St. Andrews Standard - Oct. 29, 1873 Excursion to the Red Granite Quarries, St. George. - On Thursday last a party of guests from St. John and Border ports, visited the Red Granite Quarries, by invitation from The St. George R. G. Company. The visitors from St. John arrived by the steamer ""City of St. John"", at the mouth of the River, and from thence were conveyed to the Town of St. George by the tug ""Utopia"". On landing they were received by the demonstrations usual on such occasions. As the visit, and granite district, and all been so fully and ably portrayed by our daily contemporaries of the ""Telegraph"", ""News,"" ""Globe,"" and ""Tribune"", we will content ourselves by giving a brief description, and our impressions. The excursionists from the Commercial Emporium, were leading gentlemen of the professions, commerce, capitalists, the Press, and others. Upon landing they were at once conveyed in carriages, and other vehicles to the quarries distant about two miles and a half up the river, from the Town, and are a part of the property formerly owned by the late Col. McKay, but latterly by Hugh Matthewson, Esq., from whom the Company purchased the land, which is said to contain about 1600 acres, in addition to which they have leased for a term of years about 200 acres more. Arrived at the scene of operations, where men were engaged quarrying, about 150 feet from the base of the hill, the first object which meets the eye is a temporary work shed where men were engaged in dressing the granite, some five or six pillars being already prepared for polishing, and others underway, which are intended for the new Post Office now being erected in St. John. The spot where the blasting is being carried on is at the side of a mountain, the large pieces are again drilled to the size required, and blasted. They are then hoisted by means of a large crank, and placed on a ""drag"" which runs down a sluice at a rapid rate a distance of upwards of 100 feet. Here a tram road of 2ft. 6 in. gauge, and about three quarters of a mile in length has been constructed under the superintendence of Samuel Johnson, Esq., one of the Company's Directors, and reaches the dressing and polishing building, which is nearly ready; the building is about 150 ft. square. An engine of 50 h.p. and boiler from the foundry and works of Messrs. Allan Bros., St. John, are at the building ready to be set up, with the robbing bed; the sand for present use is obtained from Lake Utopia, but it is believed that the proper quality can be had near the premises. The company intend to continue the tram road about three or four miles further towards the mouth of the river to the ""red store"" where they are building a large wharf, that vessels can receive the stone and have a sufficient depth of water. But time would fail us to tell all the company have done and will do before the works will be in full operation. We now trace our steps to the Quarries, where the large party first viewed the workmen, with rough and smooth ashlers, and their work ready for inspection; some clambered up on top of the hill, from which a magnificent panorama of the surrounding country was seen. To the left on the opposite side of the river is the ""Bay of Fundy Red Granite Company's"" work, Lake Utopia, and its natural canal, and about two miles further up the hamlet of Upper Falls - below the picturesque town of St. George. After some time spent viewing the country, the excursionists returned to the Polishing Mills before noticed - some by the car on the team road, and others by carriage. There the popping of corks, reminded one that something was coming. The genial and accomplished Secretary, E.N. Sharp, Esq., whose efforts to make all pleasant, mounted the rostrum, and in some apposite remarks proposed several toasts, which were drunk with all the honours, and responded to by Gen. Warner, the Sheriff of St. John, Messrs. John Magee, T. Barry, S. Johnson, E.N. Sharp, Esqrs., and others. Some other gentlemen who were expected to speak, viz. D.G. Smith, Esq., of the ""Telegraph"", J.L. Stewart, Esq., of the ""Tribune"", D. Main, Esq., of the ""Courier"", and one or two from St. George were prevented owing to the lateness of the hour, and the large party returned to St. George, some to the ""Frisbie House"", kept by Mr. Bogue, and others to the ""New Dominion House"", kept by Mr. Goss, where they partook of excellent warm suppers. It is unnecessary for a local paper to speak of the hospitality of the residents of St. George - there is so much of the pure Irish element in the place, imported and descended, that no one need look for anything else. The Bay of Fundy Quarries which have been opened, and whose buildings are in course of erection will be noticed fully at another time. The party returned next day to their homes much pleased with their visit, which a sour U.S. cousin would say ""had a good

Daily Telegraph - Sep. 22, 1873 A New Industry. - Messrs. Allan Brothers, of this city, shipped on Saturday to St. George, an engine and a boiler of about fifty horse power, intended for the polishing mills of the St. George Red Granite Company. Mr. Peter Cormack, we understand, goes down today to superintend the laying of the foundations for this and the other necessary machinery. The tramway will be in running order in a few weeks. The tramway from the quarries to the site of the mills has been constructed, and about a thousand tons of stone quarried. Several of the columns for the front of the new Post Office in this city, have been got out, and three of them are dressed nearly ready for being polished. The company are pushing on their works with great energy."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Sep. 30, 1873 The Bay of Fundy Red Granite Company. - In our advertising columns will be found an advertisement by Messrs. Pugsley, Crawford & Pugsley, solicitors, of a number of shares in the stock of this company. The company was incorporated by Act of Assembly last winter, possessing also, we understand, a charter of incorporation from the Legislature of the State of New York. On referring to the charter we find the names of the incorporators to be Jacob S. Brown, Abram Volk, Charles C. Ward, John M. Moffit, George G. McGlashan, Douglas Wetmore, B.C. Kenway, and Charles W. Weldon, their associates, successors and assigns. Most of these gentlemen are New York capitalists, although, we learn, that by transfer of stock, the control of the company has come into the hands of Provincialists. The object of incorporation is stated to be the quarrying and manufacturing of red granite and all kinds of stone and minerals in the county of Charlotte. The capital stock is $200,000, divide into shares of $100 each. On referring to the prospectus issued by the company, we observe that they possess a tract of 1,320 acres on the western shore of Lake Utopia, near St. George. Of the granite, the engineer, B.C. Kenway, Esq., C.E., thus reports: ""It is utterly impossible to estimate the quantity of first rate marketable red granite contained within the limits of the land ceded to the company. It is simply inexhaustible. There are hundreds of ledges, the outcrops of which represent from 5,000 to 100,000 tons each, while as to Gray's Mountain, which I estimate at 700 feet above the lake, being half a mile long and a quarter broad, and in Granite Mountain, estimated at 600 feet above the lake, one mile long and three-eighths of a mile wide, you will easily conceive the immensity of their contents, and an estimate would be merely a ceaseless piling up of figures."" To develop this valuable resource, the company has already gone to a great expense. The manager, Mr. McGlashan, has, we believe, just returned from England with new and complete machinery such as is required to fill up the extensive orders which are coming from New York and other American cities."

Daily Tribune - Apr. 28, 1874 Red Granite and the New Post Office. - The McDonald-Tilley Government approved of a handsome plan for the new St. John Post Office, and the St. George Red Granite Co. was contracted with for the pillars with which to adorn the front. Mr. Fellows, on behalf of the Company, called upon Premier MacKenzie the other day and was insultingly told that the Government didn't want his red granite pillars. Mr. Fellows explained that, in accordance with arrangements made by Hon. Mr. Langevin, the pillars had been quarried and dressed and were almost ready for delivery. The Premier repeated that he didn't want them - and wouldn't allow them to be used in the building if he did have to accept them in consequence of his predecessor's engagements. Mr. Fellows went to Mr. Burpee and Mr. Burpee sent him to Mr. Smith. The Ottawa correspondent who sends the account of the matter says that the Minister of Marine could not suppress all the indignation he felt at the conduct of his chief, and promised that he would ""see if all Maritime interests were to be trodden on in this fashion."" The account Mr. Fellows gives of his interview with the Premier is said to be very amusing, but rather discouraging for those who contemplate calling on the Premier. We should like to have a verbatim report of this interview, and of the conversation between the Premier and Jeremiah Travis, Esq., when the latter vainly applied to have a siding made at his tannery..."

St. Andrews Standard - Apr. 29, 1874 and Daily Telegraph - Jun. 22, 1874 ADVERTISEMENT: Bay of Fundy Red Granite Company. Polished Columns and Pilasters, Tombs and Monuments, Mausoleums, Vaults, etc. Estimates made for Building Work. Granite supplied to dimensions. Designs furnished to order. The Polishing Works and Quarries of the Bay of Fundy Company are now in full operation and the Company are prepared to fill orders with despatch. Further particulars and price list on application to the Secretary at St. George, N.B. St. George, N.B., March 18, 1874"

Daily Telegraph - Apr. 30, 1874 ADVERTISEMENT: Bay of Fundy Red Granite Stock A few shares of the above stock for sale. Apply to Pugsley, Crawford & Pugsley Solicitors."

S.J. Daily Telegraph - Aug. 4, 1874 Red Granite. - The placing of two of the polished red granite pillars, in the second story of the post office building yesterday afternoon, was watched with a good deal of interest. Many persons were puzzled to understand how such slippery affairs were put in their places. It was done by boring the upper end and inserting a staple by which the pillar was hoisted. The work was very neatly and carefully done."

Daily Tribune - Aug. 4, 1874 Granite Polishing Works. - The polishing mills of the St. George Red Granite Company started work in Carleton this morning in the machine shop of the E. & N.A. Consolidated Railway. Two more lathes have been erected, driven by steam power already in the building. They are at work now turning two of the granite pillars for the new Post Office building. These works, when in full operation, will make quite a stir on the West Side, and distribute a great deal of money in the course of the year."

S.J. Daily News - Aug. 5, 1874 The St. George Red Granite Company commenced operations at their new works Carleton yesterday."

St. Croix Courier - Aug. 20, 1874 Red Granite.- There are some beautiful monuments in front of Mr. Rudge's marble works, made from the St. George red granite, which well deserve an inspection. We understand some of the young men in town have it in contemplation to get up a steamboat excursion to St. George about the end of this month, when persons will have an opportunity of seeing the granite polishing works in operation."

Codes: G3 / IDX_Names: Granite;

S.J. Daily News - Aug. 21, 1874 St. George Items. - ... The St. George and Bay of Fundy Granite Quarries continue to do an extensive business. They give work to a great number of men. The latter company is enlarging its works and increasing its machinery. Its employees now number one hundred."

Dec. 1874 - Copied from: St. Croix Courier - Dec. 1, 1904 30 Years Ago. - The red granite quarries at Red Beach open well. A find on the farm of Melthia Lane has been purchased by Calais parties. A very fine quarry on the Red Beach Plaster Co.'s land has been opened up by C.H. Newton and F.A. Pike, of Calais, who intend to put up a polishing mill."

S.J. Daily Telegraph - Dec. 10, 1874 St. George. - The Bay of Fundy Red Granite Company have recently imported some additional machinery from Scotland, extended their buildings and enlarged their premises, and are now doing flourishing business, employing eighty or ninety men, and having constantly on hand more orders than they can fill."

S.J. Daily News - Dec. 14, 1874 and St. Andrews Standard - Dec. 16, 1874 The St. George Red Granite Co. have elected the following officers for the ensuing year: J.W. Lawrence, President; A.C. Fairweather, Sec.-Treasurer: P. McCormick, E. Fisher, C.H. Fairweather, Edwin Frost, J.W. Lawrence, F.T.C. Burpee, H.L. Sturdee, Board of Directors."

St. Croix Courier - Dec. 17, 1874 Bay of Fundy Red Granite Company.- We learn that Mr. McGlashan has resigned his position as Manager of the Bay of Fundy Red Granite Company and that Henry Rudge, Esq., has been appointed to the vacancy. Mr. Rudge has been a Director and Vice-President of the Company for some time past, and his knowledge of the granite business eminently qualified him for the position of Manager."

S.J. Daily News - Feb. 7, 1874 The St. George Red Granite Company's polishing works are nearly completed."

St. Croix Courier - Feb. 19, 1874 Red Granite.- The New York Sun says: ""A red granite company in New Brunswick {St. George} is receiving extensive orders from New York and Boston for polished columns and monuments."

Daily Telegraph - Jan. 26, 1874 Polishing Mill Started at St. George. - The Bay of Fundy Red Granite Company's Polishing Mill was set in operation on Thursday last, before a number of spectators, who with great curiosity witnessed, for the first time, the process of polishing granite. There were two cylindrical columns, 6 feet long and 8 inches in diameter, in the lathes; on each column were placed crosswise, and held firmly by a framework, five pieces of cast iron about the size of, and resembling a brick, with the edges up and down. Out of the lower edges of these irons was taken the sector of a circle, greater in diameter than the columns to be polished, so that about three inches in length of the surface of the irons rested upon the columns. A box of fine white sand from the shores of Lake Utopia, was placed beside each column, and a couple of buckets of water thrown into it. The polisher took his place by the column, and the order was given to ""hoist her."" The mill started, the belts creaked, the columns turned, sand was thrown on the revolving columns, the irons grated roughly on their sanded surface, a buzzing noise pervaded the whole building, and a new era dawned upon the industries of St. George."

Morning Freeman - Jan. 29, 1874 Granite Polishing Mills. - On Thursday last the Bay of Fundy Red Granite Co.'s Polishing Works were started at St. George. They have a large number of granite cutters at work now. More men are daily expected, and orders are pouring in. Thus it will be seen that a most important industry has been auspiciously begun at St. George; and a new era of prosperity is drawing upon that locality. - Journal."

N.B. Reporter - Jul. 1, 1874 The St. George Red Granite Company's works were destroyed by fire on Saturday evening last, involving a net loss in machinery, building, stock on hand and ready for transportation of over $15,000. The mills will be rebuilt immediately."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jul. 2, 1874 Disastrous Fire at St. George.- We regret to learn that a fire broke out in the St. George Red Granite Works, Saturday evening shortly after five o'clock. The men, knocking off earlier on Saturday night than usual, had left the works at 5 o'clock, but after leaving they perceived the smoke and went back, not in time, however, to save the ...?... the polishing mill, stone cutting shed, engine and boiler house, all the machinery and a large quantity of polished stone were destroyed. Among the polished work destroyed were a number of the columns for the St. John Post Office, some columns for a building in Montreal, a great many monuments, and in fact nearly the whole product of the quarries and mills since February. The loss is variously estimated, but it cannot be less than $15,000, besides the drawback to the operations of the company. We learn that the company intends rebuilding and resuming operations as

St. Croix Courier - Jul. 2, 1874 Red Granite.- We are informed that the Bay of Fundy Red Granite Company have more orders on hand than they can fulfill in eighteen months. Last Tuesday thirty-four cases of polished granite were packed and shipped for New York. They are now filling an order for two thousand tons of rough stone for a building in Boston to be built of red granite and white marble. Orders are pouring in from New York, Boston, Montreal and all parts of Canada. The company has been obliged to add to their machinery and they have made arrangements to have it manufactured in this country from Scottish patterns. Henry Rudge, Esq., has recently ordered a number of monuments from the works, including one for the late John Bolton, Esq. The red granite business, by present appearances, promises to assume very

Carleton Sentenil - Jul. 4, 1874 The ""Red Granite"" Company's Works, at St. George, have been destroyed by fire. The loss is a very serious one."

Daily Tribune - Jul. 4, 1874 Granite Polishing Mills. - The St. George Red Granite Co. has decided to build its polishing mill in Carleton, St. John, instead of rebuilding the works destroyed by fire the other day near the quarry. A desirable location has been purchased and the new polishing works will soon be in operation."

Daily Tribune - Jul. 8, 1874 The New Post Office. - The contractors of the new Post Office desire us to state that they get their remittances regularly from Ottawa, as the work progresses, and have no fault to find with the Department of Public Works. They are pushing the work forward energetically, and will soon have the walls completed. The popular criticism on the red granite pillars that have been placed in position is that, as they are partially buried in the walls, they are not so effective as they should be. The building, it is feared, will not be large enough for the work of the Department."

Morning Freeman - Jul. 9, 1874 The Red Granite Company have leased or purchased the railway workshops in Carleton, and will do all the polishing and finishing work there in future."

St. Croix Courier - Jul. 9, 1874 Granite Polishing Mills.- The St. George Red Granite Co. has decided to build its polishing mill in Carleton, St. John, instead of rebuilding the works destroyed by fire the other day near the quarry. A desirable location has been purchased and the new polishing works will soon be in operation.- Tribune."

S.J. Daily Telegraph - Jul. 11, 1874 The Red Granite Company's Works. - The report inreference to an arrangement between the St. George Red Granite Company and the Western Extension Railway for the lease or purchase of the Carleton Railway shops, appears to have been premature. No conclusion has yet been reached, whatever may be decided

S.J. Daily Telegraph - Jul. 13, 1874 The St. George Red Granite Co. - A public meeting was held at St. George on Thursday last, at which resolutions were adopted having for their object the reestablishment of the St. George red granite works at that town. It was unanimously resolved to petition the Legislature (in the event) of the company rebuilding their polishing works at that place) to exempt them from all taxes for town and county purposes during a further period of ten years."

Daily Telegraph - Jul. 14, 1874 Polishing Red Granite in Carleton. - The St. George Red Granite Works intend to make use, temporarily, of a portion of the Western Extension Machine Shop, at Sand Point, Carleton, kindly placed at their disposal by Allan Bros. The latter gentlemen have been using the railway shop for their machine shop since the fire destroyed their own, and pending the erection of new premises, which are now approaching completion. Although at some inconvenience to their own operations, they are giving the granite company the use of their steam power and giving them space for erecting lathes and doing the necessary work connected with the polishing of stone. Mr. Cormack was over yesterday and selected the site of the lathes, and today the work of placing the lathes will be commenced. It is believed the machinery will be at work this week, and a lot of granite in the rough will probably be sent up from St. George at once, as there are heavy contracts waiting completion, delay in which would not be beneficial to the company's interests. The erection of these lathes will not in any way affect the company's decision in regard to the erection of new polishing works at St. George; it is merely taking advantage of an admirable opportunity which has presented itself for carrying out the company's engagements and reducing somewhat the inconvenience and injury arising from the destruction of the polishing mill. We may add, however, that the Carleton people are most anxious to secure the permanent location of the works amongst them, and we have no doubt they will bid high to secure their establishment."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jul. 16, 1874 St. George Red Granite Company.- The Telegraph says a public meeting was held at St. George on Thursday last, at which resolutions were adopted having for their object the re-establishment of the St. George red granite works at that town. It was unanimously resolved to petition the Legislature (in event the company rebuilding their polishing works at that place) to exempt them from all taxes for town and county purposes during a further period of

Daily Telegraph - Jul. 18, 1874 and St. Croix Courier - Jul. 23, 1874 Bay of Fundy Red Granite Company. - At the annual meeting of the stockholders of the Bay of Fundy Red Granite Company, held at the company's office, on Tuesday, 14th inst., Jacob S. Browne, Bela R. Lawrence, Douglas Wetmore, John E. Green, Charles C. Ward, Thomas Barry and John M. Moffitt, were elected directors for the ensuing year, and the following resolution passed unanimously by the stockholders: ""That the stockholders of the company have heard with great satisfaction the report of the Directors for the past year, and are fully satisfied therewith, and that a vote of thanks be tendered to the members of the Board who have been active in bringing the works to such a satisfactory condition."" At a subsequent meeting of the directors, the following persons were elected officers for the year, viz.: Jacob S. Browne, president; Douglas Wetmore, vice-president; Thomas Barry, Treasurer, and Charles C. Ward, Secretary. Executive Committee, Bela R. Lawrence, Chas. C. Ward and Douglas

Morning Freeman - Jun. 18, 1874 Magaguadavic Granite. - On Tuesday two of the red granite columns prepared for the new Post Office building were exposed in front of the building, and were much admired. They are monoliths nearly 13 feet in length and beautifully polished."

Daily Telegraph - Jun. 29, 1874 Disastrous Fire at the ""St. George"" Red Granite Company's Works. - On Saturday evening we received a telegram from St. George, and Mr. J.C.P. Burpee, President, also received a telegram, from Mr. Charles Johnston, brother of the resident director of the company's works at St. George, stating that the company's works had been burned to the ground that afternoon. Mr. Peter Cormack, of this city, a director, on receipt of this startling news immediately set out for St. George to ascertain, for the information of parties interested, the full extent of the disaster. Mr. Cormack reached St. George early yesterday morning, and during the day telegraphed, in substance, as follows: That the building with all the cut and polished stone inside had been destroyed. Some of the shafting was bent. The wood work of the circular polisher is gone. The engine appears but little damaged. The iron of the lathes is uninjured. Four expensive columns intended for a building in Montreal and three of the St. John post office columns are among the losses, which include, also, all the polished monumental work. The fire commenced at half past five o'clock, after all the employees had gone to the village. The inhabitants of the place feel the destruction of the works very keenly. The building was in the shape of two sides of a hollow square, each wing being 120x28 feet, and one story high, except at the angle, where it was two stories, the upper story at this point being intended for a business office. Besides the 60 horse-power engine, boiler, shafting, belting, etc., the building contained three polishing lathes, two of them very large; one small circular rubber, and a number - probably 12 sets - of horizontal polishers. The building and contents were not insured for over $3,000 (in the ""Queen"" office), while the building and machinery probably represented $10,000. The stone destroyed or seriously damaged will probably foot up to the $10,000 to $11,000, leaving a net loss of about $15,000, allowing for a considerable portion of the machinery not being irreparably injured. Later. -Mr. Cormack returned to the city last night. He reports that the fire originated in the boiler shed. All that could be saved from the building were a few ""bush"" hammers. The stone lost included two pillars and one pillaster for the St. John P.O.; four pillars for Montreal, as stated above; ten dies, seven obelisks, two columns and four urns, all polished monumental work, as well as a number of caps, bases, vases and other dressed and carved work. Fortunately a large portion of the stock was outside the building, and escaped without injury. The building and contents were destroyed in 20 minutes. It is expected the mills will be quickly rebuilt."

Daily Tribune - Jun. 29, 1874 St. George Red Granite Company's Works Burned. - The extensive works of this Company were burned at St. George on Saturday afternoon. The fire broke out in the boiler shed about half past 5 o'clock, after the men had left for work. In about twenty minutes the building was destroyed. Besides the building and machinery burned a quantity of polished stone is a total loss. The works were driven by a sixty horse power engine, which is not much damaged, but a quantity of the shafting was bent and rendered useless. The stone lost included two pillars and one pilaster for the St. John, P.O.; four pillars for Montreal, ten dies, seven obelisks, two columns and four urns, as well as a number of caps, bases, vases and other dressed and carved work. The loss is estimated at $15,000, and there is only insurance of $3000 in the Queen Insurance Company. The works will be at once rebuilt."

Morning Freeman - Jun. 30, 1874 Serious Fire at St. George. - The sheds of the Red Granite Company at St. George were burned down on Saturday evening. The fire broke out some time after the men ceased work. The sheds were completely destroyed, the machinery much injured, and much of the granite under the chisel, including two of the pillars for the St. John Post Office, four pillars for Montreal and several monuments were destroyed or seriously injured."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Mar. 12, 1874 Inauguration of a New Industry - Bay of Fundy Red Granite Company.- [From the Telegraph] - The polishing works of the Bay of Fundy Red Granite Company at St. George, as already briefly noticed in our columns, have been started with that quietness and lack of sensation which has characterized the thorough business management of the company since its inception. On the 23rd ult., everything being ready, the valves of the Leffell wheel, which supplies the power, were opened, and instantly the perfect Scotch machinery started into life, with a beauty and precision worthy of all admiration, and reflecting the highest credit on the officials whose untiring energy has met with an appropriate reward in the complete success of their undertaking. The first order upon the Company's book is for seven polished columns for a building now in course of erection in Boston. These columns are now in the lathes, and will be finished and delivered on the 7th of February. The second order is for eleven large monuments for New York, for the largest importers of Scotch granite in the United States, who have diverted the whole of their extensive trade to the Bay of Fundy Company. One of the above mentioned monuments is about twenty feet high, and very beautiful in design. In an excavated niche at the base, there will be placed a figure sculptured in white marble, designed and executed by the Company's New York agent, Mr. John M. Moffit, the well known sculptor, and will be placed in Greenwood Cemetery. Another order of considerable magnitude and testing the capabilities of the Company's quarries, is for eighteen columns, twelve feet six inches long and two feet in diameter. Nine of those are cluster columns, and are to be polished and delivered on the 15th of April and first of May. The foregoing are but a few of the instances, resulting from the high appreciation in which the Bay of Fundy Company's granite is held by architects and others, on account of its unequalled richness and depth of color, and also from the excellent system of agencies and sub-agencies organized by the Company, and covering every city of importance in the United States and Canada. All of these agencies are furnished with a book of original designs, prepared with great care and skill, expressing for the Company, and furnished by no other company. Before concluding, we beg to give credit to the various parties who have in many ways conduced to the success of the undertaking. The whole of the polishing machinery embracing all of the latest patents and improvements, and labor-saving machines, including a travelling crane, were made to order for the Company in Scotland. The Leffell wheel, which gives the power, was furnished by the Oshawa works, through Mr. W.H. Olive, and has proved all and more than was claimed for it, with power enough left to drive the contemplated duplication of the Company's works. Mr. Crawley, the millwright in conjunction with Mr. R.J. Austin, the builder rendered most valuable aid. The shafting, &c., was furnished by Messrs. W. McDonald & Son, of St. Stephen, and give entire satisfaction. It always speaks highly for the enterprise and foresight of the business men and capitalists of St. John, that $60,000 of the capital stock of the Bay of Fundy Company is owned in

Morning Freeman. - Mar. 28, 1874 Legislature. - Hibbard committed a bill to incorporate the Victoria Red Granite Company of St. George. The bill is a copy of the St. George Company's charter, excepting the names, etc. Their property is between that of the Bay Fundy and Lake Utopia. Agreed to."

Eastport Sentinel - Nov. 18, 1874 Red Beach. - ... In addition to the present business, there are several red granite quarries about to be opened, that is said to be superior to the St. George Granite. There is no other place in New England where red granite is found, and no doubt it will add to the prosperity of the place."

Eastport Sentinel - Nov. 25, 1874 Red Beach. - The red granite quarries open well. A fine quarry on the farm of Mr. Melthia Lane, has been purchased by a Calais Company, who have opened it and intend working it in the spring; there is also a very fine quarry on the Red Beach Plaster Co.'s land, the granite being of a beautiful color and taking a fine polish. Messrs. C.H. Newton and F.A. Pike have opened it up and intend to put up a polishing mill; some pieces they have polished far exceed the St. George granite in quality and beauty."

Oct. 1874 - Copied from: St. Croix Courier - Oct. 6, 1904 30 Years Ago. - A beautiful granite, of purple shade, has recently been discovered on the farm of Thomas Cameron, at Digdeguash. Levi Young has also discovered a granite quarry on his property at Digdeguash. Still another has been opened by Robert Ross near Bartlett's Mills."

Daily Telegraph - Oct. 3, 1874 More Red Granite. - We have advices of further discoveries of Red Granite near St. Andrews. We shall publish full particulars on Monday. The discoveries are likely to have an important bearing on the property of the fair town of St. Andrews."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Oct. 4, 1874 Red Granite near St. Andrews. - Better Times Ahead for the Shiretown of Charlotte County. - Some months since, as Capt. J.B. Key, mining engineer (this is the gentleman who had the great law suit with the late Dr. Thomson) was, in company with his children, walking in the vicinity of Fort Tipperary, which is situated on the highest point of the hill, at the back of the town of St. Andrews, his attention was attracted, to a number of reddish looking stones or boulders which were lying about, and which on close inspection, proved to be red granite. Knowing that they were of a different kind of stone from any in that vicinity, he concluded that they were brought there, from their original resting place by some natural agencies, probably at a time so remote as the drift period. Being acquainted with the course of the drift, he went to his residence, and got a compass, and returning to the Fort, took the bearings. Next day he went up the St. Andrews railway to Bartlett's station, eleven miles from town, and after a few hours careful exploration, discovered a deposit of red granite. A few days ago he got home some pieces quarried out for samples two of which may be seen at the office of the Telegraph. The piece of stone marked number one, was taken out at a depth of four feet from the surface, at a point distant, three chains from the railway track. On the southern side of the belt, the stone is striped, with veins of white quartz, which when polished, will present the appearance of marble and have a very pretty effect. This belt is thirty-seven rods thick. Number two, which is merely a surface stone taken from the rock, immediately underneath the soil, was taken out a point about a quarter of a mile from where piece number one was quarried. About ten chains to the north of this, several tons of red coarsely chrystallized granite has been broken of in pieces, and its now lying there. The facilities for operating this quarry cannot be surpassed. The railway track runs nearly through the middle of the belt, and a siding is already built to where specimen number one was taken out, and one can easily be made to number two, the roadway being almost level and very little grading required. The stone quarried can at once be loaded on the rail cars and conveyed to St. Andrews, for either manufacture or shipment. No better place for the establishment of polishing works can be found, and it is believed that, in the event of a company being formed, the people of St. Andrews will give them every possible encouragement and assistance by the free gift of lands on which to erect their workshops, and relieving them from local taxation for a term of years. A very important consideration is the great convenience of shipment available at all seasons of the year, and as the vessels engaged in the sleeper and timber trade, could each trip take in several tons of granite for ballast, without in any way interfering with the quantity of sleepers they usually carry, they would therefore be able to do the work at very moderate rates. Capt. Key has labored at a disadvantage hitherto. He was time and again told by the doubting Thomases that Professor Baillie had declared, that there was no red granite in the locality, that it was only a common reddish formation not unlike sandstone. In consequence of the alleged statements of the Professor, the Capt. was made the subject of a good deal of chaffing, and was often quizzically asked ""How is Red Granite?"" To which, as a rule, he good naturedly replied - ""You will see bye and bye."" He never lost faith in the existence of the granite at the spot indicated. The captain has secured the fee simple (of six hundred acres of land,) and now has men engaged in removing the soil, and opening out the stone, with a view, of, at a not very remote date, taking steps to organize a company. He determined first, however, to fully ascertain the extent and quality of the stone. A large piece of the granite has been sent to Boston, where it will be polished, and then placed for public inspection, at the exchange and passenger office of Mr. Henry F. Magee, 136 State street. If this granite turns out as well as expected, the discovery will be a most important one for the town of St. Andrews, and most inevitably tend to the introduction of a large amount of capital, and thus stimulate all the other industries of the town, one of which, we are glad to see, is ship building. ..."

St. Croix Courier - Oct. 8, 1874 and Red Granite.- A beautiful red granite, or rather a granite of purple shade has recently been discovered on the farm of Mr. Thos. Cameron at Digdeguash. The rock when polished present even a more beautiful appearance than the St. George granite. Samples have been sent to England and it is expected that a strong company will shortly take hold of the enterprise."

St. Croix Courier - Oct. 8, 1874 and We hear that Mr. Levi Young of Digdeguash has also discovered a granite quarry on his property at that place."

St. Croix Courier - Oct. 8, 1874 and Daily Tribune - Oct. 9, 1874 And still another red granite quarry is reported at Waweig, which has just been opened by Robt. Ross, Esq., of St. Andrews, whose enterprise in various kinds of business is deserving of all praise. The quarry is situated near Bartlett's Mills, and has an inexhaustible supply. Mr. J.B. Key, who has a large experience, is assisting to open the quarry."

S.J. Daily News - Oct. 23, 1874 New Brunswick Granite. - The red granite columns in front of the new Canada Life building on St. James Street have been greatly admired. Their brightish colour and their splendid polish, make them, in the estimation of many, very much superior to the Peterhead granite pillars to be seen in some buildings in the vicinity. Our readers are not, probably, aware that this fine stone is Canadian, the production of the St. George's Red Granite Company, St. John, N.B.; the same that has recently excited some discussion in connection with the new Post Office in that city, and in reference to which New Brunswickers feel so justly proud. - Montreal Gazette."

S.J. Daily Telegraph - Sep. 10, 1874 The Red Granite Polishing Works are in active operation in the railway workshop, Carleton. The ""St. George"" company have on the premises four lathes and three horizontal polishers; and two other polishers are on the way from Scotland. Six of the Post Office columns and two columns for a Montreal Insurance building have been handled since the works were opened in Carleton, most of them having been finished and sent forward."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - Sep. 22, 1874 More Red Granite. - Mr. Levi Young, of Digdeguash, has discovered on his property a red granite quarry, some fine specimens from which he exhibited in St. Andrews last week. The quarry is situated near what is called the Still-water bridge, on the Digdeguash river, in a most convenient position for shipment."

St. Croix Courier - Jul. 8, 1875 Red Granite for Toronto.- The description of the Toronto Conservative Club House contains the following:- The entrance door-way will be the principle feature of the ground story, and will form an open porch with pilasters and Bay of Fundy red granite columns with carved capitals at each side, and finished above with a pendiment supported by consoles."

Daily Telegraph - Jul. 19, 1875 Bay of Fundy Red Granite Quarry. - At the annual meeting of the stockholders of the Bay of Fundy Red Granite Company, held at the company's office, St. George, on Tuesday, the 13th inst., Jacob S. Browne, John M. Moffitt, Bela R. Lawrence, Henry Rudge, Thomas Barry and Charles C. Ward, Esquires, and Hon. B.R. Stevenson were elected Directors for the ensuing year, and a vote of thanks was tendered by the Stockholders to the board of directors and officers of the company for their efficient management during the past year. at a subsequent meeting of the Directors, Jacob S. Browne, Esq., was elected President; Henry Rudge, Esq., vice- president; Thomas Barry, Esq., Treasurer; Charles C. Ward, Secretary. Executive Committee - Hon. B.R. Stevenson, Henry Rudge and Charles C. Ward,

Morning Freeman - Jul. 20, 1875 Bay of Fundy Red Granite Company. - At its annual meeting of the stockholders of the Bay of Fundy Red Granite Company held on the 13th inst., Jacob S. Browne, John M. Moffitt, Bela R. Lawrence, Henry Rudge, Thomas Barry, Charles C. Ward and Hon. B. R. Stevenson were elected Directors for the ensuing year. At a subsequent meeting of the Directors, Jacob S. Browne, Esq., was elected president; Henry Rudge, Esq., vicepresident; Thomas Barry, Esq., Treasurer; Charles C. Ward, secretary. Executive Committee - Hon. B.R. Stevenson, Henry Rudge, Charles C. Ward, Esquires."

S.J. Daily News - Jul. 20, 1875 Bay of Fundy Red Granite Company. - At a meeting of the Bay of Fundy Red Granite Company, held last week, the following directors were elected for the ensuing year; Jacob S. Browne, John M. Moffit, Bela R. Lawrence, Henry Rudge, Thomas Barry, Chas. C. Ward, and Hon. R.B. Stevenson. At a subsequent meeting of the Directors, Jacob S. Browne, Esq., was elected President; Henry Rudge, Esq., Vice-President; Thomas Barry, Esq., Treasurer: Charles C. Ward, Secretary. Executive Committee - Hon. R.B. Stevenson, Henry Rudge and Chas. C. Ward,

Daily Telegraph - Jul. 23, 1875 More Red Granite. - Red Granite has been found at Lepreaux, Charlotte Co., and has been examined by experienced persons who pronounce it of excellent quality. The deposit is on the property of Mr. W.K. Reynolds, and is situated very conveniently as regards water power and facilities for shipping."

Daily Telegraph - Jun. 5, 1875 St. George. - The Belle Brown, with about three hundred excursionists from St. Stephen and St. Andrews, arrived at St. George on Wednesday last, at noon. The visitors amused themselves by visiting their friends, strolling about the village, visiting the granite works, and inspecting the natural beauties of the place. They expressed astonishment at the vastness of the granite works, and all agree that St. George is yet destined to become the Peterhead

St. Andrews Standard - Jun. 16, 1875 Bay of Fundy Granite Company. - We are pleased to learn that the business of the Bay of Fundy Red Granite Company is increasing rapidly, and that the Company purpose augmenting their force of workmen to double the number at present employed. It is satisfactory also to state that the Stock is at par value, and that the business of the Association is prosperous. They have been shewn that they can compete with the Aberdeen Companies, and that in pillars, large monuments, etc., they have a decided advantage, as they can obtain blocks of any length without either defect or blemish. There are nearly fifty Granite Companies in Scotland all doing a good business in quarrying red granite. The demand is so great in the country that the buildings are to be enlarged. Orders are now being filled for eighteen polished lamp posts with engraved bases, for the White House grounds, Washington, and other orders are being daily received. It is pleasing to us to record the excellent prospects of our St. George friends who have invested

Daily Telegraph - Jun. 17, 1875 Red Granite in the Printing Office. - Those who are not acquainted with the mysteries of the art preservative of all arts, may not be aware that Italian marble is largely used in printing offices. Imposing stones, highly polished, of this beautiful and enduring marble, form important adjuncts of such offices. The forms into which the type is made up are placed on them and in common with the type they have to stand to chemicals used in cleansing it. In the Daily Telegraph composing rooms, a beautiful slab of red granite, 4 ft. 4 in. by 2 ft. 9 in., has been introduced as an imposing stone. It has been supplied by the Bay of Fundy Red Granite Company, is highly polished, very beautiful and apparently well adapted to the purpose. Of course, it will require a trial of some years to enable a comparison to be made between its durability and that of Italian marble, and it makes a very handsome imposing stone. This is probably the first time that red granite was so used, and, no doubt, the uses to which it will be put will be constantly extended. Those who take an interest in the fine polish taken by the Bay of Fundy red granite can see this fine specimen in the Daily Telegraph

Daily Tribune - Mar. 11, 1875 Mr. McKay introduced a bill to incorporate the Utopia Red Granite Co., of St. George."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - May 27, 1875 Digdeguash Red Granite Quarry.- This Company has been formed with Mr. C.B. Eaton as President, and the following Board of Directors: Messrs. Levi Young, Thos. Cottrell, F.M. Murchie, G.S. Wall and L.A. Mills. Geo. S. Grimmer, Esq., is Secretary and Treasurer. The Company will go into active operation immediately."

May 27, 1875 - Copied from: St. Croix Courier - May 25, 1905 30 Years Ago. - (27th) - The Digdeguash Red Granite Co. has been organized with C.B. Eaton, president, and the following directors: Levi Young, Thomas Cottrell, F.M. Murchie, G.S. Wall and L.A. Mills. G.S. Grimmer is secretary and treasurer. The company will commence operations at once."

Morning Freeman - Nov. 18, 1875 The stonecutters employed at the Bay of Fundy Red Granite Works struck this week because they were not paid the month's wages due last Saturday, and no explanation was given them. The stoppage of these works would prove a serious loss to St. George."

St. Andrews Standard - Oct. 6, 1875 St. George. - Business in the pleasant town of St. George has been at a stand still for some time rendering the place exceedingly dull, and money almost out of the question. The inhabitants complain that with the exception of what is being done by the Red Granite Company, and their expenditure of money for labor, there is no business carried on and no money afloat. The picture, we fancy, is only the reflection of other and perhaps larger places. Our friends in that quarter, like others, keep up heart and live in hopes of a favorable return of the tide of prosperity. .... The Red Granite Works are in full blast, their present work is principally filling the large order for the State building at Philadelphia. Such of the immense columns as have been finished are splendid pieces of workmanship and corners and bases are really grand. The cornices and bases for what we may term the tropical garden at Washington, are magnificent specimens of workmanship. A description of the works was given on the first page of last week's edition copied from the Courier. A monument was shipped this week for San Francisco, and it is believed that other orders from the land of gold

St. Croix Courier - Oct. 7, 1875 Red Granite.- Polishing works are about to be erected at Red Beach for a new red granite quarry ..."

St. Croix Courier - Oct. 7, 1875 ... G.G. McGlashan, Esq., who did so much toward developing this industry at St. George, is superintending the new enterprise."

S.J. Daily News - Oct. 9, 1875 RED GRANITE. - Polishing works are about to be erected at Red Beach for a new red granite quarry which is just being started there. The granite is very much like the St. George granite, and the increasing demand for the article will doubtless furnish this new quarry with plenty of work. G.G. McGlashan, Esq., who did so much toward developing this industry at St. George, is superintending the new enterprise. - St. Croix Courier."

Morning Freeman - Sep. 18, 1875 The Courier states that since January last the Bay of Fundy Red Granite Company have turned out about $60,000 of finished work. The quarries are inexhaustible. Over a hundred men are employed, and $4,000 is paid in wages every month. Orders from Washington, Philadelphia, and New York now occupy them."

Daily Telegraph - Apr. 7, 1876 More Red Granite. - A St. George correspondent of the Courier states that two new concerns, Taylor, Black & Co., and Milne, Coutts & Co., have commenced to develop the Red Granite business. The former have got fairly begun and the latter are beginning."

Daily Telegraph - Apr. 13, 1876 Granite of all sizes, dimensions and quantities, for building purposes and monuments, can be had on short notice from the Spoon Island Quarry, at reasonable rates, on application to Henry Walton, there, or John M. Taylor, 18 North Wharf"

S.J. Daily News - Aug. 8, 1876 Charlotte County News. - Business at St. George is at a standstill. The men employed at the Granite Works, having received no pay for several months, have struck work. The Company have offered to pay the men 50 cents on the dollar within 10 days, if they can raise the money, and to give due bills for the payment of 25 cents of the balance within 6 months, and for the payment of the remaining 25 cents within a year, but they are unwilling to give any guarantee or security that they will carry out this arrangement. The men very properly refuse to return to their work under such circumstances. There seems to be too much circumlocution in the management of the works, and the company appear to have too many highly paid officials. The failure of the Company has caused considerable embarrassment to the storekeepers to whom its workmen are largely indebted. Its employees and those who supplied them have been

St. Croix Courier - Aug. 10, 1876 Bay of Fundy Red Granite Co.- The polishing works of this company are again in full operation. The Company has more orders on hand than it can supply and is doing a large and remunerative business. Like all enterprises of the kind it needs a large capital, which being supplied, the rest is easy."

Daily Telegraph - Aug. 11, 1876 Bay of Fundy Red Granite Co. - The polishing works of this company at St. George are again in full operation. The company has more orders on hand than it supply and is doing a large and remunerative business. Like all enterprises of the kind it needs a large capital, which being supplied, the rest is easy. - St. Croix Courier."

Codes: G3 / IDX_Names: Granite;

S.J. Daily News - Aug. 11, 1876 Bay of Fundy Red Granite Co. - The position of the Granite Works in St. George, Charlotte County, referred to in a recent issue of the News is, we are happy to say, in an improved condition. The temporary difficulty in the conduct of the operations of the Bay of Fundy Co.'s officers is at an end, arrangements having been made which are satisfactory to all concerned, and ensure work being prosecuted vigorously. The best of feeling exists between the men and the company. The works are now in full operation, and there is ground to believe that an industry, the prosecution of which will be of immense service to Charlotte Co., will be pushed on to satisfactory results. Some leading citizens of St. John are now embarked in the enterprise, and take an active part in the management of the company's affairs. The company have orders enough on their books to keep the works constantly running in full blast for from two to three months, with other orders daily coming in."

Daily Telegraph - Aug. 21, 1876 St. George. - The red granite business is now being prosecuted vigorously by the Bay of Fundy Company. A change in the management has been effected."

St. Andrews Standard - Aug. 23, 1876 The Bay of Fundy Red Granite Works, are driving their business. The orders on hand requiring immediate execution."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Aug. 29, 1876 The Red granite of St. George. - We have frequently referred to this granite as an undoubted source of large profits to capitalists, who must, however, be able to carry over large and costly orders until completed. That our readers may see how these works appear to outsiders, we copy a notice from the correspondent of the Montreal Gazette, who is making a careful survey of our material resources, especially in mines and minerals. First in importance, let me tell you something about the red granite quarries, which lie on the western shore of Lake Eutopia. I reached them by stage from St. George, a distance of 47 miles from St. John, principally over a rough road; but passing through a most delightful country. During my trip I had ample opportunity of witnessing the devastations made by the recent forest fires in the vicinity of Musquash, the smoke from which at times darkened the atmosphere by its density. These quarries are about two and a half miles from the town. The first and principal one is owned by the Bay of Fundy Red Granite Company, the second by the New Brunswick Granite Company, whose works are located at Carleton, opposite Saint John. The quarries and land of The Bay of Fundy Red Granite Company comprise 1,320 acres. The ground is nearly all rock and consists mostly of red granite ledges and hills, with a few spurs of ordinary trap rock, separated by narrow valleys of rich, loamy soil, through which numerous streams run, covered by beech, birch, pine, hemlock, spruce and a little cedar. The timber varies from 7 to 14 inches in diameter. The stone on the eastern and southern portions of the land is of a rich dark red color, with some ledges of a clear salmon color. Further west, and towards the northern boundaries of the land, the stone becomes lighter in shade. In beauty of appearance, this latter shade is not to be compared with the deposits on the eastern, southern and southwestern portions of the land. The land known as the Gilmore or Ash lot is a perfect sea of ledges of a good color, with valleys between the ledges covered with a black growth of fir and pine, with some small birch. On the east side of the road there are a series of quarry faces of middling good, and very good red granite, about two chains from the road and handy thereto. The stone here is in fine large masses, most of it of a very good quality. The ledges run north and south, nearly, but seem to radiate from a common centre somewhere about the Gilmore or Ash lot, where they appear to concentrate. It is utterly impossible to estimate the quantity of first-rate merchantable red granite contained within the limits of the Company's land. It is simply inexhaustible. There are hundreds of ledges, the outcrops of which represent from 5,000 tons to 100,000 tons each, while as to Gray's Mountain, which I estimate at 700 feet above the lake, being half a mile long and a quarter of a mile broad, and in Granite mountain, estimated at 600 feet above the lake, one mile long and three-eighths of a mile broad. The granite on the land ceded to the company is said to be perfectly free from those spots and veins which occasionally disfigure the Peterhead (Scotch) granite, and that, generally speaking, the ledges appear to be perfectly homogenous or to lie in large rectangular slabs and blocks, generally inclined at an angle of 50ø from the north towards the horizon. In only three instances, when making experimental blasts (of which nearly 100 have been put in) has seamy stone been met with. Large deposits of good quartz sand, for grading purposes, extend along the beaches around the lake. The Discovery of The Granite was accidental. In the summer of 1872, Mr. C. Ward, Canadian artist of the Illustrated London News, at present secretary of the Company, was desirous of fishing on Lake Eutopia. Mr. Ward approaching a fisherman to hire his boat, which was anchored to the shore by a large red stone. In raising it its rich red color attracted his attention, and upon looking at it closely he at once saw what it was, and it occurred to him that it might be utilized for a better purpose than as a primitive anchor. Instead of going on his intended fishing excursion, he went hunting for red granite stone, and the result was the further discovery of immense ledges of beautiful dark red granite and the result is the existence of the present quarries. But the beauty of the stone in its natural state is nothing compared to its richness when polished. To give you some idea of the vast proportions which this industry has assumed, let me say a word with regard to the polishing works. They are located on the Lower Falls, on the beautiful river of Magaguadavic, and within 40 rods of the tide water wharves. The power is obtained by a 5-feet Lafelle (double turbine) wheel, with 24 feet head. Its capacity is equal to 100 horsepower. The foundations of the water-power machinery are laid in solid rock many feet below the river. The buildings occupy three sides of a hollow square 284x176 feet. The enclosed yard is covered by a travelling crane, moving along as well as from one building to another. To this crane is attached a hoist of 20 feet, capable of lifting 8 tons. The machinery consists in part of four carriages, running under vertical rubbers capable of polishing from 70 to 80 superficial feet; also 4 hand vertical machines, 3 double run of pendulums, one lathe with 28 feet by 3 feet swing, two of 20 feet by 2 feet; seven smaller lathes, besides iron and turning lathes, drill and wood lathe in the repair shops. There were in the yard when I was present two rough stones, for spires, 22 feet long by 2 feet 6 inches square at the base. At the quarry there were two stones for columns, 16 feet long by 3 feet 6 inches square. The men at that time were at work on an order for 18 columns, 13 feet 6 inches long and 1 foot 9 inches and 1 foot 10 inches in diameter. Four columns, weighing over 10 tons each and 3 feet 2 inches in diameter, were sent to Philadelphia public buildings last year. There are three decided tints of granite obtained from the quarries, but the bright, clear,red and light coloured quartz predominate, and it is generally preferred in the market. The lighter shades are so like the Scotch as to be scarcely distinguishable. The works give employment to 100 hands, the rate of wages ranging from 50 cents per day to boys, and $2.50 for the best stone-cutters. The best mechanics are Scotch. The reputation which this justly celebrated granite has achieved may be inferred from the following facts and figures: Orders have been filled for Toronto, Galt, London, Guelph, Bowmanville, and Parliament buildings, Ottawa, in Ontario; for the Lee building, Boston Evening Post Building, New York; Public building, Philadelphia; Capital Grounds, Washington; baptist church, Chicago; Central Park Bridge; San Francisco; Florida; St. John Post Office, and various other places in New Brunswick. These and smaller orders represent nearly $80,000, and yet this important industry is still a puny infant compared with what it, doubtless will be in the future. The quarries of the New Brunswick Red Granite Company are about two miles from the former, and though occupying a less extensive area the nature of the granite remains much about the same. The polishing works have recently been removed to St. John. It is needless to recapitulate a necessarily similar description of these works. There should, and probably will be, sufficient capital to carry on a highly remunerative business for both companies. The quarries of this Company are silent at present, although some thirty hands were busily employed when I was in St. John. The transportation of this granite over the Intercolonial via the Grand Southern Railway will be greatly facilitated when the latter road is completed. It will be from 75 to 80 miles in length, with its termini at St. Stephen, N.B., and St. John. The Provincial Government has given a subsidy of $5,000 per mile. It will be a narrow gauge (3 1/2 feet) and will connect at Bangor, thus making the line from Bangor to St. John some 40 miles shorter than at present. J.N. Greens, Esq., of New York, is the contractor, and when I tell you some 20 miles of road have been graded in two months, you will form some idea of its rapidity of construction. The maximum grade is 79 feet per mile. The sharpest curvature is a 717 feet radius.

The road bed seems to be built in a solid, substantial manner. There are no wooden structures, the culverts being all of granite. The principal difficulties will be the bridging of the Digdeguash and Magaguadavic, also at Popologan, Little Big, New Rivers and Musquash. The latter will be a draw bridge. It will probably be completed next fall. The advantages are that the Grand Southern will materially shorten the route to Prince Edward Island, Halifax, St. John and Bangor. The nature of the soil through which the line passes is loam and gravel, with a small portion of clay. I drove over about nine miles of it

S.J. Daily News - Dec. 15, 1876 St. George, Dec. 13. - The Bay of Fundy Red Granite Co. paid off their employees last week. It caused quite a necessary circulation of money."

St. Croix Courier - Feb. 17, 1876 The Red Beach Granite Co. are to have a space, several feet square, alloted to them in one of the centennial buildings at Philadelphia. Like all other enterprises this one, we learn, is destined to meet with opposition, a company from Vinalhaven, Me., having purchased the right to obtain granite from the property of Capt. J.W. Cook, adjoining the Red Beach Company's works. This company have their polishing mill at Vinalhaven and will ship the Granite from Red Beach in its rough state."

Daily Telegraph - Jan. 11, 1876 and St. Croix Courier - Jan. 13, 1876 Red Granite. - We have on exhibition in our office a beautiful specimen of red granite which was brought in by S.P. Bradbury. It is quarried at Red Beach, Maine, and is nearly, if not quite equal to that quarried in Aberdeen, Scotland. This specimen was sent to Mr. Bradbury by Joseph A. Lee, Esq., President of the Calais Bank, who is prominent in developing the quarry. He says their works are so near perfected that they will be ready for orders next April. - Bangor Whig & Courier."

St. Croix Courier - Jan. 13, 1876 Red Granite. - We have on exhibition in our office a beautiful specimen of red granite which was brought in by S.P. Bradbury. It is quarried at Red Beach, Maine, and is nearly, if not quite equal to that quarried in Aberdeen, Scotland. This specimen was sent to Mr. Bradbury by Joseph A. Lee, Esq., President of the Calais Bank, who is prominent in developing the quarry. He says their works are so near perfected that they will be ready for orders next April. - Bangor Whig & Courier."

Eastport Sentenil - Jan. 19, 1876 Red Beach. - While the Red Granite Co. was recently erecting an immense derrick, a defective belt broke, letting it fall, injuring it some; fortunately none of the workmen were injured. If the Company was ready to fill orders now they would have nearly a year's work ahead."

Eastport Sentenil - Jul. 5, 1876 Red Beach. - ... the Bidwell Granite Co. have commenced opening a granite quarry on the land of Capt. James W. Cook. Already buildings are being put up to accommodate the workmen; the quarry is on the same range that the Maine Red Granite Co.'s quarry is, the stone being the same superb red granite, as there is an area of about three square miles of this fine granite here and the supply probably inexhaustible, it is easy to see what the business future of this little place will be."

S.J. Daily News - Jul. 15, 1876 The New Brunswick Red Granite Company, reorganized, are carrying on business vigorously at their Polishing Works, Union street, Carleton. They are provided with the latest improvements in machinery for polishing the stone, the finish which the work receives giving the best possible proofs of its excellence. The granite, which is taken from the Company's quarries in Charlotte County, is of a fine texture, superior, it is claimed, to the granite of Aberdeen, and can be procured of any size. The Company is engaged in the business of monument and head stone-making, and have constantly employed a number of first-class workmen. The character of the work turned out, the beautiful finish which the polish gives to the work, and the cheapness of the material - all commend the granite material to public approval. Of course the Company also supply granite for building purposes, either in the rough or in the polished state. The affairs of the company are in charge of F.T. Burpee, Esq., who is energetically working its business with every

Daily Telegraph - Jul. 18, 1876 ADVERTISEMENT: Saint George Red Granite. --The undersigned is now prepared to supply Red Granite in the Rough State for Polishing or Building, as may be required. Sent to all parts of Canada and the United States. Samples sent on application to John Michael & Co. St. George, N.B., July 17, 1876"

Daily Telegraph - Jul. 19, 1876 ADVERTISEMENT: Red Granite Monuments. Polished Red Granite Monuments, Headstones, Columns, Vases, etc., supplied at moderate prices by Milne, Coutts & Co., Granite Workers, St. George. For designs and prices apply to their agents, J. & R. Milligan King's square."

St. Croix Courier - Jul. 27, 1876 Manufacturing facilities of St. George. -The red granite business, still in its short clothes, and one saw-mill in operation are all that we can claim as a manufacturing town."

Codes: G3 / IDX_Names: Granite;

St. Andrews Standard - Jun. 26, 1876 The Red Granite Quarry in this parish is one of a superior description, and worthy of a more extended notice than we can give it this week. This quarry is of recent discovery, and is situated about ten miles north of St. Andrews, on the N.B. & C. Railway, and is a continuation of the St. George belt. Its thickness at this point being about one quarter of a mile, varying in its composition, or positiveness in color, throughout the breadth of the belt. It is compact and of a fine texture, taking a very high polish, and is a stone of great strength and durability. The comparative absence of mica rendering it more easy of polish, removing all chances of disintegrating or pitting, thereby giving it a smooth and glassy surface on which the atmospheric agency can have no action for ages. Its distance from the rails, being 50 feet on a level, by a siding it can be loaded from the quarry into the cars and conveyed to a shipping port, at all seasons of the year, at less than $1 per ton. Water privileges of great extent are available for polishing and all other purposes necessary. In fact, it possesses advantages in transit over all others in this Province equal to $2 per ton, besides the advantage of daily transit throughout the year. The cost of opening up the quarry will be a mere nominal sum. The land (Freehold) is owned by J.B. Key of St. Andrews, and is a safe investment for capitalists. Its advantages and facilities, as well as its value need only to be once seen to be highly appreciated."

Eastport Sentenil - Mar. 15, 1876 Red Beach. - The granite business progresses finely; the Maine Red Granite Co. have a large crew at work quarrying and finishing up a contract. The heavy polishing machinery is nearly all in place. The winter has been very favorable for the company and their enterprise promises to be a complete success. The Hallowell Granite Co. are about to open another red granite quarry on the land of Capt. James W. Cook; a large crew is expected in April... The Red Beach Plaster co. have commenced shipping plaster for the spring trade; two cargoes have sailed and another is being loaded. All the gallant sea captains who reside here are getting their fast sailing vessels ready for the summer; after fattening up this winter, on clams, it is supposed they will make their schooners go some."

Eastport Sentenil - May 17, 1876 Red Beach. - The granite polishing mill has been running night and day for the last

Eastport Sentenil - Nov. 1, 1876 We learn from St. George that the Bay of Fundy Red Granite Company is in full operation, and turning out large quantities of fine work."

S.J. Daily News - Nov. 4, 1876 St. George. - The Bay of Fundy Red Granite Company discharged the journeymen stone-cutters in their employ on Wednesday last. They intend to keep the institution running by the apprentices this winter. There are some fine specimens of workmanship in the yard. Pay day will not be till next January. The cause of the decrease in men is owing to the fact there are not enough orders being received to warrant the employ of such a number."

St. Andrews Standard - Nov. 8, 1876 A correspondent of the Daily News says the Bay of Fundy Red Granite Company discharged the journey-men stone-cutters, last Wednesday. They intend keeping works going by the apprentices this

S.J. Daily News - Nov. 23, 1876 St. George. - The schr. Madeira is now about clearing from this port for Boston with a large quantity of lumber ... also a quantity of granite in the polished state from the Bay of Fundy Red Granite Company."

St. Andrews Standard - Oct. 11, 1876 The Bay of Fundy Red Granite Works at St. George, we learn from our correspondent, are kept busy. They recently shipped some beautiful monuments and other articles to the upper Provinces and the United States; and the works of art at present on the premises are marvels of skill and beauty. The workmen are kept busy, and orders are constantly received. He also states that there are small companies of workmen, late employees of the Granite works who have set up for themselves, and are doing a paying business. Here is evidence of the prosperity of the Town of St. George - the depot of the Grand Southern Line. It is probable that other new industries will spring up - the Parish is rich in mineral resources, which only require capital to develop them. We congratulate our friends

S.J. Daily News - Oct. 13, 1876 Bay of Fundy Red Granite Works at St. George, we learn from our correspondent, are kept busy. We congratulate our friends in that section of the county on heir prospects. - Standard."

S.J. Daily News - Oct. 23, 1876 St. George. - The Bay of Fundy Red Granite works are in active operation."

S.J. Daily News - Oct. 28, 1876 St. George. - W.J. Maxwell, who is in the employ of the Bay of Fundy Red Granite Company, had his arm broken by the falling of the crane in the quarry; several others barely escaped from being seriously

Codes: G3 / IDX_Names: Granite;

S.J. Watchman - Apr. 21, 1877 Red Granite - The New Brunswick Red Granite Co.(Mr. F.T.C. Burpee, Secretary) will hold its annual meeting at the office of the Mutual Insurance Co., St. John, Monday, May 7, at 11 a.m."

Daily Telegraph - Aug. 18, 1877 Granite for St. John. - The first ship load of granite, about 100 tons, from the new quarry recently opened by Harris & Co., Bridgetown, N.S., is now awaiting transportation on to this city."

S.J. Daily News - Jan. 18, 1877 St. George. - A large quantity of Red Granite was hauled from the works of the B.F.R.G. Co. on Monday to Roix Station. It is intended for Canada."

St. Croix Courier - Jul. 19, 1877 Annual meeting of the Bay of Fundy Red Granite Co., April 10, director selected - Hon. R.B. Stevenson, Pres. B.R. Lawrence, Treas.; Thomas Barry; C.C. Ward, Sec.; Henry Rudge; J.S. Brown, (New York); Robert Ellin, (New York)."

St. Croix Courier - Jul. 22, 1877 Bay of Fundy Red Granite Company.- At the annual meeting of the stockholders of the Bay of Fundy Red Granite Company held at the company's office, St. George, on Tuesday, the 13th inst., Jacob S. Browne, John M. Moffit, Bela R. Lawrence, Henry Rudge, Thomas Barry and Charles C. Ward, Esquires, and Hon. B.R. Stevenson were elected Directors for the ensuing year; and a vote of thanks was tendered by the Stockholders to the Board of Directors and officers of the company for their efficient management during the past year. At a subsequent meeting of the Directors, Jacob S. Browne, Esq., was elected President; Henry Rudge, Esq., Vice President; Thomas Barry, Esq., Treasurer; Charles C. Ward, Esq., Secretary. Executive Committee - Hon R.B. Stevenson, Henry Rudge and

Daily Telegraph - Jun. 6, 1877 Red granite. - The business of the Bay of Fundy Red Granite Company, under the able management of the enterprising foreman, Mr. J.N. Breed, of Boston, is prospering, and likely to increase very much in the future. Mr. Breed has recently adopted the novel process of sawing granite with chilled iron - a new discovery, with very good results. With a gang of iron saws and the aid of this chilled iron great blocks of granite are, in a few days, converted into slabs. This article also reduces the cost of polishing, as it is used instead of sand, and cuts the stone away five or six times as fast. The day is not far distant when Red Granite will drive marble entirely out of the market, and the sooner the better, for it is a perishable article, while the granite is almost indestructible. Ere long, all the monuments and tomb stones throughout the country will be made of granite, which has already superceded marble in this County, for that purpose, and will in every other county where introduced."

S.J. Daily News - May 5, 1877 Fires in the Woods. - Mr. Green, the driver of the stage between here and St. George, reported yesterday that there was a very large fire raging in the woods near the Red Granite Quarry, and another fire at

Clinch's river, Musquash. The St. George fire was only a mile distant from some valuable buildings."

Eastport Sentenil - May 9, 1877 Red Beach. - A shipment of granite was made from here on the 3d. inst., per Stm. Belle

Eastport Sentenil - Nov. 7, 1877 The Maine Red Granite Company, at Red Beach, has orders ahead for several months. They are now at work on an order for a Polished Gateway for Mt. Olivet, at Baltimore. Also for a large Sarcophagus for Greenwood cemetery, New York city. They have orders from Vermont, Ohio, Illinois, New York and San Francisco for monumental work. The Sarcophagus is an elaborate and expensive affair. - Times."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Sep. 16, 1877 The Bay of Fundy Red Granite Company.- Those who have not visited the Red Granite works of this Company, and observed for themselves, can have but a faint idea of their magnitude. For ourselves, we knew that the affairs of the Company were characterized by a considerable amount of activity, and that a good deal of granite was being polished and exported; but until a recent visit we had no idea whatever of the extent to which the quarries have been developed or of the extensive facilities which have been introduced into the polishing works for the purpose of converting the rough ashlar into shining ...?... viewed either as an article of export or as a means of providing employment for many who, especially in these dull times, could not otherwise obtain it, this Company is doing a good and profitable work, not only for its members, but for the country. The people of St. George and the surrounding country are particularly fortunate in having this large and growing enterprise located amongst them, and the circulation of money which it affords is felt to be a great advantage. Works of this kind being of local as well as of general interest, we feel that we cannot do better than furnish our readers with the history and a description of these works. The Discovery of this bed of granite is due to Mr. Chas. C. Ward, who, while prosecuting a successful business in New York as an artist, came to St. George in the summer of 1871 to spend a few weeks in that pleasant rural retreat. While out at Lake Utopia one day on a fishing excursion, he picked up what appeared to him to be a good specimen of red granite. It was this simple circumstance which led to the discovery of the mountains of red granite which have now been secured by this Company, and which in the course of its operations are destined to add hundreds of thousands of dollars to the material wealth of this province. Mr. Ward took his specimen to New York, had it polished, and found that his anticipations as to its value were more than realized. He at once secured the land and set about the formation of a company. The quarries are situated about two miles up the Magaguadavic River from St. George and comprise fifteen hundred acres of solid granite. It is nearly surrounded by water, having Lake Utopia on one side, and the Magaguadavic with the natural canal connecting the river and the lake on the others. Extensive openings have been made in the mountain and a large surface is now presented for the operations of the quarrymen. The position of the deposit seems to have resulted from an upheaval at some remote period of the world's history. It stands in huge blocks, the seams running perpendicularly. These blocks are from three to ten feet thick and can be got out in any length required. Blocks have been quarried forty feet long, but this is by no means a limit as regards length. The granite is got out by drilling and the use of blasting powder. A hundred and fifty to two hundred tons are sometimes forced out at one shot. We saw at the quarries some splendid blocks sixteen feet long by three feet six inches square. These blocks are moved about by immense derricks as though they were no heavier than a feather. Exhaustless as the everlasting hills, these mountains possess the coveted material in sufficient quantity to supply the world with red granite for countless ages to come. After being quarried the granite is cut into dimensions and hauled a distance of five or six hundred yards on immense trucks to a wharf whence it is floated down on the river on scows to the polishing works where it is discharged on the Company's wharves by means of heavy cranes, similar to those used in the quarries. The Polishing Works are situated at the lower falls, from which the necessary water power is derived. The Company has purchased the power, together with an ample area of land adjacent to it, to afford facilities for a stone yard and the extension of the works as occasion may require. The building is in the form of the letter U, its total length being 620 feet. The open space is filled with granite in all stages of advancement, from the rough block to the highly polished column, capital or monument. In this area there is a stock of this description on hand constantly to the value of thirty or forty thousand dollars. The building on one side is devoted to the stone cutting shops and the offices of the Company, and on the other to the machinery, which comprises about twenty-five machines of various kinds. We first come to the lathes, of which there are eight, three of them very large and one of them capable of turning a column three feet in diameter or tens tons in weight. The turning is done by means of iron blocks (the side next the granite being in the form of the segment of a circle) and sharp sand and water. avery suitable description of sand is obtained at New River. After the sanding process emery is next used, and lastly putty and polishing felt which imparts to the granite that beautiful glassy appearance with which all are familiar. This last process reminds one of the operation of cleaning silver by the use of silver soap. Before putting the pillars into the lathes they are cut perfectly round by the stone cutters. After this is done the polishing occupies four or five days of steady turning. Lathes have been made to turn the stone from rough block, but this stuns the stone and injures its color. For red granite, therefore, this style of lathe has been abandoned. We next come to four polishing cars. These are for polishing plain surfaces; they travel backward and forward on rails under two rapidly revolving spindles furnished with polishing rings, by means of which the granite is ground down and polished by the use of the same agents as described in the turning process. These polishing cars turn out about 200 superficial feet of polished surface in a week. Next there are six pendulums chiefly used for polishing mouldings and four vertical machines for small work. In one part of the building we observed a large circular revolving machine for polishing circles, circular mouldings and like kind of work.

At the time of our visit there was a large circular stone in it being prepared for the fountain on the White House grounds, Washington, weighing 4 1/2 tons, which was spinning around like a boy's top. There is a large tank under the building which is supplied from the river by means of a pump. This tank furnishes the works with water and is also a means of protection against fire. Gas for the use of the works is manufactured on the premises, and the works are kept in operation every week night, Saturday excepted until 12 o'clock. Shops.- There is a carpenter's shop in one end of the building where the boxes are made in which the granite is packed for transportation; also patterns for the stone cutters to work from. There is also a blacksmith shop in which five men are constantly employed in the sharpening of tools, etc. A foundry is in course of erection, which will be a great convenience, there being a large amount of casting needed in connection with the business. Progress of the work.- The first column was polished a year ago last February, but there is now double the machinery there was then, the works having been enlarged last winter. Since January of the present year, there has been turned out about $60,000 worth of finished work. The Markets.- ...?... thus far are Washington, Philadelphia, New York, Chicago, Ohio, Montreal, Toronto, etc., and orders have been received even from California. Present Orders.- The Company is at present preparing an extensive order for White House improvements in Washington. First there are two flower stands, rectangular in form, (which are being got out in sections) 40 feet long and 30 feet wide with a circle inside. These stand 2 ft. 6 in. high and contain about eighty tons each. These were being boxed at the time of our visit, and in design and finish presented a most beautiful appearance. There are also lamp posts in sections with ornamental bases and capitals, for the same work. There is also an order in course of execution for the Philadelphia Public Buildings, viz: six large pedestals 5 ft 3 in. high by 4 ft. square and bases with heavy mouldings on the four sides; also ten half and four quarter pedestals and round columns 9 ft. 5 in. long and 3 ft. diameter. For the New York Dime Savings Bank there is being prepared a splendid lot of columns seventeen in number 10 ft. 6 in. in length and 1 ft. 10 in. in diameter. The monument for the late John Worthington; recently shipped to Toronto, is said to be the finest on the continent. It stands 30 feet high with heavy moulded base and capital, and weighs ten tons. The Company.- To carry on this work the Company's Charter authorizes it to issue stock to the amount of $500,000, divided into shares of $100 each. It has not been found necessary, however, to issue the full amount of the authorised stock. About $200,000 have been taken up, and we understand that although constant application is made for stock there is none in the market. The officers of the Company at present are Jacob S. Browne, President; Henry Rudge, Vice Pres.; Jno. M. Moffatt, C.C. Ward, Thos. Barry, B.R. Stevenson, B.R. Lawrence. Directors; C.C. Ward, Secretary; Thos. Barry, Treasurer; Henry Rudge, Manager. As an immigration agency the granite works have been useful, having brought out as many as fifty skilled workmen and their families from Scotland. The Company gives employment to over a hundred men at present, 24 being regularly at work at the quarry and 80 at the works. The amount of cash paid out monthly for wages alone averages $4000. There is no doubt that St. George will become the centre of the granite business, as the quality of the granite is unequalled. The mixture of the colors and the deepness of the red combine to give it a most beautiful appearance. It is universally acknowledged to be by far ahead of the well known Peterhead granite, and in fact, experts pronounce it to be the best in the world. It is almost impossible to conceive the magnitude to which these works may attain in the future. If they have done such great things in their

Eastport Sentenil - Jan. 30, 1878 Red Beach. - The Granite Company are still shipping polished granite. Sloop Dolphin, Capt. Rocney, loaded with granite went ashore in the blow of Wednesday night, but was got off without damage."

Daily Telegraph - Mar. 13, 1878 S.J. Circuit Court: New Docket - 6. Kay et al vs N.B. Red Granite Co. - E. McLeod"

Morning Freeman - Mar. 25, 1878 The Bay of Fundy Red Granite Works are in full operation again. The prospects of the stone business during the coming summer are good."

Daily Telegraph - May 4, 1878 Red Granite Works at St. George. -A correspondent writes:-I recently had the pleasure of visiting the Red Granite Monumental Works of Messrs. Milne, Coutts & Co., at St. George, which I found running in full blast. Upon approaching the premises the sharp sound of the hammer from the cutter's shed greeted the ear, while the low buzzing sound proceeding from the polishing mill told the visitors that the machinery too was doing its work. You enter and beheld a bee-hive of industry within, all moving with the regularity of clock-work. This firm is composed of a number of practical and efficient granite workers from Aberdeen, Scotland who came to this country about three years ago and established a business here on a sound financial basis, which is now in a very thriving condition and daily increasing in volume. The secret of their success is this:- 1st. They are all efficient, practical workmen and thoroughly understand the business in all its branches and carefully attends to all its details. 2nd. They employ none but thorough, first-class workmen. 3rd. They will not, under any circumstances, permit any work to be sent out that will not reflect credit upon their establishment. We noticed among the many handsome monuments, at the works, a heavy and very elaborate one for Ontario. Another, of beautiful color and design, for T.R. Black, Esq., of Amherst. A very pretty little one for Messrs. S. & J.E. Fairweather, Hampton; also, partially completed, a very neat and tasty Gothic design for N.M. Crosby, Esq., of Yarmouth. A really handsome cottage monument, for L.B. Wyman, Esq., of the same place; and a very unique design of child's monument, with column and urn, for David Douglas, of Amherst. r. Milne, informed me that they were putting in more new machinery, and would have to run the mill night and day, in order to fill all the orders already on hand by the first of July. We are glad to see that their enterprise is meeting with success, and we bespeak for them a large and extensive business."

S.J. Daily Telegraph - Nov. 29, 1878 Circuit Court. - In the case of Kay et al. vs.The N.B. Red Granite co., reported in this morning's Telegraph His Honor this morning granted the motion of Mr. Weldon."

St. Croix Courier - Oct. 17, 1878 New granite polishing works at St. George.- Mr.J. Newton Breed has erected New Granite polishing works at St. George within the last three months, and last week shipped forty tons of polished stone to St. John. Mr. Breed possesses the knowledge, industry and perseverance requisite to carry this business forward and we cordially wish him the fullest success."

Morning Freeman - Oct. 17, 1878 New granite polishing works at St. George.- Mr.J. Newton Breed has erected New Granite polishing works at St. George within the last three months, and last week shipped forty tons of polished stone to St. John. - Courier"

St. Croix Courier - Sep. 12, 1878 Red Granite for Scotland.- A handsome Red Granite tablet has been shipped this week from Mr. Rudge's stone works, in this place, by John Taylor, Esq., of Harvey Station, for a family monument in Inverarity, Scotland. We have seen this tablet which is from the St. George's quarries. It is pronounced by experts to be as good a specimen of the products of our quarries as has yet been turned out so far as the quality of the stone is concerned, and we may add the workmanship. We venture to say, that with the deep rich red shade which it possesses naturally and the fine finish which it takes that it will eclipse the beauty of the famous Peterhead granite, beside some of which we understand it will be placed. It was recently noticed in the Courier that enquiries had been made about getting a base for Cleopatra's Needle from our quarries."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - Apr. 18, 1879 St. George. - Red Granite. - Times are somewhat flat here just now, and were it not for the red granite industry, which seems to flourish, would be dull indeed. The N.P. is rather against the interest, as the 10 per cent duty on steel, used in cutting the stone, more than overbalances the additional 2 1/2 per cent protection. The best market for red granite, however, is not at home, but in the United States."

Daily Telegraph - Aug. 1, 1879 St. George Granite for Chicago. - Mr. J. Newton Breed, of St. George, shipped last week by rail for Chicago, two polished red granite pillars, weighing five tons each."

Bay Pilot - Aug. 28, 1879...The M.R. Granite Co. have been spiking a large quantity of granite lately..."

S.J. Globe - Dec. 9, 1879 The Granite Industry is thriving and no doubt will increase and develop every day. Much inconvenience and expense is entailed in forwarding stone, both polished and rough, owing to the lack of facilities for transportation. Manufacturers are compelled to hold over finished work sometimes for two or three weeks until an opportunity for shipment presents itself. The same inconvenience attends the importation to St. George of the grey and blue granite from Spoon Island quarry. Parties ordering grumble at the delay as well as the manufacturers, but just at present there is no help for it. When the Grand Southern is opened for traffic and only then will the existing evil be remedied. Much enterprise is manifested by the different concerns in the granite business, near and among them all harmony and good feeling prevails. Messrs. Farquharson, Traill & Co. have recently leased the premises, plant, &c., of the defunct Bay of Fundy Red Granite Company, and with increased and very complete arrangements can and will do a large amount of work. They are energetic, painstaking and practical men, and are well versed in every department of their business. The same remark may be made concerning all the other concerns here, viz., Mr. J. Newton Breed, Messrs. O'Neill & Co., Messrs. Coutts & Co., Messrs. Black & Taylor, &c. It is not easy, nor is it intended to particularize where so much general excellence and so much individual qualification, tending to business success, exists. The lettering can now be done in gold and silver, as may be required, and either has a very nice effect on the red granite."

Daily News - Dec. 18, 1879 The St. George Red Granite Establishment. - The first place honored with a call was the somewhat extensive works belonging to the St. George Red Granite Company. Sir Leonard was warmly welcomed by Fred T.C. Burpee, Esq., manager, and cordial greetings were exchanged between the President of the Company, Moses Lawrence, Esq., and the Minister of Finance, the latter afterwards being conducted through the various apartments. As in other places, Sir Leonard's almost inexhaustible knowledge showed forth as well in this comparatively new business as in some of the common ones. The various machines were all working, from the huge lath, which was used for taking off the rough and superfluous part of the stone, to that of the dimunitive machine, required for polishing and giving the finishing touches, and the different processes, were nevertheless very interesting, and the highly polished vases, building stone, etc., produced were very creditable to the company engaged in this business. The machinery is all of the most expensive kind, having to be brought from London. There is a huge wheel which the company lately got from the Old Country at a cost of nearly $5,000, of which there is not another in this country. The quarries at St. George cover an extent of ground one and a half mile square and are 400 feet in height, where four different shades of the red granite are turned out. Whilst the party were in progress through the buildings, Isaac Olive, John Coram and John McLeod, Esqrs., dropped in and had brief conversations with Sir Leonard. Mr. Burpee is decidedly favorably inclined to the National Policy, although it has little or no effect on the business which he manages, saying that he finds it is the means of steadying trade in all its branches. They do no canvassing always having enough orders ahead to keep them running. They have now about $1,200 worth to do before the first of January. Although the business is as yet quite young, still it has assumed vast proportions and is still growing rapidly."

S.J. Daily Telegraph - Jul. 5, 1879 St. George Red Granite for Chicago. - There will shortly be shipped from Mr. Breed's works, St. George, for the new Music Hall, Chicago, two immense columns of red granite. They are 15 feet long by 2 1/2 feet diameter and weigh 5 1/4 tons each. They must require careful handling. We are glad to see such work done in our Province for a foreign market. We put the item on record and hope soon to see it doing duty in the Conservative press as illustrating the hum of business produced by the National Policy."

Daily Telegraph - Jul. 7, 1879 ADVERTISEMENT: Polished Granite Monuments, Tablets, Tombstones, Vaults, Ledgers, Headstones and Building Work. In Ruby Red, Scotch Red, Salmon Color, Brown Grey or Blue Grey. Send plans direct to the Manufacturer for estimate, or write about what priced Monument you wish to buy, and I will send you Original Designs of as good Monuments as can be made for the money. Remember, the expenses of the travelling salesman add more than one half to the original cost of the Monument. Sawn slabs, one inch thick and, upwards, and Turned columns, a specialty. Orders will be executed promptly. Colors well matched and in good workmanlike manner. Address J. Newton Breed, St. George, New Brunswick."

Codes: G3 / IDX_Names: Granite;

Bay Pilot - Jul. 17, 1879 We had the pleasure recently of visiting the workshops of Messrs. Milne, Coutts & Co., and of Black & Taylor, which are in the same building, situated on the Gully at Saint George. These firms are engaged in the manufacture of Red Granite Monuments, and for Building work, for which they are constantly receiving orders from different parts of the Dominion, and the United States, in the latter market notwithstanding the duties levied to protect that industry there, they are from the superior quality of the St. George Red Granite, and their facilities for manufacturing cheaply, able successfully to compete. In both establishments some twenty-two hands are at work, and they have orders for months ahead. As the members of the respective firms are working men, and having no secretaries or other supernumaries to pay, they can supply articles in their line of superior workmanship, at moderate rates."

S.J. Daily News - Jul. 18, 1879 Drowning accident. - William Forsyth, the son and only child of Mr. Stephen Forsyth, manager of the St. John Granite Quarry, was drowned in the Magaguadavic river on Wednesday afternoon. His body was recovered about two hours after the accident occurred."

Bay Pilot - Jul. 24, 1879 ...Mr. Stephen Forsyth, manager of the St. John Red Granite Quarry..."

Bay Pilot - Jul. 24, 1879 The Tablet of St. George granite sent to Scotland last year by John Taylor, Esq., of Harvey Settlement, which was noticed in the Courier at the time, was erected in the cemetery at Dundee on the 4th of June. The Dundee Advertiser copies our description, and expatiates upon the beauty of the granite which far exceeds the famous red granite of Peterhead.- Courier"

Eastport Sentenil - May 2, 1879 Quarrymen and stone cutters are in demand in Biddeford. The stone business is increasing rapidly. Large contracts have been taken by Biddeford parties, prominent among whom are Capt. Ira Andrews and Capt. J.M. Andrews, and they say they have been unable to procure a sufficient number of men to do the work."

St. Andrews Standard - May 7, 1879 The Bay of Fundy Granite Works have been sold and it is reported our neighbors over the line. have the largest interest in the present company."

S.J. Daily Sun - May 12, 1879 Bay of Fundy Granite.- A handsome monument, the shaft of which is composed of polished Bay of Fundy red granite, was extracted on Easter Sunday in Mount Auburn cemetery, near Boston, over the grave of the Hon. Edward Everett. The beauty of the stone is attracting much attention there."

St. Croix Courier - May 28, 1879 The Maine Red Granite Co. are about to construct a large scow to serve as a kind of floating wharf for the purpose of enabling the steamer to take in and discharge freight for the company at any time of tide. The enterprise that is being shown by the Maine Red Granite Co. certainly indicates that business is on the increase or in expectation. The price list of the company has been reduced from time to time so that now they can compete with any concern in the country, while the superiority of their granite and workmanship is universally admitted. The business now promises to be one of important interest to this entire section, for which too much praise cannot be accorded to those enterprising gentlemen who have invested their money, and more especially to those who are conducting the enterprise."

S.J. Daily Sun - Nov. 7, 1879 St. George Granite Works. - The granite works at St. George are running day and night at present, having such large orders that the employment of additional help has been necessitated as well as night work."

Bay Pilot - Nov. 13, 1879 The beautiful Red Granite monument in memory of the late good Rev. Father Vereker erected in the Catholic Cemetery last week, was manufactured at Saint George, by the enterprising young native firm of John O'Neill & Co. For quality of workmanship, elegance of design, and beauty of finish, the monument is all that could be desired, and proves that native talent when cultivated is equal to that of any other country. Persons requiring monuments would do well to give this firm a trial."

Moncton Daily Times - Nov. 14, 1879 A Handsome Monument. - Mr. Jas. McGrath, Dorchester, is finishing a very handsome monument for the Dunlap estate, Moncton, to stand 14 feet high, to be built of Italian marble. The face of the tablet portion is elaborately carved with ivy and water lilies. The bottom vase is of polished grey granite from St. George. When completed it will be a fine specimen of art."

Bay Pilot - Oct. 9, 1879 St. Croix Marble Works. - Mr. Samuel Almond's marble works are in first rate running order, as any one who calls at his establishment in St. Stephen and Calais may see. His stock on hand is now very large, consisting principally of Marbles and marbleised slate mantles, which will compare favorably with anything in the country. These are furnished with grates and frames and also with hearths of polished steel. In the monument business he has a full line of headstones and monuments in marble and red granite. Mr. Almond is one of our most enterprising men and we are glad to witness the success which he is achieving in this line. - Courier."

Codes: G3 / IDX_Names: Granite;
Moncton Daily Times - Oct. 25, 1879 The largest block of granite ever quarried in New England has been taken out at Woodbury, Vt. It was 230 feet long, 13 to 18 feet deep, 15 feet wide, weighed 4,080 tons, and required 673 wedges with 50 lbs. of powder to start it."

S.J. Globe - Aug. 16, 1880 The Red Granite Works, in Carleton, are doing a flourishing and increasing business. Mr. Willett, formerly of the firm Willett & Watters, contractors, who did considerable building in St. John after the fire, is here from New York contracting with the granite company to supply the New York market with their article."

Daily Telegraph - Aug. 16, 1880 A Boom in the Stone Works, Carleton. - The New Brunswick Red Granite Works, Carleton, are exhibiting signs of increasing activity. Since the commencement of the year some ten hands have been kept constantly employed, but the staff has lately been increased to almost double that number. The company has added further facilities for their work. They have purchased teams of their own and are not dependent on the services of others, which was the case a short time ago, and it caused considerable inconvenience. It is said that the number of orders now on hand will keep the men constantly employed for several months. Pilasters, columns and monuments, are the principal work in which the men are at present engaged. The market is mainly a foreign one."

St. Croix Courier - Aug. 26, 1880 The granite quarries in operation at St. George, have large orders on hand and are short of workmen. The completion of the Grand Southern Railroad will give a still greater impetus to the demand for this far famed granite."

Daily Telegraph - Aug. 27, 1880 The granite quarries in operation at St. George have large orders on hand and are short of workmen. The completion of the Grand Southern Railroad will give a still greater impetus to the demand for this far famed granite. - Courier."

St. Croix Courier - Dec. 9, 1880 The first shipment over the Grand Southern Railway to St. Stephen, was six massive polished granite columns and four plinths from the Bay of Fundy Granite Co., St. George, in transitu to New York. Now that St. George has Railroad communication with the world, the granite quarries there will spring into activity and development and become valuable. As the St. George granite cannot be eclipsed, or even equalled by any other and there is a great demand for it for many purposes, not only in the States but in different parts of the Dominion."

Moncton Daily Times - Dec. 11, 1880 St. Stephen. - The first shipment over the Grand Southern Railway to St. Stephen, was six massive polished granite columns and four plinths from the Bay of Fundy Granite Co., St. George, in transit to

St. Croix Courier - Dec. 16, 1880 The six granite columns sent from St. George lastweek were shipped by Mr. Alexander Taylor, from his works in St. George, not by the Bay of Fundy Company as erroneously stated. They were manufactured by Mr. Taylor for the N.Y. Stock Exchange, and are part of a large order which he is at present employed in filling."

Bay Pilot - Dec. 23, 1880 The six granite columns sent from St. George lastweek over the Grand Southern Railway, were shipped by Mr. Alexander Taylor, from his works in St. George, were manufactured by Mr. Taylor for the N.Y. Stock Exchange, and are part of a large order which he is at present employed in filling."

Estimates given and orders solicited. All work sold at the lowest

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - May 3, 1880 Red Granite Works. - The works of the New Brunswick Red Granite Company. - A visit to the works of the New Brunswick Red Granite Company, on Union street, Carleton, will amply repay those who are in any way interested in home industries and manufactories and their progress and welfare. They will then be enabled to observe for themselves what New Brunswick talent and enterprise can do, and also what perseverance and business tact and judgment have accomplished in a few years. This establishment, now of no small proportions, has been slowly, but steadily and surely, increasing the amount of its business and the size of its premises since its organization, and it is now on a firm and substantial basis, doing a thriving and paying business, and takes rank among the principal industries of this City and Province. The works are situated on the western side of Union Street, Carleton, near the railway crossing, and consist of a long, one story building, containing polishing machinery of various kinds, driven by steam, with a small ell jutting out near the western end, in which are located the engine and boilers supplying the motive power. Back of this ell, or in the western end of the building first mentioned, is the turning room, where the heavy building and monumental work is turned, after coming from the stone cutter's hands, in a manner very much the same as wood or iron is turned on a lathe, and made ready for the hands of the polishers and the polishing machines. Opposite this building, at the western end, is the blacksmith shop; and parallel with it (the building first named) is a similar, though slightly smaller, structure, where the stone cutters work. It is a spacious and well-lighted building, adapted in every way for the work to be done; and contains the business office of the Co. Between these two buildings is a roomy stone yard, and a large and powerful crane for moving and removing the heavier blocks of stone from the yard and stone cutting department into the polishing shop. Principal Markets. - A Sun reporter visited the establishment on Thursday afternoon and found Mr. F.T.G. Burpee, the courteous and obliging manager of the works, in the office. Mr. Burpee, asked our reporter, how do you find business? Mr. B. - We have plenty to do at present, and have always had since we started business. Reporter. - Where do you principally send your work? Mr. B. - Ontario, Michigan and Illinois are the places to which we send most of our work, or rather receive most of our orders from. We are getting a good many orders from Chicago now. We do not do much in New Brunswick. It does not take one day in a month to do the work we receive orders for in New Brunswick. Rep. - Have you sent any work to New York? Mr. B. - We have done a good deal there, and have sent on some remarkably fine specimens of work. We put some beautiful work in the new State House at Albany, New York. Rep. - Is your work principally building or monumental? Mr. B. - It is chiefly monumental work. Superior to Scotch Granite. - The conversation then turned upon the red granite and its quality, and in reply to questions Mr. Burpee said:- The stone is good; there is no question about its excellence of quality. Even the most bigotted Scotch workmen and other experienced workmen who have been in our employ say it is superior to the Scotch stone. The Ontario dealers with whom we have done business express the same opinion, and it has been admitted by unpredujiced judges also to be superior. In the Scotch granite there is a black or coal spot, which is quite soft, and it has also a bright mica-like spot, which can be easily removed in a flake by the point of a jackknife. These spots rot out very soon in a hot dun and on exposure to bad weather. Now our granite is of a more flint-like nature. The light spots in our granite are somewhat similar to the mica spots in the Scotch, with the exception that in ours the light spot is a hard flinty substance and almost as transparent as glass. Try it, and you will see that you can not pick it out with the point of a knife. Rep. - Does your granite come entirely from St. George? Mr. B. - All our red granite comes from St. George; it is the best and only place to get it. Our grey stone comes from Spoon Island, Queen's County. The red granite is used principally in filling our orders, but we are doing considerable in the grey stone at present. The Queen's County grey granite is a very good stone. Rep. - Have you found an increase in your business? Mr. B. - We have experienced a steady increase in our business since we started. We have never solicited orders yet, nor had a traveller out; the orders have all come in by mail and we have plenty to do. We furnish employment at present for between 55 and 60 hands. I am satisfied that there is going to be a large business done in the Province in this line. There is no reason when Aberdeen supplies millions of dollars of stone yearly, that we in this Province, with a very much better and more durable quality of stone, should not come in for a large portion, or at least a share of this trade. Turning and Sawing. - After some further conversation Mr. Burpee escorted our reporter to the turning department. Here he introduced our representative to and put him in charge of Mr. John Sleeth, the foreman of the establishment and an old and experienced worker in stone, who conducted him through the various departments and explained the working and process of each in a plain and practicable manner. In the turning shop one of a pair of large columns, each 13 feet 6 inches long and 22 inches in diameter, was being turned on a large lathe, the cutters taking off the superfluous stone with a grinding sound and reducing the column to the proper proportion, when it is ready for the polishing machine, somewhat rough, it is true, but in an admirable condition for receiving a polish. This machinery is all new and of the most improved style. Formerly the work was done by hand, but by the present method the same amount of work is performed in one-tenth of the time. In this department there was another and a smaller lathe engaged on some monumental work. The company has done considerable in these columns and two months ago sent away to the States 46 columns in of various size, some of them being as large as 9 feet long and 20 inches in diameter. The sawing machine, in the western end of the polishing department, is a most interesting piece of machinery, capable of cutting about 1,300 feet of stone per month. Fine chilled shot, about the size of hay seed in grain, is used in sawing, with plenty of water, and the machine cuts down into a stone about three inches an hour. The saws are made of ordinary iron; and the chilled shot, while in use and commingled with water and the cuttings of the stone resembles a thick paste. This machine cuts truly and evenly and leaves an excellent surface for polishing. In the polishing department the mate of the large column seen in the turning shop was being polished. Suspended on spindles and made to revolve rapidly, the symmetrical column was being put through the first stage of polishing - that is with sand and water, with a polishing block resting on top. The first process of polishing is with water and sand, and this is continued until the tool-stumbles or marks of the cutting instrument are effectually effaced. The emery is then applied which brings on the skin of the polish; and after this process thick felt and a polishing powder are applied, and a beautiful and enduring gloss is effected. The other polishing machinery is also of an interesting nature. There are three large cars which are used for polishing large flat surfaces. The pieces of stone are placed on the cars, securely fastened and levelled, and the interstices between any of the pieces are filled up with Plaster of Paris, so that one unbroken surface is exposed to the action of the polishing discs. These cars are three in number and are supplied with three discs each, with the exception of one, which has four. The same process of polishing as regards the material used, is observed. These discs, loaded with large iron rings, to the weight of about 1,200 pounds, rest on the surface to be polished and are set revolving by machinery. The car at the same time moves backward and forward on a track on which it rests, and thus the whole surface is evenly and regularly gone over. When it comes to the final polish with the powder and felt, less weight is put on, and this last process only consumes about two hours time. The emery really puts the polish on, but only a thin skin, which is thickened and the gloss brought out with the heat by the use of the felt and polishing powder. In working marble, acid is used in bringing on a gloss, but in this establishment it is only used for washing off the dirt. It is of no use on red granite. An acid polish wears off in a year or so, when exposed to inclement weather, but a friction polish remains for all time, and it is not disturbed to any extent by even fire. The body of the stone may be softened and destroyed by the fire, but the polish will peel off and remain intact. In the eastern end of the building some finer grades of polishing were being done. In polishing mouldings, etc., pendulums are used, and single revolving discs are used in polishing small flat surfaces. Monuments. - In the yard there were some very fine specimens of shafts for monuments, which had just been cut, and in the stone cutting department, where a number of men were busily engaged, some elegant and artistic specimens of work were under way. Noticeable among them was a shapely draped urn to cap a monument, in red granite,

S.J. Daily Sun - Oct. 5, 1880 Red Granite Works. - The New Brunswick Red Granite Co. have now some 55 men employed at their works in Carleton. They make all kinds of monuments and building work, such as columns, &c. They run their machinery with a 70 horse-power engine. They have three carriages for polishing plain surfaces and eight pair of pendulums for polishing mouldings. They have twelve lathes for polishing columns and six verticals for polishing small work. They have also two cutting lathes for cutting columns and round mouldings of all descriptions, and two gangs of saws. They use red granite mainly, but the demand for grey is increasing. They send most of their goods to Ontario but a great deal goes to the other Provinces and to the United States. The increase in this business has been really wonderful, and there can be no doubt it will reach much larger dimensions in the course of a year or two. The capacity of the works is to be increased immediately, as at present the company cannot fill their orders."

Daily Telegraph - Sep. 29, 1880 Red Granite from Westfield. - Mr. James McCorkill, we are informed, is the fortunate discoverer and possessor of a mountain of a very valuable red granite upon his farm on the Nerepis stream, within a mile-and-half of Welsford Station. A small specimen of granite from Mr. McCorkill's premises is entered for the Provincial Exhibition. It is in the form of a pedestal, two feet high by eight inches square at the base, one side being finished to show the very fine polish it is capable of receiving."

S.J. Globe - Apr. 21, 1881 In the red granite business rapid strides are being made and work is now done that a few years since it was generally believed, could only be wrought in softer stone. Last week the works of Messrs. Farquharson, Traill & Co. were thrown open to the public in order that all might have an opportunity to see a magnificent monument which has just been completed by this enterprising firm. Such a description of this work as would do it justice, or present it fairly before your readers, would seem a well nigh impossible task. As it appeared in the yard the monument was truly striking, not only on account of the superior character of the workmanship. but because of the unusual design as well. It is Gothic in style, and massive, There are two highly polished red granite bases, on the upper one of which are appropriate monograms represented with the passion flower intertwined and in relief - one on each side of this base. The bases are equilateral. The first one is 13 ft. 7 in. on each side. The second base is 4 feet in length on each side, and they are respectively 1 ft. 2 in. and 1 ft 8 in in depth. On the first base rests the die, 2 ft 10 in square. In the die and bottom of the cap are recesses for marble tablets, while at each corner of the die is a granite column, semi-detached, connected at the capitals and bases with the original stone - all beautifully polished. Surmounting the die is the cap in pyramidal form, 3 ft x 3 ft 2 in, the whole surmounted by a double cross 2 feet 6 inches high, 1 ft 6 inches square and 1 ft 2 in across. The weight of the monument as it stood in the yard is about seven tons and a half and represents equal to the labour of four men for six months. It is of a uniform deep, rich red colour, and is most highly polished throughout, except in the recesses of the die and around the monograms. This fine monument was designed by Stephen C. Earle, Esq., architect of Pemberton Square, Boston - a leading architect of that city. It has been ordered by Hon. W.E. Rice, of Worcester, to be placed in the Rural Cemetery of that City, in memory of his wife. It will be forwarded from here to Saint Stephen by water, thence by special car to its destination. While in the works your correspondent was shown several other designs for monuments, ordered from this firm - notably one for West Virginia, which will stand 39 feet 4 « inches high. The workmanship exhibited on the Worcester monument certainly entitles Messrs. Farquharson, Traill & Co. to the credit of producing work from their yard second to no other granite cutting establishment in the Province, or Dominion, and they may justly feel proud of their skill manifested in this their perhaps greatest and most elaborate monument, every detail being carried out with the greatest care. The firm comprises men of particular energy. Each member of the firm is a thoroughly practical man - their work is of a very high order of excellence, they are most courteous and attentive to visitors, and as they now occupy the extensive premises of the late Bay of Fundy Red Granite Co., containing all the facilities, there is every reason to believe they will succeed, even beyond their most sanguine expectations. Such work as they have just turned out, and which I have attempted to describe, must rebound to their benefit and fame, securing for them, and this town as well, the most satisfactory results. That it may be so is the wish of Yours, &c. X St. George, N.B., April 18, 1881."

Bay Pilot - Apr. 21, 1881 St. George Items. - Messrs. Farquharson, Traill & Co., manufacturers of carved and polished Granite work, last week exhibited at their works in St. George, a magnificent specimen of their art, in the form of a monument, made from designs furnished by Stephen Earle, architect, Boston, for W.G. Rice, president and treasurerof the wire works, Worcester, Mass. The design is Gothic, the four fronts stand relieved, the corners recede, space being left in the dies and caps for the insertion of marble tablets, the columns, caps and bases are cut upon die blocks with a foliated design round the second base, and stands fourteen feet high. The design is very chaste and the workmanship in every detail is of a high order of merit, the polish and finish being exceptionally fine, proving that Farquharson, Traill & Co., are first-class workmen able to turn out monuments that they need not fear to place in competition with any elsewhere made. We are glad to be able to state that this firm is getting a large share of patronage, and we can confidently recommend

Codes: G3 / IDX_Names: Granite;

S.J. Globe - Aug. 13, 1881 Legal.- The case of H.L. Sturdee vs. St. George Red Granite Co. was continued before Judge Watters this morning, and was further adjourned till Friday next."

S.J. Globe - Aug. 13, 1881 Legal. - This morning Judge Watters was engaged in taking evidence on a claim of H.L. Sturdee, Esq., against the insolvent estate of the St. George Red Granite Co., which is being contested by the Assignee and inspectors of the estate. Messrs. Geo. E. Fairweather and A.A. Stockton appear on behalf of the estate, and Messrs. Sturdee and Frith for the claimant. The further hearing of the matter was adjourned at one o'clock till tomorrow morning."

S.J. Globe - Aug. 20, 1881 and Moncton Daily Times - Aug. 22, 1881 and Weekly Freeman - Sep. 3, 1881 The Largest Stone Ever Quarried in the Dominion.- Mr. H. Walton quarried at his granite quarries, Spoon Island, Queens Co., a block of granite, measuring 65 feet in length, 20 feet wide and 11 feet thick, apparently without a flaw. The granite is of the mottled gray and black, and is considered equal to the Aberdeen granite. It weighed 1101 3/4 tons."

S.J. Daily Telegraph - Aug. 22, 1881 A Large Stone. - Mr. H. Walton has taken out of his granite quarries, Spoon Island, Queens Co., a block of granite measuring 65 feet in length, 20 feet wide, 11 feet thick, apparently without a flaw. It weighed 1,101 3/4 tons."

Chignecto Post - Aug. 25, 1881 At the quarries on Spoon Island, Queen's County,a block of granite measuring 65 feet in length, 20 feet wide, and 10 feet thick, and apparently without a flaw, has been quarried. This is the largest stone ever quarried in the Dominion, it is claimed."

S.J. Daily Sun - Dec. 22, 1881 The Carleton Granite Works are doing an extensive business at present, giving employment to an unusually large number of hands. To meet pressing demands the company are making preparations to erect additional workshops."

St. Croix Courier - Jul. 7, 1881 The granite quarry at the Ledge, which is being operated by the contractor for the erection of the Cotton Mill, is pronounced one of the best on the Continent."

S.J. Daily Sun - Jul. 26, 1881 Saint John exports: (For July 25th) - Per stmr. City of Portland, to Boston - includes 10 bxs. granite."

Bay Pilot - Jun. 23, 1881 The quarrying of stone at the Devil's Head(Maine?) for the foundation of the cotton mill has been abandoned, the stone was shakey, and besides was liable to pay duty at the rate of one dollar per ton. Quarries have been opened at the Ledge, Charlotte Co., N.B. A derrick has been erected on a wharf at the Ledge to facilitate the loading of the stone into scows."

S.J. Daily Sun - Mar. 9, 1881 At the present time large quantities of red granite from St. George are being shipped over the Inter- Colonial to the Upper Provinces. Great expense is occasioned, however, in hauling the stone from the vessel or railway terminus, Carleton, to the freight shed, which would be saved were a bridge erected across the river, with railway connexion skirting the wharves."

Fredericton Capital - Mar. 31, 1881 Red Granite.- The red granite which is worked at St. George, in this Province, is of that variety which is called syenite, from Syene, in upper Egypt, where a similar rock was quarried by the ancient Egyptians. Syenite differs from true granite in the fact that the mica of the latter is replaced by a mineral called hornblende. It was for a long time thought that the red granite of New Brunswick was confined to a small extent of country, commencing a few miles north of St. George, and constituting the high ridges which bound either side of the Magaguadavic from the Canal to a point near the upper Mills. Further observation has discovered red granite, however, near Welsford, on the Saint John and Maine Railway, and boulders of it may be seen from the cars lying in the brook less than a quarter of a mile north of the station; it also occurs extensively near Pokiok in this county. In Nova Scotia it is found in great extent near Englishtown. At Saint Ann's Harbor, Cape Breton, is also to be seen a granite having green crystals of epidote disseminated through it."

S.J. Globe - May 3, 1881 N.B. Red Granite Co. - At the annual meeting of the New Brunswick Red Granite Company, held at the Company's works, Carleton, yesterday afternoon, Mr. J.W. Lawrence presided, and Mr. F.T.C. Burpee acted as Secretary. The following directorate was appointed:- J.W. Lawrence, President; Edwin Fisher, James Harris, J.C. Robertson, and F.T.C. Burpee, directors. Committees were appointed to examine into the condition of finances, etc., and report at an adjourned meeting, to be held at the call of the President. An enlargement of the works is in contemplation."

S.J. Daily Sun - May 4, 1881 The annual meeting of the St. George Red Granite Co. was held on Monday at the office of the works, Carleton. The stock was well represented and the annual report showed a satisfactory exhibit. J.W. Lawrence, Jas. Harris, Edwin Fisher, F.T.C. Burpee and J.C. Robinson were elected directors. At a meeting of the directors, Mr. Lawrence was elected president."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Telegraph - May 4, 1881 St. George Red Granite Company. - The annual meeting of the St. George Red Granite Company was held at the company's works on Monday. The annual report showed that the affairs of the Company were in a satisfactory condition. Improvements have been made during the past year amounting to $4,000. The old directors, J.W. Lawrence, James Harris, Edwin Fisher, F.T.C. Burpee and J.C. Robinson were re-elected."

Weekly Freeman - May 7, 1881 At the annual meeting of the St. George Red Granite Co., held in Carleton on Monday, the following were elected directors: Messrs. J.W. Lawrence, Jas. Harris, Edwin Fisher, F.T.C. Burpee and J.C. Robinson. Subsequently the directors chose Mr. Lawrence president."

Eastport Sentinel - May 11, 1881 Judging from the direction on the cases of red granite brought down from Calais by steamer and shipped to Boston, the beautiful work of the Maine Red Granite Co., is being distributed all over the far west, even to Salt Lake City and California."

Daily Telegraph - May 16, 1881 Red Granite. - The Red Granite works in the gully appear to be busy on various pieces of works. Red granite in the rough, at the shore, brings $9 per ton. This price, if the means of transport were sufficient, ought to leave a large margin for profits if the market holds out, but as matters are carried on at present the profits are small. The stone is now hauled down to the salt water landing on common carts, each stone or two requiring not only the services of a horse but also of a driver. Before, therefore, any great returns can be expected from this business some better and cheaper means of transport must be devised. When the Grand Southern is completed the rock can be delivered cheaper in St. John than it can now be placed at the seaboard here."

S.J. Daily Sun - May 31, 1881 Large quantities of red granite from the works in Carleton have been shipped over the Inter-Colonial to the Upper Provinces during the past few days."

Bay Pilot - Nov. 10, 1881 The St. Croix Cotton Mill Co'y intend to carry on operations at the Ledge granite quarry during the ensuing winter."

S.J. Daily Sun - Apr. 15, 1882 Alex. Taylor, of the Granite Works, has received an order from Messrs. McQuillan & Hamilton, of the Wellington Marble Works, Guelph, Ont., that will keep him busy for some time. The order consists of large granite column monuments generally. Messrs. McQuillan & Hamilton are the largest retail dealers in Ontario, and claim that the Canadian granite is far superior to any other granite known to the trade and think that eventually there will be no other granite used in Ontario. We also claim they are right, as the Canadian granite has been tested and found to be the best granite, being better adapted to the climate, being free from flaws and imperfections found in foreign granite."

Daily Telegraph - Aug. 30, 1882 Carleton. - The New Brunswick Red Granite Company's Works are kept going at their full capacity to keep pace with the orders coming in. There are now over a hundred hands finding permanent and remunerative employment at these works."

St. Croix Courier - Feb. 9, 1882 A piece of granite, hurled by the explosion of a blasting charge at the Ledge quarry on Friday, struck a workman named Joseph Farthing on the left hip and bruised him considerably. It is thought, however, that no bones were broken and no very serious injury sustained."

S.J. Daily Sun - Jan. 11, 1882 Red Granite. - A large lot of unfinished red granite came over the Grand Southern from St. George, last week, and went on by Inter-Colonial to the Upper Provinces. Lots of polished granite from Mr. Fred. Burpee's works in Carleton, have been going forward regularly, in fact, almost daily."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Jul. 10, 1882 A Carleton Industry. - Development of the St. George Red Granite Works. - The Nature of the Works - The Process of Manufacture - The Markets, etc. - Some days ago, a Telegraph reporter visited the works of the St. George Red granite Company, on Union Street, Carleton. Under the successful management of Mr. E.T.C. Burpee, this establishment has grown to be one of the largest industries in the province, and has done a world of good to the western section of the city of St. John, by giving permanent employment both to skilled workmen and labouring men. Entering by the main gate, into the large yard, the visitor is struck by the busy sight before him. Everything appears to be moving; great tall derricks, by means of which huge, unshapely blocks of stone are lifted as easily as if they weighed but a pound, are swung round depositing their burdens in convenient places to be sawn into slabs or polished. In a shed to the left, skilled mechanics are seen at work with chisel and maul chipping out of the solid stone handsome designs, while in front and to the right is heard the din of machinery, sawing or polishing the surface of every conceivable shape of stones for architectural purposes or monuments. It is only a few years since this industry had its birth, but it has grown to such a strong and vigorous manhood in that short time that the exports from the works are to be found in many of the handsomest buildings in the United States from Maine to California. Last summer Mr. Burpee found the building and machinery, then in use, inadequate for the rapidly increasing business of the company, and consequently plans were proposed for new buildings, by which the output could be made nearly double what it was formerly. As the ground on which the works stand is nearly all made ground, it was necessary to drive spiles for the foundations of the proposed new buildings to rest on. This proved a rather tedious operation and consumed most of the winter. In the spring the construction of the new buildings was commenced, and they are now completed and in full working order. The works occupy a large area of what is known as the old millpond. The old building, in which is situated the principal part of the polishing machinery, runs at right angles to the street, and is over 300 feet in length and 40 feet in breadth. The new building, which is also fitted up with polishing and sawing machinery, runs at right angles to the old building and parallel with Union street. It is 250 feet in length and has a uniform width of 40 feet. The boiler house, in which there are three large boilers, is situated at the junction of the two buildings. At the end of the old building the engine which furnishes the power for that portion of the works is located. To give power to run the machinery in the new building, a new 100 horse power engine, built by Messrs. James Harris & Co., has been placed in this new building at a short distance from the boiler. The quarries of the company where the red granite is procured are situated on the Grand Southern Railway a short distance from the village of St. George. In order to facilitate shipment, a short branch line is run in close under the hill, and the blocks of granite, sometimes many tons in weight, are lifted on the cars by means of a derrick and brought over the line of the railroad to Carleton. The Carleton Branch Railway passes directly in front of the granite works, and the stones are lifted by another derrick to a tram car and carried over a railway (which runs through the company's yards) to whatever part of the works they are required. In the yard there are several derricks, so that a block of granite, no matter how heavy, can be easily raised and placed near any of the saws, or laid down on blocks for the stonecutters to square up or round off, as the case may be. If it is to be cut into different thicknesses and polished up to form a portion of the front of a building it is placed under one of the saws. These saws are simply thick hands of steel (without teeth) stretched on a frame and moved backward and forward across the stone by the machinery. A gritty substance, on which a constant stream of water runs, is kept in the cut made by the saw, and by this means a stone is cut to the desired size with astonishing rapidity. Of course the work of the saw is necessarily rough, and if the flat surfaces of the stone has to be polished, it is placed on one of the polishing cars. These cars move backwards and forwards on a short track, while a grooved iron cylinder is kept revolving on the surface to be polished. To even the surface sand is first used, and when comparatively smooth emery takes the place of sand. The action of the emery on the stone cuts the rough surface down and leaves it smooth enough for the final process. Heavy felt is used for this, and the surface soon assumes that mirror-like appearance which gives such value and beauty to polished granite. The manufacture of round pillars is very interesting. A block, in the rough, is placed in one of the lathes in a shop set apart especially for this kind of work. These lathes do not differ materially from those used in cutting iron, except that the cutting tools in the stone lathes, instead of remaining stationary, are round and revolve with the stone, cutting the surface quite even. The capitals for columns which are moulded in a variety of shapes, are also made in this department, as well as all ornamental work of circular form. After the pillars or columns have been cut down to the desired shape and size in the lathes, they are removed and taken to the polishing department and there placed in other lathes where they are polished smooth by the same process as that to which the flat surfaces are brought up. In another part of the old building there is machinery for polishing mouldings of different sizes. The stone is set up on a block and an iron polisher, which exactly fits the moulding to be polished, is kept constantly moving over the surface by a machine for that purpose until it is smooth and shining. Then there is what is known as a vertical polisher for smoothing flat surfaces that are too small to be put on one of the polishing cars. Occasionally a surface is met with that cannot be polished by machinery and in that case the work has to be done by hand, but this is a tedious and expensive operation. In addition to the buildings described, there is a blacksmith's shop, where the stone-cutters' tools are made and repaired, as well as some of the machinery in the building. The works of the Company are now running at full time, and large quantities of both red and grey granite are being sent daily to the Upper Provinces and the different cities in the United States as far west as San Francisco."

S.J. Daily Sun - Jul. 20, 1882 Several car-loads of red granite in the rough arrived yesterday by Grand Southern Railway from St. George and were unloaded at the New Brunswick Granite Company's Works. The company are experiencing a tremendous boom, all the machinery, old and new, being kept on the full swing."

Daily Telegraph - May 13, 1882 The new buildings in process of erection by the Red Granite Co., at Carleton, approach completion, and their machinery is being rapidly put in place. A large force of men is employed in the execution of orders for monumental and other work, which come from all parts of the country."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Oct. 10, 1882 The New Brunswick Granite Co. are doing a vast amount of work in their establishment in Carleton this season. They have more than 100 hands in their employ at present - have six gangs of saws in constant operation, each saw being capable of a perpendicular cut of from two to three feet per day. A large number of columns have recently been shipped to Ontario, to be used in buildings in process of erection there, and a market for nearly one half of their products is found in the United States - California, Kansas and Michigan being among their best customers for monumental work. Every facility is provided by the company for the economical prosecution of its operations, with the exception, perhaps, of a sufficient water supply, which, it is to be hoped, will be overcome during the coming year."

S.J. Globe - Oct. 11, 1882 A disturbance took place in the Granite Works, Carleton, this morning caused by a young man McCaslin, who is attaining quite a notoriety. He was drunk and was anxious to beat all hands in the building. Policeman Ross was sent for and he took McCaslin to the lock-up. He will be brought over for trial this afternoon if he is sufficiently

St. Croix Courier - Sep. 28, 1882 and Daily Telegraph - Sep. 29, 1882 and S.J. Daily Sun - Sep. 29, 1882 The Red Granite Works of H.D. Wallace & Co., St.George, are turning out some good work just at present. Eight men are constantly employed in working the beautiful stone and polishing it as we see it in monuments, &c. The stone worked by Messrs. Wallace & Co. is of two shades, a deep and light red, the latter almost approaching the shade of grey granite. The firm does quite a business, shipping principally to United States markets."

S.J. Daily Sun - Aug. 2, 1883 Large blocks of Granite. - Two immense blocks of granite, weighing respectively 6,800 and 4,000 pounds, were yesterday forwarded by the I.C.R. to Mr. F.B. Gallet, Toronto. They came from Burpee's granite

S.J. Globe - Aug. 29, 1883 The bridge will create an active demand for quarrymen. Messrs. Harrison, Peters & Co., have taken a contract to procure 1000 yards or more of granite for the structure, and have purchased a very fine quarry near Randolph, and just by the road to Messrs. Randolph and Baker's mill."

St. Croix Courier - Dec. 27, 1883 The St. Croix Valley.- Its Industries and Water Power.- ... Wm. McDonald & Son have machine shops... have just completed a lathe weighing 15 tons for the granite works at Red Beach .."

Feb. 1, 1883 - Copied from: St. Croix Courier - Jan. 30, 1913 30 Years Ago (Feb. 1). - A red granite church is to be built at Red Beach in the spring, a lot of the stock being already on the grounds."

S.J. Daily Sun - Jul. 28, 1883 The Granite Works at Carleton are closed down on account of a difficulty between the employer and employees in respect to wages."

S.J. Globe - Jul. 28, 1883 The Red Granite Works in Carleton, which have been closed up for some days, are again in operation."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Jun. 7, 1883 Red Granite Work. - A look Through the Extensive Shops of the New Brunswick Red Granite Company at Carleton. - Within the last few years, without much heralding, a most important industry has grown up in Carleton, which, from its rapid increase, promises to be a valuable acquisition to the manufactures of St. John. Close to the railway track, and not many yards from the head of the ferry landing, is situated the works of the New Brunswick Red Granite Company. The Company was formed in 1872, and work was shortly afterwards commenced at St. George, where they own 1,600 acres of land, rising in parts 500 feet above the river, and composed almost entirely of red granite. The works at St. George were carried on for a short time, when they were unfortunately burned, and it was considered that, if they were removed to St. John, where the facilities for manufacturing and shipping were much more favorable, a greater impetus would be given to the business. Accordingly, the present property was acquired in Carleton in 1874. For some time after the removal to Carleton, the works, though steadily progressing, were not very extensive until 1876, when F.T.C. Burpee, Esq., took an interest in the company and gave his personal attention to the advancement of the business, and, by the introduction of new machinery, greatly extended the sphere of operations, enabling the works to turn out every description of polished or cut stone for monumental work, as well as pillars and ornamental work for buildings, and mouldings of all kinds. The ground occupied is 250x200 feet and contains the following buildings: Polishing shed, 185x35; for sawing stone, 80x25; for saws and carriages, 167x40; cutting lathes, 65x35; chipping shed, stone cutters' work, 90x30, blacksmith shop and office - all these buildings are in full operation. The stone brought from the quarry at St. George, by the grand Southern Railway, is unloaded directly at the works, where it is placed on small tramcars and run to the sawing shed; or, if required for turning, such as pillars, etc., is knocked out by hand and taken to the turning lathe. These turning lathes, of which there are three, are remarkable machines, rounding an immense block of granite with as much apparent ease as a carpenter turns a block of wood on his lathe, a rough column of granite, 18 inches in diameter, is reduced in seven hours, perfectly smooth and rounded true, ready for the polishing machine. In the sawing sheds, large squares of granite are being operated on by the saws; these saws have no teeth but work with a steady horizontal motion across the face of the stone. The cut is fed by a peculiar preparation of iron, about the size of the smallest bird shot, and a constant flow of water drops from above. In a comparatively short time, the stone is cut through to the diameter wanted, and as even as if the material were the softest wood. Six saws are in operation in this building. In the polishing house there are eight cars and thirty polishing lathes. The flat pieces of granite are packed in a bed on the carriage and all the interstices filled in with plaster, making them perfectly compact; the polishing machines depend from above, and attached to their base are flat iron rings fitting into each other, which revolve over the stones to be polished in a smooth, even manner, producing a surface of beautiful finish. The polishing house also contains thirty smaller machines for polishing every description of moulding. The stone is cut by hand to the shape required and then an iron model of the same design is driven backwards and forwards across the surface until the requisite smoothness is acquired. These machines are called verticals and pendulums, and one of a peculiar description, difficult to describe, is called by the romantic name of Jenny Lind. The power to drive all this machinery is furnished by two superior engines, of 175 horse-power; in the different departments of cutting, polishing, etc., employment is given to 105 men. The quantity of red granite in the quarries at St. George is practically unlimited - the whole quarry may be called a mountain of granite; a force of twelve men is constantly employed here quarrying stone. In addition to manufactures in red granite, the same description of articles are produced from a most beautiful variety of granite of a bluish hue, which is brought from a quarry on the river St. John. The company has for a market the whole continent, as many orders coming from the United States as from Canada. The outlay to the present time on the works in Carleton and the quarry at St. George, has amounted to $94,000, and in writing about the manufactures and industries of St. John, it may be safely said that for perfection of machinery, and for energy and industry in carrying on the operations, the position attained by the New Brunswick Red Granite Company is one of a very high standard; and one marked advantage that the company possesses over most manufacturers, is the fact that

S.J. Daily News - May 3, 1883 ... bill to incorporate the N.B. Granite Co.,with a capital stock of $500,000, with power to increase to $1,000,000, was agreed to with amendments."

S.J. Globe - May 8, 1883 At a meeting of the stockholders of the New Brunswick Red Granite Company yesterday, the following were elected directors: J.W. Lawrence, F.T.C. Burpee, James Harris, E. Fisher, J.C. Robertson, B.H. Appleby and Charles E. Burpee. At a meeting of the directors J.W. Lawrence was elected president and G.K. Smith secretary

Daily Telegraph - May 8, 1883 N.B. Red Granite Co. - At a meeting of the stockholders of the New Brunswick Red Granite Company, held yesterday at the works in Carleton, the following were elected Directors: J.W. Lawrence, F.T.C. Burpee, James Harris, E. Fisher, J.C. Robertson, B.H. Appleby and Charles E. Burpee. At a meeting of the directors J.W. Lawrence was elected president and G.K. Smith secretary- treasurer."

Bay Pilot - May 24, 1883 Watts, Milnes & Co. granite workers of Saint George, recently finished for a Mr. Curry of Toronto, the largest monument ever made at St. George, N.B."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Nov. 29, 1883 The Granite Works in Carleton. - A reporter for the Daily Telegraph while going his rounds in Carleton yesterday called in at the works of the New Brunswick Red granite Company, which he found a hive of industry, eighty men, and apparently as many pieces of machinery, being hard at work preparing the finished granite, with which to fill the many orders that the company have on hand. The processes through which the stone is put to convert it from the dull, rough blocks as they come from the quarry to the brilliant and richly colored columns, capitals, pedestals and other forms in which the general public know it best are many and interesting; but as they have already been fully described in these columns it is unnecessary to repeat their description now. The principal point now of interest in connexion with this establishment, for it is one of those industries, which particularly commend themselves because they take the natural products of the country and by the expenditure of labor upon them make valuable articles of commerce. In reply to our reporter's question as to how business was, the foreman said We are worked to full capacity. The next query was as to where the market was, and he was told that it was principally in Ontario, Quebec and the United States, the demand from the Maritime Provinces not having been very large as yet, probably because the management have never yet attempted to push their business at home. The demand abroad is owing first to the peculiarly excellent quality of the granite, and secondly, because of the excellent taste and finish of the workmanship. The latter, perhaps, could be got anywhere; but of the former New Brunswick apparently has a monopoly on this continent. There are one or two other known beds of red granite in America besides that at St. George, but none of them appear to be so durable or so perfectly crystallized. The Red Granite Company does not confine itself to the red granite, but works up a very large quantity of grey granite from Spoon Island. Many persons prefer this to the red, and its beauty is certainly very great. It looks particularly well when what is known as cleaned work and polished stone are brought in contrast, the greyish white of the former and the bluish, mottled grey of the latter, making a combination as nearly perfect as one can imagine. The grey granite is increasing in popularity, and when used for monumental purposes it makes a striking contrast in a cemetery with the red varieties or the white marble. The company will probably before long give greater attention to the home market. One of its features which will recommend the granite to most persons is its absolute imperishability from the weather. Nothing seems to affect it, or discolor it, except perhaps oil, but the latter is never likely to be brought in contact with a

Eastport Sentenil - Oct. 10, 1883 A large granite monument weighing some 30 tons and standing 25 feet high has recently been erected on the Leavitt lot in the cemetery. The monument was brought here from Portland in the sloop United States, which was supplied with steam hoisting gear."

S.J. Daily News - Sep. 28, 1883 The granite for the train shed foundations in theI.C.R. yard, all came from Spoon Island and Eagle Rock."

Daily Telegraph - Dec. 4, 1884 St. George. - ... The red granite operations at present employ about two hundred men, but it is believed by some that as many thousands might find steady employment. It is worthy of note that the quarries are inexhaustible and their products eagerly sought after, not only throughout the United States and Canada, but in many parts of Europe as well. The water power at St. George is never failing. Railway and water communications are excellent. The Grand Southern is now in first class repair, and the regular running of trains on that line daily established beyond doubt. In further reference to the quarries, it is said that an English gentleman who owns part of the mountain, has a number of men prospecting at present with a view of going into extensive operations at no distant day. It is reported that Messrs. Milne, Coutts & Co., who have been operating for some time, have recently purchased the entire property of the Bay of Fundy Granite Co., and hope to increase their operations largely. It is also pleasing to notice that the young firm of Epps, Dodds & Co., who are now occupying part of the Bay of Fundy granite works, have some twenty five men steadily employed, and intend going ahead in the right direction. They have also the only column cutting lathes in St. George, which is equal to accomplish the work of 8 men. This firm have just shipped a large monument to Toronto, which stands twenty seven feet high and the price of which is $1,600. They are also executing two other large orders to go to the same place, of American granite, besides several other large orders in red and grey granite, amounting in all to about $4,000. Having purchased a red granite quarry last spring, they have spared no pains or cost to open it in first class shape, and are now repaid by having one of the finest quarries in the place. It is admitted by all who have seen it, to be as fine granite as any in New Brunswick, both in color and quality. They will move into a new steam manufactory, which is now in construction, at the Grand Southern Railway station, about the first week of the new year. This manufactory will be operated in connexion with steam power of the railway machine shop, which is located here."

St. Croix Courier - Dec. 18, 1884 St. George.- Operations in the Mill Lake quarry have been suspended for the winter, but will be resumed in the spring with renewed vigor. Mr. A.D. Westcott, one of the parties interested, sailed from Halifax on Saturday in the steamship Sardinian for Liverpool, to spend the winter."

St. Croix Courier - Dec. 18, 1884 The construction of Epps, Dodds & Co.'s new polishing mill and cutting shed is progressing rapidly. They expect to have everything in running order by the middle of January."

St. Croix Courier - Dec. 25, 1884 St. George.- The granite companies have suspended work until after the new year."

Codes: G3 / IDX_Names: Granite;

Jun. 12, 1884 - Copied from: St. Croix Courier - Jun. 18, 1914 30 Years Ago. - (12th) St. George. - It is estimated that the granite business is nearly as great in value as the lumber business was in its palmy days. About one hundred and twenty five men are employed and $4000 paid in wages each month. The supply of granite is inexhaustible, and though men have been quarrying for twelve years, what has been taken away can hardly be noticed."

S.J. Daily Sun - Jun. 19, 1884 St. George. - Its Granite Quarries a Large Sources of Wealth. - (Special Correspondence of the Sun). - St. George, June 17. - This is perhaps the prettiest village of its size in the Maritime Provinces, and is, indeed, like a work of art of the highest order, for it has the quality of improving the more one studies its attractions. It is situated on the Magaguadavic River (river of hills), about four miles from its mouth. The position of St. George early pointed it out as vastly important in the lumbering business. From the bridge which crosses the river above the falls a half hour can be pleasantly spent in contemplating the falls. At this point the river is compressed into a gorge about forty feet in width and falls about 70 feet. It seems a pity that this water power is not used. Years ago, when lumbering was carried on here, this power ran several mills which are now idle. Engineers who have visited the place say that this is the best water power of its size in America. ... In the course of a few years all the good timber in the vicinity of the river had been cut, but there still some timber which is very far distant from the river. The people commenced quarrying granite and it is undoubtedly a remunerative business. The prospects of business are much improved and St. George is now emerging from the depressions of a few years ago. People who, several years ago, moved away are returning in large numbers and the population of the village is in the vicinity of 1,000. It is estimated that the granite business is nearly as great in value at present as lumbering was in its palmy days. The different firms engaged in the granite business here pay over $4000 in wages each month, about one hundred and twenty-five men being employed. The supply of granite is inexhaustible and although men have been quarrying for twelve years, a person can hardly notice that any great quantity has been taken away. The quarries are about three miles distant from the polishing shops, consequently the stone is hauled that distance, employing a number of teams. The granite mountains which lie on the northern side of the village, extend up near about two miles, there being in that distance about six mountains. Several years ago the Bay of Fundy Company commenced quarrying stone, but were unsuccessful and failed. Since then several firms have been in the business and at present the operations are Milne, Coutts & Co., Epps, Dodds & Co., Alexander Taylor and John O'Neil. Milne, Coutts & Co have by far the largest polishing shop in the place, the building being 300 x 50. They employ 35 men and have machinery for polishing, with all the latest improvements. They make monumental work of every description, columns and pillars for buildings and are able with skilled labor to do work which compares favorably with any of its class in the world. At present they are filling a number of orders for the United States. The other polishing works are not as large as this, but altogether they employ about 60 men, besides those working in the quarries. The New Brunswick Granite Works of Carleton, quarry their stone here, their quarry being near the line of the Grand Southern Railway. ..."

Eastport Sentenil - Mar. 12, 1884 Red Beach. - The Granite Co., in addition to their other expensive and heavy machinery, have just received a powerful steam winch."

Daily Telegraph - Mar. 19, 1884 St. George. - The shipments of Red Granite last year were worth more than those of lumber in any one year during the palmiest days of that trade. Five concerns are engaged in getting it out. The payroll of the largest being $1,200 per month. This does not include the shipment of granite to the Red Granite Company at Carleton. More orders are received than can be filled, one obstacle being lack of capital. D. Wallace has patented a machine for dressing stone, which looks as though it would work a revolution in the granite working trade."

Mar. 20, 1884 - Copied from: St. Croix Courier - Mar. 19, 191430 Years Ago. - (Mar. 20). - H.D. Wallace has patented a machine for dressing stone which is expected to work a revolution in the granite trade. The shipments of red granite last year were worth more than those of lumber in any one year in the palmiest days of that trade. Five concerns are engaged, the pay roll of the largest being $1200 per month. More orders are received than can be filled, one obstacle being the lack

S.J. Daily News - Mar. 21, 1884 and Moncton Daily Times - Apr. 5, 1884 St. George. - The shipments of red granite last year were worth more than those of lumber in any one year during the palmiest days of the trade. Five concerns are engaged in getting it out, the pay roll of the largest being $1200 per month. This does not include the shipment to the Red Granite Company at Carleton. More orders are received than can be filled, one obstacle being lack of capital."

S.J. Daily Sun - May 9, 1884 West Side. - Arrival of Granite. - Two car loads of granite for the N.B. Granite Works arrived from St. George by the Grand Southern yesterday."

May 15, 1884 - Copied from: St. Croix Courier - May 14, 191430 Years Ago. - (May 15). - Howard D. Wallace, of St.

George, is about to take out a patent for a granite working machine which, it is said, will greatly reduce the cost of polishing the stone. M. Coffey, of St. George, was caught in the machinery of the granite works last week and narrowly escaped death. He was carried some distance around on one of the pulleys before the belt could be slipped off. A broken arm and a few broken ribs were the result of the accident."

S.J. Daily Sun - Nov. 3, 1884 A large quantity of granite from Spoon Island for the N.B. Granite Works is piled on South Rodney Wharf, Carleton."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Nov. 27, 1884 St. George.- The enterprising firm of Epps, Dodds & Co. are about building an extensive polishing mill and cutting shed adjoining the machine shop of the G.S. Ry. The mill is to have all the modern improvements, and the power will be derived from a stationary engine, now in working order in the machine shop. A siding will be built into the mill and there will be no team work. Their facilities for the manufacture of red granite are superior to any at present in operation, and, no doubt, in a very short time they will become the leading firm in the business. We wish

Daily Telegraph - Nov. 29, 1884 Mr. Hugh Ludgate, of this town, and Mr. James S. Westcott, of Liverpool, Eng., are opening a quarry at Mill Lake, near Ludgate Mill. They have already got out some very fine specimens, both in regard to color and quality, and, in the spring, if the granite proves good, they will erect a large polishing mill and cutting shed right on the spot, and will employ a large number of workmen. They will ship their polished granite on scows down Lake Utopia, through the canal, and down the Magaguadavic river to the railway bridge where, by means of a derrick, they can load it on the cars. The enterprising firm of Epps, Dodds & Co. are about building an extensive polishing mill and cutting shed adjoining the machine shop of the G.S. Railway. The mill is to have all the modern improvements, and the power will be derived from a stationary engine, now in working order in the machine shop. A siding will be built into the mill and there will be no team work. Their facilities for the manufacture of red granite are superior to any at present in operation, and, no doubt, in a very short time they will become the leading firm in the business. We wish them success."

Oct. 2, 1884 - Copied from: St. Croix Courier - Oct. 1, 1914 30 Years Ago (2nd). - Howard D. Wallace's patent stone surface cutter has been experimented with at St. George and is working very satisfactorily."

S.J. Daily Telegraph - Sep. 19, 1884 Granite Operations. - In St. George, quite a large business is carried on in the granite quarry. Ald. Burpee, of Carleton, has twenty-five men employed cutting the stone. It is loaded on the Grand Southern and carried to St. John and polished. Other quarries are in operation, the stone cut being polished in St. George."

St. Croix Courier - Sep. 25, 1884 St. George.- Messrs. Milne, Coutts & Co., the lessees of the St. George Granite Works, give employment to a large number of men, and Mr. Taylor, who also works a granite quarry, employs about 20 hands. The business might be more extensively prosecuted, and would doubtless prove doubly profitable if more capital were

S.J. Globe - Sep. 26, 1884 Red Granite. - Some magnificent specimens of this stone, from the St. George quarry, are being worked in the Carleton red granite works. Four blocks, each fourteen feet long and seven feet wide, weighing fifteen tons apiece, have just been received and are being dressed, to fill an order from Quebec. It is unusual to see such large blocks, so exact in size. A number of columns have just been completed at the works for the Drexel Bank, Philadelphia. They are each fourteen feet eleven inches in height, and twenty eight inches in diameter. They were quarried out of the rock in the shape required and had only to be dressed and polished when they came here. A wealthy gentleman in Philadelphia is so delighted with the stone that he is negotiating to have a residence built of it. At present the works give employment to ninety four men, not including the twenty men who are engaged in the quarry."

St. Croix Courier - Apr. 2, 1885 Messrs. Epps, Dodds & Co. have their new mill completed. The machinery works splendidly, and everything around it looks like business. Some days ago they shipped quite an order to Messrs. O'Neil & Coffey, of Eureka, California, who are doing quite an extensive business in granite and marble. They say they cannot procure granite anywhere so saleable as, or that will compare at all with, the St. George rock. They are both St. George boys. Mr. O'Neil was engaged in the business here previous to his departure, and is a brother of Mr. Jas. O'Neil of this place. Mr. Coffey has been in the States for some time and is a brother of Mr. Coffey of the St. George firm."

St. Croix Courier - Apr. 2, 1885 St. George.- There will be another granite company starting out in a very short time. They have already purchased a quarry and are now treating for a power. Judging from the prospects now, the coming summer will be a lively one in this line."

St. Croix Courier - Apr. 9, 1885 Messrs. Milne, Coutts & Co., of St. George, have received from Allan Brothers, of Saint

John, a large granite lathe for turning columns twelve feet long and two feet in diameter. The lathe weighs about five tons and is for use in the firm's granite works. These machines, which work automatically, were formerly imported from Aberdeen, Scotland, but it has been found that an equally good machine can be produced at home for the same cost."

Codes: G3 / IDX_Names: Granite;

S.J. Globe - Aug. 21, 1885 and St. Croix Courier - Aug. 27, 1885 St. George.- A Glance at the Red Granite Business of Eastern Charlotte.- (Globe).- St. George is famous for its water power advantages. The Falls of the Magaguadavic river empty directly into the basin, on which the town fronts. They form a cascade and the descent is probably fifty feet. Here power enough may be obtained to run all the machinery in the Province if it could be so devised, and yet this fine body of water is in a great part allowed to run to waste. Formerly saw mills occupied several portions of the river; but with the shrinkage, if not stoppage in the lumber business, these mills are now silent as the Harp upon the Halls of Tara. But a more solid, prosperous and enduring business is destined to spread upon the banks of this river - for its waterfall has already commenced to attune its music to the buzz of wheels created by a far better industry. Until within the last ten years it was unknown to the residents of St. George that the hills adjacent to the town abounded in inexhaustible wealth - quarries far more valuable, when worked, than all the treasury of the forest upon which the inhabitants formerly subsisted. The red and grey granite of these hills (enough to supply the world for a million years) is fast taking its place among the choice costly stones of the North; and the more it becomes known, the more extensive will be the demand for it. On the discovery of this precious stone an American company was formed in New York, called 'The Bay of Fundy Granite Works' for the purpose of quarrying and manufacturing upon a large scale. The capital stock was fixed at $200,000. The shares were put down at $100. A large number of shares were subscribed, but being a matter of speculation and money-making on the part of those who have only their wits to invest and no money to put in, but to get it out of others by watering the stock abundantly and then selling out, the Company, or what was left of it, after a struggle of about five years, began to exhibit signs of exhaustion. The officials pocketed large salaries. A two hundred thousand dollar operation meant business upon a grand scale. Were not the mountains filled with valuable stone, and were not the markets of the world open for its reception? The organizers of the company had made their pile, and those who purchased the stock and took their places, began to find out to their cost, to the ruin of some, that all is not gold that glitters. Everything went buy the board. The creditors were compounded with, receiving but a moiety of the amount they paid for their shares. This failure produced a stunning effect upon the inhabitants; but it has led to a more wholesome state of things. The young men of the town who had been engaged at the quarries and in workshops as employees now went to work on their own account. The machinery was there and all the materials for operating were present. Messrs. Milne, Coutts & Co., four enterprising young men, went to work and they now carry on the Bay of Fundy Granite Works in the right way. It is a cooperative arrangement. Each partner takes charge of a special department, works himself, has men under him. So by means of this combination of labor and the interest each has in his own department these young men have not only done well for themselves and the town, but bid fair to do an immense business in the future, as they have more orders than they can supply - such as tombstones, pillars and other articles for building purposes. Then other shops have been opened, such as Taylor & Hibbard, & Epps, Dodds & Co. In this last named establishment works are being carried on for a tomb ordered from Toronto, to cost $4,000. Different colored stones are cut by machinery (in fact all the stone is cut by machinery) and made according to drawings to fit into particular places when the tomb comes to be put up. Here I also saw the plan of a monument to cost $800, for the same place. Then there is the workshop of Messrs. Meating, Tayte & Co. The hands employed are as busy as they can be. The granite is polished like silver, some of which comes from Spoon Island, (a beautiful grey) on the St. John River. All the shops in different parts of the town - four or five in number - are as busy as they can be. I was informed that upwards of 250 men were employed at the quarries and in the shops, and yet to go about the streets one would think that everybody was at home asleep, so deserted they appear. But I look upon these works as the beginning and building up of a large city. Possessing a staple article of such commercial value when manufactured, I cannot see how the industry can lead to anything but rapid prosperity. It is not one of those articles calculated to be disturbed by the fluctuations of trade. Such granite as this being so rare, and said to be equal to the Aberdeen, it certainly looks as well and takes as high a polish, must always find a steady and remunerative market on this continent. Although the prevailing color is red, there are sections of the hills that contain other colors. I have a polished specimen of a drab shade, beautifully mottled and resembling marble, which, when it comes to be got in quantities and submitted to the polishers, I believe will take the shine out of the other descriptions. It is not unlike the Spoon Island granite, but to my eye is richer and more attractive. What is better still for the place is that the work can be carried on winter and summer alike, whereas the wood business can only be prosecuted during certain months of the year. It is not so much the want of capital (partly complained of) as the habits of industry that must tell; and I am sure that those young men employed in the granite shops give strong evidence that they themselves are made of the material mostly needed. Orders are daily coming in from distant parts for work to be wrought out of the granite hills around."

Bay Pilot - Dec. 17, 1885 Mr. McGlashan, superintendent of the Red Beach granite works, died at that place on the 2nd. inst. The deceased was a native of Scotland and was for a time a resident of St. George, N.B., where he had charge of the granite works, and from which he went to take charge of the granite works at Red Beach, Calais, Me. He was esteemed and respected wherever known. He leaves a widow and eight children."

S.J. Daily Sun - Feb. 6, 1885 The New Brunswick Granite Works at Carleton are being thoroughly repaired and will probably resume operations about the middle of the month."

St. Croix Courier - Feb. 12, 1885 The granite mills are rushing off their orders to make room for spring stock and orders."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Feb. 12, 1885 St. George.- ... An important factor in this revival in the business of cutting and polishing red granite. The partner of one of the firms engaged in the work recently told a representative of the COURIER that the number of orders being received pointed to a very busy summer of 1885. And this business is only in its infancy. Three firms - Milne, Coutts & Co., Alex. Taylor, and Epps, Dodds & Co. - have embarked capital and skill in red granite and have been fairly prosperous. The demand for the stone is only limited by the supply, which is capable of well-nigh unlimited extension. With more capital, the granite business in itself will make a city of St. George."

Daily Telegraph - Jan. 27, 1885 St. George. - Epps, Dodds & Co. are at work in their new granite mill, near the GSR station. Milne, Coutts & Co. are doing a good business in granite."

St. Croix Courier - Jan. 29, 1885 Epps, Dodds & Co. have moved into their new mill and are doing good work, although their machinery is not fully in working order as yet."

St. Croix Courier - Jan. 29, 1885 St. George is quite lively at present. Those engaged in manufacturing are making extensive preparations for doing an extra business in the spring. Orders for red granite are coming in every day."

St. Croix Courier - Jun. 11, 1885 An important discovery has been made at St.George. Hitherto, those working the granite quarries have found it difficult to get stone of sufficient magnitude to cut to large sizes. Last fall Alex. Taylor, of that place, secured a quarry. In opening it up this spring he finds that the granite is suitable for work requiring very large bodies of stone, and shafts of any length or thickness may be obtained from it. So far as the St. George men know, there are no quarries of red granite in the world where similar valuable material may be found. Another valuable feature of the stone is that its color does not vary, so that orders of any extent may be filled with material of one shade only."

St. Croix Courier - Jun. 25, 1885 Commenting on the COURIER'S notice of the discovery of a red granite quarry at St. George from which stone of large dimension can be taken, the Monetary Times says it is an important discovery for architects and builders to say nothing of monumental workers."

S.J. Daily Sun - May 5, 1885 The annual meeting of the New Brunswick Red Granite Company was not held yesterday, as there was not a quorum of stockholders present. The works are making full time at present and a large number of orders are being received."

May 7, 1885 - Copied from: St. Croix Courier - May 6, 1915 30 Years Ago (7th). - Messrs. Meating, Tait & Co., have started in the granite business at St. George."

Eastport Sentenil - Nov. 11, 1885 The prospects of the town of St. George, N.B., continue to brighten. ... The granite industry is yet in its infancy. Tayte, Meating & Co. will soon commence to erect a new polishing mill. The barren rocky mountains, that at one time were thought to be entirely worthless, are proving to be literally mines of gold. The different firms pay out per month $11,000, but it is thought before five years $20,000 will be disbursed monthly in St. George

S.J. Daily Sun - Nov. 24, 1885 It is reported that an American firm, Tayte, Meating & Co., contemplate the erection of a granite polishing mill at St. George."

Chignecto Post - Nov. 26, 1885 St. George, N.B. is an important centre of the granite industry. The various granite firms operating there pay out monthly about $11,000. Tayte, Meating & Company, will soon erect a new polishing mill."

Daily Telegraph - Nov. 27, 1885 It is said that an American firm, Tait, Manning & Co., will establish a granite polishing mill at St. George."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Apr. 1, 1886 St. George.- What Our Correspondent Noticed in this Busy Little Town.- Editor Courier:- I had the pleasure of visiting St. George and wish to express, through the columns of your valuable paper, the many kindnesses received at the hands of the people of this thriving little town. I registered at the Bellview Hotel, kept by Mr. T.B. Goss, and must assure travellers to St. George that they can be nicely accommodated at the Bellview. I was taken through the granite works by the kindness of Mr. McCormack. A person, without first visiting the works, can form no idea of the amount of business carried on in this branch. About five thousand dollars is paid out monthly for labor, not speaking of the many other bills to be paid. In visiting the factory of Epps, Dodds & Co., one would be almost lead to say that there is something great in the future for St. George, for there you behold a massive piece of workmanship in the construction of a great vault, bearing the inscription 'Thomas Watkins'. Mr. Coffey, one of the firm, informed that the whole structure when completed, would weigh about forty tons, and will cost over $150 for freight. The vault is manufactured for parties in Hamilton, Ont. The stone, out of which the vault is built, was taken from a quarry on the St. John River. This is not the only massive work that this company has on hand, for they are also manufacturing eight large pieces of the Garfield monument. These pieces are made from St. George granite. They are undoubtedly handsome and reflect no small amount of credit upon the firm of Epps, Dodds & Co., as well as being somewhat of an honor to Charlotte County. ..."

Eastport Sentenil - Apr. 14, 1886 The large granite urns which were brought here last week on the steamer Cumberland to be

finished and polished at Red Beach are, it is reported, for a tomb which Jay Gould is having built."

Eastport Sentenil - Aug. 4, 1886 The Maine Red Granite Co., of Red Beach, Washington county, are polishing two large urns for Vanderbilt's tomb on Staten Island, N.Y. The urns are three feet in diameter, seven feet high, and are considered to be the largest ever made in the world. The company are also filling an $18,000 government order for terrace work around the capitol at Washington."

St. Croix Courier - Dec. 9, 1886 The firm of Epps, Dodds & Co. has its polishing works located near the Grand Southern repair shops and is doing a large business. At present they have erected in their shop a large cottage monument, manufactured by them from dark Quincy granite for Toronto parties. It is eighteen feet high and six feet six inches square at the base, highly polished and handsomely carved. It is acknowledged by all to be the finest piece of work ever turned out in this granite town. The firm employs thirty- six men and has a granite cutting lathe for cutting round columns, urns and other articles. Its principal market is in Ontario. Messrs. Chas. Epps, James Dodds, Henry Meating and Michael Coffey, all natives of St. George, compose the firm and deserve no small degree of credit for the energy and enterprise

St. Croix Courier - Dec. 9, 1886 The Bay of Fundy red granite company are doing a large business now. Their works are full of machinery, which furnishes employment for fifty-five hands, and the wages paid now are as high as they have been at any time in the history of the industry. During the summer, they lost three weeks time on account of scarcity of water, but they are now shipping their granite to Ohio, Michigan, British Columbia, Manitoba, Ontario, Quebec and all parts of the maritime provinces. Black granite, which promises good results, has recently been discovered on their lands. They have fitted up a part of their buildings for a retail store, and will soon put in a stock of groceries and dry goods. Since the death of Mr. Alexander G. Milne, the senior partner, the business is being conducted by another Mr. Alexander Milne, Mr. Wm. Coutts, Mr. Jas. Wadds and Mr. Charles Johnson."

Daily Telegraph - Dec. 28, 1886 The N.B. Red Granite Works have been shut down for the winter."

St. Croix Courier - Feb. 11, 1886 St. Andrews.- A quantity of St. George red granite is to be used in the Garfield

S.J. Globe - Jul. 16, 1886 Serious Accident. - Mr. Henry Walton of Walton's stone quarry, Spoon Island, received severe internal injuries yesterday by a heavy rock falling across his body. Our informant states that Mr. Walton's life is despaired

Chignecto Post - Jun. 24, 1886 A new quarry is to be opened St. George, N.B. to supply stone for extensive repairs on the breakwater at St. John."

S.J. Daily Sun - Jun. 29, 1886 The N.B. Granite Company and the St. George companies are forwarding large quantities of granite to the upper provinces."

Daily Telegraph - Mar. 15, 1886 The New Brunswick Red Granite Works, which have been shut down for some time on account of the cold weather, are in operation once more."

Fredericton Capital - Mar. 16, 1886 Red Granite Works. - The New Brunswick Red Granite Works, St. George, which had been shut down for some time on account of the cold weather, are in operation once more."

Codes: G3 / IDX_Names: Granite;

Chignecto Post - Mar. 18, 1886 The New Brunswick Granite works at Carleton have resumed operations."

Nov. 1886 - Copied from: St. Croix Courier - Nov. 23, 1916 Thirty Years Ago: The Maine Red Beach Granite Company, Red Beach, Calais, has secured another order for $17,000 worth of their stone, to be used in the construction of the terrace being built around the north, west and south sides of the capitol at Washington, considered to be the finest in the

Bay Pilot - Nov. 4, 1886 A polished granite pedestal manufactured byMilne, Coutts & Co., of St. George, Charlotte Co., occupies a prominent position in the Canadian Court of the Indian and Colonial Exhibition, London, England, supporting a life like statue of Sir Hector Langevin. The pedestal is admittedly the handsomest specimen of Granite at the Exhibition."

St. Croix Courier - Nov. 11, 1886 St. George.- The red granite companies have sufficient orders on hand to keep all of them busy during the entire winter."

Eastport Sentenil - Nov. 17, 1886 The Maine Red Granite Co, have secured another order for $17,000 for red granite plant cases for the capitol at Washington. These plant cases form part of the terrace that is being built around the northwest and south sides of the Capitol, and which is considered to be the finest terrace in the world. The Red Beach granite now extends all along the south side, and this year's contract will complete the entire length of the west or principal front of the Capitol. The company have also received an order for 500 tons rough stone for the front of a large block of buildings in Baltimore. - Calais Times."

Daily Telegraph - Nov. 20, 1886 St. George, Nov. 18. - Mrs. Milne, widow of the late Mr. Alex. Miine, of the Bay of Fundy Red Granite Works, died suddenly last evening. It is just a month since her late husband's remains were carried to their last resting place. In death they were not divided. They leave three children, the youngest being only three weeks old; the alleviating circumstances in the sad loss of both of their parents, is that their father left sufficient means for their

St. Croix Courier - Nov. 25, 1886 and Daily Telegraph - Nov. 26, 1886 The Maine Red Granite Company, Red Beach, Calais, have secured another order for $17,000 worth of their stone, to be used in the construction of the terrace being built around the north, west and south sides of the capitol at Washington, considered to be the finest in the world."

Bay Pilot - Nov. 25, 1886 The widow of the late Mr. Alex. Milne, of the Bay of Fundy Red Granite Works, died at St. George on the 17th inst., having survived her late husband only one month...."

St. Croix Courier - Sep. 2, 1886 New Brunswick Granite.- Points for St. George Manufacturers.- A correspondent of the Montreal Witness, writing from the Colonial Exhibition, devotes nearly half his letter to New Brunswick. Our province is not very large and there are larger exhibits than ours there, but we are getting fully our share of notice. This is largely due to Mr. Cornwall's energy, who loses no opportunity of bringing the province forward. One of the principal points urged by the correspondent of the Witness is the English market for granite. The demand in England for granite is very large and constant. For curbing stone the importations are enormous, and they come principally from the Baltic. In New Brunswick some of the best granite quarries are upon the sea coast, and it has been said that red granite could be carried as cheap from St. John to London as from Aberdeen to London. What remains to be proved is whether New Brunswick granite can be delivered in England as cheaply as the Baltic granite can. The matter is worth looking into."

Daily Telegraph - Apr. 15, 1887 St. George. - ... A new granite firm has been established, Messrs. Colman, Wallace & Co., with good prospects."

Moncton Daily Transcript - Dec. 1, 1887 A New Brunswick Industry. - Red granite is one ofthe products of the eastern portion of New Brunswick. There is a market for it in the United States; but it has to compete there with Scotch granite. Some of the producers think the granite industry should be protected by a higher tariff; but one of the number objects to an increase in the Canadian tariff because he thinks such an increase would be followed by a similar increase on the part of the Americans. He thinks the Commercial Union is the policy which will best enable New Brunswickers to hew and sell the millions and millions of tons of granite they have already to work - Toronto Mail."

S.J. Daily Sun - Dec. 3, 1887 Carleton. - The granite works are in full blast, giving employment to about 70 hands."

St. Croix Courier - Dec. 8, 1887 Messrs. Milne, Coutts & Co. are at present hauling from their quarry several large granite blocks, for a massive monument they are to complete next spring for a party in the United States. The largest block will weigh about sixteen tons."

Codes: G3 /   IDX_Names: Granite;

Bay Pilot - Dec. 15, 1887 Monument to the Late Hon. Robert Robinson, M.L.C. - A massive and elegant granite monument in memory of the late Hon. Robert Robinson, has this week been erected in the rural cemetery. The monument is of grey Quincy granite and consists of three bases, die, cap and obelisk, the whole stands sixteen feet high. The 1st or lower base is a stone 3 ft. square and 14 inches deep, the 2nd 2 ft. 7 inches square and 12 inches deep, both of unpolished stone, the 3rd is 2 ft. 4 inches square by 14 inches thick, and like the rest of the monument is beautifully polished. The die is 2 ft. 1 inch square and 2 ft. 6 inches deep, the obelisk or shaft which surmounts the whole is 6 ft. 6 inches high and 1 foot square at foot. The third base and cap is carved a greek cross below which is the following inscription: Sacred To the memory of Hon. Robert Robinson, M.L.C., Born 17th November, 1828. Died 5th September, 1885. -- He giveth His beloved sleep. The monument was manufactured by Mr. Robert Reid of Montreal, and erected by Mr. Alexander Taylor, granite worker, of St.

Bay Pilot - Dec. 15, 1887 St. George Granite Industry. - Mr. Alexander Taylor is prominent among the granite manufacturers of Saint George, in the quarrying and manufacture of which, into monuments, building stone, &c., he is extensively engaged, employing between his quarry and polishing works some forty hands. Mr. Taylor's quarry is situated off the St. Andrews road about four miles from the village, in the direction of St. Andrews, from which stone of the very best quality and of any required dimensions can be quarried. It is from Mr. Taylor's quarry that Messrs. Milne, Coutts & Co., granite workers, of Saint George, obtained the large blocks of granite from which they are making a massive monument for parties in the United States. Mr. Taylor owns a granite quarry on Spoon Island, St. John river, from which is quarried granite of a grey color, equal in quality to the celebrated Quincy granite, only a shade lighter in color. Mr. Taylor's establishment and work is first class in every particular, which accounts for the large patronage he receives and explains why he has not been able for some time past, to overtake the orders received by him."

S.J. Globe - Jan. 20, 1887 Red Granite. - The statement in one of Mr. Stockton's letters that the high tariff had practically killed the unwrought stone business makes the tory organ very sad. But it is not sadness of the right kind. The Sun is not sorry for the loss of the business to the country, but for the injury that may be done the government by having the facts made known. Consolation is, however, sought for in the growth of the red granite business. Well, we are glad to be able to say that that business is flourishing, and no thanks to the government, which has done nothing whatever for it. Unwrought stone, says the sapient Sun, is better than nothing, but the production and sale of granite cut and polished by well paid labor is a much better thing for the community. Of course it is better for the government, too, which takes good care to impose a heavy tax on the coal and bread and clothes and blankets of the labor aforesaid. The red granite business at St. George, and in Carleton, has been improving for the last two years. But this is not due to the National Policy or to any policy of any kind whatever which has its origin in toryism. Some years ago the business was larger than it is now, but the large companies, perhaps because they attempted to do too much, went down, and the business at St. George was for a time almost dead. The valuation of the property of one concern, The Bay of Fundy Red Granite Company was a few years ago $10,000. Today it is taxed on a valuation of $12,000. In general terms the same thing would apply to the other old companies. More recently the companies have adopted close business habits, and have run everything on careful and economical principles. At the present time they are doing a good business, and appear to have reached the point when they pay current expenses and have something to add to on their capital. In addition to this they have great business facilities by the Grand Southern Railway, for which they owe nothing to the Dominion government. The works in Carleton, too, feel very much the value of the road. Red granite is a raw material, the natural product of the country. Polishing it is a business capable of indefinite extension, as the supply of the raw material is really inexhaustible. But the government have not by any system of reciprocity been able to get this product into the United States market at reasonable rates of duty. The stone shipped to that country in its rough state is subject to a duty of $1.50 per ton; manufactured or polished, it is subject to a duty of twenty per cent. Even this does not keep it out of the United States, for we are informed that considerable portion of the polished granite sent from here to Toronto and to other parts of Ontario is re-shipped to the United States. Get us reciprocity, or more favorable terms with the United States, and almost any quantity of our red granite will find its way into the United States, and St. George will hum far more than it does today with the evidences of a prosperous business. If this cannot be done, take off the heavy taxes imposed on the red granite workers. Just think for a moment. We produce $100,000 worth of red granite. It is sold in the United States - twenty per cent duty there. We buy goods with the proceeds and bring them to New Brunswick - twenty five per cent duties here. How delightful this is! That our country and its industries can live is really surprising. It is not by taxation and restrictions that industry flourishes, and, if, in spite of these, some industry does prosper, surely no thanks are due to those whose policy it is to oppress all trade, and then declare that this is a National Policy."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Jan. 21, 1887 Mr. Stockton on a Rock. - A.A. Stockton, M.P.P., having taken charge of the Globe in order to explain awayhis plea for the restoration of the unwrought stone business, has only succeeded in getting himself in a worse mess than ever. The following passage contains the important part of what he has to say on the development of the polished granite business at St. George. The red granite business at St. George, and in Carleton, has been improving for the last two years. But this is not due to the national policy or to any policy of any kind whatever which has its origins in toryism. Some years ago the business was larger that it is now, but the large companies, perhaps because they attempted to do too much, went down, and the business at St. George was for a time dead. The valuation of the property of one concern, 'The Bay of Fundy Red Granite Company' was a few years ago $100,000. Last year or early in the year preceding, the whole property was sold for $10,000. Today it is taxed on a valuation of $12,000. In general terms the same thing would apply to the other old companies. Mr. Stockton is wrong in saying that the business of finishing St. George granite was ever larger than it is now. It is larger than ever before and is growing. He may be right in saying that the Bay of Fundy red granite company once owned property valued at $100,000, and that property is now taxed on a much less sum. If instead of a few years ago he had written fourteen years ago, and if he had added that the business failed and was closed up in 1876, he would also have been correct. The whole trade went to nothing in that famous period when Mr. Stockton's friends were legislating. It has been restored as the Sun shows, and as Mr. Stockton admits, within the past two or three years, under the tariff which Mr. Stockton hates. We have shown that the Ontario market which Mr. Stockton and his friends are trying to destroy is the one on which this granite industry chiefly depends, seeing that about three-fourths of the product goes there. Mr. Stockton is decidely weak on the granite question."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Jan. 25, 1887 St. George And Its Extensive Granite Quarries. - A Business That is Rapidly Developing Large Proportions. - One of the most prosperous towns in this province is St. George, a place in which no man need be idle if he is willing to work. St. George was at one time a great lumbering centre and about 15 years ago there were a dozen saw mills in the immediate vicinity of the place. Now there is only one saw mill of any size on the Magaguadavic, about six miles from St. George. Very little lumber is now cut on the river and the granite business has taken the place of the lumbering industry. It is doubtful if the people of the province have anything like an adequate idea of the proportions which this business has assumed. When it came into prominence, the lumber business in that part of the province was on the downfall. The granite shipped from St. George last year brought more money than the lumber did even in its palmiest days, and the manufacturers of granite have done hardly anything yet in building work. The wage accounts of the various concerns in the business at St. George show that the workmen are paid about $5000 per month, which is no inconsiderable sum. There is a great field for building work, which is bound to make St. George a great manufacturing centre. The great difficulty at the present time is that the men in the business have not sufficient capital, a large amount being required to develop the business. In the past, one great drawback has been that the cost of shipment was very great, but now the facilities are such that the expense is a mere bagatelle as compared with that of some years ago. In former years the granite was shipped in vessels which could not get to St. George in the winter months, which prevented the shipment of the stone except when the river was open. Now the Grand Southern Railway, running through St. George, affords excellent facilities for the shipment of the granite and the cost is very small. When in the past it did not pay to make a shipment unless a full cargo could be supplied to the vessel, any quantity great or small can now be sent over the railway, and it is delivered more promptly, which is a great advantage. That red granite will be used to a great extent in building is not questioned by any, as it is one of the handsomest stones that can be obtained. A large building in Boston was erected in 1875 in which St. George granite was used and it is a very attractive structure. The Philadelphia city building, one of the handsomest that could be found anywhere, contains some 40,000 cubic feet of red granite, and the same stone has been used for trimmings in many other structures. The granite workers at St. George confine themselves to the manufacture of monuments, tablets, columns, pilasters and every kind of monumental work, and are kept constantly at work in filling the orders poring in upon them. The manufacturers have no agents and the work seeks them, which indicates that the granite is of the very best quality and the workmanship of the best. To show what the business will some day be done in St. George, it may be stated that an order was once received by one firm which could not have been executed by 400 men in a year. Of course the firm for lack of capital and in consequence of their inability to obtain workmen, had to refuse the order. The deposit of granite in the vicinity of St. George is inexhaustible. It extends on both sides of the river and can be traced for a distance of twelve miles. The nature of the ground is generally rocky and consists entirely of red granite ledges and hills, with a few spurs of ordinary trap-rock, separated from one another by narrow valleys of a rich loamy soil, in almost every case traversed by streams and covered by a luxuriant growth of beech, birch, pine, hemlock and spruce, together with some cedar. The deciduous trees predominate, and the timber is generally small. It is utterly impossible to estimate the quantity of first rate merchantable red granite in the parish. It is simply inexhaustible. There are hundreds of ledges, the outcrops of which represent from 5,000 tons to 100,000 tons each. Gray's mountain, which 12 700 feet above Lake Utopia, and a half a mile long and a quarter of a mile broad, and Granite Mountain, estimated at 600 feet above the lake, one mile long and three-eighths of a mile wide, are of granite, and numerous other mountains are to be found which are also of granite. As said by Balston C. Kenway, an American engineer, the mind can hardly conceive the immensity of the contents of these mountains, and an estimate would be merely a useless piling up of figures. The granite is free from those spots that disfigure the Peterhead (Scotch) granite, and generally speaking the ledges appear to be perfectly homogenous, or to lie in large rectangular slabs or blocks generally inclined on an angle of 30 degrees from the north towards the horizon. There are also deposits of good quartz sand, suitable for grinding, and consisting of disintegrated granite in the shape of some twenty sandy beaches at intervals all around Lake Utopia and extending an unknown distance under the lake. About fifteen years ago a man named McCormack picked up a piece of granite which was thrown out of a vessel which was discharging ballast in this city. It was a piece of Scotch granite, and the man remarked to a young man standing near him that he would like to find a deposit of such stone. The young man, whose name was Purves and whose home was in Charlotte county, explained to McCormack that he had seen this kind of granite in his native county. The conversation resulted in McCormack visiting St. George, where he spent several weeks. At length he found the granite for which he was seeking and saw that St. George was destined to become a great place on account of the wealth of granite in its immediate vicinity. About the same time, Mr. Ward, the artist, of this city, found a piece of red granite at Porcupine Mountain near Lake Utopia. He took the rock to New York, where it was polished. This led to the formation of the Bay of Fundy Red Granite Company in 1871. The company consisted chiefly of American capitalists, who saw there was money in the business, and several St. John and St. George men held some of the stock. The Bay of Fundy Company purchased a large tract of land about three miles from St. George and erected large works in the town. Soon afterwards the St. George Red Granite Company was organized and they purchased a large area of land and put up an extensive polishing mill. The first named company's works were operated for several year's under the management of a Mr. McGlashin, and then they got into difficulties through mismanagement. The outlay for the work was so great that the company did not have sufficient money to operate them. The machinery, it is said, cost something like $75,000. Another reason of the collapse was that the company's agent in New York, having no knowledge of the business, contracted for work which was done at a great loss. In 1875 or 1876 the St. George company's works were burned, the loss being a severe one to the company. The company was reorganized soon afterwards, and has since been doing business as the New Brunswick Red Granite Company. Their works are at Carleton and the granite is brought up from St. George by the Grand Southern Railway. About the same time the Bay of Fundy Company's works were also closed down, and the business was at a standstill for a couple of years. Many of the men who worked in the mills had come out from Scotland and were in anything but affluent circumstances. With that pluck which is characteristic of the Scotch they commenced business for themselves. Milne, Coutts & Co. and Alex. Taylor leased an old mill in what is known as the gully and worked there for some time. Mr. Taylor took as a partner a Mr. Black who remained with him until the business had increased very considerably. These firms worked away quietly and the most sanguine hardly dreamed that ever these men who has commenced in such a small way would become such successful business men as they are at the present day. Farquharson, Trail & Co. worked the old Bay of Fundy works for about a year, renting them from the St. Stephen bank.

While Milne, Coutts & Co and Taylor & Black were working in the old mill they did not do any quarrying, buying the granite from John Nichol. In 1881 Milne, Coutts & Co. leased from the St. Stephen bank the Bay of Fundy works and commenced work on a large scale. They sublet a part of the works to Epps, Dodds & Co. and business was continued in this way until November, 1884, when Milne, Coutts & Co. purchased the entire property and Epps, Dodds & Co. removed to a shed built for them by the Grand Southern Railway. Milne, Coutts & Co. have now the most extensive works in Charlotte County. They have some 1,800 acres of land situate about three miles from town. Easy access is obtained to the quarries by the turnpike road which passes directly in front of the western quarries and connects with a road to the other quarries. In addition to the road the Magaguadavic river runs within an eighth of a mile of the western quarries. There is a wharf on the north bank of the river and adjacent to the road which can be used for the carriage of the granite to the works. The works themselves are situate a short distance from the main street of the town on the eastern bank of the river, immediately over the falls (from which is derived the motive power) and cover an area of over an acre. The workshops form a quadrangle, divided in sections as follows: 1st, the polishing shops, 250 x 40 feet and one story high; 2nd, the granite cutting shop of the same size; 3rd. blacksmith, machine and pattern shops, and 4th, offices and store. The inner are of the quadrangle is covered by a large traveller which is used for carrying the granite from the cutting to the polishing shop and for loading and unloading the granite as it arrives from the quarries and when completed for shipment. The Polishing Shop has shafting extending through its entire length, supported by transverse beams upheld by 18 inch square posts sunk eight feet in the ground, resting on granite blocks. The machinery is of the very best, consisting of five Jenny Linds or polishing machines, four pendulums, one boring machine, eight lathes, etc. The present machinery will polish 200 superficial feet per day exclusive of mouldings. They have recently put in a patent column cutter, manufactured by Allan Bros. of Carleton. The motive power is derived from the adjacent falls, the shafting extending from the shops to a flume built from the lower level of the falls, to the level of the river and is ten feet square by thirty feet deep. The water is conveyed to the flume by a Penstock, a Lefell turbine wheel (48 inches in diameter) at the bottom of the flume, giving a motive power equal to 200 horses, sufficient to drive four times the quantity of machinery and can be used day and night throughout the entire year, frost having no effect on these falls. They had during the past year 13 men at work in the quarries under Mr. Coutts. The stone when quarried is hauled by teams to the works. They employed 25 stone cutters and 22 polishers, Mr. Milne superintended the cutting and Mr. Watt the polishing. The column cutter was run by Mr. Johnston, who invented it. In addition to the number of men given above they give employment to two blacksmiths and several teamsters. Their business last year was larger than ever before, the output being to the value of $45,000. They ship the product of their works principally to Ontario, finding a market for considerable of it, however, in the maritime provinces and the United States. They shipped not long since two monuments to Victoria, B.C., via the C.P.R. Alexander Taylor, who started in the business with Mr. Black, now runs a large mill and finds a greater demand for his work each year. In 1881 Mr. Taylor leased the Breed mill near the falls on the St. Andrews road. His works are larger and the machinery in them the best obtainable. He has two cutting sheds 80x14 and 20x14 feet respectively, a polishing shed 60x40 feet, and also blacksmith and pattern shops. There are in his works 3 Jenny Linds, 4 lathes, 2 pendulums, 2 verticals, and a column cutter. Mr. Taylor derives the motive power for his works from the falls, and there is sufficient power to drive works much larger than his during the entire year. There is little expense attached to the operation of the machinery which is a great advantage. The work is done under the immediate supervision of Mr. Taylor, who is a man of many years experience in the business. Ha has 50 acres of land near St. George, and also 200 acres at Spoon Island, on the St. John river. From the former he obtains red granite, and grey granite is quarried at Spoon Island. He employs 5 men at his St. George quarry, the stone being more easily got out than in many other places. Last year he had 14 stone cutters and 10 polishers at his works besides a column cutter, teamsters and blacksmiths. Mr. Taylor's business last year was double what it was in any former year and he expects it will be much larger this year. He has on hand orders which will keep his men busy for about two months. His output last year was valued at $20,000, most of it being shipped to Ontario. Epps, Dodds and Co. commenced business in 1881 in a part of the Bay of Fundy works and are now carrying on a large business in their works near the Grand Southern Railway shops. The polishing mill is 40x50 feet and the cutting shed 40x50 feet. In addition to these, they have added two wings, which are also used as cutting shops and a blacksmith shop. Their machinery is run by steam, the power being derived from the railway shops. Their quarries are about three miles from the town on the line of the railway. Their stone, when quarried, is placed on cars (sidings running from the main track to the quarries) and taken to the mill. They employed last year 10 men at the quarries, and at the mill 25 stonecutters and nine polishers. Their machinery consists of two Jenny Linds, three verticals, seven polishing lathes and a column cutter. The value of their output last year was about $40,000, over half of which went to Ontario. The remainder was sold in the maritime provinces and the United States. They have all the work they can do. Much of their output is vault work, which does not require polishing, which accounts for the small number of polishers employed. This firm manufactured, in 1886, the pillars of the Garfield monument at Cleveland, Ohio. Tayte, Meating and Co. commenced quarrying on a property owned by them about two and a half miles from St. George in May, 1885, and in August of the same year they leased a blacksmith shop from the Grand Southern railway. They commenced the manufacture of building and monumental work in this building, and have continued to increase their output ever since. Their works have been enlarged several times since and their dimensions are: polishing shop 32x20 with blacksmith and pattern shops attached. They will have to extend their works this spring, as the sheds will not accommodate the number of men that will be required to execute the orders coming in. They have two Jenny Linds, and will put in another one very soon, two lathes, one vertical, to which they will add another vertical in the spring. They employed last year six men at the quarries, nine stone cutters, four polishers, and several other workmen. The product of their works last year was valued at $15,000, most of it being shipped to Ontario. They work in grey as well as in red granite, the former rock being obtained from this city. The orders now on hand will keep their workmen busy until the first of May, and then they will be compelled to increase the number of their workmen. There is not as much work doing just at present as at other times, but the dull season lasts only a few weeks. The cutters and polishers are nearly all kept constantly at work. In the near future two other firms will commence the manufacture of granite work at St. George and will give employment to about 50 men. The New Brunswick Red Granite Company whose works are at Carleton, own a large area of land at St. George, where the stone used in their works is quarried. They employed about 15 quarrymen last year.

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Jun. 1, 1887 Fine Granite Specimens. - Rev C.W. Dutcher, now in Atlanta, Georgia, has handed in to the Journal office there, some beautiful specimens of granite sent to him by the Carleton Granite Company, of St. John, Canada, F.T.C. Burpee, manager. The Journal says: One of them is known as Spoon Island and the other as Bay of Fundy granite. In color and texture the specimens are very fine, and they are beautifully polished. The company is backed by $100,000 capital and are pushing the work vigorously."

St. Croix Courier - Mar. 31, 1887 Messrs. Milne, Coutts & Co., of St. George have received a diploma from the Colonial Exhibition for their exhibit of granite. A bronze medal accompanies the diploma which is signed by Albert Edward, Prince of Wales. The leading feature of the diploma is the allegorical figures representing the various colonies laying their tributes at the feet of their common mother - BRITAIN."

S.J. Daily Sun - May 4, 1887 Carleton Red Granite Co. - At the annual meeting of the Carleton Red Granite Company, Monday, the following directors were elected: J.W. Lawrence, F.T.C. Burpee, E. Fisher, J.C. Robertson, B.H. Appleby, R.O. Stockton, C.E. Burpee. At a subsequent meeting of the directors, J.W. Lawrence was elected President; George K. Smith, secretary-treasurer, and F.T.C. Burpee, manager."

Moncton Daily Transcript - Nov. 18, 1887 A magnificent monument, 15 feet high, has been placed over the grave of the late Hon. J.C. Pope, at St. Eleanors, PEI. It is of red granite, from the quarries of St. George, N.B."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Nov. 22, 1887 Red Granite. - Some Facts About St. George's Great Industry. - The Works of Milne, Coutts & Co., Epps, Dodds & Co., and Others. - Heavy Shipments to the Upper Provinces. - A trip over the Grand Southern as far as St. George brings one in the midst of an industry of comparatively recent origin, but now famous not only all through the Dominion, but through the neighboring republic, even to its westernmost states. It is some 14 years since the red granite business was first started in St. George. The actual discovery of this source of wealth is laid claim to by several parties, and, as in all other discoveries, each claimant has his devout adherents. A Sun representative visited St. George a few days ago for the purpose of finding what amount of business was done in red granite, and the following information was derived from members of the firms at present engaged in the business: The first parties that started in the business were principally Americans, and in 1871 or 1872 were incorporated as the Bay of Fundy Red Granite Company. It seems that one George McGlashen was the head man in the concern. After a while he removed from St. George and started a similar industry at Red Beach in Maine, Although the original Bay of Fundy Company in course of time went to the wall. Under the same name the enterprising firm of Milne, Coutts & Co. carry on the most extensive business in the place. Their works are situated near the main street of the town, on the eastern bank of the Magaguadavic river near the falls, covering an area of one acre. Their polishing mill is 250 feet long by 40 feet wide, the motive power, which is derived from the adjacent falls, is equal to 200 horsepower and can be used day and night throughout the year. The land in connection with the works is in area about 1600 acres and within this limit are found three shades of colour - dark red, medium red and salmon colour. This firm as now constituted has been doing business for over nine years; they employ 60 men at wages ranging from 50 cts. per day for apprentices (1st year) to $2.50 which is often made by piece workers. They pay about $2000 a month in wages. Four years ago the extent of the business was not more than $18,000 per annum. They estimate their output this year at $50,000. The bulk of this they quarry, dress and polish themselves, though some of their grey granite is brought, in its rough state, from Spoon Island, above St. John. In fact all the firms in the business here get more or less from that source. Milne, Coutts & Co. ship, via Grand Southern and Intercolonial, fully three-fourths of their product to Ontario, and other parts of the Dominion, some going as far west as Victoria and New Westminster. The remaining shipments are to the States, not a little of it going to Indiana and Michigan. Just now this firm is preparing the largest tomb ever made in New Brunswick. It is destined for Cedar Hill cemetery, Hartford, Conn., will weigh 70 tons, and consists of 10 pieces. It will be shipped in the spring. At the Indian and Colonial exhibition of 1886, held in London, a diploma was awarded to the work of this firm. In conversation with one of the members an opinion, favoring a higher duty on foreign granite was expressed. Close by these works are situated those of Colmer, Wallace and Co., a concern which has only been running since the spring. Mr. Colmer left his work (busy as he was) to extend what information he could to the Sun's representative. The sales of this firm during the past summer had been some $3,000 worth of finished granite. They quarry, dress and polish their own work, employing during the summer about 12 men at wages ranging (not including apprentices) from $1.30 to $1.75 a day. Here was to be seen a handsome monument, near completion, to be erected in Chamcook, to the memory of the late George S. Grimmer, Esq., Q.C. Two thirds of the output of this firm goes to the upper provinces. It was replied to the question Why does so much of the gray granite come here from Spoon Island? Such are the facilities for procuring that species of granite at the island that it can be landed in St. George at less price than it would cost to quarry our own grey granite. Close by are the works of Alexander Taylor, a Scotchman by birth, whose life has been spent working in granite. He has been in the business in St. George for many years, and by economy and hard work has always kept afloat. Besides his quarry at St. George he has two grey granite quarries on Spoon Island. In Mr. Taylor's employ are about 30 men, at wages from $1 to $2.50 a day. He generally ships about $20,000 worth per year, two-thirds of his product going to the upper provinces. This year he sent $600 worth to San Francisco and Kansas City. A walk over in the neighborhood of the station brings one to the work of Epps, Dodds & Co., Tayte, Meating & Co, two enterprising firms engaged in the business. The former of these parties, Epps, Dodds & Co., quarry, dress and polish their own red granite. They import from Quincy, Mass., in rough form some dark gray granite, manufacturing it at their works, and some from Westerly, Rhode Island, to the extent of perhaps 40 or 50 tons. The Quincy granite costs in Quincy $2.25 per cubic foot, and the duty is $1.50 a ton - the Spoon Island grey granite costs but 50 cts. per ton in St. John. This firm has been for five years in business, and during the summer employed some 40 men, paying some $1200.00 a month in wages. Their average annual output they estimate at $25,000. They ship more of their product to the States than any other firm, not very much short of half their output going thither. It was this firm which did the work for the famous Garfield monument, now in Lakeville cemetery, Cleveland, Ohio, costing $150,000. Right beside Epps, Dodds & Co., are the works of Tayte, Meating & Co., a firm which has been established for some 2 years, quarrying, dressing and polishing their own product. Twenty-four men have been employed during the summer, and now, about 18 hands have work. The wages paid are about the same as paid by the other firms, ranging from $1.50 to $2.50, apprentices starting at 50 cts. a day. Of an estimated output of $12,000 worth, all of $10,000 goes to Ontario. The firms to which reference has been made, do all their work in St. George, and ship the finished product thence, principally over the Grand Southern railway, some however being sent away by schooners. A large quarry, belonging to the New Brunswick Red Granite Company, is contained in a piece of land one and a half miles long, and some three miles deep. Here are employed, in the quarry alone between 20 and 25 men, who, having extracted the material from the stubborn earth, ship it in its rude form over the Grand Southern to Carleton, where close by the station are the polishing and finishing mills, under the management of Mr. F.T.C. Burpee. The machinery in this large mill consists of 6 saws, 8 polishing carriages, 3 cutting lathes, 14 polishing lathes, 3 Jennylynds, 6 verticals, 4 pairs of pendulums, 2 engines, and 3 boilers. From the above it will be seen that this company do much of their work through the omnipotent agency of steam power. In their works at Carleton 99 men are employed, and the last time an average was taken, the daily wages paid was $1.46. Mr. Burpee estimated last year's output at a figure between $60,000 and $65,000. Some three-fifths of this total has been sold in the Dominion, but an increasing trade with the United States is being operated. Scotch competition is felt keenly over the border, but Americans regard the St. George red granite as superior to that which is found at Peterhead and Mull, the principal granite centres in Scotland. Your reporter was taken through this mill; all the men were very busy, some cutting, some polishing and others engaged with the ponderous saws. One large block of grey granite, probably four feet in diameter, was almost half sawn through. Yet such is the hardness of the stone that the piece would not be divided till late in the day, and it was then but ten o'clock in the morning. There were a couple of massive columns for a Philadelphia public building in course of being polished and finished, and beautiful pieces of workmanship they gave promise of being. Said Mr. Burpee: We have been going since 1877. For some years it was uphill work, but now there is no limit to the business we can do. If we could put more capital in our business (for it is a business requiring enormous capital) we could employ ten times as many men as we now have, and as for the demand it is increasing largely every year. Mr. Burpee did not altogether agree with his co-workers in St. George about a raise in the tariff, thinking that such a measure would lead to a corresponding raise in the American duties, and thus shut from us the American market. Commercial union was rather pleasing in his eyes, as it implied free entry into the U.S. market. But, said he, no matter what our fiscal policy may be, this red granite is going to be an ever- increasing business. There are millions and millions of tons in the quarries of St. George, and the supply is perennial. I think our business is capable of being increased every four days at the rate of 100 per cent. Speaking individually of how his sales this year compared with those of the previous year, he said they had increased fully 12 per cent. Most of his work is sent away all finished, but some of the raw material is shipped to Ottawa, especially when large stone is required, the quarries there are not turning out such large pieces as are often required. From the information derived in regard to the red granite business, it will be easily seen what an unlimited source of wealth, in this industry alone, is found in our province. It is an industry which 15 years ago was unknown; now it has a world-wide reputation. All those engaged in it speak hopefully of its future. There is no apparent fear of a failure in the crop, and new markets are being reached each year. Many people associate red granite with monuments and tomb stones alone; as a matter of fact it is becoming extremely fashionable for building purposes, and besides very fashionable, what is much more to the point, it is handsome and durable. The outlook for the red granite industry is indeed a bright one. In order to show what an unlimited supply there is of this stone in St. George, a gentleman could not find a more forcible expression than that which he made use of in informing your representative that they were the everlasting hills, bearing the same relation to St. George that those hills of Biblical renown did to ancient Jerusalem. From the statements afforded it would seem that the annual aggregate output of the firms engaged in this business is about $175,000 worth, of this, fully $110,000 worth finds a market in Canada. It gives employment to not far short of 300 men, at an average wage (taking Mr. Burpee's estimate) of $1.46 a day; this of course is inclusive of apprentices, who begin at 50 cents a day. The work is healthful and not as dangerous as one would imagine it might be,

S.J. Daily Sun - Nov. 23, 1887 Editorial.- An introductory account of the red granite industry in this province appeared in the Sun yesterday. Our representative interviewed members of firms engaged in the business at St. George and St. John, and found that the principal market for our granite produce is Ontario. His computation that manufacturers of granite to the value of $110,000 find their way to the upper provinces from New Brunswick workshops is well within the mark. The industry is prosperous and capable of great expansion with the present demand."

S.J. Globe - Nov. 25, 1887 Welsford. - ... The sound of the stone hammer is no longer heard at Eagle Rock, and Mr. Hogan's shanty cook has laid away his gridiron for the winter."

S.J. Globe - Oct. 17, 1887 Welsford. - ... Eagle Rock, about two miles east of Welsford, is now a busy place; as Mr. Hogan the Fredericton Railway Bridge contractor, has here, some fifty men employed in quarrying stone for that structure

Apr. 1888 - Copied from: St. Croix Courier - Apr. 18, 1918 30 Years Ago. - All the polishing mills at St. George are running on full time and every firm in the business has orders ahead. It is altogether likely that two of the firms will find it necessary to enlarge their mills this year in order to fill the orders that are coming in."

S.J. Daily Sun - Apr. 12, 1888 The Granite Business. - All the polishing mills at St. George are running on full time and every firm in the business has orders ahead. It is altogether likely that two of the firms will find it necessary to enlarge their mills this year in order to fill the orders that are coming in."

Chignecto Post - Apr. 26, 1888 All the polishing mills at St. George, N.B., are running on full time, and every firm in the business has orders ahead for Bay of Fundy red granite."

Daily Telegraph - Jan. 11, 1888 Iron Bridges. - The third iron bridge built for the government by Mr. Alfred Haines of St. Mary's, was completed last week across the Dennis Stream, near St. Stephen. The abutments of this bridge were built anew of granite laid in cement. The next iron bridge to be put up by Mr. Haines for the government will be across the Meduxnekeag in the town of Woodstock. This work will be begun early in the spring."

Daily Telegraph - Jan. 17, 1888 Exporting Red Granite in the Rough. - The sloop Hunt, built expressly for the transportation of stone and owned by the Cape Ann Granite Company, arrived in port yesterday and moored at the railway wharf, Carleton, where she will be loaded with red granite from the quarries of the New Brunswick Red Granite Company at St. George. The Hunt will carry 120 tons or upwards of some of the finest stone ever taken from the quarry. This is the first time a vessel has been sent expressly to New Brunswick for this product. The Americans recognize the value of the red granite of New Brunswick for building purposes, its capability for receiving such a good polish making it highly desirable. The Hunt has hoisting engines and all the machinery necessary for taking such a cargo on board, and thus fitted out and the stone brought on cars to the edge of the wharf, the work of loading will proceed rapidly. Although the quarry from which the stone is procured is but four miles from the wharf at St. George, it is cheaper to bring it by rail to Carleton than haul it the shorter distance to St. George's wharf. The quarries owned by the N.B. Red Granite company are practically inexhaustible, and there is no reason why a large and remunerative export trade in this product could not be worked up."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Jul. 26, 1888 Central Hampstead. - Mr. Joshua Cameron has taken from the Spoon Island granite quarry a stone eight feet square and two feet thick, for F.C. Burpee of Carleton. He had fifteen pairs of oxen engaged hauling it to the landing for shipment yesterday, but failed to reach its destination. Today he will use some of his hoisting apparatus for moving it."

St. Croix Courier - Jun. 28, 1888 Our St. George correspondent writes:- Your correspondent had a chat with Mr. Thomas Logan a few days ago. Mr. Logan, as mechanical superintendent of the works of the Grand Southern railway at St. George, has proved himself an efficient manager whose services the directors of this road could not easily dispense with. The different companies operating granite are just now turning out some handsome monuments. As the St. George granite becomes more and more known the demand for it is increasing, so that, in a few years, the men engaged in it will number thousands instead of hundreds as at present. Perhaps the most remarkable and exquisite finished piece of work that has been wrought by the skilful hands of the St. George quarrymen was shipped to Boston on the 13th inst. It was manufactured by Epps, Dodds & Co., was of large size, weighing several tons, and of great beauty. This monument, moulded out of the best and most enduring granite in the world, was of the following dimensions:- Base, 8 1/2 feet by 4 1/2 feet with a rise of 1 2/3 feet; die, 8 feet by 3 2/3 feet, with a 2 foot 7 inch rise; cap, 7 3/4feet by 3 feet 5 inches, with a 1 1/2 foot rise. Eight polished panels, sunk 2 1/2 inches and 1 1/2 foot square, showed 495 letters delicately cut. A variety of flowered tracings occupied conspicuous places. Piepoint, the family name of the party for whom it was manufactured, is displayed by letters sunk at the base. Among the inscriptions is one that read poet, patriarch, preacher, philosopher, philanthropist."

S.J. Daily Sun - Mar. 1, 1888 Carleton. - The New Brunswick Red Granite Works have again started, and it is expected will be in full operation in a few days."

S.J. Daily Sun - Mar. 8, 1888 The Granite Business. - All the polishing works at St. George have resumed work for the season, and there is every indication that this year's business will be more extensive than ever before. At the present time the monthly wages account of the various firms amounts to over $4,000."

Daily Telegraph - Mar. 29, 1888 St. George. - There has not been much to communicate from the granite town of late. The stonecutters are hammering away and the polishers polishing steadily in the granite mills; otherwise we are very quiet

S.J. Globe - May 8, 1888 The annual meeting of the New Brunswick Red Granite company was held yesterday afternoon, when the following directors were re-elected: F.T.C. Burpee, Joseph W. Lawrence, James C. Robertson, Edwin Fisher, C.E. Burpee, R.O. Stockton and B.H. Appleby. Mr. Lawrence was chosen president, F.T.C. Burpee, manager, and Geo. K. Smith, secretary. An outstanding mortgage of $26,000 was reduced to $5,400 during the past year."

Daily Telegraph - Oct. 24, 1888 A Granite Cutting Machine, invented in New Brunswick, and just purchased by Camden parties is attracting much attention among the stone workers of eastern Maine. The new owners are experimenting with it to see if it can be made to work satisfactorily. The machine has cutters, one above the other, which are fixed to loose pulleys on a moving shaft. They are one inch thick, going to an edge. The cutters move up and down, and the stone is brought to them on a carriage, similar to that of an iron planer. If the machine cuts stone as rapidly and well as claimed, it will revolutionize the granite business; but this is far from being an assured thing. -[Bangor Commercial."

Progress - Sep. 29, 1888 A Handsome Piece of Work. - Judging from an order about to be filled by the New Brunswick Red Granite company, the upper Canadians have fallen in love with New Brunswick red and gray granite for monuments. A few days ago the above named company shipped the first two massive blocks of stone to Ottawa, which will be included in a handsome monumental structure, 8 feet square at the base and 33 feet high. The base was of grey granite, and one of the finest stones which has ever been quarried in the Spoon Island quarry. Upon this will be placed two other square blocks of red granite, each smaller than that below it, and upon them the die of polished red granite and the shaft, which will be about 12 feet high and 2 in diameter, will be a curiously-carved and ornamental stone. All the work is being done in the works in Carleton, and it is safe to say that the monument, when completed and placed in position, will be one of the finest in

S.J. Daily Sun - Apr. 3, 1889 The Granite Business. - The granite business is destined to be a very important one in this province. There is at St. George a mountain of red granite of the best quality in the world. Builders throughout the United States are unanimous as to its superiority over the Scotch granite. Then the grey granite got at Spoon Island is of the very best quality. Several firms are engaged in the business at St. George. The extensive works of the New Brunswick Red Granite Company at Carleton present just now an exceptionally busy scene. These works were erected in 1877, and for the first two or three years gave employment to about 30 men. The business has increased wonderfully since then and at the present time 100 men are employed there. This company manufacture all descriptions of materials for building purposes and have turned out some of the finest pillars used in many of the large buildings. At present the company are furnishing the granite for two large buildings in New York - one of which is being erected in Central Park. Fully 5,000 tons of granite will be required for this purpose. The company have a large quarry at St. George, where they obtain their red granite, and another at Spoon Island, where the grey is procured. About forty men are given employment at the quarries and the company's wages exceeds $4,500 per month. The granite when polished, etc., is shipped to the upper provinces and the United States, about one half of the product being sold in Canada."

Codes: G3 / IDX_Names: Granite;

S. J. Daily Sun - Apr. 30, 1889 The New Brunswick Red Granite company has shipped from their quarry at St. George about 250 tons of red granite to New York. The granite, which is in its rough state, will be used in the art museum which is being erected in Central Park."

Moncton Daily Times - Aug. 6, 1889 St. John, Aug. 5. - The N.B. red granite works have orders enough to keep them rushed till New Years."

St. Croix Courier - Aug. 15, 1889 A scow loaded with granite for the Calais bank, was sunk near the end of Chipman's wharf on Sunday. She was raised the next tide."

S.J. Evening Gazette - Aug. 19, 1889 A Large Block of Granite. - A correspondent atSt. George writes: - Mr. A. Caird succeeded in quarrying what is the largest block of granite ever quarried in New Brunswick. The granite was taken from the quarry of the New Brunswick Red Granite Company near this place and weighed 1200 tons. The mass was moved 20 feet from the solid rock."

Daily Telegraph - Aug. 20, 1889 The Largest Block of Granite ever quarried in New Brunswick was taken from the quarry of the New Brunswick Red Granite company near St. George, a few days ago. It weighed 1,200 tons. The mass was moved 20 feet from the solid rock."

St. Croix Courier - Aug. 22, 1889 St. George.- Mr. A. Caird succeeded in quarrying what is the largest block of granite ever quarried in New Brunswick. The granite was taken from the quarry of the New Brunswick Red Granite company near this place and weighed 1200 tons."

S.J. Daily Sun - Aug. 26, 1889 St. George. - Michael Coffee, of the firm of Epps, Dodds & Co., died at St. George Saturday morning of typhoid fever. Mr. Coffee's many friends will learn of his death with the deepest regret."

Daily Telegraph - Aug. 27, 1889 The Late Mr. Coffey of St. George. - A valued correspondent at St. George writes: A feeling of deep and universal grief prevails in our village on account of the sudden and unexpected death of Mr. Coffey of the firm Epps, Dodds & Co. one of the leading firms in the manufacture of granite in this place, which occurred here Saturday morning 24th inst. Although not enjoying his usual health for a short time past yet he had up to within a week of his death been able to attend to his ordinary business when he was stricken with typhoid fever which, despite the efforts of medical skill and the care and attention of loving friends resulted so fatally. He was a young man of such promise. Warm hearted, generous and obliging, of an affable and cheerful disposition which made him a prime favorite with a large circle of friends. He was a good business man, intelligent, upright and energetic. He was a member of the St. George School Board and always took an active interest in all matters that tended to the advancement and interests of his native place. Called away at the age of 30 he leaves a wife and child and a large circle of relatives and friends to lament the early close of an earthly career so rich in promise of usefulness and felicity."

St. Croix Courier - Aug. 29, 1889 Obituary.- Michael Coffee of Epps, Dodds & Co."

Evening Gazette - Dec. 12, 1889 The Red Granite Work. - West end, are running at night now in order to finish all their work before the time for shutting down arrives. The men there make 9 days to the week."

S.J. Evening Gazette - Dec. 13, 1889 Coal for the Granite Works. - Schooner Wioma is discharging a cargo of coal at Rodney Slip, West End, for the Red Granite Works."

Evening Gazette - Dec. 14, 1889 Granite Shipments. - Several cargoes of red granite in the rough state have been shipped from the Red Granite Works at West end, to New London, Conn. this year. The granite is for the Metropolitan Museum of Natural History, which is being built in Central Park, New York City. It is taken to New London where it is dressed and from there shipped to New York. About 2,000 tons have been shipped for this purpose this season and the schooner Geo. E. Dale will begin on Monday, to load the last cargo of the season. It will consist of about 250 tons."

St. Andrews Beacon - Dec. 19, 1889 and S.J. Globe - Dec. 20, 1889 Epps, Dodds & co., the enterprising granite manufacturers of St. George, have purchased from Hon. B.R. Stevenson, a lot of land adjacent to the Magaguadavic Falls, and intend removing their works thither. They will thus be able to draw their motive power from the Falls, instead of from the railway shop engine. The lot cost the firm $1600. Considerable expenditure will be necessary to build a flume in the river, but the firm have made up their minds to live independently and they will push the work as rapidly as possible.

Messrs. Tayte, Meating & Co., who also got their power from the railway works, are looking about for a site near the river."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Dec. 26, 1889 During the holidays the granite firms have suspended operations. Epps, Dodds & Co., have commenced smoothing and leveling the site which they have recently purchased close to that of Milne, Coutts & Co. They intend having their mill in readiness for work by spring. Tayte & Meating, it is said, intend purchasing the works lately occupied by Colmer & Wallace. This will bring all the granite firms close to the falls, from which the motive power is

St. Croix Courier - Feb. 14, 1889 As Mr. James Dodds, of the firm of Epps, Dodds &Co., was superintending the moving of a stone weighing some ten tons, a portion of the gearing by which it was being raised gave way and the stone fell a distance of five or six feet, crashing through the floor. Fortunately no one was injured."

Evening Gazette - Jan. 11, 1889 The Maine Red Granite Co., in completing the urns for the Vanderbilt monument, have the honor of making the largest urns in the world. Mr. O.S. Tarbox, superintendent of the works, left for the west on Thursday to make plans and specifications on which to give estimates on granite work for buildings and monuments at Chicago, Kansas City and other points west."

St. Croix Courier - Jan. 17, 1889 St. George.- The granite companies resume operations again on Monday, having been closed since the holiday season."

Saint John Evening Gazette - Jan. 18, 1889 The St. George granite works, which have been closed since the holidays, will resume operations next Monday."

St. Croix Courier - Jan. 24, 1889 A number of our young men have gone to Maine to engage in the granite business there."

Evening Gazette - Jul. 2, 1889 Red Granite Shipments. - Schooner Laura Brown is now loading red granite from the new railway extension on South Rodney wharf. The granite is taken in very large blocks to New London, Conn. This is the sixth cargo shipped this season by the N.B, Red Granite Company."

S.J. Globe - Jul. 5, 1889 At the New Brunswick Red Granite works Thursday afternoon, Wm. Copeland, an employee, had one of his feet injured by being struck by the fly wheel of the engine."

St. Andrews Beacon - Jul. 18, 1889 The granite works at Red Beach, Me., are constructing columns for buildings in the new town of Guthrie, Oklahoma."

St. Croix Courier - Jul. 18, 1889 St. George.- Our red granite business is flourishing, the managers of the different firms report plenty of work and the prospect of trade in their line better than ever before. The business is a growing one, and bids fair at no distant day to make our village a prosperous business centre."

St. Andrews Beacon - Jul. 25, 1889 Advertisement: Established 1881 EPPS, DODDS & CO. MANUFACTURING AND DEALERS IN Dark Red and Grey Canadian and Dark Blue and Medium Quincy GRANITE Estimates promptly given for all kinds of Cemetery and Building work. Orders executed with care and despatch. All work warranted. Satisfaction guaranteed. Post office address: St. George, New Brunswick."

Eastport Sentenil - Jun. 19, 1889 Mr. T.J. Lyons, the special agent of the Maine Labor Bureau has been visiting the granite quarries as well as the fishing villages, and writes that the following wages are paid per day; Paving cutters, $3; quarrymen, $1.75 to $2; teamsters, $1.60 to $2; sharpeners, $1.75 to $2.50; laborers, $1.50."

Evening Gazette - Jun. 29, 1889 The N.B. Red Granite Works are shut down on account of a defective boiler."

Daily Telegraph - Mar. 8, 1889 Accident. - Yesterday afternoon, Mr. Thos. Allen, acting foreman for the New Brunswick red granite works, Carleton, had his foot severely injured by being jammed between two stones."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Mar. 14, 1889 The Granite Town.- Something About the Industries of Thriving St. George.- (Our St. George Correspondent) The manufacture of granite being the principal business of this place, a short account of the principal firms and the extent of the business which they are carrying on will doubtless prove of interest to many of your

readers. There are at present five companies engaged in this industry, employing in the ..?.. about one hundred and seventy five men and paying to such upwards of five thousand dollars a month. The oldest firm and that doing the most extensive business is that of Milne, Coutts & Co. The firm originally consisted of Alexander Milne, Alexander Milne and James Watt. They began operations in a small way in 1872 in a work shed situated in the Gully, so called. After many years of uphill work having many difficulties to encounter and overcome and meeting with several losses, taking considerable at the time of the St. John fire by having monuments destroyed which were stored there for sale, they succeeded in establishing a paying business. About eight years ago they moved into the works formerly occupied by the Bay of Fundy Company and have since been steadily increasing their business. In 1885 the works, which they at present occupy, were purchased by the firm and Messrs. John D. Chipman, Julias T. Whitlock and C. Johnson, jr., were admitted as partners into the business. The supply of granite owned by the firm is considered inexhaustible. It is of a light red color and takes an excellent polish. At the present time the firm employ about fifty men and their monthly payroll amounts to upwards of sixteen hundred dollars. They are engaged principally in monumental and architectural work - four fifths of their trade being with Ontario, the remainder with the United States. They sent an exhibit to the Indian and Colonial Exhibition, held in London in 1886, upon which they were awarded a medal and diploma. The same is now being exhibited in Australia. A
large general supply store is run in connection with the business. The finance of the firm is controlled by Geo. F. Hibbard, M.P.P. The business of the firm is yearly increasing, new lines of trade are being developed and facilities for meeting the required demand are being constantly added. The firm of Epps, Dodds & Co. consisting of Messrs. Charles Epps, James Dodds, Henry Meating and M. Coffey, affords an example of what business ability and enterprise can accomplish. Some eight years ago these four young men, all of whom are yet under thirty years of age, with keen business insight and having faith in the future success of the granite enterprise of the town, purchased a column cutter and other machinery from Scotland, and for a number of years carried on quite a business in part of the works of Milne, Coutts & Co., doing the column work of that firm, as, previous to the introduction of their machinery, the cutting of the columns had been done by hand. Finding their business rapidly increasing, they removed four years ago to their present place of business, close to the machine shops of the Grand Southern Railway. In their work sheds and quarry they at present employ forty-five men and the monthly wages paid to their employees amount to fourteen hundred dollars. Columns for buildings and monumental work largely occupy their attention. Their principal market is Ontario, but they have also worked up considerable trade with the United States, especially in monumental work. Their quarry being situated close to the Grand Southern Railway, the granite is brought directly to their work sheds and there, by the use of machinery, stone weighing eight and ten tons is handled with apparent ease as though it weighed but a few hundred weight. Their granite being obtained mostly from underneath the surface is of a deep red color and takes a superior polish. The yearly increase of their trade and the promptness with which they are able to fill orders are a sufficient guarantee of the superior workmanship and business ability of the firm. The late Alexander Taylor had, for a number of years, been conducting a successful business. At the time of his death he had employed about thirty or thirty-five men. The business will be continued by his sons, Alexander and John. Both these young men had for some time been associated with their father in connection with the business and therefore are qualified to continue the business successfully. Being industrious and energetic and having a good business already worked up, the success which has characterized their work in the past will not be allowed to languish. The firm of Tayte & Meating employ about twenty five men. They are both superior workmen and the quality of the work which is done by this firm is unsurpassed. They are energetic and persevering and are building up for themselves a good trade. If diligence and application to business are any guarantee to success then the success of this firm is assured. The firm of Colmer & Wallace are also doing a considerable business, and, although the winter months are always regarded as slack time in the granite business, a visit to the work sheds of the different companies would convince every one of the extent

Weekly Record - Fri. May 3, 1889 The New Brunswick Red Granite Company has shipped from their quarry at St. George about 250 tons of red granite to New York. The granite, which is in its rough state, will be used in the art museum which is being erected in Central Park."

Moncton Daily Transcript - May 7, 1889 GRANITE FOR ONTARIO.- Several cars of handsome red granite, boxed, were seen in the ICR yard to-day. They were en route from the quarries at St. George, Charlotte Co., for Toronto."

Codes: G3 / IDX_Names: Granite;

Evening Gazette - Nov. 1, 1889 The Welsford Red Granite Co. - As announced in the Royal Gazette, application is to be made for incorporation by a company to be known as The Welsford Red Granite Company. 2. The objects for which such incorporation is sought are - For the purpose of quarrying, polishing and selling of Red Granite; and also the acquiring, holding, selling and conveying of lands, and of rights and interests in lands within the province of New Brunswick, for Mining and other purposes incidental to mining and quarrying, and the working of mines and quarries, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds; and all other purposes connected with the business of mining and quarrying. 3. The chief place of business of said Company, shall be at Welsford, in the County of Queens, New Brunswick. 4. The amount of the Capital stock of said Company is to be Fifty thousand dollars, divided into one thousand Shares of Fifty Dollars each; of which two hundred shares, amounting to Ten thousand Dollars, have been actually subscribed. 5. The following are the names, of the several applicants, of whom the first five named are to be first or provisional Directors of the Company. Brunswick Sancton, of the City of New York; banker; Arthur J. Trueman, of St.

John, Barrister-at-law; John A. Chesley, of St. John, Manufacturer; Robert Wisley, of St. John, gentleman; John Connor, of St. John, manufacturer; John Kelly, of St. John, manufacturer; Isaac Holstein, of the City of New York, mineralogist; Levi H. Young, of St. John, manufacturer; W. Alonso Chesley, of St. John, manufacturer; John J. Forrest, of St. John, barrister-at-law; Joseph W. Hazelhurst, of St. John, manufacturer."

S.J. Daily Sun - Nov. 1, 1889 Welsford Red Granite Co. - Notice is given in the Royal Gazette of intention to apply, under the provisions of the New Brunswick Joint Stock Company's Letters Patent Act, for letters patent incorporating the Welsford Red Granite Company, under conditions, etc., set forth as follows: 2. The objects for which such incorporation is sought are - For the purpose of quarrying, polishing and selling of red granite; and also the acquiring, holding, selling and conveying of lands, and of rights and interests in lands within the provinces of New Brunswick, for mining and other purposes incidental to mining and quarrying, and the working of mines and quarries, and raising, selling and exporting of and dealing in ores and minerals of all kinds; and all other purposes connected with the business of mining and quarrying. 3. The chief place of business of said company shall be at Welsford, in the county of Queens, New Brunswick. 4. The amount of the capital stock of said company is to be fifty thousand dollars, divided into one thousand shares, of fifty dollars each, of which 200 shares, amounting to ten thousand dollars, have been actually subscribed. 5. The following are the names, addresses and callings of the several applicants, of whom the first five are to be first or provisional directors of the company; Brunswick Sancton of the city of New York, banker; Arthur I. Trueman, of the city of St. John, barrister-at-law; John A. Chesley of the city of St. John, manufacturer; Robert Wisely of the city of St. John, gentleman; John Connor of the city of St. John, manufacturer; John Kelly of the city of St. John, manufacturer; Isaac Holstein of the city of New York, mineralogist; Levi H. Young of the city of St. John, manufacturer; W. Alonzo Chesley of the city of St. John, manufacturer; John J. Forrest of the city of St. John, barrister-at-law; Joseph W. Hazelhurst of the city of St. John, manufacturer."

S.J. Daily Sun - Nov. 6, 1889 St. George Granite Works. - Yesterday A.H. Gilmor, M.P., acting for the St. George granite works firms, met H.H. McLean, vice president, and W.A. Almb, manager of the Shore Line railway, and arranged to have the engine in the machine shop placed at the disposal of the granite companies under certain conditions. The statement yesterday was slightly premature. None of the companies had closed down."

St. Andrews Beacon - Nov. 7, 1889 Saint George is to have a rival in Welsford, Queen's County. Letters patent have been asked for the incorporation of the Welsford Red Granite Company with a capital stock of $50,000. The applicants for incorporation are: - Brunswick Sancton, of New York, banker, Arthur I. Trueman, John A. Chesley, Robert Wisely, John Connor, John J. Forest, Joseph W. Hazelhurst, all of the city of St. John, and Isaac Holstein, of New York, mineralogist."

S.J. Globe - Nov. 12, 1889 Fred. Dale, an employee in the New Brunswick red granite works, had his left hand badly injured, Monday, by the slipping of a chain."

St. Andrews Beacon - Nov. 28, 1889 The manager of the Carleton Red Granite works has received offers of free ground and free taxes from several Maine towns if he will remove his works there. One town will give a bonus to assist in defraying expenses of moving plant."

St. Croix Courier - Nov. 28, 1889 Red Beach has been making a bid for the establishment of the Burpee Granite Works, now located at Carleton. The citizens of the Beach offered a bonus of $5,000 to the company and exemption from taxation for twenty-one years on condition that they would remove their business to that point. The offer has not been accepted."

S.J. Daily Sun - Oct. 11, 1889 Building stone is being shipped in considerable quantities from Port Elgin to Montreal."

S.J. Evening Gazette - Oct. 23, 1889 Coal for the Granite Works. - Schr. Wioma is unloading a cargo of coal at Rodney Slip, West End for the Granite works."

S.J. Globe - Sep. 9, 1889 Mr. F.T.C. Burpee, of the Granite works, in getting rates to ship goods ordered from British Columbia, was asked $54 per ton; on seeking to get a better rate, through a line of British steamers via Halifax, he was told his goods could be carried from the latter port for $29.75. It is always Halifax which seems to have the advantage."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Sep. 25, 1889 and St. Croix Courier - Sep. 26, 1889 The granite business at St. George is flourishing, all the works being run to their full capacity. Epps, Dodds & Co., and Tayte, Meating & Co., are talking of enlarging their premises, and it is altogether likely that the business will increase very considerably."

St. Croix Courier - Apr. 17, 1890 A number of stone cutters arrived last week and are at work in Burpee's quarry filling a large order for American parties. The stone will be hammered only."

S.J. Globe - Apr. 26, 1890 The quarrymen have decided to work only nine hours a day after May first."

S.J. Evening Gazette - Apr. 26, 1890 Rockland, Me. - The Granite Association of Maine have voted to give their employees the option of working nine or ten hours a day, but they will give no increase of price per hour."

S.J. Evening Gazette - Apr. 28, 1890 The first cargo of granite curb stones for use along Dock, Mill and Main streets, in connection with the pavement to be laid this summer, is now being discharged in York Point Slip. The stones are from the Spoon Island quarries and measure about 6 or 7 inches thick by 16 deep and from 5 to 13 feet in length. They are being hauled and left at the side of the streets on which they will be used."

St. Croix Courier - Dec. 4, 1890 St. George. - It is astonishing the weather we are having. Sunday was very warm and fine and the mercury registered thirteen below. Nearly everything froze up. Messrs. Tayte, Meating & Co. had a good deal of difficulty in chopping the ice from the notch to let the water through for their mill. They succeeded in getting started again on Wednesday. Many have been heard to exclaim that if they stood Monday out all right with the Scott act so strongly enforced as it has been they would feel fit to tender their services to Commander Cheyne when he next made his descent

St. Croix Courier - Dec. 4, 1890 and S.J. Globe - Dec. 5, 1890 St. George. - Messrs. Epps, Dodds & Co. have gottheir travelling crane finished and find it works most satisfactorily. It will take up a stone between twelve and fifteen tons in weight and carry it to any part of the mill, which saves a good deal of handling. This work was done by Samuel Austin, assisted by Mr. McLaughlin of St. Andrews, and it is certainly a very great credit to them. Mr. Austin has nearly completed a very neat dwelling for Mr. Charles Epps. It is situated on Wetmore's hill and represents a very fine appearance. Mr. Epps expects to occupy it early in the spring."

S.J. Evening Gazette - Feb. 28, 1890 A new granite company has been organized at Red Beach, Charlotte Co., known as the Shattuck Red Granite Co."

St. Andrews Beacon - Jan. 9, 1890 Messrs. Tayte, Meating & Co., granite manufacturers, St. George, have purchased the Bradbury property, on the western side of the Magaguadavic Falls, and as soon as the transfer of the property has been made, they will begin erecting their works. They hope to be in their new premises by the first of March. By the purchase of this property the firm have secured one of the best water privileges on the river. We congratulate the firm upon this practical evidence of success. Messrs. Epps, Dodds & Co., who purchased a site alongside the Falls a few weeks ago, are pushing their building forward with all haste, and expect to occupy it in a month or so. The building is 117x70 feet in size."

Carleton Sentenil - Jan. 25, 1890 Central Hampstead. - Mr. Harvey Walton has a crew of men working in his Granite Quarry getting out curbstones for the streets of St. John, principally on the street leading from the North End to the city proper; it has been favorable for them except the few cold days of last week which they did not work."

St. Croix Courier - Jul. 3, 1890 St. George, New Brunswick, is known of late years as 'the granite town', from the growth within its borders of the industry of cutting the handsome red granite of its neighborhood into building decorations and monuments. Much of the output of this handsome material comes to Ontario. Indeed it is superceding, for architectural, as well as, perhaps, as for other purposes, the Peterhead granite from Scotland."

Codes: G3 / IDX_Names: Granite;

Progress - Jul. 26, 1890 By Industry and Perseverance. - What Tayte, Meating & Co. Have Done in Five Years. - It is fitting that in such an edition of Progress as this, largely devoted to showing the beautiful scenery along the Shore line railway and with some description of the country through which it runs, some attention should be given to the one industry above all others that takes the foremost position in one of the most important centres of Charlotte County, St. George. The granite industry has of late years assumed wonderful proportions in this place and the stone can fairly be considered as one of the most important of the products of western New Brunswick. Among the most prominent firms in the business is that of Messrs. Tayte, Meating & Co. Their efforts to build up a good business have been eminently successful and at the present time they can point with considerable pride to the substantial results of their industry and perseverance. The firm is composed of three gentlemen, viz: A.R. Tayte, Joseph Meating and Nicholas Meating. Every man is a practical worker and understands his business, as the saying goes, from A to Z. Perhaps to this fact as much as any other do they owe their unqualified success. Five years ago the business started with only two workmen beside themselves. Today they give regular and constant employment to 40 hands. When this fact is associated with another, that all of their workmen are natives of the place, those who read this will appreciate just how great an advantage such a business is to the flourishing community of St. George. It was only a short time ago that local papers and correspondents made such favorable mention of the erection of their new mill, a building situated in what is known as The Gulley. It covers an area of 70x80 feet, and is considered to be one of the most convenient and best located structures in the business. It is here that the cutting and polishing is done, and when it is known that the firm can utilize 100 horse power, its capacity to do heavy and much work can be understood. What speaks loudest for the character of their work, and their prices is the fact that they are always seeking to extend their premises to accommodate the trade they have to handle. Their quarry is located two miles above the town in close connection with the railway. Eight men are always employed here getting out stone for their own work. To return to the works of Messrs. Tayte, Meating & Co.; they have lately put in a lot of new machinery, and even with this addition which enables them to execute orders much more promptly than ever before, they know that more machinery will be required in the near future. There can be no possible reason, therefore, to doubt their assertion that they can quote hard bottom prices to the wholesale and retail trade. Mr. Joseph Meating is the competent designer of the firm and has always done first class work."

Progress - Jul. 26, 1890 To The Front Always. - The Immense Establishment of Messrs. Milne, Coutts & Co. - Their Buildings in the Shape of a Quadrangle - The Shaft by a Water Power Equal to 200 Horse-power - Their Quarries and Quantity of Stone in Them. - It would not do to pass over the Red Granite industry of St. George without especial reference to the extensive part taken in the quarrying and manufacture of the stone by the Bay of Fundy Red Granite company, or more properly, Messrs Milne, Coutts & Co. To give some adequate description of their lands and buildings, their quarry and machinery, would take more space than Progress can give the subject, but a fairly comprehensive sketch of their business is what will be attempted. The works are situated on the bank of the Magaguadavic river, right above the falls, and but a step from the main street of the town. Their location gives them a grand water power - about 200 horse power - which can be utilized every hour of the year, if necessary. It would be difficult to explain the immense advantage such a natural power is to a business of this kind, saving the entire expense of fuel and costly engines and boilers, the employment of engineers, and avoiding all the danger incident to the use of steam. The workshops themselves are in the form of a quadrangle, the inner area of which is covered by a large Traveller which is used to carry the granite wherever it is wanted. About this area are the polishing shop, the granite cutting shop, the blacksmith, machine, and pattern shops, and the business offices. The polishing shaft extends through the entire length of the shops, and is ingeniously and strongly supported by transverse beams supported on posts sunk in the ground and resting on granite blocks. To speak of the quarries and give some idea of the quality of granite in them it would be best to quote the words of a civil engineer who surveyed the grounds ceded to the Bay of Fundy Company. It is utterly impossible to estimate the quantity of first rate merchantable red granite contained within the limits of the land ceded to the company. It is simply inexhaustible. There are hundreds of ledges, the outcrops of which represent from 5,000 to 100,000 tons each, while as at Gray's Mountain, which I estimate at 700 feet above the lake, being half a mile long and a quarter of a mile broad, and in Granite Mountain, estimated at 600 feet above the lake, one mile long and three eighths of a mile wide, you will easily credit me when I say that the mind can hardly conceive the immensity of their contents, and an estimate would be merely a useless piling up of figures. I may note, for your information, that the Granite on the land ceded to the Company is perfectly free, so far as I have been able to see, from those spots and veins which occasionally disfigure the Peterhead (Scotch) Granite, and that, generally speaking, the ledges appear to be perfectly homogenous or to lie in rectangular slabs and blocks, generally inclined at an angle of about 30ø from the North towards the horizon. Orders from all parts of the United States and Canada come to Milne, Coutts & Co. daily. They have all they can do, and keep 75 men employed all the time. Since they started they have quadrupled their capacity and there is no saying where proper management cannot place such a business in the future. They cater to the wholesale trade and dealers, and always have their hands full. The work is all carried on under the personal supervision of the firm, and is always of the first class. Their facilities for doing heavy work are superior, and their prices for the same as low as any."

St. Andrews Beacon - Jul 31, 1890 PROGRESS devoted a good deal of its space lastweek to booming St. George and vicinity. Some very choice illustrations were published. We observe that it printed very flattering articles (though none too flattering) on the granite industry, with special reference to Tayte, Meating & Co. and Milne, Coutts & Co."

Eastport Sentinel - Jun. 11, 1890 It is said that there are thirty-five kinds of granite in this State, each one of which possesses distinctive characteristics readily recognized by workmen acquainted with monumental and building tones. There are all shades of what are termed white granite, the most beautiful of which is the Hallowell, together with the red granite of Red Beach, and the black granite of Addison."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 12, 1890 and Daily Gleaner - Jun. 13, 1890 In a few weeks all the St. George granite manufacturers will be clustered around the Magaguadavic Falls. Milne, Coutts & Co. and Taylor Bros. have been obtaining their motive power from the Falls for several years. Three weeks ago, Tayte, Meating & Co. began work in their new building on the opposite side of the Falls, and in a short time Epps, Dodds & Co.'s machinery will be keeping time to the

St. Andrews Beacon - Jun. 19, 1890 Milne, Coutts & Co., Tayte, Meating & Co., and Taylor Bros. are enjoying a season of prosperity."

St. Croix Courier - Jun. 19, 1890 and St. Andrews Beacon - Jun. 19, 1890 The Granite Town.- A description of the Fine Mill now Occupied by Messrs. Epps, Dodds & Co.- Other Notes.- (Our St. George Correspondent) - St. George, June 16th, 1890.- The new mill of Epps, Dodds & Co., which has just been completed by Mr. Robert Stevenson, was occupied for the first time by the firm during the week. The building is 115 feet long and 70 feet wide; the main building is 40 feet wide and 25 feet high. On each side are two wings running the entire length of the building and being 15 and 19 feet wide respectively. The whole building has been built in the most substantial manner and no expense has been spared in making it first class in every respect, while the experience gained by the firm during the ten years they have been in business has enabled them to have their mill arranged on the best plan for securing both convenience and comfort for their workmen. The machinery for polishing and all work connected with it will be carried on in the south wing. The main building and part of the north wing will be used for cutting the stone and the smith shops will also be in this part of the building. The power is obtained from a fine turbine water wheel of 100 horse power, which was placed in position by that veteran millwright, Mr. M. Cawley and which as soon as tested gave the greatest satisfaction. The main line of shafting will be about 25 or 30 feet in length. The firm are to be congratulated on the completion of their fine mill which is said by those competent to judge to be the finest in the lower provinces. They employ at the present time upwards of fifty men, nearly all of whom are young men - natives of the town - and are considered superior workmen and command the wages of such. They have also a large number of apprentices employed, the period of apprenticeship being three years. During the present year the firm will pay out for workmen's wages about the sum of $25,000.00. They are engaged principally in monumental and architectural work, about two thirds of their work being done with Ontario, the remainder principally with the United States. The granite, which they obtain from their own quarry, is of a deep red color, takes a superior polish and being of a very fine quality, the work turned off by this firm in point of workmanship, design and finish is unequalled. They also manufacture gray, Quincy and other imported granite, for all of which they find a ready market. The firm at present consists of Messrs. Chas. Epps, James Dodds and Henry Meating, the late Mr. Coffee having been a member. They are all workers and give their personal attention to the different branches of their work. The pluck, enterprise and ability which has characterized their work does them credit and the town is justly proud of the success that has crowned their efforts. With the improved facilities which they now possess new lines of trade will be developed and the volume of business which they are at present doing will in a few years be doubtless doubled. Milne, Coutts & Co., and Taylor Bros. have been obtaining their native power from the Falls for several years and three weeks ago, Tayte, Meating & Co., began work in their new building on the opposite side of the Falls."

Daily Telegraph - Mar. 1, 1890 Red Granite Company. - The Royal Gazette gives notice of the granting of letters patent incorporating Messrs. Robert Wisely, John Connor, John Kelly, Levi H. Young, W. Alonzo Chesley, Leonard A. Currey, Geo. R. Vincent, for the purpose of quarrying, polishing and selling red granite, etc., by the name of the Welsford Red Granite Company, with a capital stock of $50,000, divided into 1,000 shares of $50 each."

Weekly Record - Fri. Mar. 7, 1890 The company to be known as 'The Welsford Red Granite Company' with a capital stock of $50,000 in 1000 shares of $50 each, has just been incorporated in St. John. The company have valuable granite properties, and will probably push the work of fully developing the same at an early day."

St. Croix Courier - Mar. 13, 1890 The firms of Epps, Dodds & Co. and Taylor & Meating have a quantity of lumber on the sites of their respective mills, have made excavations, placed the wheels from which they will derive the motor power for running their machinery and have made other extensive arrangements for having their work sheds completed and their mills ready for occupancy in the early spring."

Daily Telegraph - Mar. 19, 1890 Going to New York. - A company for polishing granite has recently been established in New York City, being known as the American Granite company which will be patented in Great Britain, United States and Canada. Mr. A. Black, of St. John, has secured a position with this company and intends leaving for New York shortly to enter upon his regular duties. His friends will wish him success in his new calling."

St. Andrews Beacon - Mar. 20, 1890 and S.J. Evening Gazette - Mar. 21, 1890 The St. George granite men, who have recently located themselves at the Falls, are getting their work in readiness for the Spring business. Messrs. Epps, Dodds & Co. have the flume built and have purchased a large water-wheel. They are getting the lumber on the ground for their shops. Messrs. Tayte, Meating & Co., who have acquired a splendid water privilege on the other side of the river, are proceeding with the erection of their shop."

St. Croix Courier - May 1, 1890 Mr. C. Epps, of the enterprising firm of Epps, Dodds & Co., has left the ranks of the bachelors and gone over to the great majority - of married men. The boys are disconsolate at his loss, but all join in wishing

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - May 1, 1890 Business is booming just now and everybody is busy. Messrs. Tayte, Meating & Co. and Epps, Dodds & Co. are hurrying on the work in their new mills. The increase of ten per cent. more on granite is already being felt by the granite men, and business promises well this season."

S.J. Evening Gazette - May 2, 1890 Messrs. Tayte, Meating & Co., and Epps, Dodds & Co., of St. George are hurrying on the work in their new mills. The increase of ten per cent. more on granite is already being felt by the granite men, and business promises well this season."

Evening Gazette - May 3, 1890 The employees of the New Brunswick red granite works have been granted the nine hours per day."

St. Andrews Beacon - May 15, 1890 The wooden building for the granite works which Messrs. Epps, Dodds & Co. are to erect at St. George, will be built by Mr. R. Stevenson, of St. Stephen."

St. Croix Courier - May 22, 1890 Messrs. Tayte & Meatings' new mill is completed and will soon be in readiness for occupancy. It is large, roomy and well arranged for carrying on the different branches of their business."

St. Croix Courier - May 22, 1890 Mr. Robert Stevenson, who is to build the granite mill for Epps, Dodds & Co., arrived here the first of the week and will at once commence building operations."

St. Croix Courier - May 22, 1890 All the granite firms report orders plentiful and prices good, but on account of the freshet it has been difficult to bring the granite from the quarries."

St. Andrews Beacon - May 29, 1890 Mr. Robert Stevenson began work on Epps, Dodds & Co.'s granite building at St. George on Monday, and expects to have it completed in a fortnight. The water wheel has been set, and as soon as the building is finished the machinery will be moved into it."

S.J. Evening Gazette - Nov. 8, 1890 Granite Shipments. - Lately large shipments of granite have been made from the Burpee quarries at St. George to New York, for some large buildings which are being erected there. The last carload for the work arrived in Carleton today by the Shore Line."

S.J. Evening Gazette - Nov. 24, 1890 The Red Granite Works at Carleton were closed down today on account of a break in one of the water pipes. Work will be resumed to-marrow."

Eastport Sentinel - Nov. 26, 1890 Maine is quite a state for granite and there are quarries all through the down east regions. For that reason it seems a trifle strange that the granite for the new government building at Eastport is being brought from way up at North Conway, N.H., a distance which calls for freight rates enough to use up a large amount of stone. It is furnished by the company of which Mr. Parson Tucker is president. This seems to indicate a decided lack of enterprise on the part of the Eastern Maine Quarry owners, says the Bangor Commercial."

St. Andrews Beacon - Oct. 2, 1890 The granite business at St. George is booming."

St. Andrews Beacon - Oct. 16, 1890 St. George.- The granite business is booming along, all the firms engaged in the business report plenty of orders."

S.J. Evening Gazette - Oct. 21, 1890 Jammed at the Quarries. - A young man employed in Burpee's granite quarry at St. George had one of his hands very badly jammed at the quarry yesterday. He arrived in the city today on the Shore Line railway train to receive surgical treatment."

St. Croix Courier - Sep. 18, 1890 St. George.- A vessel discharging Quincy granite for Milne, Coutts & Co. has been at the public wharf during the week."

St. Croix Courier - Sep. 18, 1890 ...municipal affairs ... four candidates ... James Dodds (of the firm Epps, Dodds & Co.)

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Sep. 18, 1890 St. George.- Taylor Bros. have completed the excavation and placed in position their new wheel, which is one of the well known Vulcan turbine water wheels, and is of the same pattern as that used by the adjacent firms. During the time the excavation has been in progress Epps, Dodds & Co. have been running their machinery by night, as the water in their flume would have interfered with and greatly retarded the work."

St. Andrews Beacon - Apr. 9, 1891 Some of the Red Beach granite men have been enticing St. George granite workers by promises of bigger pay. Two or three have taken the bait and left St. George."

St. Andrews Beacon - Apr. 9, 1891 Charles Johnson, jr., of the granite firm of Milne, Coutts & Co., St. George, is now in the West seeking for business for his firm. We hope he will be well rewarded."

Eastport Sentinel - Apr. 15, 1891 Bill McKinley Did It. - Mr. F.T.C. Burpee of St. John, managing owner of the New Brunswick Granite Company, has been in town this week arranging for the establishment of his granite works here. The granite will be brought here in the rough from the quarry at St. George, and the work of preparing it for the market will be done on this side. It is his intention to move his polishing works and all to this side."

St. Andrews Beacon - Apr. 16, 1891 Mr. F.T.C. Burpee, of the New Brunswick Red Granite Works, Carleton, left this morning by the State of Maine for Eastport, to make arrangements for the establishment there of polishing works. Nearly all of Mr. Burpee's trade is with the United States and the American duty on dressed stone - forty per cent. - makes it impossible for him to sell there. - ST. JOHN GLOBE"

St. Andrews Beacon - Apr. 30, 1891 The New Brunswick Granite Co. have leased a lot of land belonging to A.M. Winchester of Manchester, N.H., at the head of the International Steamship Co.'s wharf, and are erecting a shed in which to finish granite to be brought here from their quarries in St. George, quite a quantity of which in the rough and partly finished condition has already been received.- Eastport Sentinel"

S.J. Globe - Aug. 3, 1891 Mr. John Ward, for several years past a worker in the granite works, Carleton, has gone to Boston to reside. On Saturday he was presented with a handsome meerschaum pipe and tobacco pouch by his fellow

Daily Telegraph - Aug. 5, 1891Red Granite. - John Johnston, of Clarendon Station, Queens Co., has on his farm an inexhaustible supply of a very excellent quality of red granite, which he offers for sale. For further particulars see

Daily Telegraph - Aug. 5, 1891 ADVERTISEMENT: Granite For Sale. The subscriber has on his farm, which is situated a half a mile from Clarendon Station, an excellent quality of Red Granite, in large quantities, which can be purchased for a reasonable figure. A good wagon road from Railway Station. Samples of the granite have been polished in St. John, and pronounced by judges to be an extra good stone. Full particulars furnished on application to John Johnston, Clarendon

St. Andrews Beacon - Dec. 17, 1891 The New Brunswick Red Granite Company are making arrangements for laying a track from their quarries at St. George to the Red Store , near the mouth of the Magaguadavic. The distance to be traversed will be about four miles."

Eastport Sentinel - Dec. 28, 1891Red Beach. - The Maine Red Granite Co. has opened a new quarry, and having a big job on hand, will run it all winter."

St. Croix Courier - Dec. 30, 1891 John McMillan, the well known monument manufacturer of St. Stephen, arrived in the city yesterday, and to-day shipped by the Canada Eastern two very rich looking and artistically designed monuments, one to Boiestown in memory of the late John Richards, son of Wm. Richards, the other to Marysville for the grave of Mrs. Waterman. The first mentioned is made of American black granite, and will stand about eleven feet. It is what is called a cap monument. The other is also of the cap design made of red granite, and will stand about ten feet. - Gleaner"

St. Andrews Beacon - Feb. 5, 1891 St. George.- The granite manufacturers here are unanimous for reciprocity with the United States. Atpresent there is a duty of 40% against manufactures going into the States, which duty is almost prohibitory, and as there are no red granite quarries there, the opening of that market to them would be a great boon to our manufacturers, granite of any description commanding a much higher price there than in Canada."

Eastport Sentinel - Feb. 18, 1891 and St. Andrews Beacon - Feb. 19, 1891 At the Red Beach granite works part of the work is being done on a monument to General Grant, and one of the blocks of red granite to be utilized for the purpose, and which was hauled from the quarry the other day, weighed over eleven tons. - Calais Times."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jan. 1, 1891 St. George.- The granite works are booming, working for all they are worth filling fall orders. They report prospects for winter work fairly good. Messrs. Taylor Bros. have built quite an addition to their mill. This has been done by a local carpenter, Mr. J. Crickard, and reflects great credit on him as a builder."

St. Andrews Beacon - Jul. 2, 1891 A handsome block of polished granite, from the works of Epps, Dodds & Co., St. George, now adorns the mantel over the ample fire-place in the Algonquin hall- way."

St. Andrews Beacon - Jul. 2, 1891 St. George. - The Village of St. George … In the background may be seen the swift Magaguadavic, winding serpent like between the cliffs of granite and down through the meadows until it reaches the Falls… But it is not its natural beauty that Saint George is famous for, but its natural wealth. In the everlasting hills which encircle the village like grim sentinels lies untold wealth, the development of which without doubt will some day make of Saint George a rich and populous centre. With the barriers of trade thrown down on the North American continent, and the people of Canada and the United States allowed to do business freely and fully with each other, the strides which Saint George would make would be enormous. But, with a limited market in Canada, and a high tariff wall guarding the entrance to the United States, its progress and development must necessarily be slow. Nevertheless during the last few years it has made progress, and substantial progress, too. Twenty five or thirty years ago the village was entirely dependent upon the lumber trade, and to what an extent the decaying wharves, the ruined mill sites and dams, still forcibly attest. To-day the lumber business, so far as Saint George is concerned, is numbered with the past, but in its stead has grown up the granite industry, something which bids fair to be more lasting and more wealth-producing. This industry originated less than twenty five years ago, the Bay of Fundy Granite Company being the first organization to turn the stone of the surrounding mountains into a marketable commodity. This company was largely composed of Americans, but its business was carried on on too lavish a basis, and after running about ten years it was obliged to succumb. The extensive works which they erected in the village were seized by the bank, which had been advancing them money, the high salaried officials were scattered east and west, and many of the workmen, too. But the company had not labored in vain. They showed conclusively that the stone was good, that there was a constantly increasing market for it, and that with prudence and economy the business could be successfully run. It was not long before a company was formed of practical men to purchase the works and continue the manufacture of the stone. This was the firm of Milne, Coutts & Co. That their step was a wise one has been abundantly shown by the large and paying business which this firm have succeeded in building up. Encouraged by their success, three other granite manufacturing concerns have sprung into existence. These were the firms of Taylor Bros., Epps, Dodds & Co., Tayte, Meating & Co, all composed of young men belonging to the village of Saint George, most of whom had gained their experience in the shops or in the quarries of the Bay of Fundy company. The Taylor firm - we believe the originator of the firm is now dead - established themselves near Messrs. Milne, Coutts & Co.'s premises, like them obtaining their motive power from the Magaguadavic Falls. The other two firms planted themselves alongside the Grand Southern - now the Shore Line - railway shops, the large engine of which supplied them with the necessary power to operate their lathes, polishers and other machinery. In addition to these firms, the New Brunswick Granite company, of which Messrs. Burpee were the leading spirits, was established, and the works were erected by them in Carleton, St. John, the stone being hauled by cars from the quarries in St. George to their Carleton works. This company has done a prosperous business, but, like the other granite firms, has been greatly handicapped by the heavy duties which the United States government exacted on the finished article. This has been the means of causing them to establish polishing works at Eastport. But to resume the history of the Saint George granite firms. When the G.S. railway became the property of the Shore Line company it was resolved to remove the machine shops to Saint John. This, of course, meant the removal of the engine which provided Epps, Dodds & Co. and Tayte, Meating & Co. with power. The railway company was disposed to be exacting, and for a time the firms were in a quandry as to what course they should pursue. But they soon found a way out of the difficulty. Messrs. Epps, Dodds & Co. secured a site on the bank of the falls, between Milne, Coutts & Co.'s and Taylor Bros. shops, and at once began the erection of an immense shop. It has only been completed a few months. Messrs. Tayte, Meating & Co. adopted a similar plan and having purchased a privilege further down the falls, on the opposite bank, also erected large and substantial buildings. So that now all the granite manufactories are clustered around the falls. They are all doing a good business, and appear to be making money. At the present time probably three hundred men are dependent upon them for a livelihood. As the average wages of these men are about $1.50 per day, the importance of the granite business to the village can readily be seen. The biggest contract that any of these firms ever accepted is now being finished up in Epps, Dodds & Co.'s shop. It is a vault of grey granite, and some idea of its immensity can be obtained from the fact that its estimated weight will be 140 tons. Some of the stones used in this job weigh a great many tons. Besides being heavy there is also a good deal of ornamental work, in the shape of carving, in connection with the job. Some specimens of this carving which are now to be seen in the shop cannot be excelled elsewhere. When completed the vault will be set up at Hamilton, Ontario… Mineral prospectors should examine the rocks around St. George. In many places, notably in the cliffs on either side of the falls, there are indications of richer mineral wealth than granite. There may be millions in it. ..."

St. Croix Courier - Jul. 23, 1891 Three carloads of granite work, weighing ?000lbs., shipped by Messrs. Epps, Dodds & Co. of St. George, to Hamilton, Ontario passed through here on Tuesday on the way to their destination."

St. Croix Courier - Jul. 23, 1891 The New Brunswick red granite recently seized in Boston was on Wednesday of last week declared forfeited to the government and will be sold to satisfy the claim of the customs officers for duties."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jul. 30, 1891 Reciprocity in Granite Seizures .- (Calais Advertiser) A monument manufactured by the Red Beach Granite Company to be placed over the resting place of the late Mr. Wm. Murchie, was seized in St. Stephen on Friday last, together with the team, on the plea of under valuation. And notwithstanding the company told the officers that they had entered it at $150 more than the cost of it, they would not give it up, but detained the horses there till they could send to St. John for an expert at granite work to come and examine the article and tell them what it was worth. He came and examined it and informed them that it was overvalued by the amount the company stated, and they were obliged to give it up, after putting the company to three or four days detention and expense. Such acts as this and the seizure of the fishing boats at Eastport are not very conducive to harmony and good feeling which should prevail along the border among a people so closely allied by trade and consanguinity."

St. Andrews Beacon - Jun. 4, 1891 Mr. Chas. Johnson, jr., of St. George, who has been spreading the name and fame of St. George granite through many of the leading cities of the West, has got back to his granite home again, and is looking

Evening Gazette - Jun. 16, 1891 The Carleton Granite Works were closed down yesterday for repairs to the boilers. Work will likely be resumed tomorrow."

Evening Gazette - Jun. 24, 1891 and Daily Telegraph - Jun. 25, 1891 Granite to be Confiscated. - The Seized New Brunswick Red Granite to go Through the Courts. - By"

S.J. Globe - Jun. 24, 1891 That Red Granite Seizure. - Boston, June 24. - The district attorney's office has been asked to take steps for the confiscation of a large lot of valuable granite shipped to this port by the New Brunswick Red Granite Co., of St. John, N.B., and seized by customs officials in April last. The treasury department refuses to take any steps looking towards the return of the property to the importers upon payment of the duties, and the granite will go through the courts and be confiscated. It was to go originally to Chicago."

S.J. Daily Sun - Jun. 25, 1891 That Red Granite Seizure. - Boston, June 24. -The district attorney's office has been asked to take steps for the confiscation of a large lot of valuable granite shipped to this port by the New Brunswick Red Granite Co., St. John, N.B., and seized by customs officials in April last. The treasury department refuses to take any steps towards the return of the property to the importers upon payment of the duties, and the granite will go through the courts and be confiscated. It was to go originally to Chicago."

S.J. Globe - Mar. 7, 1891 The Granite Works. - A Globe reporter called on Mr. F.T.C. Burpee, of the New Brunswick Red Granite works, today. Is it true, asked the reporter, that you have made arrangements for the removal of your works to the United States? Well, not exactly, said Mr. Burpee, I have made no arrangements, but I see no other course open for me. The people are evidently not in favor of free trade, and under the present restrictions my business cannot flourish. Where would you be likely to remove your works? Probably to Eastport or Calais; either of these towns would grant me a subsidy of from $5000 to $6000, which would cover the expense of removal. I would still be handy to the quarries, and the United States duty on unmanufactured granite is only 10c. per foot. I now employ from 75 to 80 men and pay out about $800 per week in wages. If free trade relations were established with the United States, I could greatly enlarge my works, and employ a great many more men. Another plan of mine was knocked on the head by the result of the election. I have a shot manufactory at Quincy, Mass., and it had been my ambition for some time to remove it to St. John, where it would prove a great benefit to the people as well as to myself. But I cannot do that now."

Moncton Daily Transcript - Mar. 9, 1891 The Granite Business. - Mr. F.T.C. Burpee, of the New Brunswick Red Granite Works, St. John was called on by a reporter of a St. John paper a day or two ago, and the following conversation took place: Is it true, asked the reporter, that you have made arrangements for the removal of your works to the United States? Well, not exactly, said Mr. Burpee, I have made no arrangements, but I see no other course open to me. The people are evidently not in favor of free trade, and under the present restrictions my business cannot flourish. Where would you be likely to remove your works? Probably to Eastport or Calais; either of these towns would grant me a subsidy of from $5000 to $6000, which would cover the expenses of removal. I would still be handy to the quarries, and the United States duty on unmanufactured granite is only 10c. per foot. I now employ from 75 to 80 men and pay out about $800 per week in wages. If free trade relations were established with the United States, I could greatly enlarge my works, and employ a great many more men. Another plan of mine was knocked on the head by the result of the election. I have a shot manufactory at Quincy, Mass., and it had been my ambition for some time to remove it to St. John, where it would prove a great benefit to the people as well as to myself. But I cannot do that now."

St. Andrews Beacon - May 14, 1891 St. George.- All the granite mills are working, and running big crews. They are turning out fine class of work."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - May 16, 1891Burpee's Granite. - Seized in Boston for Great Undervaluation at Vanceboro. - Boston, May 15. - An important seizure was made yesterday by special agent Montgomery of the treasury department. It is the second seizure made under the new McKinley administrative law shipping articles from Canada through ports in Maine. Yesterday morning a consignment of finished and polished granite for building, decorative and ornamental purposes arrived from Vanceboro, Me., via the eastern division of the Boston & Maine railway and was immediately confiscated by the treasury authorities. The granite was shipped from St. John, N.B., by Burpee & Co., and was consigned to their agents in Quincy, Mass., and was entered at Vanceboro at a valuation of nearly 200 per cent. below its market value, according to statements of experts in the business. When the granite arrived at Vanceboro the special agent of the treasury for this district had it measured and its value estimated, after the duties were paid at the port of entry. The provisions of the McKinley administrative law in such cases apply to consignees or agents of shippers making false entry, and a fine of not more than $500 and imprisonment of not more than two years as the penalty prescribed. The duty on finished and polished granite such as that seized is $4.05 specific."

Daily Telegraph - May 16, 1891Burpee & Co.'s Granite Seized. - Shipped from St. John to Boston and Said To Have Been Undervalued. - Boston, May 15 - An important seizure was made yesterday by Special Agent Montgomery of the industry department. It is the second seizure under the new McKinley administrative law (shipping articles from Canada and Nova Scotia through ports in Maine). Yesterday morning a consignment of finished and polished granite for building, decorative and ornamental purposes, arrived from Vanceboro, Me., via the eastern division of the Boston & Maine, and was immediately confiscated by the treasury authorities. The granite was shipped from St. John, N.B., by Burpee & Co., and was consigned to their agents in Quincy, Mass., and was entered at Vanceboro at a valuation of nearly 200 per cent below its market value, according to statements of experts in the business. When the granite arrived in Vanceboro a special agent of treasury for this district had it measured and its value estimated after duties were paid at that port of entry. Under provisions of the McKinley administrative law, in such cases they apply to consignees of the agents of shippers making false entry and a fine of not more than $500, and imprisonment of not more than two years is the penalty prescribed. The duty on finished and polished granite such as that seized is 405 specific."

Fredericton Daily Gleaner - May 19, 1891 A large amount of granite shipped by Burpee & Co., of St. John, has been seized at Vanceboro for undervaluation. It is claimed that it was entered at a valuation one-third of what it should be. The McKinley bill provides a fine of not more than $500 and imprisonment of not more than two years for such offense."

Eastport Sentinel - May 20, 1891 Work in the Granite Works in Anderson, was brought to a stand still Saturday, by the hands being ordered out by the Cutters' Protective Union. The Republican also says that the men were receiving $2.50 a day for ten hour's labor, but the union demands that the hands be paid the same wages for nine hours' work, which the company refuse to do."

Moncton Daily Transcript - May 20, 1891 A Magnificent Monument. - Messrs. Joshua and Alfred Peters have erected on the centre of their lot in the cemetery a magnificent monument, which undoubtedly surpasses in size and beauty anything of a similar character about Moncton. The monument is 21 feet high and weighs twelve tons. It is of red granite, highly polished, and the material used is a very clear and good quality stone. There are seven pieces of stone in all; three bases, a die, a cap, a plynthe and the spire or obelisk. The lowest base is a huge square block of unpolished granite, upon which the other two of similar shape, each smaller than the one below it and each polished, rest. The die is a large block of fine stone, in fact the whole material used is peculiarly free from flaws or blemishes. The obelisk is 12 feet high and has a nice taper towards its summit. The monument while giving an idea of massiveness and stability, appears also, from its perfect symmetry, to one's sense of grace and beauty, and will attract considerable attention from visitors at the cemetery. The work was done by Burpee & Co., of St. John, and the erection was under the charge of Mr. Gilbert Dykeman, a foreman of Burpee & Co. The monument cost in the vicinity of $1000."

St. Andrews Beacon - May 21, 1891 Since the above was written, Mr. Burpee, the shipper of one lot of stone, has sent a letter to the St. John press declaring that there was no under-valuation on his part. This agrees with what we have already said, and serves to convince us that the whole affair is a put-up job on the part of the American manufacturers to harass the exporters from the Provinces."

St. Andrews Beacon - May 21, 1891 GRANITE EXPORTATIONS. - The granite manufacturers of the United States, finding that even with the heavy duties imposed upon the finished stone, they cannot exclude the New Brunswick article, have adopted another policy which they hope will be more effectual. They have whispered into the ear of the Customs department that New Brunswick granite is being imported into the United States at a lower valuation than it ought to be, and as a result special instructions have been sent out that all New Brunswick granite brought into the United States shall be detained until it is tested as to value. Importations from two firms have been stopped for this reason, and the experts who have examined the stone have pronounced that the valuation is too low. It is probable that seizures will be made in both cases. We have not heard what the exporters have to say, but we are willing to wager a big apple that the experts have made out a much stronger case against New Brunswick manufacturers than the facts justify. Whoever heard of an expert whose evidence was not favorable to the side that employed him? Should the exporters choose to employ experts, and pay them enough, there is little doubt that their evidence would show that the stone was worth no more than it was entered at. The incident serves to show how important it is for our New Brunswick granite manufacturers that there should be the freest possible trade relations between Canada and the United States. The manufacturers would be benefited by being able to buy a good article at a much lower rate than they now have to pay."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 21, 1891 (Boston Herald) A MONUMENTAL FRAUD - Granite Seized at the Custom House for Undervaluation - For some time United States Special Treasury Agent L.M. Montgomery has been keeping a keen eye on importations of finished granite, not only from Europe, but from New Brunswick. This granite goes to all parts of the United States. Nothing delights the colonel more than catching a crooked importer in defrauding the customs revenue of Uncle Sam. Yesterday the colonel quietly walked down to Commercial wharf, and in the most severe simplicity of style seized a large shipment of New Brunswick finished granite - a sort of monumental fraud in undervaluation - that had been entered and duty paid at Eastport, destined for Chicago, Ill., on an invoice value fully 10 per cent. below actual market value. With expert aid of a measure and Gen. Dunham, the examiner of the appraisers department, the polished blocks, columns and splints were exposed and estimated carefully. A group of curious onlookers indulged in various speculations as to what it was all about. Some thought the massive monument was a rival tribute to the Bunker Hill adornment; others conjectured it was to perpetuate the memory of an idle man in the federal service, while a third party pronounced it a polished waiting tribute to the deeds of a pure civil service reformer of the future, or that defeated salary appropriation in our Legislature. But the facts are simply there: The United States granite industry has been severely handicapped by undervalued importations. To remedy this the colonel resolved to interpose. His first opportunity presented itself in the shipment in question. It came from Messrs. Epps and Dodds of St. George, N.B. was entered, but not appraised at Eastport, and permitted to proceed to Boston, destined for Messrs Davidson & Sons, Chicago. But its destiny may now be elsewhere, unless some very satisfactory evidence establishing the difference of over 100 per cent. in undervaluation forthcoming, a rather doubtful contingency. The Chicago importers are not as much compromised as the St. George exporters, who are to the manner born in these efforts toward a comparative free trade and no reciprocity."

St. Andrews Beacon - May 21, 1891 ANOTHER SEIZURE. - Boston, May 15.- An important seizure was made yesterday by special agent Montgomery of the treasury department. It is the second seizure under the new McKinley administrative law shipping articles from Canada through ports in Maine. Yesterday morning a consignment of finished and polished granite for building, decorative and ornamental purposes arrived from Vanceboro, Me., via the eastern division of the Boston & Maine railway and was immediately confiscated by the treasury authorities. The granite was shipped from St. John N.B., by Burpee & Co., and was consigned to their agents in Quincy, Mass., and was entered at Vanceboro at a valuation of nearly 200 per cent. below its market value, according to the statements of experts in the business. When the granite arrived at Vanceboro the special agent of the treasury for this district had it measured and its value estimated, after the duties were paid at that port of entry. The provisions of the McKinley administrative law in such cases apply to consignees or agents of shippers making false entry, and a fine of not more than $500 and imprisonment of not more than two years as the penalty prescribed. The duty on finished and polished granite such as that seized is $4.05 specific."

Richibucto Review - May 21, 1891 A large amount of granite shipped by Burpee &Co., of St. John, has been seized at Vanceboro for undervaluation. It is claimed that it was entered at a valuation one-third of what it should be. The McKinley bill provides a fine of not more than $500 and imprisonment of not more than two years for such offense."

St. Andrews Beacon - May 28, 1891 The men who are employed in the branch of the New Brunswick Granite Company works recently established here, turn out some fine jobs in the stone cutters line. The work of finishing and polishing a red granite slab 12 feet long and three feet wide, for a new Lutheran Church at Brooklyn, New York, is now in progress. A handsome scroll with elaborate corner pieces is being out along the sides and ends, and the face will contain inscriptions cut in German text. The work done on this piece of stone here, represents the labor of three first class workmen for at least four weeks. Mr. Morrisey is the foreman in charge here. - Eastport Sentinel"

S.J. Daily Sun - Nov. 5, 1891 The New Brunswick Red Granite company are to build a railway from their quarry at St. George to the water, so as to facilitate shipments."

St. Andrews Beacon - Nov. 12, 1891 The New Brunswick Red Granite company are to build a railway from their quarry at St. George to the water, so as to facilitate shipments - SUN"

Evening Gazette - Oct. 8, 1891 The Granite Works at the West end are running night and day in order to finish a number of granite pilasters for a building now being constructed in New York."

Evening Gazette - Oct. 17, 1891 A handsome monument was yesterday placed over the grave of Norman Smith, the fireman who was killed on the Monticello in August. It is of white marble with a granite base and is about seven feet eight inches high. On one side of the shaft is an anchor with the following inscription beneath it: Erected by the officers and crew of the steamer Monticello to the memory of our late comrade, Norman Smith, who died August 25, 1891, aged 35 years. A native of the Isle of Lewis, Stornoway, Scotland. The work was done by John S. Seaton."

Eastport Sentinel - Oct. 21, 1891 Red Beach. - The Shattock Granite Co. have their new mill in running order, are employing many more men than ever before, and with the improved facilities that they now have, will evidently do more business than ever. Messrs. Lane & Brown have purchased a fine quarry of Red Granite from Mr. Fred Keen of this place, and are to build a polishing mill in the early spring. The Maine Red Granite Co. have a large number of men employed and are doing a flourishing business. Granite seems to be the absorbing interest just now in the community."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Apr. 14, 1892 Messrs. Tayte, Meating & Co. have lately imported a very fine column cutter from

St. Andrews Beacon - Apr. 14, 1892 A new granite quarry is to be opened at Magaguadavic this week to supply stone for the Fredericton station building, and for other work, which the C.P.R. intends doing. Mr. McVittie, of St. John, under whose direction the stone will be got out, came down to St. Andrews last week for the tools which he was using on the Van Horne lot, Minister's Island."

Evening Gazette - Apr. 16, 1892 A new granite quarry was opened at Magaguadavic this week to supply stone for the Fredericton station building, and for other work which the C.P.R. intends doing."

Evening Gazette - Apr. 22, 1892 There is strong talk, says a Calais correspondent, of establishing a granite polishing works in that city to polish granite from St. George. Mr. E.R. Burpee, is at the head of the scheme with some of the local capitalists. They will repair the long unused station foundry and occupy it."

St. Croix Courier - Apr. 28, 1892 Mr. Burpee, the railroad man, is the promoter of a scheme to establish granite polishing works at Calais to polish granite from St. George."

Aug. 1892 - Copied from: St. Croix Courier - Aug. 14, 1952 60 Years Ago. - Calais. - The formation of the granite company and the removal of the Burpee granite works to this city is now assured, the capital of $10,000 being nearly all subscribed. The works will be located on the site of the old Boardman Bros. shipyard."

Eastport Sentinel - Aug. 24, 1892 Calais. - The amount of stock required to bring the Burpee granite industry to this city - $10,000 - has been subscribed."

St. Croix Courier - Aug. 25, 1892 Calais. - The granite company was organized on Saturday last with Wm. A. Murchie as president, L.G. Downes, secretary, H.D. Pike, clerk, and nine directors. The entire plant of the Burpee granite company, of St. John, is to be transferred to this city, and the quarries of the company have been purchased by the new corporation. It must be admitted that the McKinley Bill had much if not all to do with the transfer of this industry to this city."

St. Andrews Beacon - Aug. 25, 1892 Nearly all the granite cutters of Red Beach have returned to work, having conceded to their employers' demands. They now work ten hours a day instead of nine hours as heretofore."

Eastport Sentinel - Aug. 31, 1892 The New Brunswick Red Granite Co., of Maine, organized at Calais, on Saturday afternoon, August 30th, 1892. The following officers were chosen: Wm. A. Murchie, president; Henry D. Pike, clerk; L.G. Downes, treasurer; E.R. Burpee, Bangor, Parson Tucker, Portland, F.T.C. Burpee, St. John, H.D. Pike, Calais, W.A. Murchie, C.W. Young, W.F. Boardman, A. MacNichol, C.D. Hill, directors. The entire plant of the Burpee granite company of St. John, is to be transferred to this city, and the quarries of the company have been purchased by the new corporation. It must be admitted, says the St. Croix Courier, that the McKinley bill had much if not all to do with the

St. Andrews Beacon - Dec. 1, 1892 St. George.- Emerson Grant, one of Tayte, Meating & Co.'s representatives, narrowly escaped being drowned while crossing the foot-path across the river above the falls. He lost his balance and fell into the river and if it had not been for the timely aid of Nicholas Meating a fatality would have been the result."

St. Croix Courier - Dec. 8, 1892 One of the red granite dealers at Calais talks glibly of exporting the stone to Europe. To substantiate this opinion he affirmed that red granite in the rough in the Scotch and English markets brings a higher price than in America. The smaller dimensions are worth five shillings or a dollar and a quarter per cubic foot and increase in value as dimensions increase, rising as high as three dollars per cubic foot for stone of smaller which sells in Canada or the United States at $1.50 per foot. The reason of this is they can get larger sizes of stone in our quarries than can be obtained in the Scotch quarries.- Exchange."

Eastport Sentinel - Dec. 14, 1892 Red Beach. - Lane & Brown are putting a heavy polishing machine in their granite shed."

S.J. Globe - Feb. 8, 1892 The annual meeting of the stockholders of the New Brunswick Red Granite Co. was held on the 3rd inst., Messrs. Arthur Sewell, Bath, Me.; E.R. Burpee, Bangor, Me.; Payson Tucker, Portland, Me.; and F.T.C. Burpee, J.W. Lawrence, B.H. Appleby and Geo. W. Ketchum, of this city, were elected directors."

S.J. Daily Sun - Feb. 10, 1892 St. George. - The streets now present a somewhat deserted appearance, as the granite works of Milne & Coutts have begun operations, as well as those of Epps & Dodds, and most of the young men are at

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Feb. 11, 1892 The New Brunswick Red Granite Company, at a recent meeting, elected the following directors: Messrs Arthur Sewall, of Bath, Me.; E.R. Burpee, of Bangor; Payson Tucker, of Portland, and F.T.C. Burpee, J.W. Lawrence, B.H. Appleby and Geo. W. Ketchum, of St. John."

Eastport Sentinel - Feb. 17, 1892 The New Brunswick Red Granite Company, whose quarries are at St. George, N.B., with extensive works at St. John, at a recent meeting elected the following directors: Messrs. Arthur Sewell, of Bath, Me.; E.R. Burpee, of Bangor; Payson Tucker of Portland; and F.T.C. Burpee, J.W. Lawrence, B.H. Appleby, and Geo. W. Ketchum, of St. John."

Eastport Sentinel - Feb. 17, 1892 and St. Croix Courier - Feb. 28, 1892 The Red Beach Granite Co. are opening a new road from the beach to Bay Brook, which will shorten the road to Calais three miles and also afford access to a fine black granite quarry on their lands."

S.J. Daily Sun - Feb. 19, 1892 St. George. - There is a rumor of a line of railway being built here from one of the Red Granite mountains to a deep water landing down the river. Railways and factories are the hope of this country."

S.J. Daily Sun - Feb. 22, 1892 and St. Andrews Beacon - Feb. 25, 1892 Seizure of Granite. - A Boston despatch of Saturday says: The special agency force of the treasurydepartment made a seizure yesterday for undervaluation of a car of finished granite, manufactured and shipped by F.T.C. Burpee of St. John and consigned to the White Granite company of New York. The seizure was made at Northampton, Mass., while it was in transit, and consists of half columns for building purposes. This is the third seizure this week by special agent Converse J. Smith and his men, and the fourth seizure of granite from the above parties during the past few months."

St. Andrews Beacon - Feb. 25, 1892 The St. George granite works are full running butorders are not as plentiful as the proprietors would like."

St. Andrews Beacon - Feb. 25, 1892 The plant of the Burpee granite works, inCarleton, St. John, is to be removed to Eastport, Me., where work will be carried on in the future."

Eastport Sentinel - Jan. 20, 1892 While watching the unloading of some thirty odd tons of Red Beach granite from the company's sloop Rocky Mountain, and the reloading upon steamer Cumberland, Monday, we remarked to Captain Thompson of the steamer, what a useful and indispensable article of steamer equipment was the baggage truck now universally used on all steamboat and railway lines throughout the United States. That which called forth our remark and admiration as well, was the ease with which several of the steamer's crew, with two of these useful trucks one at each end of a long box containing two heavy granite pillars, weighing more than a ton, loaded and moved it to its place on the steamer. Captain Thompson remarked that it was a great improvement he would admit, over the way freight was handled when he first commenced steamboating forty-five years ago, and for a long time after, for then everything that could be, was carried in the arms or on the shoulders of the men, or when too heavy for that, it had to undergo the end over end

S.J. Globe - Jan. 22, 1892Another Granite Seizure. - Boston, Jan. 21 - The United States customs officials have made another seizure of twelve cases containing monumental fluted columns, for duties levied on invoices. The granite was shipped via International Steamship line by F.T.C. Burpee, of St. John, N.B., and consigned to the White Granite Co. of

S.J. Daily Sun - Jan. 28, 1892 St. George. - The sound of the hammer and the hum of machinery are heard in the granite shop of Epps & Dodds."

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Jul. 5, 1892 Jack on Lake Utopia (including section on the old granite carving) .... Eutopia was always a favorite resting place of the Abenakis, but people were there before the Abenakis saw it. Many years since there was a stone mason residing not far from the point where the Magaguadavic, by a magnificent fall like Arethusa of old, jumps into old ocean. One day when this mason, who was not a member of a trades union and who knew nothing whatever about strikes, was looking over the broken pieces of granite lying on the hill side on the west shore of Eutopia, to obtain some for the uses of his business, his eye fell on an oval piece 21 in. in length by 18 in. breadth; when he had turned this over he saw to his amazement sculptured on it in low relief, the head and profile of a man whose hair was bound with a fillet, the face, which was perfect with the exception of one lip, was that of a stern man. It was as smoothly carved as if executed by the hand of some sculptor whose work had been done in historic times; the features were those of one who had thought deeply, and determination was written on that granite brow. The mason took his prize to the shore of the lake and rowed home with it. When he arrived there he placed his treasure trove in front of his cottage, but his wife refused to allow it to remain, saying that it glowered at her , good proof of the ancient unknown sculptor's skill. The mason was, I think, Scotch, which may account for the fact that instead of doing as the crafty Arabs did with the Moabite stone, that is to say, break it in pieces, he took it to St. George, and for the consideration of $4 sold it to Mr. A.J. Wetmore, collector of that port. Philosophers and anitiquaries, ye who love so much to deal in theories and hypothesis, take a look at that face and tell me what race gave birth to the artists who has left the impression of his genuine in indelible characters on the granite! I might safely offer you all the gold that has ever rendered so many generations of men miserable as a reward for the solution of this question without fear of either loss or gain."

S.J. Daily Sun - Jul. 18, 1892 Doing a Good Business. - Sleeth & Co., an offspring of the New Brunswick Red Granite Company, have been engaged in the granite business at Carleton on their own account for several weeks, and they are doing well. They employ twenty men in their shops at present, and hope soon to be able to give employment to a bigger gang. They get their granite from the N.B. company's quarry at St. George, and send their output chiefly to upper

St. Andrews Beacon - Jul. 21, 1892 and S.J. Daily Sun - Jul. 22, 1892 The Granite Industry. - The St. George red granite men are not given to boasting, but they are getting there quietly all the time. The mills are running full time now, and they have numerous orders on hand. Within the last day or two, Tayte, Meating & Co., one of the go-ahead granite firms of St. George, have purchased the Matheson property, consisting of 900 acres of the very best of granite, and they intend opening a quarry there at once. Their old quarry has not been exhausted, but it is situated so far from their works that it makes it costly for them to get the stone there. The new one will be much handier. At present they employ in the neighborhood of 50 men, but if their business continues to increase as it has done they will need more men very shortly. -[St. Andrews Beacon."

St. Croix Courier - Jul. 21, 1892 St. George. - Quarrymen from Massachusetts, thrown out of work by the lockout, are still coming to the provinces, where most of them are finding work."

Daily Telegraph - Jul. 22, 1892 The Granite Business. - Messrs. Tayte, Meating & Co., of St. George, have purchased the Matheson granite property of 900 acres there, and intend to open up a quarry at once."

St. Croix Courier - Jul. 28, 1892 Messrs. Tayte, Meating & Co., of St. George, have purchased the Matheson granite property of 900 acres there, and intend to open up a quarry at once."

St. Croix Courier - Jun. 2, 1892 St. George.- A vessel loaded with light grey granite from Rockport, Me., for Epps, Dodds & Co., is unloading at the public wharf."

St. Andrews Beacon - Jun. 2, 1892 There's Nothing Like Granite.- There is a good deal of business rivalry between Calais and Eastport just now. Until a month or two ago, Eastport was dead sure that the Burpee granite industry would be located there, but Calais was able to make a higher bid and so they captured the prize. This incident has aroused the Eastport board of trade, and they are determined that if the money can do it they will have granite works, too. On Thursday last, they paid a visit to St. George, and submitted rather a tempting offer to one of the granite firms to establish a branch at Eastport. It is said the offer included free land on which to build, exemption from taxation for twelve years and a bonus of $15,000. This offer, the BEACON is informed, was made to Milne, Coutts & Co., and they are now considering it. There is a strong possibility that it may be accepted. The acceptance of the offer, we are further informed, will not affect the present status of the firm in St. George. They would continue to operate their present works, but would probably require more men in the quarry, as more stone would be necessary. The St. George granite is recognized as much superior to any red granite yet opened up in the United States, hence one reason why the Eastport people are so anxious to have works established there."

St. Andrews Beacon - Jun. 2, 1892 Mr. F.T.C. Burpee has paid off all but three orfour of his employees in the red granite works at Carleton, and will commence moving his machinery to Calais in about a week. The new firm, who intend carrying on the work, have purchased some machinery from Mr. Burpee and have employed his men. They are now at work, and it is said several contracts have been taken by the new firm. Mr. Burpee will have the present buildings at Carleton nearly all

Codes: G3 / IDX_Names: Granite;

Daily Telegraph - Jun. 4, 1892 The Carleton Granite Works. - Mr. F.T.C. Burpee has paid off all but three or four of his employees in the red granite works at Carleton, and will commence moving his machinery to Calais in about a week. The new firm, who intend carrying on the work, have purchased some machinery from Mr. Burpee and have employed his men. They are now at work, and it is said that several contracts have been taken by the new firm. Mr Burpee will have the present buildings at Carleton nearly all torn down."

Eastport Sentinel - Jun. 13, 1892 Mr. F.T.C. Burpee has paid off all but three or four of his employees in the red granite works at Carleton, and will commence moving his machinery to Calais in a few days, says the St. John Telegraph. Eastport had hoped to receive this special benefit resulting from the effects of the Republican tariff law, but failed to realize full expectations, it is no little satisfaction to be able to congratulate a neighboring town on securing a new industry

St. Andrews Beacon - Jun. 16, 1892 A handsome granite monument has been erected in St. Andrews cemetery to the memory of the late Robert Ross. It was manufactured by Milne, Coutts & Co. of St. George."

St. Croix Courier - Jun. 16, 1892 Mayor Chipman, J.T. Whitlock, and Alex Milne of St. George were in Eastport yesterday, in consultation with the Board of Trade of that place concerning the proposed removal of a portion of Milne, Coutts & Co's business from St. George. Eastport holds out big inducements to Milne, Coutts & Co., and, while nothing has been definitely settled, it is not improbable that the firm may accept."

St. Croix Courier - Jun. 16, 1892 St. George. - James Dodds, of the firm Epps,Dodds & Co., returned recently from a trip through the upper provinces."

St. Croix Courier - Jun. 16, 1892 St. George. - Arrangements are about completed by which Messrs. Milne, Coutts & Co. will move a part of their granite business to Eastport, most liberal terms having been granted the firm to induce them to locate a branch of their business there."

St. Andrews Beacon - Jun. 23, 1892 Granite Works at Eastport.- There is little doubt that Messrs. Milne, Coutts & Co., granite manufacturers, of St. George, will establish a branch in Eastport at an early day. On Thursday, of last week, Mr. Alex. Milne, who had been in Eastport, looking over the ground, and talking the matter over with the Eastport Board of Trade, returned to St. Andrews. To the BEACON he stated that his firm had about decided to accept the very liberal offer which the Eastport people had made. They had promised them a site, exemption from taxation for ten years and agreed to take stock to the amount of $10,000 in the works, in addition to this amount, Milne, Coutts & Co. would invest a large sum in the business themselves. With such liberal concessions at the outset the Works would soon be on a paying basis."

St. Croix Courier - Mar. 22, 1892 The Maine Red Granite company have nearly a full crew at work in the mill and are increasing their crew in the quarries. They are working in three quarries and are expecting a good year's business, as their granite is in demand in all parts of the country."

St. Croix Courier - Mar. 31, 1892 The several granite sheds are turning out a good amount of polished stone. We understand several new buildings are to be erected next summer."

S.J. Globe - May 4, 1892 The Red Granite Works at Carleton are not to be closed entirely. A syndicate component of Messrs. John Sleeth (the present foreman of the works), Robert Quinlan, and Samuel Fox will, it is said, continue to work them after the New Brunswick Red Granite Company ceases its operation."

S.J. Daily Sun - May 4, 1892 The Granite Industry in Carleton. - The granite industry is not likely to die out in Carleton. Though it is probable that in about two months the work in the New Brunswick Red Granite company's shops will cease, yet they will be ably succeeded by a new firm of active Carleton men. The new firm will have the business enterprise and thorough practical skill of the foreman of the late company, John Sleeth. He will be associated with Robert Quinlan and Samual Fox, both experienced men. The new firm will begin work this morning, and start, it is said, with a season's work contracted for. It is to be hoped that this industry will receive the encouragement which the efforts of its promoters will

Daily Sun - May 4, 1892Granite Cutters Go Out. - Augusta, Me., May 3. - The granite cutters employed in the Hallowell Granite works of Hallowell, today joined the quarrymen's strike, the cause being a disagreement over the employment of non-union men as drillers in the place of quarrymen. Three hundred men are out. The quarrymen still decline to accept the proposed change in the date of the bill of prices from May first to January first. The cutters present bill expires on the fourteenth, when the same trouble will arise."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 5, 1892 It is rumored that Mr. Burpee's granite works at Carleton, will be removed to Calais instead of Eastport, as at first intended. The cause of this removal of these works from Canadian to American territory is the heavy duty on finished granite going into the States, and the difficulty Mr. Burpee experienced in getting several of his consignments through the customs. No duty, however, is charged on the raw material. [There is a duty of eleven cents per cubic foot on undressed granite going into the United States.- ED]. If he locates at Calais the rough granite can be brought from St. George, by way of the Shore Line, thence carried across the river in scows. In order to afford the necessary facilities for its transport Superintendent McPeake and R.J. Ostend, of the Shore Line, were last week inspecting the opportunities for building a wharf at the terminus of their road."

Carleton Sentinel - May 7, 1892 Messrs. Kitchen have established an office here in Leighton's brick block, King Street, nearly opposite the Sentenil office. They have a crew of men at work getting out granite at the Sugar Brook quarry, for the Woodstock bridge, and are evidently bound to push the work of construction with their well established energy."

St. Andrews Beacon - May 19, 1892 The St. George granite works are all running, but they could do a great deal more work than they are doing."

Moncton Transcript - May 21, 1892 A handsome red granite monument, 12 feet high, was erected over the grave of the late Dr. Sayre in the Moncton Rural Cemetery last week by Mrs. F.S. Huntley."

S.J. Daily Sun - May 24, 1892 The Granite Business. - The Carleton Company to Remove to Calais. - The Works to be Kept Running. - In the course of two weeks the New Brunswick Granite Company will cease to be employers of labor at Carleton. Their works will not remain idle, however. Several of their workmen have decided to operate them in future under the name of Sleeth & Co. In addition to Mr. Sleeth, the other partners are Thos. Allen, Robt. Quinton and Samuel Fox. They are all men of large experience in the granite business, in fact they, as the heads of departments, have done much to make their employer's work so popular. The old company are now engaged in filling some orders which remain on hand, but they have only a small number of hands engaged thereon. They will in future carry on their business in Calais. The bulk of their business was always with the United States, viz., building work. They go to Calais, import the granite in its raw state and manufacture it there. The new firm will not put forth any great effort to get American patrons. They will devote themselves chiefly to monumental work for Canadian customers. Already they have a number of orders on hand and they are assured of others which will keep them busy for quite a time. Local work will be depended on, too, to a very considerable extent, and there is no reason why they should not get it. They will get their red granite from the Burpee quarry at St. George and their grey granite quarry at Spoon Island. These are the quarries controlled by the New Brunswick Granite company. The red granite is admitted now to be the best in the world. For a long time this was disputed, but now even the Scotch have to admit its superiority. It is the stone known as the Bay of Fundy granite. A Sun reporter had conversations yesterday with several men who are engaged in the granite business, with regard to the New England strike. Their views are about as follows: That it is an effort on the part of the employers to shut the union workmen out. The employers formed unions to offset the unions of the workmen. In one case, (Quincy), the works were thrown open to non-union men, but they did not go to work. It is a big lock-out, but will not last long as the men's demands are not extravagant. The strike will have no effect on the granite industry of New Brunswick. It might possibly be of some benefit to the works at Carleton if the old company were running them under full time, and with a full complement of hands. But as it is it will not benefit them in the least. The St. George granite people ship little of their product to the United States. They have always confined their business chiefly to monumental work for Canadian purchasers."

Eastport Sentinel - May 25, 1892 The Granite Lockout and Strike. - The dispute between the granite manufacturers and the granite cutters and quarrymen of New England seems likely to extend to all parts of the country where New England granite is used in building, pavements or other forms of construction now going forward. There is no disagreement about wages. The combined manufacturers insist that the annual agreement made with the unions of granite cutters and quarrymen fixing the scale of prices and hours of work shall be made in January of each year instead of in May as at present. They insist that as their contracts for work are usually made at the beginning of the year it is essential that they should know what they will have to pay their workmen as a basis for calculation. On the other hand, the unions insist that as there is little work to do in January and many idle men it is a bad time for fixing prices. In May there is a full employment for all. In January the employers are in a position to dictate terms; in May the advantage is with the unions, and they do not propose to surrender it. As a basis of compromise, however, the quarrymen offer to give notice three months in advance of May 1, in each year, of any changes they may desire to make in the scale of wages. This offer the granite manufacturers have refused to entertain. As a result there is a lockout in New England and sympathetic strikes of stone workers in other parts of the country where New England granite has been contracted for. If the strike shall continue it will prove a serious blow to building operations, and cause great delay and loss in other related industries. It would seem as though a dispute having no more serious basis than this appears to be, ought to have been settled in some way, thus avoiding those disastrous results which must inevitably follow its continuance for any length of time."

St. Croix Courier - May 26, 1892 Taylor Bros., finding their business increasing, have decided to extend their mill accommodation. They have built quite an addition to their mill, extending it towards the river upon a foundation which has been built up from the waste material during the last few years."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - May 26, 1892 The Granite Quarry employees at Red Beach, who belong to the Central Labor Union of New York, are enjoying the luxury of a lock out at the expense of themselves and families, of from $2.50 to 5.00 per day, at the behest of their chief in order to enforce a demand for more pay and shorter day's work."

Eastport Sentinel - Nov. 2, 1892 George D. Perry of Machias has bought a granite privilege and quarry lot near Rocky Hill, Jonesboro, and has commenced improvements. This makes the seventh quarry in town, with two or three more in sight."

Eastport Sentinel - Nov. 9, 1892 Red Beach. - The Plaster Mills are hung up for"

Eastport Sentinel - Nov. 9, 1892 Calais. - The Burpee Granite Co., late of St. John, N.B., have broken ground and are at work on the foundation of the Granite Works to be removed to Calais. The main building will be 220 feet long by 50 feet wide with a building for a steam boiler in addition."

St. Andrews Beacon - Nov. 10, 1892 Tayte, Meating & Co., of St. George, have just finished a handsome red granite monument, which is to be erected on Deer Island to the memory of the late Capt. Geo. Calder."

St. Andrews Beacon - Nov. 10, 1892 The Burpee Granite Co., late of St. John, have broken ground and are at work on the foundation of the Granite Works to be removed to Calais. The main building will be 220 feet long by 50 feet wide with a building for a steam boiler in addition - ADVERTISER."

St. Andrews Beacon - Nov. 17, 1892 St. George.- Nicholas Meating, of Tayte, Meating & Co., has just returned from Deer Island where he has been putting up a monument."

St. Andrews Beacon - Nov. 17, 1892 John Taylor is on a business trip to Spoon Island, in the interest of Taylor Bros."

St. Andrews Beacon - Nov. 17, 1892 Patrick Drumgold, Ernest Jackson and Samuel Dodds returned home last week from Spoon Island, where they have been working of late on a monument for Milne, Coutts & Co."

St. Andrews Beacon - Nov. 23, 1892 Granite Works at Eastport. - There is little doubt that Messrs. Milne, Coutts & Co., granite manufacturers, of St. George, will establish a branch in Eastport at an early day. On Thursday, of last week, Mr. Alex. Milne, who had been at Eastport looking over the ground, and talking the matter over with the Eastport Board of Trade, returned to St. Andrews. To the Beacon he stated that his firm had about decided to accept the very liberal offer which the Eastport people had made. They had promised them a site, exemption from taxation for ten years and agreed to take stock to the amount of $10,000 in the works. In addition to this amount, Milne, Coutts & Co. would invest a large sum in the business themselves. With such liberal concessions at the outset the Works would soon be on a paying basis."

Eastport Sentinel - Oct. 26, 1892 The Hallowell Granite Company settled all differences with their employees Thursday night and work will be resumed at once. The strike has been on five months."

S.J. Daily Sun - Oct. 30, 1892 and St. Croix Courier - Nov. 3, 1892 The Granite Works. - The sheds of the N.B. Red Granite Co. in Carleton are being torn down and will be taken across the border, where the company will resume business. Messrs. Sleeth, Quinlan & Co. have purchased a portion of the buildings and are working up a good business, which will probably in a few years employ more men than the company has done for some time."

St. Croix Courier - Sep. 8, 1892 Epps, Dodds & Co. and Tayte, Meating intenderecting stores for carrying on general supply business in connection with their granite industry."

Daily Telegraph - Sep. 20, 1892 Carleton Granite Works. - Work was begun yesterday in removing the machinery from the granite sheds, Carleton, to Calais, where a new company will shortly begin operations. Mr. Burpee, who so long was identified with the Carleton works, will be a leading man in the Calais shops. He did most of his business in the western states, and under the present tariff relations between Canada and the United States he could not successfully compete in the American market. Now the granite will be quarried at St. George and manufactured on American soil. A company of Carleton men will set up machinery in the old works and will try their fortunes in supplying the Canadian demands. The company moving out employed 50 men on the average; the new company expect to average about 20. Messrs. John Sleeth, Thomas Allan, Samuel Fox and Robert Quinlan are the Carleton men who will carry on the work, and the firm name will be Sleeth, Quinlan & Co. It is earnestly hoped that success will crown their efforts to continue the industry in Carleton."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Sep. 22, 1892 Upper Gagetown, Sept. 21. - A beautiful monument has lately been erected in the Baptist burying ground here by Miss Lydia N. Coy, M.D., of Boston, to the memory of her father, the late William Coy. It is made of a singularly pure piece of grey granite, the product of Long Island, Queens County, quarry. Its base is 3 feet 1 inch square; height, including base, plinth, die, projecting cap and ornamental finish, 9 feet, and its weight about three tons. The lettering on the die is deeply cut, plain and symmetrical."

S.J. Daily Sun - Apr. 3, 1893 St. George, April 1. - The four granite sheds here are working full time with a full force of men. Epps, Dodds & Co. are busily engaged on a vault to be erected in Toronto. It is being built of granite from Spoon Island, Rockport. The height of the vault is to be twenty-five feet. Some of the blocks used will weigh about fifteen tons. The cost when complete will be about $6,000."

Eastport Sentinel - Apr. 5, 1893 Red Beach. - The granite and plaster industries are moving full blast. The Granite Co. is pressed with work and will run four quarries this season."

St. Croix Courier - Apr. 6, 1893 St. George. - The granite men are working full time with full crews. Gillmore Brothers are making active preparations for the erection of a gang mill. Geo. Hill, of Milltown, N.B., is to have a controlling influence in

St. Andrews Beacon - Apr. 13, 1893 St. George is to be represented at the World's Fair, Milne, Coutts & Co., the enterprising granite firm, being engaged on a magnificent red granite shaft, which they are going to send to Chicago. The stone is beautifully mottled, and the careful workmanship on it is well calculated to bring out all its beauties."

St. Andrews Beacon - Apr. 13, 1893 The granite works at St. George are all as busy as they can be. Even with the heavy tariff restrictions a great deal of the St. George granite finds its way into the United States. When a breach is made in the tariff wall, St. George will be one of the busiest little towns in Canada."

St. Croix Courier - Aug. 3, 1893 That 'Boom for St. George.' - While frankly confessing all the infirmities to which advancing age may render its subject, the Courier congratulates itself that its development throughout the years has been an even one, and unlike its esteemed down river contemporary, it does not, while presenting all the outward appearances of age, retain the gullibility and freshness of callowest youth. For nothing but an exceeding and refreshing verdancy, except, perhaps, a desire to deceive, could induce the Beacon to continue its nonsensical strain concerning the benefits which the fiscal policy it advocates would confer on the granite workers of St. George. Of course the Beacon understands that it must discuss the matter in relation to the bearing of the entire policy of the liberals. It cannot quietly ignore a portion of the platform and confine itself to the reciprocity feature. It is the anomalous combination tariff for revenue reciprocity platform for which the granite workers are confronted, and not a section of it. The Courier regrets to notice a disposition on the part of the Beacon to repudiate at this early stage a portion of the policy over which it lost its head a few weeks ago. We propose, however, to keep the Beacon to its full text, until the time arrives for it to abandon that text altogether - a time which sooner or later will arrive. With this in mind then, a glance at the Beacon's position on the granite question is all that is required to show its utter absurdity. It professes to base its opinion in the premises on two things. One of these is the 'concentrated and expressed opinion of the people of St. George,' as shown in federal elections, and the other is the 'belief' of that profound mind which directs the destinies of the Beacon - a 'belief' not 'attained by any sudden process', but by 'observation and by a recollection of the prosperity which the province enjoyed during the years when reciprocity was in force. Without commenting on the almost unavoidable conclusion that the 'recollection' possessed by our esteemed contemporary of the effect of the reciprocity treaty of '54 must be very vague at best, it is only necessary perhaps to state this 'belief' of the Beacon is a 'belief' opposed to all the teachings of history and experience, and in direct opposition to what practical men in the granite business believe. Under the present tariff they find it difficult, paying the generous wages they do, to compete with the Scottish granite. In canvassing the upper provinces for work, they are continually offered contracts on which the Scotch granite men have figured, and are prevented from taking them because the figures are too low for them to accept with any hope of making a profit. If the duty were lowered, even with a reciprocity treaty, they would find themselves shut out of both the Canadian and American markets by their Scotch competitors, their business would be rendered unprofitable and they would be compelled of necessity to abandon it. The disaster which overtook the Bay of Fundy company, notwithstanding a determined effort to succeed, demonstrates what a revenue tariff would do for the St. George industry - demonstrates that it would silence the music of the busy shops, deprive the workmen of employment and wages, bring loss of capital to the employer, and drive the supporters of many happy homes to seek a livlihood elsewhere. Those are the plain facts. Yet, in the face of them, the profound mind of the Beacon has reached a 'belief' that what in its practical operation would mean ruin to a now prosperous industry and thus destroy the business life of the town would give St. George the greatest boom that it was possible to give any town. It is no wonder that the Beacon's belief is the laughing stock of St. George and that those of the people who have, on personal grounds, voted for the liberal candidate in the past, are beginning to see as they never saw before that in doing so they have been voting against their own interests. And now let us add a word with reference to the concentrated and expressed opinion of the people of Saint George. It is true that a majority of the people of the town and parish have at different elections for some time past voted for the liberal candidate, but never since the inauguration of the present granite industry has the liberal party asked them to vote for a revenue tariff. In one election it was a readjustment of the tariff, with the protective feature maintained; in another, unrestricted reciprocity, a policy which was not fully understood at the time of the election and which the party at large very soon abandoned when they discovered what it really did mean. No matter what the policy, however, the vote of St. George was always largely a personal one and party politics had very little to do with it. The vote at federal elections then can hardly be taken as the concentrated and expressed opinion of the people of 'St. George' on the relation of the tariff to the granite industry. If the Beacon is sincere, however, in its desire to accept the 'concentrated and expressed opinion' of the people of St. George on this question, it is respectfully referred to a petition which was signed a year or two ago by nearly every adult male inhabitant of the town, and which was forwarded to parliament with a request that the prayer expressed in it be granted. This, it must be admitted, was a genuine expression of the opinion of the people of St. George and is more worthy of consideration than a vote cast in the best of political excitement, even if that vote favored a revenue tariff. In that petition were set forth many of the facts which have appeared in the columns of the Courier of late, and it concluded with a prayer for increased protection to the granite industry. Surely no more convincing proof is needed to show that the people interested do not desire a revenue tariff, and that in advocating such a policy the Beacon is 'insulting the intelligence', of which it professes to be so jealous, and is striking a vicious blow at an industry which owes its very life to a wise and judicious system of protection. Against the 'belief' of the profound editorial mind, then, we set the facts of history and experience and the opinion of the men who are engaged in the granite business and whose interests are most vitally affected by any legislation that may affect it. Against its imaginary 'concentrated and expressed opinion' of the people, we place a genuine document, written and read by the people, signed by the people and forwarded to parliament by the people, in which they repudiate any desire for a lowering of the tariff and ask that it be increased in so far as it affects the industry on which they depend for support. There should not be much difficulty in determining which is the correct view of this question, and in reaching the conclusion

St. Croix Courier - Aug. 10, 1893 An Export Duty on Granite. - Some of the best granite quarries are now owned by American capitalists, and it is said that a project is on foot to establish granite works at Eastport, where, as in Calais, the rough stone of St. George will be manufactured in order to escape the prohibitory duties the McKinley bill places on the finished article. The St. George granite has no equal on this continent and, as it becomes known, the demand for it in the States is greatly increasing. When the granite is wanted it will be obtained at any price, but as long as it can be taken from the country in its rough state at a very small cost, the price will be kept down and our own manufacturers, in the face of heavy duty on the polished granite, will be unable to compete with the manufacturers across the line. But the conditions be equalized, however, or our people given an advantage in tariff over the American manufacturer, and they will sell their stone in the United States at a profit, no matter how high the duties may be. This can only be accomplished by an export duty on the rough stone, and it is hoped that, in the proposed revision of the tariff, this matter will be carefully considered,

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Aug. 10, 1893 THAT ST. GEORGE BOOM.- ... The Courier isparticularly unfortunate in its allusions to the Bay of Fundy company, as it shows at once to those who are acquainted with the history of that corporation that it is arguing from wrong premises. Almost every man, woman and child in St. George knows that the downfall of the Bay of Fundy company was not due to any lack of protection from without but from lack of protection from within. High salaried officials, who never soiled their fingers with hard work, gross extravagance and mismanagement, and a lack of knowledge of the details of the trade were the rocks upon which the Bay of Fundy Company was wrecked. Happily, no such dangers threaten the existing business houses of St. George. Notwithstanding that that Company had little or no protection from the foreign article, it is a fact, which we challenge our contemporary to deny, that the prices it obtained for its manufactured material were far in excess, double in some cases, of what the present business houses are able to obtain. And not only did it do a large business with the United States, but in spite of the costly and meagre transportation of those days, it had also extensive business connections with upper Canada..."

S.J. Daily Sun - Aug. 10, 1893 Among the Granite Quarries. - A sun reporter had a short chat with L.G. Holder, Mill street, who recently returned from a visit to St. George, Charlotte County. Mr. Holder says he had no idea there was such a bust time in that part of the province. The granite industry is assuming mammoth proportion. There are four large firms at work in the quarries - Taylor Bros., Epps, Dodds & Co., Tayte, Meating & Co., and Milne, Coutts & Co. These firms employ between fifty and 100 men each. Their business is increasing very rapidly, and orders are coming in as fast as they can fill them. They ship largely to Ontario and Quebec; they also ship to the United States, but their principal market is the upper provinces. The quarries are situated about five miles out of the town, where there are men employed constantly. The granite is hauled to the factories and there put in shape. All the power used to drive the different machines in the factories is furnished by the falls on the Magaguadavic River. By utilizing this power a great saving is made. Epps, Dodds & Co. are at present engaged on a front for a bank vault which is to go to Montreal. Mr. Holder says nearly every one of the employees has a cottage of his own, which he keeps painted and looking very pretty. The men work ten hours a day and are satisfied to do so. These firms use Mr. Holder's granite polishers, which are considered the best made in the dominion."

Aug. 1893 - Copied from: St. Croix Courier - Aug. 13, 1953 60 Years Ago: Mr. Kelly, the well known mining representative of New York capitalists, has secured from S. Almond an option of the well known Granger and Whidden granite quarries just below Calais. The stone of these quarriesis of the finest quality and only the necessarily high charge for transportation to the west has prevented their development. There are rumors afloat to the effect that Mr. Kelly has not confined his prospecting to St. Stephen and Calais. It is said that he has recently secured anoption on valuable phosphate lands at Grand Manan, and on a marble quarry and deposit of asbestos at White Head. Mr. kelly is not so sure of the marketable value of the phosphate and asbestos, but he is of opinion that the White Marble is very valuable and that it will be in great

Gazette - Dec. 2, 1893 The St. George granite workers are all doing a nice safe business. Epps, Dodds & Co. have recently purchased for $800 the lot lying between their works and the works of those hustlers, Milne, Coutts & Co. They will utilize it as a yard room for the present, and at a later day, if business warrants it, may erect buildings thereon. Taylor Bros., who are located to the west of Epps, Dodds & Co., are working up a good business. Like all other granite kings of St. George, they are practical workmen. Tayte, Meating & Co. since establishing their new works, have been gradually enlarging their territory, and the outlook for them is very promising."

Dec. 1893 - Copied from: St. Croix Courier - Dec. 2, 1953 Sixty Years Ago. - Sheriff Stuart and J.M. Hanson of St. Andrews and William Gibson of Benton have entered into co-partnership for the purpose of opening up the Bocabec black granite quarries, and the work will be commenced early in the spring. The new firm is to be known as Gibson, Stuart & Hanson. The quarries lie about a mile and a quarter from the shore of the bay and will be connected by tramway with a wharf at which vessels can land. A site for the proposed wharf has been secured, and a right of way leading to it."

Gazette - Dec. 4, 1893 Fatal Fire in Calais. - ... John James ... James Hooper ... Wm. Armstrong ... Peter Kennedy ... John Moore ... employees of the N.B. and MaineRed Granite Co. ..."

St. Andrews Beacon - Dec. 7, 1893 BOCABEC BLACK GRANITE - THE PART A PORCUPINE PLAYED IN ITS DISCOVERY - Something About the Quarry and the Company That are to Develop it - Steam Polishing Works and a Wharf to be Erected at Bocabec - Wm. Gibson to be Manager - It was a porcupine - one of those plain, every- day, ugly-looking, bristling porcupines - that led to the discovery of the black granite quarry in the adjoining parish of St. Patrick, and when the historian of the future applies himself to the task of sketching the career of the black granite barons of Bocabec he must not forget to place the discovery on the proper shoulders. This is how it happened. One day last winter, to beguile an idle hour or two, Sheriff Stuart took his gun and started off in search of game amid the wilds of Bocabec. When in the neighborhood of what is familiarly known as Orr's Mountain, just across the borders of St. Andrews parish, he noticed where a porcupine had found a hiding-place among the boulders at the foot of the cliff. He tried to dislodge the animal, but without avail. We'll come another day and smoke you out, old fellow. said the Sheriff to his companion. True to his word, a day or two later found Mr. Stuart, with a package of sulphur and an axe in his hand, threading his way amid the snow and tangled shrubbery in search of the porcupine's lair. While cautiously picking out his path, his knee came in contact with a projecting boulder with so much force as to cause him a twinge of pain. Without thinking what he was doing particularly, and never dreaming that the stone was other than the ordinary trap rock which abounds in the neighborhood, Mr. Stuart aimed a blow at the offending boulder with his axe, and knocked off a long sliver of it. Instantly his practiced eye caught sight of GRANITE QUARTZ, and both pain and porcupine were soon forgotten in face of his new discovery. It was evident to him that he had made a find of black granite, but he was determined to keep the knowledge of it to himself until he had an opportunity of making further researches. For days after that, Orr's mountain had a peculiar fascination for the sportive sheriff, and his friends began to wonder what kind of game it was that had such an extraordinary attraction for him. But he kept his own counsel, and continued prospecting until he was satisfied that the entire mountain above named was composed of the very best quality of black granite. Samples of the stone were shown to the granite experts of St. George, and they pronounced it superior to the famous Quincy granite, for which they have to pay $30 a ton. It was also found to take a brilliant polish. CHARACTER OF THE STONE.- Although known as black granite, the stone is not altogether black, but that is the prevailing color. Its constituents are feldspar, quartz and mica. In its rough state, it has very little attraction for one who is not an expert in such matters, but the polishing process reveals its lustrous mottled beauties to the full. Then the dull, heavy rock becomes a thing of marvelous beauty, far surpassing in appearance and pattern many of the black granites of the United States. Most of these exported stones are unable to stand our rigorous northern climates, but the Bocabec granite, it is thought, will be able to stand the test of both time and weather. SITUATION OF THE QUARRY. - Orr's mountain is a high bluff of 400 or 500 feet in height, and perhaps three times that distance in length. It is located about half a mile from the St. John road, and within full view of it. Its distance from St. Andrews is about six miles. From the public landing in Bocabec cove it is distant perhaps a mile or a little more. It is this nearness to the water, combined with its excellent quality, that makes it so valuable. Almost the entire mountain was located on Mr. Joseph Craig's farm. There were few, if any trees upon it, and no verdure, and Mr. Craig always regarded it as a kind of black elephant on his hands. When Sheriff Stuart offered to buy from him that portion of his farm which lies to the east of Glenelg road,- and which includes the granite mountain and Steen's Lake,- Mr. Craig very quickly made a bargain with him. By a 99- year lease with the Orr heirs, some of whom are in distant California, Mr. Stuart was able to get running privileges over their property, as well as the right to quarry stone. He has also secured from Mr. Wm. Thompson extensive shore rights. Negotiations have yet to be made with some other land owners, over whose property the stone would have to be carried to the water, but as the value of their land will be greatly enhanced thereby, there is little fear of their offering any serious objections. A COMPANY FORMED.- As soon as Mr. Stuart had completed negotiations for the purchase of the property, Mr. Jeremiah M. Hanson, who was his companion when the stone was discovered, was taken into the secret and admitted into ownership. Mr. Wm. Gibson, of Benton, Carleton Co., who had seen a sample of the polished stone, and who was very enthusiastic over its possibilities, was also invited to join the company. Last week, the partnership was consummated, each of the three gentlemen named putting in $5000 and entering upon the work on a common footing. The formal notice of partnership is made public in this week's Beacon. The firm will be known as Gibson, Stuart & Hanson. THE COMPANY'S PLANS.- Messrs. Gibson, Stuart & Hanson are not going to allow the grass to grow under their feet. Having discovered a good thing, they propose developing it to the fullest extent. If the plans which they have in view are carried out, and their hopes realized - as everybody trusts they will be - it will give the entire district a boom which it stands much in need of. It is proposed to lay a tram-way from the quarry to the water of St. Andrew's Bay, and as the company will be able to follow the level of the stream which courses through the valley and empties into the Bay, the cost of laying this road will not be very great. The track can be laid with a slight incline towards the sea, so that the loaded cars can be carried forward by their own momentum. Horses will be employed to haul back the empties . On the shore lands purchased from Mr. Thompson, extensive polishing works, to be operated by steam, will be erected. A deep water wharf will also be constructed, so that vessels can be easily loaded with the stone. It is proposed to run the track down on the wharf, and have a travelling crane projecting over the structure to facilitate hoisting of heavy blocks. The sleepers for the tramway and the necessary timbers for the wharf will be secured this winter by the firm, and when Spring opens, the work of erecting the buildings and wharf and developing the quarry will be vigorously pushed forward. Sheriff Stuart is to manage the company's affairs for the present, but later on Mr. Gibson will move to St. Andrews and assume the management. Mr. Gibson is a thorough business man, with lots of capital and lots of push, and if he cannot make Bocabec black granite boom it will not be for want of trying. Although the bulk of the business will be carried on in St. Patrick parish, St. Andrews ought to and will receive much benefit from it. The rail shipments will probably all be made from this point. So far as we

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Dec. 7, 1893 Co-Partnership Notice. - The undersigned, desirous of forming a limited partnership under the laws of the Province of New Brunswick, hereby certify:- (1) That the name or firm under which such partnership is to be conducted is Gibson, Stuart & Hanson . (2) That the general nature of the business to be transacted by such partnership is:- To quarry, cut, polish, manufacture, buy, sell, handle and generally to deal in granite and stone in the rough and in its manufactured state, and to handle, barter and deal in the said granite and stone, either rough or manufactured, in wholesale and retail quantities. (3) That the names of all general and special partners interested in the said partnership are as follows. - William Gibson, who resides at Benton, in the Province of New Brunswick, Robert A. Stuart, who resides at St. Andrews, in the County of Charlotte, in the said Province of New Brunswick, and Jeremiah M. Hanson, who resides at St. Andrews, aforesaid, are the general partners. (4) That the said William Gibson has contributed the sum of five thousand dollars, the said Robert A. Stuart the sum of five thousand dollars and the said Jeremiah M. Hanson the sum of five thousand dollars as capital to the common stock. (5) That the period at which the said partnership is to commence is the first day of December, A.D. 1893, and the period at which the said partnership is to terminate is the first day of December, A.D. 1903. William Gibson R.A. Stuart Jeremiah M. Hanson Witness M.N. Cockburn New Brunswick } Charlotte County} SS I, Melville N. Cockburn, a Notary Public for the Province of New Brunswick, by Royal authority duly commissioned and sworn, residing and practising at Saint Andrews, in the County of Charlotte, do hereby certify that on this 29th day of November, A.D. 1893, before me personally came and appeared William Gibson, Robert A. Stuart and Jeremiah Hanson, the three persons whose names are subscribed to the foregoing certificate of co- partnership, and acknowledged that they did severally subscribe their names thereto as their and each of their free act and deed for the several uses and purposes therein set forth and contained. In faith and testimony whereof I, the said Notary Public, have hereunto set my hand and affixed my Notarial Seal the day and year in this certificate first above written. Melville N. Cockburn [Seal]"

St. Croix Courier - Dec. 7, 1893 Granite Kings Are They.- (Exchange) The St. George granite workers are all doing a nice safe business. Epps, Dodds & Co. have recently purchased for $800 a lot lying between their works and the works of those hustlers, Milne, Coutts & Co. They will utilize it as a yard room for the present, and at a later day, if business warrants it, may erect buildings thereon. Taylor Bros. who are located to the west of Epps, Dodds & Co., are working up a good business. Like all other granite kings of St. George they are practical workmen. Tayte, Meating & Co., since establishing their new works, have been gradually enlarging their territory, and the outlook for them is very promising."

St. Croix Courier - Dec. 7, 1893 Black Granite. - A Company Formed to Open the Bocabec Quarries. - Sheriff Stuart and Mr. J.M. Hanson, of St. Andrews, and Mr. William Gibson, of Benton, have entered into co-partnership for the purpose of opening up the Bocabec black granite quarries, and the work will be commenced early in the spring. The new firm is to be known as Gibson, Stuart & Hanson. The quarries lie about a mile and a quarter from the shore of the bay and will be connected by tramway with a wharf at which vessels can land. A site for the proposed wharf has been secured, and a right of way leading to it. As there is an even grade from the quarries to the shore, the cost of transportation will be very light. The stone, when polished, shows a very dark grey color, and a handsome grain, that may be compared to a mixture of powdered coal and rock salt; the black predominating so that a shaft of it would look almost like polished jet, though of a softer and more transparent hue. The stone takes a brilliant and apparently durable lustre, and must find a ready sale."

St. Andrews Beacon - Dec. 21, 1893 Messrs Tayte, Meating & Co. are getting out some of their large stones for the large vault they are building. Some of them weigh from five to ten tons each."

St. Andrews Beacon - Dec. 21, 1893 Another black granite quarry is reported to have been located at Bocabec. It has not been taken up, but the stone is said to be of good quality."

St. Croix Courier - Dec. 28, 1893 The granite firms have all closed down for two or three weeks. They have done quite a successful year's work. Notwithstanding the sharp competition which they meet with in the Scotch and Swedish granites they are, by close attention to business, able to hold their own in the Canadian market."

St. Croix Courier - Dec. 28, 1893 Charles Johnson, jr., of the firm of Milne, Coutts & Co., returned during the week from an extended business trip through the upper provinces."

S.J. Daily Sun - Dec. 30, 1893 St. George Granite Works. - The granite works at St. George have shut down for the season. A gentleman from that town told a Sun reporter yesterday that the past season's work in the quarries had been the most successful of any year in the history of the works. They had all the orders they could fill, and all the firms had a larger staff of employees than last year. A large quantity was shipped to Ontario and Quebec."

Eastport Sentinel - Jan. 25, 1893 Red Beach. - Work has slowed down in the Maine Red Granite shed."

St. Croix Courier - Jan. 26, 1893 St. George. - The granite works have started again, after a month's rest. It is a pity that so many of our young men have to leave St. George seeking work. There are over twenty of them, cutters and polishers, now working in Vermont."

Weekly Record - Fri. Jul. 14, 1893 Charters letter #7 (one half is geological including displays of red granite monuments from St. George and copper ore from Letete."

St. Croix Courier - Jul. 20, 1893 Fact Versus Fiction. - A St. George Man's Views of the Effect of a Revenue Tariff on the Granite Industry. - Editor.- Under the head of 'A Boom for St. George', our esteemed friend of the shire town tells us, in his last issue, of the great benefit our town would receive if the liberal policy were adopted. Now, sir, it is a very easy matter for a literary man to write a nice sounding, readable article off hand about anything, especially when he don't know much about it - and, as a rule, the less he knows, the better he can write. I wonder if our learned friend ever looked carefully into the granite business, from a purely business, dollar-and-cent point of view, or if he only took a political bird's-eye peep at it. I am inclined to think the latter was the way he viewed it; for if he had made careful enquiry he would have stumbled on a few facts that do not coincide with his editorial. In the first place I suppose one of the heavy taxes we are groaning under is the 30 per cent. on Scotch granite. This of course he would wipe out to 'boom' us. Let us see how it would work. Our chief competitors in Canada are Scotch and Swedish granites. These are manufactured in free trade Europe, where a good stone cutter's wages is from 6 to 7 pence per hour - say an average of $1.30 per day, and polishers from 2s. 6d. to 4s. 6d. per day - say 80 cents on an average; and freight from point of manufacture to any place in Ontario is no more, and in some cases less, than from St. George. In St. George stone cutters get from $2.25 to $2.75, and polishers $1.35 to $1.60 per day. Now, when you estimate at least 60 per cent of the selling price of manufactured granite as wages, it does not require a great deal of brains to figure where the home industry would be with free European granite. I would like to see our learned friend put it in plain figures, so that we benighted villagers could see the boom. It may be that the policy of the country drove one granite industry over the line; but I think the McKinley bill had something to do with that. Let us take a look at the granite industry of St. George. After the collapse of the Bay of Fundy Red Granite Co., we find the business a very small affair - a couple of firms, with very little capital, and employing in all about a dozen men. Now, after a period of fifteen years under the much abused policy, we find four firms, employing about 200 men, and shipping from $80,000 to $90,000 worth of manufactured granite per year, mostly to Canadian points, not more than from five to ten per cent of it going out of our own country. All four firms report plenty of work, and not an unemployed granite worker in the village. These are practical facts, gleaned from the men in the business, who, in my opinion, know as much about the matter as outsiders. A word about the great sixty million market. Latest advices say there are between 400 and 500 stone cutters out of work in Barre, Vt., and vicinity, and more being discharged every day. Some of our town boys are writing home seeking employment, as the prospect for work in the United States, they say, is poor. He also adds that St. George is largely interested in the lime industry. This is good news, and I am glad to hear it. I wonder in what part of the village it is carried on. I find J. DeWar & Sons imports a carload occasionally. I think that is about the size of our 'lime industry.' Now, sir, I regret very much taking up so much of your valuable space; but would add that I am not a politician, and don't care what name we are governed under, grit or tory, so long as they can show us in figures and facts that they are governing the people for their best interests (I mean the people's). I might add that our local government is called liberal, but it has acted very far from liberally with our town, leaving us without a bridge for over a year, and putting some of our granite people to more expense than the duty on steel, etc., would amount to in ten years. Had it been called 'conservative' it couldn't have used us more shabbily, Yours truly, Magaguadavic. St. George, N.B., July 15, 1893."

St. Croix Courier - Jul. 20, 1893 That Boom For St. George. - The attendance at the recent liberal convention... Mr. Tarte ... This is illustrated in his reference to the St. George granite industry last week. The Courier stated a fact when it stated that the adoption of the liberal policy would close the granite works of St. George and deprive the people of that prosperous village of the profitable employment they now enjoy. The letter of a St. George man which we publish in another column is a very complete answer to the Beacon's assumption that the adoption of the liberal policy would give St. George the grandest boom it is possible to give any town, and needs little comment from the Courier. Our correspondent might have added, however, that the 'pioneer manufacturers' of red granite at St. George, the Bay of Fundy company, found it impossible to work successfully under a revenue tariff and the large amount of capital they invested was swamped in their operations between 1873 and 1878, when the liberals were in power. And the Beacon surely knows that Mr. Burpee's removal from St. John was largely the result of a desire to unload his machinery for a good figure on a wealthy American corporation, a fact shown by his intention to retire from active business and live on the competence he has acquired. The granite industry depends for its very life on the maintenance of a judicious system of protection, and no one knows this better than the granite men themselves. The reciprocity advocated by the conservative party might benefit them, but the anomalous reciprocity and tariff for revenue policy would bring to them nothing but disaster. And the Courier repeats that 'there is more genuine politics in this fact than in two or three columns of frosty denunciation of the wicked tories.' There are one or two other points in the Beacon's article - those relating to 'robber of the public chest' ..."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jul. 27, 1893 The Granite Business.- To the editor of the BEACON, SIR:- I noticed in the last issue of the COURIER a communication signed Magaguadavic , in which the writer evidently thinks that he has entirely demolished the BEACON's arguments anent the Boom at St. George. It is said that some men will hang themselves if they are allowed rope enough. Magaguadavic , in his letter, makes a very strong argument in favor of free trade as against protection. He says our chief competitors in Canada are Scotch and Swedish granites, meaning by that the dark colored granite that is got out in Sweden in the rough and taken to Scotland and manufactured there. He, without apparently seeing the force of his argument, admits that in Canada under protection it costs more to manufacture granite than it does in free trade Scotland by at least 39 per cent. And he is correct! Now how would it be if Canada were a free trade country? But as Canada is not likely to become a free trade country in the near future - her people requiring yet to be educated upon that point - how would it do in the mean time to abandon protection for the sake of protection and take a step in the direction of free trade by adopting a tariff for revenue only. But Magaguadavic does not stop here. He tells us that in the United States, which enjoys the very highest order of protection that between 400 and 500 stone cutters are out of work in Barrie, Vermont, alone. The result of protection! Query: Which are the better off, the granite workers in Scotland who are earning steadily $1.30 per day, or the noble 400 or 500 who are out of work at Barrie, Vt.? Magaguadavic evidently thinks he plays a heavy card when he says after a period of fifteen years under the much abused policy (meaning protection) we have four firms employing about 200 men and shipping from $80,000 to $90,000 worth of granite per year. Now it seems to me that with the almost exclusive monopoly of red granite on the continent of America and the magnificent water power adjacent to the quarries, that after fifteen years of protection the showing is nothing to boast of. I will venture to state that had we had reciprocity with the United States during these fifteen years that there would be now employed at St. George in the granite industry over 2000 men and that the output would exceed $1,000,000 annually. Magaguadavic sneers at the lime industry of St. George. Perhaps he does not know that during the 10 years of Reciprocity with the United States, the lime business was an important factor in the commercial property which St. George then enjoyed. He should know, however, that the lime prosperity at Letang has lately changed hands, and that the present owners are spending large amounts of money upon it in improving it in anticipation of gaining access to the American market for their product, upon the repeal of the McKinley bill and to ... also know that lime as well as granite to be manufactured more cheaply under a low than a high tariff. I am, ... yours truly ... St. Andrews, July .., 1893"

St. Croix Courier - Jun. 1, 1893 The Hum at St. George. - The Granite Works are Filled With Orders and are Doing a Rushing Business. - The granite works of St. George are just now veritable hives of industry. They are all working full time and all are supplied with orders that will keep them busy for some time. Among the larger work on hand is a building job for the Bank du Peuple, Montreal, on which Milne, Coutts & Co. are engaged. It is very elaborate and will cost when completed about $2500. Epps, Dodds & Co. are making a large red granite cottage monument for J.A. Boulanger, of Quebec, which, when finished, will cost $2000. They are also engaged on a front for a vault which will be placed in Mt. Pleasant cemetery, Toronto, and which will cost $6000. It is of grey granite and will measure 25 feet in front and will stand 25 feet high. They have in hand, also, a monument to stand 25 feet high, which is to be erected by the Masons of Toronto in memory of brethren who have died in the city without friends. Taylor Bros. and Tayte, Meating & Co. devote themselves almost wholly to smaller monumental work, for which orders are plentiful. The last named firm have recently opened up a new quarry, which produces a very handsome light colored stone, and which is gradually deepening in color as they develop it. The firm is just about completing an addition, 25x65 feet, to their buildings, an enlargement rendered necessary by their rapidly increasing business. Milne, Coutts & Co. and Epps, Dodds & Co. have exhibits at the World's Fair, the former firm a column representing the red granite in its rough, hammered and polished states, the latter a cottage monument of handsome design."

Jun. 1893 - Copied from: St. Croix Courier - Jun. 4, 195360 Years Ago. - St. George. - The granite firms have never done a more rushing or successful business than they are doing this spring. Some of the firms have enlarged their crews and are working extra time. Many young men who had gone away last year to Vermont and elsewhere have returned and find steady employment and better wages at home."

St. Andrews Beacon - Jun. 8, 1893 Epps, Dodds & Co., of St. George, have obtained aten year's lease of the property of Daniel Campbell, which is alongside their present quarry, and will cut the granite that is on it."

S.J. Daily Sun - Jun. 8, 1893 A St. George man told a Sun reporter yesterday that the various granite works at that place are very busy at present. They have orders on hand that will keep them going for a long time."

Eastport Sentinel - Mar. 15, 1893 The Bodwell Granite Company of Rockland has been awarded the contract for furnishing granite for the new post office of Washington, D.C. Their figures were the lowest of about ten bidders. The time allowed in which to complete the job is two and one half years. The granite will be furnished from the company's quarries of Carver's Harbor, which have long since become famous for the material they produce. Work will probably be commissioned in a few weeks. The Bodwell Granite Company already has a large crew employed, which will be considerably reinforced as a result of this contract. It is good news to the granite men."

Codes: G3 / IDX_Names: Granite;
St. Andrews Beacon - Mar. 30, 1893 At the present time Epps, Dodds & Co., of St.George, are at work on a vault to be erected in Mount Pleasant cemetery, Toronto, for James French, Esq. The design is a beautiful one, and the plans call for the like of Spoon Island, Quincy and Rockport granite. Some of the blocks used will weigh between ten and twenty tons. The height of the vault will be 25 feet. Mr. F.B. Bartlett, Toronto, is the sculptor, and the design at once shows his ability. The cost of the structure when complete, will be in the vicinity of $3,000. This is the third vault that his firm has built for the above sculptor. The first two were erected in the cemetery of Hamilton, Ont. - Workman"

St. Andrews Beacon - May 11, 1893 St. George ... Years ago the timber became largely exhausted. Only the valleys are first rate for farming. The hills and hillsides are indifferent. Then the young men and young women began to leave for the cities of the United States. But the keen eye of an Aberdeen granite man detected an article on the banks of the Magaguadavic river equal to the red granite for which Aberdeen is famous. Well, the outcome is an industry of no small dimensions at St. George. There are now three firms in the granite business. Their work is chiefly in making monuments for the dead. The companies are: Milne, Coutts & Co., Tayte, Meating & Co. and Epps, Dodds & Co. It is about eighteen years since this industry was started. Between three and four hundred men are employed at present; they get from $1.25 to $3 a day. The polishers make the highest wages. The granite used comes from Quincy and Rockport, Mass., Addison, Me., three miles above St. George, and Spoon Island, St. John river. The crude material is obtained from all these places, so as to suit the tastes of customers. Spoon Island granite is gray, that from Addison, Me., is nearly black, that from Quincy and Rockport is gray. No more than a third of the raw material comes from the states. There is $1 a ton duty on it. Before the McKinley bill passed, all the firms had large sales in the states, but since that time they find a market chiefly in Canada - maritime provinces, Quebec, Toronto, Hamilton, Ottawa and other places west. The amount of work done is not lessened by the McKinley bill. I went through the works of Epps, Dodds & Co. There I saw the interesting process of making monuments. A block of granite weighing eight tons can be handled by one man. A crane on rollers passes from end to end, and from side to side, of a room 115 by 35 feet. The blocks, large or small, can be taken up at any point and let down at any point. The crane was made in Aberdeen, Scotland. When the rough work of the chisel is done, then the polishing begins. Water-power, secured at the Falls nearby, is used. First, chilled iron is applied to the revolving shaft or under the polisher on a plain surface. This chilled iron is about the size and shape of mustard seed. It is made, not at St. George, by turning a steam jet on to a current of molten iron, flowing from a furnace over a tank of cold water. The iron falls into the water in particles and cools in globular form. After this emery is applied. The last substance for polishing is a fine powder. Epps, Dodds & Co. built the Tuckett monument at Hamilton, Ont., which cost about $11,000. They are now building the James French monument for Mount Pleasant cemetery, Toronto, which will cost about $6,000. They also built the monument of Wm. C. Fitch at Toronto, who fell at Batoche during the Northwest rebellion; and eight double columns for Garfield's monument at Lake View cemetery, Cleveland, Ohio. St. George is not dead yet. Could all Canadian men be induced to stay at home and work as the hundreds of fine, sturdy fellows at St. George have done, the country would go ahead by leaps and bounds. The forest has been growing, and the owners of the timber limits are about to revive that

St. Andrews Beacon - May 11, 1893 The St. George contribution which Milne, Coutts & Co. have forwarded to the World's Fair, was shipped on Monday. It is a beautiful piece of workmanship, and shows the stone in its natural state, and in the various degrees of finishing. It ought to make a good advertisement for the granite town."

St. Andrews Beacon - May 18, 1893 Tayte, Meating & Co., of St. George, are to add 40 feet more to their granite works."

St. Andrews Beacon - May 18, 1893 The St. George Granite Industry.- In the BEACONof April 13, appeared a local paragraph relative to the granite industry of St. George. The Calais Times copied the item in its next issue. Now, we find the following article in relation thereto in the last number of the Calais paper:- With reference to an item contributed to this paper, but which appeared, on the 29th ult, as a local editorial, W.W.R. - who is evidently unaware of the new granite industry about to be started in this city- writes from Los Angeles, Cal., as follows: If 'with heavy tariff restrictions,' as you term it (I call it protection to American industries), 'a great deal of the St. George granite finds its way into the United States,' what will become of the Red Beach and other granite quarries of Maine when 'a breach is made in the tariff walls?' If St. George will then be 'one of the busiest little towns in Canada,' what will become of the little suburb of Calais - Red Beach? To quote a saying of the great apostle of free trade, I think it will be left in 'innocuous desuctude.' The article from which I quote is an argument in favor of protection, and if there are any bread winners in Red Beach who have not sat at the feet of the incomparable Blaine and drank in his words of wisdom, they had better emigrate to the quarries of St. George and help make it the busiest little town in Canada."

Evening Gazette - May 22, 1893 and S.J. Daily Sun - May 22, 1893 and St. Andrews Beacon - May 25, 1893Big Block of Granite. - At one of the St. George granite quarries the other day, a block was taken out 32 feet long, 18 feet wide and 15 feet thick. It is computed that this block of stone when loaded on a car will be worth œ3,000. It contains about 250 tons of

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - May 23, 1893 Spoon Island Granite. - B.H. Appleby, who is now operating the Spoon Island granite works, is much encouraged with the prospects of the business. He is filling good orders from Ottawa, Montreal and more other distant points, and feels confident that the gray granite from up river will replace that of Quincy and Vermont, which now goes to the upper Provinces in considerable quantities. The Spoon Island product is superior in quality, being free from iron, and taking a better polish, and it can be furnished much cheaper with equally advantageous rates of freight. Mr. Appleby furnishes the Intercolonial with a considerable amount of business, and says that he has been well treated by the line. He has great faith in his wares, is firmly convinced that Spoon Island produces the best gray granite in the world, and what is more to the purpose is able to furnish disinterested expert testimony to support his claim. Mr. Appleby has an idea that his quarries will send out $8,000 to $10,000 worth of stone this year, though he does not venture on exact predictions."

May 1893 - Copied from: St. Croix Courier - May 24, 1923 Calais - 30 Years Ago: The New Brunswick Red Granite company of Maine closed a contract on Friday night, and business is so rushing that it is necessary to increase the number of men they now have at work. The granite base for the soldier's monument weighs twelve tons. It was slid from the street to the foundation of the monument on ways. O.S. Tarbox, superintendent of the Maine Red Granite Works, took charge of the work of placing it in position, and this he did by means of the powerful skids used at the granite works. The next layer of granite weighs seven tons, and this will be placed in position by the same means. The entire monument is to be completed this week. It will then be faithfully guarded until placed in the hands of the city."

St. Andrews Beacon - May 25, 1893 The New Brunswick Red Granite Company of Maine made a blast in the old Burpee quarry at St. George last Tuesday, May 16. It was the largest ever made in any quarry in St. George, and contained the fairest and best quality of red granite ever brought to light in that vicinity, says the Calais News."

Eastport Sentinel - May 31, 1893 Mr. F.T.C. Burpee of St. John, managing director of the Maine Red Granite Co., with his wife have taken rooms at Mrs. A.Q. Hills for the summer."

Nov. 1893 - Copied from: St. Croix Courier - Nov. 1, 1923 30 Years Ago: The Calais Granite Company have completed a wharf just below the Shore Line station for the purpose of scowing the heavier pieces of the granite they receive, instead of carrying them by the bridge to their works. A track is laid from the railway to the wharf and scows used will be large enough to carry a car, loaded with granite, across the river. The wharf was rendered necessary because of the objection of the Bridge Company to the transportation of very heavy loads across the bridge."

St. Croix Courier - Nov. 2, 1893 Mr. B.H. Appleby, of Carleton, has purchased the Dawson granite quarry at Bonney River, Charlotte county. The stone is of a beautiful cream color and is of a fine quality. Options on the Carson and McAleenan quarries in Digdeguash have been taken by Messrs. McGratton of St. George and Estabrooks, of St. John."

St. Andrews Beacon - Nov. 2, 1893 Tayte, Meating & Co., of St. George, have placed an order with Sheriff Stuart for twenty tons of black granite from his new quarry at Bocabec. Other orders are expected from St. George granite workers. Joseph Craig, of Chamcook, has the contract for quarrying this stone."

St. Andrews Beacon - Nov. 9, 1893 Epps, Dodds & Co., of St. George, have ordered aquantity of black granite from Sheriff Stuart's quarry at Bocabec."

St. Andrews Beacon - Nov. 9, 1893 St. George - The enterprising granite firm of Tayte, Meating & Co. have received an order for a vault from Ontario, which will net about three thousand dollars."

St. Andrews Beacon - Nov. 9, 1893 Tayte, Meating & Co., of St. George, have received a contract to construct a large burial vault of granite for a Toronto party. It will cost in the neighborhood of $5,000. The ornamental part of the structure will be composed of black granite."

St. Andrews Beacon - Nov. 16, 1893 R.A. Stuart, Esq., the High Sheriff of Charlotte Co., has struck a bonanza in the granite quarry which he has opened at Bocabec. The granite is the very finest black stone and takes an excellent polish. Mr. Stuart has already received an order for a large number of tons from the St. George manufacturers.- St. John Globe."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Nov. 16, 1893 Black Granite. - The Bocabec Stone Promises to be of Great Value. - A St. Andrews despatch to the Telegraph says:- There has recently been discovered on the mountains of Bocabec about eight miles from St. Andrews, a species of black granite which is likely to lead to a new and most important industry in this community. From appearances it would seem that the supply is inexhaustible and so far as tested the grade and quality of the stone for polishing purposes is superior to any granite yet quarried in this country. It is beyond doubt a real black granite, beautifully mottled and free from any soft or foreign substance to interfere with its polishing brightly and smoothly. The samples thus far taken out have been polished and finished up most satisfactorily, and are as handsome specimens of granite as have ever been shown in this county. Sheriff Stuart is the fortunate discoverer of this valuable stone, and he has secured the control of the right to quarry, which it is thought by granite manufacturers of the county will prove an independent fortune to him. Already he has received some good orders from the St. George granite men for stone from his quarry, for which he will receive a good price. The granite business has now become very firmly established at St. George and is a very important industry to this county, and it may be indeed that as an industry it is only in its infancy in Charlotte county. There is no possible doubt but that such stone as Sheriff Stuart is now taking out of his quarry is bound to sell in any market and needs only to be seen to be sought after by all stone dealers."

St. Croix Courier - Nov. 16, 1893 Tayte, Meating & Co., of St. George, have received a contract to construct a large burial vault of granite for a Toronto party. It will cost in the neighborhood of $5,000. The ornamental part of the structure will be composed of black granite."

St. Andrews Beacon - Nov. 23, 1893 St. George.- Nov. 18;- The firm of Epps, Dodds &Co. have an order for a monument in memory of the Spring Hill miners, Nova Scotia. It is to have on the top of it a statue of lifesize of a miner in full working dress. This statue is to be manufactured in Ontario. The monument will cost about fifteen hundred dollars. It will be unveiled next Dominion Day. In their works there are some very handsome monuments of different kinds of granite. Noticed one of the very beautiful black Quincy granite. The Quincy black granite takes a very beautiful polish, but, unlike our red granite, on being exposed to the weather and air, it rusts. It is softer than our red granite and is used very much for inside work such as cornices, mantlepieces, etc., for which purpose it is very beautiful. One of the firm stated to me that one of their column cutters that was in very general use before the passing of the McKinley bill is now more than five months of the year idle. He said that the forty per cent duty practically shut them out. They had some fine customers in the United States but after the bill was passed their customers told them that though they liked their granite and work a great deal better than their own they could not pay the extra forty per cent, and, therefore, would have, though reluctantly, to discontinue purchasing from them. If it were only twenty per cent as before the McKinley Bill they could do very well. Thomas Colmer and son and Charles McCormick, stone cutters of St. George, who have been away for about six months, have returned from Springfield, Mass., where they have been working upon an elegant mansion. Understand they are to be employed by the Calais granite firm."

S.J. Gazette - Nov. 25, 1893 The granite cutters of the New Brunswick Red Granite Company of Calais, Maine, struck yesterday morning, demanding nine hours pay for eight and a half hours work. No disturbance resulted."

S.J. Gazette - Nov. 27, 1893 Epps, Dodds & Co. have an order for a monument in memory of the Springhill miners, Nova Scotia. It is to have on the top of it a statue of life size of a miner in full dress. It will be revealed next Dominion day."

Nov. 1893 - Copied from: St. Croix Courier - Nov. 29, 1923 Calais 30 Years Ago:The strike of the cutters at the granite works last week has been happily settled and the men all went to work on Monday morning. The demand which brought on the strike was for nine hours a day, instead of ten. What concessions were made is not learned. The works have been running night and day of late and the strike came at a very bad time."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Nov. 30, 1893 Granite Workers Strike.- (Calais News, 24th).-The works of the Maine & New Brunswick Granite Co. have for a few weeks past been a scene of busy activity, and great hopes were entertained of a prosperous winter's work, which would put the company on a footing to do much more business in the future. A big contract had been commenced on and others were being talked of and figured on; and it might be said that the works had just commenced to do business. It was therefore a matter of surprise to our citizens this morning, when a body of some sixty men were seen marching up the street shortly after eight o'clock and filed into Pool's Billiard Rooms. A representative of the News called at the building and was courteously received and shown into the room in the rear of the hall where the men were congregated. The object of the visit was stated and a gentleman spoke for his comrades, and to the question as to what was the matter, he said: We are mostly members of the National Stone Cutters Union, whose working day is nine hours and we wished to establish that as a working day. Is there no other issue? Yes. We have got a charter for a local union and wished to be recognized as such, and were told it could not be done. The matter of nine hours did not matter much, as we are only working eight and a half now, and there is no question of wages involved, for if we were working on a ten hour a day basis, of three dollars, we are willing to receive two dollars and seventy cents for a nine hour day. He further said there was no trouble at all further than that they were members of the union and as such, they wished to form a local branch here. At the works, which were visited shortly after this interview, Superintendent Green was found, and he was also quite willing to give his side of the question. He said that this morning the men called on him and asked him to recognize the union, and his story of the demands was the same as that given by the men. He says that they told him that less than half of the men belonged to the union and therefore it was a request of the minority of the men. He says he does not ask a man's religion or politics, or whether he belongs to a union or not, as long as he can do his work. The union will not be recognized as a body, he will treat with the men individually and he feels able to get all the men he wants. He says the strike anyway will not affect the present contracts as there is a strike clause inserted in it. The strike is to be deplored, and it is to be hoped that the matter may be adjusted satisfactorily."

St. Andrews Beacon - Nov. 30, 1893 Despite the limited market which Canada affords, the St. George granite workers all are doing a nice, safe business. Epps, Dodds & Co. have recently purchased for $800 the lot lying between their works and the works of those modern hustlers, Milne, Coutts & Co. They will utilize it as a yard room for the present, and at a later day, if business warrants it, may erect buildings thereon. Taylor Bros., who are located to the west of Epps, Dodds & Co., are working up a good business. Like all the other granite kings of St. George, they are practical workmen. Tayte, Meating & Co., since establishing their new works, have been gradually enlarging their territory, and the outlook for them is

St. Croix Courier - Nov. 30, 1893 The firm of Epps, Dodds & Co. have an order for a monument to memory of the Springhill miners, Nova Scotia. It is to have on the top of it a statue of life size of a miner in full working dress. This statue is to be manufactured in Ontario. The monument will cost about fifteen hundred dollars. It will be unveiled next Dominion

St. Andrews Beacon - Oct. 5, 1893 St. George.- Mr. James Dodds, of the firm of Epps, Dodds & Co., has recently moved into his fine residence on the Manor Road. Alexander Taylor, of the firm of Taylor, Bros., is building a very fine residence near the works of Milne, Coutts & Co. All the granite works here are full of orders and doing a flourishing business. The prospects of the Granite business here seem to be bright for the future."

St. Andrews Beacon - Oct. 12, 1893 Sheriff Stuart has purchased a black granite quarry in Bocabec, and will supply St. George granite workers with the stone. The stone takes a splendid polish, and when finished is far more beautiful than the Quincy granite."

St. Andrews Beacon - Oct. 12, 1893 Epps, Dodds & Co. are making a massive vault for parties in Ontario. It will be a very fine piece of workmanship when finished, and will cost quite a large amount."

St. Andrews Beacon - Oct. 12, 1893 St. George - Oct 7th - Milne, Coutts & Co. have opened a large new quarry. It is said that it is a fine quality of granite and will turn out well."

S.J. Daily Sun - Oct. 13, 1893 Black Granite. - Sheriff Stuart, says the Beacon, has purchased a black granite quarry in Bocabec, and will supply St. George workers with the stone. The stone takes a splendid polish, and when finished is far more beautiful than the Quincy granite."

St. Andrews Beacon - Oct. 19, 1893 and Gazette - Oct. 20, 1893 The St. George Granite men are charmed with the specimens of black granite which Sheriff Stuart has sent them from his Bocabec quarry, and it is probable that henceforth this granite will take the place of both the Spoon Island and the Quincy granite. It certainly looks more beautiful when

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Oct. 26, 1893 A Boom in Granite.- The possibility of a reciprocity treaty being entered into with the United States has caused an increased interest to be taken in the granite deposits in this County. Within the past few weeks, the Dawson quarry at Bonny River has been purchased by Benj. Appleby, of St. John. The stone in this quarry is said to be of a very fine character, and if the U.S. market was opened to it there is no doubt that it would become very popular. Options have also been taken by Mr. McGrattan, of St. George, and Mr. Estabrooks, of St. John, on the Carson and McAleenan quarries in Digdeguash. There is good stone in both of these quarries, but there is one of them that turns out a most beautiful tint. In addition to these quarries, there is a black granite quarry at Bocabec, recently purchased by Sheriff Stuart, the product of which cannot be surpassed by any quarry in the United States."

St. Andrews Beacon - Oct. 26, 1893 The Maine Granite Co., of Calais, get the roughstone from their quarries near St. George. It is then brought by train to St. Stephen and heretofore hauled by teams to Calais. This was found to be a slow as well as a hard and expensive way, so they have about completed st the Shore Line Railway terminus an abutment or pier, on which a track is laid, so that the loaded cars will be run on a large scow capable of holding two cars with their loads. They will then be ferried across to the company's wharf at Calais and unloaded by a powerful derrick with steam power, the scow afterwards returning with the empty cars to St. Stephen. It is said an electric light will be placed on each side to

Oct. 1893 - Copied from: St. Croix Courier - Oct. 29, 1953 60 Years Ago. - The Calais Granite Company have completed a wharf just below the Shore Line Station for the purpose of scowing the heavier pieces of the granite they receive instead of carrying them by the bridge to their works. A track is laid from the railway to the wharf and scows used will be large enough to carry a car, loaded with granite across the river."

S.J. Daily Sun - Sep. 14, 1893St. George. - A Visitor's Impression of the Red Granite Town. - ... (For the Sun, by D.R.L.). - ... St. George ... It is built on q great ledge of rock, around and through which the beautiful Magaguadavic River finds its way on its last mile to the tide waters of the Atlantic. ... Of course the granite industry is the main stay. This work is done by four firms, all of which are working on the rush to fill out orders. I could not help noting the difference between these firms and some of the heavy, wealthy firms of Vermont - there, stagnation and depression; here, activity and prosperity. For, as one stone cutter said, I'm not fit to work today, but there is no time to be sick, our firm is too busy. Epps & Dodds, who have the largest shops of the four firms, are at work on a splendid vault for parties in Toronto. It is a large one and some of the work is very intricate and beautiful. The whole is to cost about $1,000. The quarries from which the beautiful red granite is obtained lie from three to six miles out from the town and the supply is said to be inexhaustible, and new

St. Andrews Beacon - Sep. 14, 1893 and S.J. Daily Sun - Sep. 16, 1893 Black Granite in Charlotte County.- What promises to be a valuable quarry of black granite has been found in Bocabec, not far from the public landing. In every respect but color it bears a close resemblance to the red granite, and if it can be polished as easily there is no doubt that it will be of almost inestimable value. The St. George granite workers are interesting themselves in the stone, and some of them have samples in their possession, which they are working on."

St. Andrews Beacon - Sep. 28, 1893 Bocabec.- Bocabec people are greatly interested in the find of black granite, and they are hoping that the stone may be made use of. For ornamental purposes, such a stone ought to be very popular."

St. Andrews Beacon - Sep. 28, 1893 Henry McGrattan, of St. George, is prospecting on a red granite property in

Digdeguash, with a view to opening a quarry and making shipments in the rough to the United States. He wants no export

St. Andrews Beacon - Apr. 5, 1894 The Bocabec black granite quarry is turning out splendid stone. Shanties for the workmen are being erected, logs for the wharf are being rafted, and everything about the quarry indicates progress. The quarrying operations are witnessed with a good deal of interest by the Bocabec people, who little dreamed a year ago that such a forbidding-looking mountain should prove so valuable. The firm have booked several orders for stone already."

St. Croix Courier - Apr. 12, 1894 The proprietors of the Bocabec black granite quarries are meeting with good success in their operations so far as they have gone. The stone is turning out fully equal to their strongest expectations, and is free from seams or shakes of any kind. Quite a number of men are now employed there and more will soon be added."

St. Andrews Beacon - Apr. 26, 1894 Several samples from Mr. A. Kennedy's blackgranite quarry at Lime burner Lake, were sent to St. George last week to be polished."

St. Andrews Beacon - Apr. 26, 1894 The Bocabec black granite quarry is turning outsplendid stone, and everything looks promising. Next week, in the neighborhood of twenty-five men will be at work blasting rock, making roads and erecting a wharf. The quarry has made quite a hum at Bocabec."

S.J. Daily Sun - Apr. 30, 1894 St. George. - The four granite firms are runningfull hours, but the prospects of a very busy season are not as promising as the proprietors would wish them to be."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Aug. 7, 1894 St. Andrews. - Stone from the Gibson, Stuart & Hanson black granite quarry at Bocabec is being polished for a monument to be erected in the St. Andrews Rural cemetery in memory of the late Claude Lamb."

S.J. Daily Sun - Aug. 11, 1894 Charlotte Co. - St. George, Aug. 6. - The Black Granite company of Bocabec have suspended the polishing of samples for the present and Bruce McKenzie, who had charge of the polishing works, has come home. But we are informed that the rumor which has been afloat for some time that the work at the quarry was to be given up is not correct. Epps, Dodds & Co., one of our enterprising granite companies, have had some of the black granite dressed and, though the workmen find it difficult to work, say it is an extra quality of stone and a stone that, when

Aug. 1894 - Copied from: St. Croix Courier - Aug. 19, 1954 60 Years Ago. - Messrs. Epps, Dodds and Co., have completed and are getting ready to ship the Spring Hill monument, which is certainly a credit to them."

St. Croix Courier - Aug. 23, 1894 St. George. - The granite business is very quiet at present, owing to the water being very low, and only a few hands are employed in some of the mills. Messrs. Milne, Coutts & Co. are running only a small part of their machinery. Messrs. Epps, Dodds & Co. have completed and are getting ready to ship the Spring Hill monument, which is certainly a credit to them. The bottom base is of hammered red granite, 5 1/2 feet square by 1 1/2 feet high. The second base is of hammered gray granite, 4 1/4 feet square and 1 1/6 feet high, with the figures 1891 raised and polished on front and back. The third base is of gray granite, 3 1/2 feet square by 2 1/2 feet high, polished, bearing the following inscription: 'Erected to the memory of 125 men who lost their lives in the explosion.' The die is of gray granite, 8 feet high by 2 feet 7 inches square, polished, with the names of the men covering the four sides. The cap is of hammered gray granite, 3 1/6 feet square, by 2 1/2 feet high, with 'In Memorium' in large raised letters. The statue is of the finest Italian marble, 7 feet high, and was made by Gullett, the celebrated sculptor of Toronto. The monument will be unveiled early in

St. Croix Courier - Dec. 13, 1894 St. George. - Business is generally dull here at present. The granite mills have closed for the holidays. Some preparation is being made for a little jollification at Xmas."

St. Andrews Beacon - Dec. 13, 1894 The report is untrue that the Maine and New Brunswick Granite company, of Calais, have contracted to furnish the granite for Vanderbilt's mansion."

St. Croix Courier - Dec. 13, 1894 The black granite quarries at Bocabec are likely to be developed during next summer, the company for that purpose organized at Bangor having secured control of the deposit on land owned by Mrs. Turner of St.

St. Andrews Beacon - Dec. 20, 1894 St. George.- The granite works, except Taylor's are closed and it has never been so dull here for many years as it is now and from present appearances we will have a pretty hard winter."

St. Andrews Beacon - Feb. 1, 1894 St. George.- The works of Epps, Dodds & Co. will open for work again next Monday."

St. Andrews Beacon - Feb. 8, 1894 St. George.- Feb 3rd.- The granite works have reopened and are doing a flourishing business. It is anticipated here that the granite will boom under the new tariff of the United States."

Feb. 1894 - Copied from: St. Croix Courier - Feb. 14, 1924 30 Years Ago: Sheriff Stuart and Mrs. J.M. Hanson of St. Andrews, with their partner in the granite business, Mr. Gibson, of Benton, were in town part of the day in inspecting the granite works in Calais. From St. Stephen they went to St. George with a like purpose, their object being to get what information they can concerning the manufacture of granite before starting their proposed works at Bocabec."

St. Andrews Beacon - Feb. 15, 1894 The Maine Red Granite Company is hauling logs for the construction of a new wharf at Red Beach."

St. Andrews Beacon - Feb. 22, 1894 Messrs. Gibson, Stuart & Hanson, proprietors of the Bocabec black granite quarry, who have been making a tour of the granite works of Calais and St. George, have returned to St. Andrews. They propose erecting a mill something after the pattern of Epps, Dodds & Co.'s, St. George, and will put in saw machinery similar to that in use in the Calais works."

St. Andrews Beacon - Feb. 22, 1894 St. George.- The granite business here must be flourishing as we notice the platform of the station at St. George covered with monuments for shipment to Ontario."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Feb. 22, 1894 Mr. Thomas Comer and son arrived from Calais, where they were engaged in the Calais granite works, and will in future work in Milne, Coutts & Co.'s works."

St. Andrews Beacon - Jan. 4, 1894 and S.J. Daily Sun - Jan. 5, 1894 Bocabec Black Granite.- When the owners of the black granite quarry at Bocabec formed their partnership a month ago it was not deemed expedient by them to build their polishing works until next summer or fall, but the outlook seems so promising that the company have determined upon commencing the erection of their works just as soon as the necessary arrangements can be made. On Friday last, measurements for the proposed wharf were made, and plans and specifications are now being drawn, and the necessary timber cut. The plans call for a wharf 82 feet long by 32 feet wide, with a depth of 16 feet at the face."

S.J. Daily Sun - Jan. 4, 1894 St. George. - The granite works of Tayte, Meating & Co. commenced operations for the new year today, which indicate good business prospects."

S.J. Daily Sun - Jan. 6, 1894 Charlotte Co. - Patrick McLaughlin of Bocabec brought into town today a sample of black granite found on his farm. The granite shows a very fine grain, compact and hard, and is susceptible of taking a more brilliant polish than the celebrated Quincy granite. The supply is practically inexhaustible. The place where the quarries can be located is situated near the Bocabec River, and close by good water power and about a mile from salt water, where it can be conveniently transported to for shipment either in the rough or manufactured."

St. Croix Courier - Jan. 11, 1894 The owners of the black granite quarry at Bocabec will commence the construction of their works as soon as the necessary arrangements can be made. Plans for the wharf have been drawn and the timber for the structure is being cut. The plans call for a wharf 82 feet long by 32 feet wide, with a depth of 16 feet at the face."

Jan. 1894 - Copied from: St. Croix Courier - Jan. 17, 1924 30 Years Ago: None of the granite firms except Tayte & Meating, have as yet started work since the holidays. The firm secured the contract for building a large vault for an Ontario firm, to be shipped in the spring. Its construction will employ a large number of men during the winter months. It is understood that the other firms will start up before long, many of them having on hand a number of spring orders."

St. Andrews Beacon - Jan. 18, 1894 Business is booming. The New Brunswick Red Granite Co. of Maine, is running night and day. It employs one hundred and forty men. The weekly payroll is $1,100 - Calais News."

Jan. 1894 - Copied from: St. Croix Courier - Jan. 31, 1924 30 Years Ago:Taylor Bros., Epps, Dodds & Co., and the Bay of Fundy Red Granite Works, which have been closed since the beginning of the year commenced operations during the

St. Andrews Beacon - Jul. 5, 1894 Twelve pillars of the Sir John A. MacDonald monument, to be erected at Montreal, will be constructed by Milne, Coutts & Co., of St. George. They will be of red granite, circular in form, 11 feet 8 inches in height, with a diameter of 1 ft. 3 in. at the base and 1 ft. 2 in. at the top. They will mot be polished."

S.J. Daily Sun - Jul. 20, 1894 St. George. - ...The granite mills are all humming, though work is not so pressing as owners and workmen could wish."

St. Andrews Beacon - Jul. 26, 1894 Mr. Fred T.C. Burpee, of the Calais Red GraniteWorks, who has been seriously ill for some weeks past, died on Monday night. The works at Calais have been closed down in consequence. Mr. Burpee has been long identified with the red granite industry. For many years he operated polishing works at Carleton, St. John, removing from there a few years ago to enter upon a business at Calais. He was a man of push and enterprise, and will be greatly

St. Andrews Beacon - Jul. 26, 1894 The Bocabec black granite people have suspendedthe polishing of samples for the present. Bruce McKenzie who had charge of the polisher in St. Andrews, has returned to St. George. There is no truth in the report that the quarry has been abandoned."

Carleton Sentinel - Jul. 28, 1894 F.T.C. Burpee, proprietor of the red graniteworks, Calais, Me., which he removed from Carleton, St. John, a few years ago, died on Tuesday. He was a brother of the late Hon. Isaac Burpee and of E.R. Burpee."

St. Andrews Beacon - Jun. 7, 1894 Messrs. Epps, Dodds & Co., of St. George, began on Saturday to letter the shaft that is to be erected as a memorial to the miners who perish in the Springhill mines a year or so ago. One hundred and twenty-five names are to be recorded on it. The main shaft is composed of grey granite, set upon a base. On top of this shaft which is about 2 feet square by 7 feet high, will stand a bronze figure of heroic size."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 7, 1894 Eastport is to have a black granite establishment in connection with the Bocabec quarry. On Monday evening, a conference was held in the Eastport Board of Trade rooms between Messrs. Gibson, Stuart & Hanson, proprietors of the quarry, and the business men of the town. The proposition made at the previous meeting was repeated and accepted by the black granite firm. As soon as a site has been chosen, wharf and buildings will be erected. A delegation from Eastport will visit the quarry in a tug today."

St. Andrews Beacon - Jun. 14, 1894 The black granite people have their vertical polisher at work in one of the rear rooms of the shoe factory. Bruce McKenzie, of St. George. is in charge. The polisher is at present engaged on sample stones."

S.J. Daily Sun - Jun. 14, 1894 Wedding at Benton. - June 13. - ... The Methodist church was the scene of a brilliant wedding this evening, when Miss Mary Gibson, daughter of William Gibson, general merchant here, and senior partner of the Bocabec Black Granite works, was married..."

S.J. Daily Sun - Jun. 19, 1894 St. Andrews. - The trade between the Eastport syndicate and the Bocabec Granite Quarry Co. has fallen through for the present."

Woodstock Dispatch - Jun. 20, 1894 Mr. Gibson, of Benton, tells the Dispatch that work in the black granite quarry at Bocabec, Charlotte Co., is going on finely. A wharf has been built at Bocabec, and lumber is now at St. Andrews with which to build the factory near the works."

St. Andrews Beacon - Jun. 21, 1894 St. George.- June 13.- There is nothing inreference to the granite industry, only that it is very dull, few orders coming in. There are a number of the workmen unemployed, many of them having to go elsewhere to seek employment. There have been some gentlemen here from Eastport, representing the Board of Trade of that city, negotiating with two of our granite firms with a view to manufacturing granite at Eastport. There is, however, a doubt in the minds of some of our men as to the feasibility of the enterprise, on account of the great expense attending steam power. They expect to know what they will do in about ten days."

St. Andrews Beacon - Jun. 21, 1894 Eastport and Granite.- From the Sentinel's report of the last meeting of the Eastport Board of Trade, the following extract was taken:- Upon a call for a report of the committee visiting St. Andrews and adjacent places, Gen. Leavitt responded with a detailed account of the interview which he and the gentlemen of his party, Messrs. McLaren, Gardner, Paine and Colwell, had with Messrs. Gibson, Stuart & Hanson, their visit to Bocabec quarry on Friday and their trip to St. George, and their favorable reception by Messrs. Epps, Dodds & Co., and Tait, Meating & Co., owners of quarries and polishing works in and near the latter place. The committee while not favorably impressed with the immediate prospects of consummating a trade with the owners of the Bocabec quarries, owing principally, to the as yet undeveloped state in which their property now is, feel little doubt that if reasonable inducements were held out to other parties, an extensive plant with an established trade could be found to accept and before many months have their machinery set up and in working order at some one of the eligible sites to be found along the waterfront."

S.J. Daily Sun - Jun. 25, 1894 St. George. - Work in the granite sheds is not as brisk as the men would wish, but the four sheds are kept running, and some with a good number of men at work."

St. Croix Courier - Mar. 4, 1894 C.C. Ludgate, American consular agent at this port, floats a pretty little flag over the store of Epps, Dodds & Co., where he has an office, he having greatly assumed the duties of book-keeper for this firm."

St. Andrews Beacon - Mar. 15, 1894 The Black Granite Business.- Black granite quarries appear to be as numerous as flies in August since Messrs. Gibson, Stuart & Hanson acquired the black granite mountain in Bocabec. Almost every Bocabec farmer thinks that he has a vein of black granite running through him, or his farm, and two or three of them, it is said, have really very promising deposits. The latest person to go into black granite is Mr. Angus Kennedy, proprietor of Kennedy's hotel. He tells the BEACON that he has purchased 200 acres in the neighborhood of Limeburner Lake, principally for the black granite cliffs that are upon the property. Messrs. Epps, Dodds & Co., of St. George , have polished a sample of the stone, and they pronounce it first class. It is very fine-grained and shows very little mottle, being almost perfectly black. The deposit is quite close to the railway and is capable of being worked to advantage. Mr. Kennedy intends starting in at once, and satisfying himself what he has got before he makes any lavish expenditure. He says that if the stone does not meet his expectations there is more than enough wood on the land to recoup him for what it cost."

St. Andrews Beacon - Mar. 22, 1894 The Crown Land report gives as the granite output of St. George in 1892 as follows:- Milne, Coutts & Co., 400 tons, averaging $80 per ton, $32,000; Tayte, Meating & Co., 300 tons, $24,000; Epps, Dodds & Co., 300 tons, $24,000; Taylor Bros., 300 tons, $24,000. This, says the report, is exactly the same as the output of the previous year."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Mar. 22, 1894 Mrs. A.J. Turner, of St. John, who own the black granite hill in Bocabec, which was alluded to in last week's issue, writes to the BEACON that no person has spoken of buying it, neither has any value been placed upon it, either by myself or family. The BEACON's paragraph was based on a statement made to the editor by a near relative of the man who located this granite deposit, and hence was considered authentic."

St. Andrews Beacon - Mar. 22, 1894 St. George.- Tayte, Meating & Co. have shipped to Toronto part of the large vault which they have been manufacturing."

St. Andrews Beacon - Mar. 22, 1894 Quarrying will be begun next week on Messrs. Gibson, Stuart & Hanson's black granite quarry in Bocabec. Stephen Dick, of Letete, who was foreman for Tayte, Meating & Co., of St. George, will be foreman of the new quarry. Lumber for the erection of shanties at the quarry has arrived at Chamcook, and will be hauled to the ground this week. Everything looks promising."

St. Andrews Beacon - Mar. 29, 1894 Operations at the Bocabec black granite quarry began this week. Success to it."

St. Croix Courier - May 3, 1894 St. George. - The granite business is somewhat dull just at present."

St. Andrews Beacon - May 10, 1894 In the matter of the estates of George Milne, Myrtle Kate Milne, and Alex. G. Milne, infants under 21 years of age, Alex Milne, of St. George, stone cutter, and Wellington C. Douglas, of the same place, master mariner, were appointed guardians of the estate and persons of the said infants. The estate of each is valued at

St. Andrews Beacon - May 10, 1894 Some late samples of black granite from Angus Kennedy's quarry at Lime burner's Lake have been returned from the St. George polishing works. They take a fine polish."

St. Andrews Beacon - May 10, 1894 BOCABEC BLACK GRANITE.- Road-way Built to the Quarry - Millions of Tons of Splendid Stone in Sight.- Wonderful strides have been made around the black granite quarry of Messrs. Gibson, Stuart & Hanson, of Bocabec, during the past few weeks. Not only has the quarry been successfully opened, but a splendid road-way has been built from it to connect with the site of the proposed polishing works at the water-side. This road-way in itself was quite a heavy undertaking, as it had to be constructed far up the mountain side, through a tangled mass of boulders and shrubbery, but with an abundance of material and a gang of skilful and willing workers, the difficulties of the task were speedily overcome. When the quarry was first opened, it was the idea of the owners that a tram-way could be easily constructed from the mountain-side to the water, but they soon abandoned that notion, and determined upon building a road-way. At the summit of the road, just alongside where great slices of most beautiful black granite are being thrown out, a powerful hoisting crane will be erected. This will be utilized in lifting the heavy stones upon waggons; they will then be hauled by horses down the hill to the polishing works or to the wharf, as may be desired. As there is a descending grade the whole way, it will be possible to haul very heavy loads. It is estimated that one team alone will be able to haul at least

25 tons a day, which will be ample for all purposes. The site of the polishing works, which was covered a few weeks ago with a dense growth of timber, has been cleared away, and as soon as the lumber arrives on the ground, the erection of the building will be begun. The works will be as large as any of those in Saint George and will be supplied with the very latest appliances for polishing and cutting stone. Pending the erection of the works, a small polisher will be set up in the shoe factory, St. Andrews. This will be used in preparing samples and small orders. The material for the wharf is on the ground, and the contact for its erection has been awarded to Angus Fisher, St. George, than whom no more capable person could be found. The structure will be eighty feet in length, and will have a face large enough to accommodate any vessel that may come. It will have a depth of twelve feet in front. The wharf site is in a well protected spot and can easily be reached. In the neighborhood of twenty men are now employed in connection with the quarry, and their presence makes quite a hum around the locality. Some of the men are quartered with the farmers in the neighborhood, but the most of them are being fed and cared for in a temporary boarding house which has been constructed near the shore. This building has accommodations for close upon twenty men. The chef of the establishment was brought down from Canterbury by Mr. Gibson, and he is an adept in the culinary art, a fact the BEACON can attest by experience. He is quite happy in his new surroundings, and to our reporter he confided that his chief wants at the time of the latter's visit were a bean pot and a fiddle string . He has framed a set of rules for the government of the establishment, the chief and only section of which is that No swearing is allowed in this camp . Why there should be any swearing with such an excellent cook and with such pleasant surroundings was something the newspaper visitor could not understand. But to return to the quarry. If there had been any doubts in the minds of the promoters at the outset as to the quality of the stone, they have all been dissipated. The samples that were shown the BEACON at the quarry were of the most beautiful description, and there are millions of tons of equally good stone in sight. The formation of the rock makes quarrying an easy matter. Indeed, Foreman Dick declares that he never saw such a cheap and easy quarry to work. Already the company have a number of orders booked, and the outlook for future business is very brilliant."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - May 17, 1894 Business is reported as brisk just now in and around Bocabec. A number of black granite quarries have just been opened and the work is being pushed rapidly forward. The timber is being got out for a polishing factory within convenient proximity to the quarries. It will be 80 feet in length, and will be equipped with the latest and best patents. The granite is said to be of choice quality. Messrs. Gibson, Stewart & Hanson are the owners of the new quarries. They have between twenty and thirty men employed at present, and hope very soon to rival St. George."

St. Andrews Beacon - May 17, 1894 The St. George granite works are feeling theeffects of the present trade depression, but the proprietors hope that the future has better things in store for them."

St. Andrews Beacon - May 24, 1894 Mrs. George F. Hibbard ... her father, Mr. JohnN. Breed, superintendent of a granite quarry at Mooreville, N.C. ... Mr. Breed was actively identified with the granite quarries at St. George at one time ..."

St. Andrews Beacon - May 31, 1894 The black granite wharf at Bocabec has been completed and preparations for the erection of polishing works have been begun. A small polisher has been secured, and will be set up in St. Andrews."

St. Andrews Beacon - May 31, 1894 Black Granite for Eastport.- The Eastport people want the Bocabec black granite men to establish polishing works in their city, and they have certainly taken an excellent way of obtaining their desires. On Monday night last, on invitation, Mr. Stuart, one of the black granite firm, attended a meeting of the Eastport board of trade, when the matter alluded to was discussed in all its bearings. Samples of the stone were shown to the members of the board, and they were delighted with it. They were satisfied that e ready market could be obtained for the stone in the United States, as it looked so much better than the Quincy granite, and could be laid down at a lower figure. Mr. Stuart offered to furnish two thousand tons of rough stone per year, the Eastporters to do their own manufacturing, and that the people of the town would engage to supply them with wharf and building and the necessary plant, pay taxes and insurance thereon, and charge the company 4 per cent. on the investment. They were willing to spend from $10,000 to $20,000 in order to put the works in first class shape. Mr. Stuart said the offer was a liberal one, and he promised to lay it before his partners. The Eastport people are very enthusiastic over the matter and it would not be at all surprising if their offer was accepted. The establishment of the works at Eastport would not affect the Bocabec works, further than it would call for a larger stall in the quarry and on the wharf."

St. Croix Courier - Nov. 8, 1894 St. George. - Epps, Dodds & Company have added very much to the appearance of their mill by giving it a coat of paint."

St. Andrews Beacon - Nov. 8, 1894 The Bocabec black granite project is progressing satisfactorily. Already a large quantity of stock has been subscribed by Bangor and Boston capitalists. As soon as sufficient has been obtained, the purchase of the quarry will be consummated. The scheme which the promoters of the company have in view is quite a large one, and if carried out in its entirety will prove highly beneficial to this vicinity."

Weekly Record - Fri., Nov. 9, 1894 The Bocabec black granite quarries, in Charlotte County, are soon to be operated. It is said Boston capital is behind the enterprise."

St. Andrews Beacon - Nov. 15, 1894 St. George.- Most of the granite works are expected to shut down for two months or there abouts. It is expected that about February the work will resume with its usual boom."

St. Andrews Beacon - Nov. 15, 1894 Booming Bocabec Black Granite.- The fact is admitted by the most experienced granite men in this county that granite of any required dimension can be procured from the Bocabec black granite quarry. The organizing of a company in Boston and Bangor to operate the quarry on a larger scale is being readily carried on. The samples of finished and rough granite forwarded to Boston stand the severe tests given them and place the granite at the head of any known for beauty and durability."

Nov. 1894 - Copied from: St. Croix Courier - Nov. 18, 1954 Sixty Years Ago. - St. George. - The granite business continues very dull. The gully mill is down and the others will follow suit shortly."

St. Croix Courier - Nov. 22, 1894 It is stated on very reliable authority that the black granite quarries at Bocabec, owned by Messrs. Gibson, Stuart and Hanson, are about to be transferred to a company which has recently been formed in Boston for the purpose of purchasing and operating these quarries. It is understood to be the intention of the company to erect granite mills here for the manufacture of their stone for the Canadian trade, and to ship the stone in the rough state to Boston for distribution in the markets of the United States."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Nov. 22, 1894 Bocabec Black Granite Company.- From time to time, during the past month or two, the BEACON has been noting the progress that was being made towards acquiring and developing the black granite quarry of Messrs. Gibson, Stuart & Hanson, at Bocabec. The matter is now definitely settled, as on Tuesday last the Company was formally organized at Portland, Me. The new corporation is known as the Bocabec Black Granite Company, and will start business with a capital of $250,000 divided into twenty-five thousand shares of $10 each. The directors of the Company are Samual N. Mayo, banker, of Boston; C.E. Mitchell, real estate capitalist, of Bangor, Me.; George C. Irvin, of Boston, Mass. Mr. Mayo is president and secretary; George C. Irvin, treasurer, and S.C. Perry, of Portland, Me., clerk. The chief place of business of the company will be at Boston, Mass. It is their intention to operate the quarry on an extensive scale, using steam drills instead of the old fashioned hand method. A tram-way will be constructed to carry the rock from the quarry to the wharf, where there will be a steam hoisting crane. The stone will be shipped to the United States market in the rough state, and as the samples that have been shown to dealers there have been received with much favour, the Company are justified in expecting a large business. Later on, polishing works for a Canadian trade will be erected at Bocabec or St. Andrews. Mr. F.A. Stevenson, postmaster of St. Andrews, has taken an active interest in furthering the scheme, and it is greatly owing to his efforts that the project has been pushed ahead so rapidly."

Daily Sun - Nov. 22, 1894 St. Andrews. - Boston Gentlemen Secure The Bocabec Black Granite Quarry. - (Special to th Sun) - St. Andrews, Nov. 21. - Boston gentlemen having heard of the Bocabec black granite quarry, and having seen samples of the stone, were so favorably impressed there with that they sent experts to examine and report. These experts after carefully looking over the quarry came to the conclusion that the stone was all that it had been represented, of fine hard even texture and susceptible of taking a high polish, while the color surpassed in its deep rich shade anything in that line they had ever before seen. Further, that the supply is practically unlimited, and stone of any dimension likely to be required can be got out, while from the proximity of the quarry to a point of shipment where it can be loaded in vessels, will enable the stone to be transported at the minimum of expense. Another feature peculiar to this granite is its fire resisting quality, it being practically indestructible by fire. On receiving the report, these gentlemen believing they were in reach of a good thing, immediately took steps to bargain for and secure an option from the owners, which was done through Geo. C. Irvin, of Boston, and F.A. Stevenson, of St. Andrews. The next step was the formation of a company under the title of the Bocabec Black Granite Company, which has been incorporated at Portland, Me., under the laws of that State. The capital is fixed at $250,000 in 25,000 shares at $10 each par value. The company will also be incorporated under the law of New Brunswick. At first the granite will be shipped in the rough to Boston, where polishing works will be established. Later on polishing works to supply the demand for this granite in Canada, will be established either at Bocabec or in St. Andrews, as the company may decide. It is understood that Gibson, Stuart and Hanson, the discoverers and owners of the Bocabec quarry, have, everything considered, made a good sale."

St. Croix Courier - Nov. 22, 1894 St. George. - The granite business continues very dull. The gully mill is shut down and the others will follow suit shortly."

St. Andrews Beacon - Nov. 29, 1894 St. George.- The granite works of Tayte, Meating & Co. and Epps, Dodds & Co. have closed for the Christmas holidays. The work at present is very slack."

St. Andrews Beacon - Oct. 4, 1894 Orders for the Kennedy black granite have been received from St. George."

S.J. Gazette - Oct. 5, 1894 News of the Death of John Taylor of the firm of Taylor Bros., granite manufacturers of St. George was heard with regret last evening. Mr. Taylor has been an invalid for some time, but only confined to his bed for three weeks. He was unmarried and much esteemed by a large circle of friends."

Oct. 1894 - Copied from: St. Croix Courier - Oct. 7, 1954 Sixty Years Ago. - A deposit of black granite has been discovered on Veazey street, in town. A piece of the stone, polished in the Calais Works, takes a very bright polish and is of excellent grain and appearance. Here is another problem for the Board of Trade."

St. Andrews Beacon - Oct. 18, 1894 Douglas Bros., stone-cutters, of St. Stephen, have recently erected a handsome monument in the St. Andrews cemetery, to the order of Mr. Edward Maxwell, of Bocabec."

St. Croix Courier - Sep. 4, 1894 F.B. Gullett and son, of Toronto, arrived here on Saturday last and left for Springdale, N.S., on Monday, accompanied by Henry Meating of the firm of Epps, Dodds & Co. They will set the Springhill monument during the work."

St. Andrews Beacon - Sep. 6, 1894 The unveiling of the memorial monument at Springhill, N.S., is to take place on the 11th inst. The monument is erected to the memory of 125 miners who perished in the disaster in the mine some time ago. It consists of a granite pedestal fifteen feet high, surmounted by a heroic statue of a young miner in white Vermont Italian marble. On the pedestal, which was manufactured in one of the St. George granite works, are engraved the names of the victims of the disaster. It was a very difficult and delicate job to chisel out so many names on a stone that size, but the St. George workmen proved equal to the task. The entire cost of the monument will be about $3000."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Sep. 13, 1894 St. George. - The recent rain has not raised the water and the Granite mills are running rather slowly."

St. Andrews Beacon - Sep. 13, 1894 Preparations are being made to develop the black granite quarry which Mr. Kennedy possesses at Limeburner Lake. He has acquired some of the stone and taken it to St. George to be polished. The samples of the rough stone are very promising."

S.J. Daily Sun - Sep. 15, 1894 Charlotte Co. - St. Andrews, Sept. 12. - Amonument consisting of a grey granite base and a black granite pedestal and shaft, altogether twelve feet high, made from stone quarried at Gibson, Stuart and Hanson's quarry, Bocabec, has been erected in the rural cemetery in memory of Claude M. Lamb and his wife Ann Stevenson. The monument was manufactured and polished by Douglass Brothers of St. Stephen, and is the first made from Bocabec granite. It is admittedly one of the handsomest monuments in the cemetery. The stone has taken a beautiful polish, and is intensely black. Amongst those who went to see it was Sir Leonard Tilley, who says that he never before has seen such a beautiful stone, or one that takes a higher polish."

St. Croix Courier - Sep. 20, 1894 A beautiful monument manufactured from stone obtained from the Bocabec black granite quarries of Gibson, Stuart & Hanson by Douglas Bros. of this town, has recently been placed in the St. Andrews cemetery to the memory of the late Claude M. Lamb and wife."

St. Croix Courier - Sep. 20, 1894 Samples of stone taken from the quarries owned by Angus Kennedy at Limeburner Lake are being manufactured by the granite workers at St. George."

St. Croix Courier - Sep. 20, 1894 The Red Beach granite company shipped last week four large columns to be used in the construction of a church at Toledo, Ohio. They were twenty feet long and two feet six inches in diameter, and each weighed more than five tons."

St. Croix Courier - Sep. 20, 1894 A beautiful monument manufactured from stone obtained from the Bocabec black granite quarries of Gibson, Stuart & Hanson by Douglas Bros., of this town, has recently been placed in the St. Andrews cemetery to the memory of the late Claude M. Lamb and wife."

St. Andrews Beacon - Sep. 27, 1894 Orders are being received a little more freely by the St. George granite manufacturers, and a better feeling prevails in the granite town."

St. Andrews Beacon - Sep. 27, 1894 LETTER FROM BOSTON.- Charlotte County Granite to the Front... Editor Beacon:-

The following clipping from the Boston Herald must take the responsibility for its editorial utterances, concerning destroying the Palisades on the Hudson for the sake of supplying building material to New York . This is, indeed, a levelling age. Destroying the Palisades on the Hudson for the sake of supplying building materials to New York is a bit of an iconoclasm that sickens one with the 19th century. There is no spirit in the American but the spirit of gain, and that so intoxicates the species they cannot distinguish a stone quarry from a beauty spot of nature. The hustling hustler has a perpetual jag on when it comes to a matter of sale, but slashing into the Palisades is worse than cutting down timber on the White mountains, for trees grow again, while the wonderful formation of the ice age depart forever. Have New Yorkers never seen, heard or read of the red granite quarries of St. George, in Charlotte County, N.B.? Not, of the black granite of Bocabec? The inexhaustible red granite in the near vicinity of Lake Utopia, and proximate to the town of St. George, has now attained such Canadian and American notoriety, for its beauty and durability that it seem singular such lack of information concerning it should exist in the commercial capital of of the United States. Let the experienced eye of a New York architect look at one of the polished pillars of the red granite of St. George; and the Palisades of the Hudson will no longer remove to the great city for building material. Now that the corner stone of the new Tremont Temple has been laid, it is among the probabilities that the whole edifice may in its construction be strengthened, supported and ornamented by polished pillars from the red granite quarries of St. George..."

St. Andrews Beacon - Sep. 27, 1894 The samples of the black granite that have been polished look very fine, and it proves almost as easy worked as the red granite. Mr. Kennedy is hopeful that the stone will quarry in suitable sizes. If it does, the stone will be in good demand."

St. Andrews Beacon - Apr. 4, 1895 St. George.- The granite works are not getting many orders and at present it does not look very encouraging for the future."

St. Andrews Beacon - Apr. 11, 1895 SEIGE OF LOUISBURG.- New Brunswick Granite will Commemorate the Glorious Achievement.- The artisans of St. George are to-day engaged in shaping a stately monument which is to be erected at Louisburg, C.B., to commemorate the capture of that French fortress by the colonial army in 1745. On the 17th of June the monument will be unveiled with appropriate honours......"

Codes: G3 / IDX_Names: Granite;

Apr. 1895 - Copied from: St. Croix Courier - Apr. 23, 1955 60 Years Ago. - The water has been falling fast for the past week, and on account of the trespass dam going out, Tayte, Meating and Co.'s mill is a little short."

Apr. 1895 - Copied from: St. Croix Courier - Apr. 23, 1955 60 Years Ago. - The operatives in all the granite mills at St. George went out on strike Tuesday night against a ten per cent reduction in wages."

St. Croix Courier - Apr. 25, 1895 Our granite mills are not doing much just now and from present indications we shall have a very quiet summer, in fact some of them are thinking of shutting down."

St. Andrews Beacon - Aug. 1, 1895 St. George.- The new granite firm Victoria is flourishing. Orders are coming in very fast."

St. Croix Courier - Aug. 1, 1895 R.A. Stuart is opening up a very promising black granite quarry at Steen's Lake, Bocabec. He has several men employed in blasting operations. The stone takes on a fine polish and is first class in every respect. There is a good chance to get it out, too. - Beacon"

St. Andrews Beacon - Aug. 1, 1895 The MacDonald memorial committee, says a Kingston despatch, has been notified that the pedestal for the monument will not be ready soon enough to enable the unveiling to take place on Labor Day, September 3. The stone is being quarried at St. George."

St. Andrews Beacon - Dec. 5, 1895 and S.J. Daily Sun - Dec. 7, 1895 Brilliant Future for Bocabec.- Neither a prophetnor the son of a prophet is Mr. John Dawson, of Chicago, who has been prospecting this season among the black granite mountains of the home of his nativity, but the discoveries he has made during his investigations the past few months have led him to predict a brilliant future for Bocabec. There is no doubt of it, he said to the BEACON, on Thursday last, as he drew from a satchel some samples of polished black granite and held them up for the admiration of the scribe. The stone is certainly a beautiful one, and differs so much from the ordinary black granite, as to be almost unique in its formation. Mr. Dawson, who has been in the building business in Chicago for many years, says he has never seen anything that would approach its matchless beauty. The most of the black granite that has so far been discovered is very finely mottled, but the stone taken from the Dawson deposit is very large in grain and when its surface has been polished the effect is most entrancing. Mr. Dawson says that he has endeavored to interest the local stone men in his venture and has met with little success. He now proposes to carry his samples to Chicago, where he anticipates no trouble in organizing a strong company. But Mr. Dawson does not intend to limit the field of his enterprise to quarrying granite. He has also in view the erection of a summer hotel at Dawson Cove, which is one of the lovliest and most romantic nooks on the Bocabec shore. Another feature of his project is the building of a deep water wharf, which will enable ocean vessels to sail right up the Bay. When his plans are consummated, he declares that Bocabec will outstrip all its neighbours and become that for which nature designed it, viz, an ideal port and summer resort. So mote it be."

S.J. Daily Sun - Dec. 7, 1895 St. George. - The granite business is in a fairly satisfactory state. This is shown by the fact that all of the factories are still working up to their full strength. Sheriff Stuart, some of whose Steen Lake black granite is being worked up into monuments, was in town last week inspecting the progress that is being made on them. The stone takes a beautiful polish, and is said to be very easily manufactured."

St. Croix Courier - Dec. 12, 1895 What might have been a fatal accident occurred at Tayte, Meating & Co.'s quarry on Tuesday last. Workmen had loaded a hole and it missed fire. Three of the men were drilling the load out when it exploded. Hiram Leavitt was bruised about the face and body and had both eyes closed. He was at once brought to Dr. Taylor who, after dressing his wounds, and clearing the powder, etc. out of his eyes pronounced him out of danger. The other two men were more or less shaken up but not seriously hurt."

St. Croix Courier - Dec. 19, 1895 St. George. - The different granite mills have shut down for the season, after doing a fair summer's work. They will not resume work before the first of February."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Dec. 19, 1895 St. George. - The different granite mills have shut down for the season, after doing a fair summer's work. They will not resume work before the first of February."

Progress - Feb. 2, 1895 The granite works near St. George, Charlotte County, are about to start up for the season. The last season's business was unsatisfactory, but the companies and firms are expecting something better this year. A new company is preparing to open up a valuable ledge of black granite near Bocabec."

St. Croix Courier - Feb. 7, 1895 Milne, Coutts & Co. and Tayte, Meating & Co.started their mills on Monday last with small crews. Epps, Dodds & Co. have been running ten days and now have their journeymen and polishers at work."

St. Croix Courier - Feb. 7, 1895 Mr. F.W. Fuller, who is heavily interested in the Quincy black granite business, was in St. Andrews looking into the merits of the Bocabec black granite quarries. An effort has been made to induce Mr. Fuller to take an interest in the new Bocabec Black Granite Company, and it was to satisfy himself concerning the quarries that he made his visit there last week. After looking fully into the affairs and making an examination of the quarries he expressed himself very much satisfied with the scheme. It is believed that the visit of Mr. Fuller will be the means of bringing to a conclusion, very soon, the scheme for purchasing and working the Bocabec quarry."

St. Andrews Beacon - Feb. 7, 1895 St. George, Feb. 4.- All the granite works have opened again, which will be an advantage for those who have been idle for so long."

Progress - Feb. 9, 1895 F.W. Fuller, who is heavily interested in the Quincy, Mass., granite business, has been looking over the Bocabec black granite quarries at St. Andrews, and as he expresses himself as being much pleased with the property, it is believed that he will interest himself in its development."

Progress - Feb. 23, 1895 The St. George granite works are all at work again, with one exception, and the business is looking up."

St. Croix Courier - Jan. 24, 1895 St. George. - The granite business is looking up a little. Taylor Bros. are about starting their mill. Epps, Dodds & Co. Will start on Monday next, and the others will no doubt follow suit."

S.J. Daily Sun - Jan. 25, 1895 The granite works near St. George, Charlotte Co., will be opened in a few days. Business was very poor with them last year, but the different firms are looking for something better this year. It is stated that a company will operate this year at or near Bocabec, where there is a valuable deposit of black granite."

Gazette - Jan. 25, 1895 The N.B. Red Granite Co. of Maine met with quite a serious loss on Friday last. Two large stones, 35 feet long and about 26 in. square, came up from the quarry loaded on a flat car. When the car, with its heavy load, was being transferred to a scow, the wire cable parted. The car ran over the end of the scow, dumped the granite into the mudflats and broke one of the car stringers. When the tide went out, one of the blocks of stone was found to be broken. The company succeeded in raising the pieces and brought them to the works, Monday."

St. Andrews Beacon - Jan 31, 1895 Bocabec Black Granite.- F.W. Fuller, of Quincy granite fame, visited St. Andrews this week, and made a close inspection of the Bocabec black granite quarry. He is delighted with the stone and with the opportunities for quarrying and shipping it. Mr. Fuller returned to Boston on Tuesday via St. Stephen."

St. Andrews Beacon - Jul. 4, 1895 Douglas Bros., St. Stephen, have just erected a handsome monument at Bayside for Mr. John Wiley, and another in the R.C. Cemetery, St. Andrews, for Mr. Wm. Carr."

St. Andrews Beacon - Jul. 4, 1895 St. George.- The granite works are all working again and are seeming to flourish as before the strike."

St. Andrews Beacon - Jul. 11, 1895 Messrs Epps, Dodds & Co., are putting saws into their works for cutting the granite. The saws are of the most approved and latest pattern and are expected to do good work."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jul. 18, 1895 St. George and its Surrounding Beauties.- .....in their place is heard the sound of the granite works, turning the rough rock of the country into polished stone of marvelous beauty, which, in the facades of some of the stateliest buildings in America, has charmed the eyes of thousands who never as much as heard of St. George. It is less than a quarter century ago, that a sharp eyed Scotchman found that the hills around this part of the country contained a rock strangely like the famous Aberdeen granite, which was occasionally brought to this country at a great cost in the form of monuments. A trial showed that the St. George stone would take as high a polish as that from Scotland, was equally indestructible and was in every way its peer. Then the granite industry was born. It had its early struggles, money was lost in some instances, but it is today on a solid foundation, and the four concerns engaged in it circulate about $1,000 a week in the village. A visit to the quarries, where the rough rock is dug out, and to the works, where it is polished, will be found full of interest to the stranger. ...."

St. Croix Courier - Jul. 18, 1895 Messrs. Epps, Dodds & Co. have got their new stone sawing machine at work, and it does excellent work. It was imported from Aberdeen, Scotland."

S.J. Daily Sun - Jul. 24, 1895 and St. Croix Courier - Jul. 25, 1895 The Victoria Granite Company, who opened up their works at St. George in May last, have already found it necessary to increase the number of hands employed by them. They are doing a good business and have a number of large orders on hand. They are making a monument for shipment to Toronto to be placed at the grave of a man who fought under Nelson at Trafalgar."

St. Andrews Beacon - Jul. 25, 1895 R.A. Stuart is opening up a very promising black granite quarry at Steen's Lake, Bocabec. He has several men employed in blasting operations. The stone takes on a fine polish and is first class in every respect. There is a good chance to get it out, too."

St. Andrews Beacon - Jul. 25, 1895 Mr. Fred Bogue, of the Victoria Granite Company of St. George, is stopping at the Victoria. He says his company, which has been only recently organized, is doing an excellent business and lately has received an order to build a monument for Toronto people, which is to be placed in that city in memory of Gen. Osler, who died in the battle of the Nile fighting with Nelson.- Telegraph."

Woodstock Dispatch - Jul. 31, 1895 Black Granite. - R.A. Stewart has opened a very promising black granite quarry at Steen's Lake, Bocabec. He has several men employed blasting. The stone is said to take a fine polish and is of a high grade. As the facilities for quarrying it are good Mr. Stewart hopes to work up a good business - SUN."

S.J. Daily Sun - Jun. 1, 1895 and St. Croix Courier - Jun. 6, 1895 and St. Croix Courier - Jun. 13, 1895 Messrs. Milne, Coutts & Co. of St. George, who have finished two MacDonald monuments, have been awarded the contract for the construction of the monument to be erected at Kingston, Ont., in memory of the dead chieftain. It will be composed of a large quantity of red granite, and when finished will be very beautiful. - Beacon"

Jun. 1895 - Copied from: St. Croix Courier - Jun. 2, 1955 60 Years Ago. - The granite works of Calais, which were removed there from Carleton a few years ago to take advantage of the sixty million market, have been shut down for want of orders. An additional company has just been formed at St. George. Milne, Coutts & Co., of St. George, who have finished two MacDonald monuments have been awarded the contract for the construction of the monument to be erected at Kingston, Ont., in memory of the dead chieftain."

S.J. Daily Sun - Jun. 4, 1895 About Granite. - Lord Aberdeen laid the corner stone of the Foresters' temple, Toronto, on May 30th. In the course of his address on that occasion his excellency said: You will pardon me if I go on to say that I think I detected among the many other qualifications of my friend the Supreme Chief Ranger a further proof of his fitness for that position by his choice of the material of which this corner-stone is formed. I recognized it as soon as the covering was removed that it was of Aberdeenshire granite. (Cheers). Well, that shows that the Supreme Chief Ranger is what we call in Scotland a canny man - (laughter) - who knew where to go for the right material, and I do not think any true Canadian would complain of the fact that you had to send to Aberdeenshire to make sure of getting exactly what you wanted. The Sun expresses the hope that when the governor general makes his promised visit to New Brunswick he will be shown the granite quarries at St. George, where stone the equal of any to be found in Scotland exists in abundance. In the meantime it might be in order for his honor Judge Wedderburn, one of the officers of the supreme court of Foresters, to furnish Supreme Chief Ranger Oronhyatekha with a sample of St. George granite."

St. Andrews Beacon - Jun. 6, 1895 St. George.- The new granite firm have got orders already and are working with a view to being one of the leading firms of the town."

S.J. Daily Sun - Jun. 7, 1895 The Victoria Granite company of St. George has ordered a Robert Armstrong automatic engine and a Monarch economic boiler, from the Robb Engineering Company of Amherst. F.B. Robb is in the city on his return from St. George. The Robb company has taken the general sales agency for Stirling Niagara Inspector."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 13, 1895 St. George, June 10.- Mr. Henry Meating, of the firm of Epps, Dodds & Co., went to Cape Breton last week to superintend the erection of a large monument manufactured by them."

St. Andrews Beacon - Jun. 13, 1895 Erection of Louisburg Monument.- (Montreal Star)- Senator Poirier, who represents a French Acadian district in New Brunswick, the other day, in the Senate Chamber at Ottawa, questioned Sir MacKenzie Bowell with reference to the erection of a monument at Louisburg, C.B., to commemorate the capture of that place from the French. The project is fathered by the Society of Colonial Wars of New England and elsewhere. The Premier, it will be recalled, stated the government had no official connection with or knowledge of the erection of the memorial, and had not granted the land on which it was to be placed. It appears the members of the New York branch of the society of Colonial Wars as well as those of the Boston branch, are perfecting arrangements for a descent upon Louisburg, and on June 17 the memorial shaft which commemorates the capture of Louisburg in 1745, will be unveiled. The monument was designed by W. Geney Beattie, a member of the New York society. It is a slender granite column balancing a cannon ball found upon the battle field, and surmounts a pedestal of graceful proportions....."

St. Croix Courier - Jun. 13, 1895 St. George. - The Victoria Granite Company are opening the quarry and expect their machinery right away."

St. Andrews Beacon - Jun. 13, 1895 The Victoria Granite company of Saint George has ordered a Robert Armstrong automatic engine and a Monarch economic boiler, from the Robb Engineering Company of Amherst. The new firm starts out under very favorable auspices."

St. Andrews Beacon - Jun. 13, 1895 The unveiling of the statue of Sir John A. MacDonald in Montreal on Thursday last was made the occasion for a grand demonstration. Sir Leonard Tilley was not present, having been detained at St. Andrews by illness. The oration of the day was delivered by Hon. George E. Foster. It is said to have been a brilliant effort."

St. Croix Courier - Jun. 20, 1895 St. George. - Tayte, Meating & Co. have completed the trespass dam and have turned the water into the gully. Their mill is running with a full crew. The granite business is looking up a bit. Orders are coming in every day."

S.J. Daily Sun - Jun. 21, 1895 St. George. - (Special to the Sun). - St. George, N.B., June 20. - Tayte, Meating & Co. have finished the new trespass dam, and the water is going through the gully as usual. Several salmon have come through since its completion, and now that the fishways are completed our fishermen are looking forward to some rare sport in the near future. ...The several granite mills are running with a full force of men, and Epps, Dodds & Co. are running some of their machines night and day."

S.J. Daily Sun - Jun. 22, 1895 The Victoria Granite Co. are commencing operations at St. George. Their power will be supplied by a 30-horse power Robb-Armstrong engine and Monarch Economic boiler."

St. Andrews Beacon - Jun. 27, 1895 The contract of the New Brunswick Red Granite Company of Maine to furnish ornamental granite for the Fidelity Trust Company's offices, Philadelphia, has been accepted, and will furnish work for a large crew of men for several months."

S.J. Daily Sun - Jun. 27, 1895 R.A. Stuart has opened a very promising black granite quarry at Steen's Lake, Bocabec. He has several men employed blasting. The stone is said to take a fine polish and is of a high grade. As the facilities for quarrying it are good Mr. Stewart hopes to work up a good business."

S.J. Daily Sun - Mar. 5, 1895 The granite works at St. George have resumed operations, and the proprietors of the several establishments look for a good season's work."

St. Andrews Beacon - Mar. 14, 1895 Bocabec Black Granite.- The promoters of the Bocabec Black Granite Company are still actively at work endeavouring to interest United States capitalists in the stone. They are meeting with a fair measure of success. But for the prevailing business depression the Company would have had all the stock taken up months ago. Wherever the stone has been seen it has been very favourably commented upon. W.O. Crosby, Professor of Geology in the Massachusetts Institute of Technology, says of it:- I have examined the sample of Diabase (commercially known as black granite) from the quarries at Bocabec, N.B., and I take pleasure in certifying that it is an exceptionally bright and beautiful stone of its class. It is the most attractive black granite I have ever seen, and I can discover no reason why it should not give excellent satisfaction in use. It is practically free from Pyrite or any ingredient which might prove deleterious on exposure to the elements. The structure of the stone is so thoroughly crystalline and dense as to make it susceptible of a beautiful and lasting polish, and I do not see how it can fail to become very popular when fairly tried."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Mar. 21, 1895 The promoters of the Bocabec Black Granite Company are still actively at work endeavoring to interest United States capitalists in the stone. They are meeting with a fair measure of success. But for the prevailing business depression the company would have had all the stock taken up months ago. - BEACON"

St. Croix Courier - Mar. 21, 1895 Messrs. Epps, Dodds & Co. hauled quite a large piece of granite to their mill last week. It measured 17x3x3 feet and weighed about 13 tons."

S.J. Daily Sun - Mar. 22, 1895 The monument that is to be erected by Americans at Louisburg, C.B., on the site of the old fort to commemorate the adventurous courage of the New Englanders who captured the place in the old colonial wars, is being built by Epps, Dodds & Co. of St. George, and will be forwarded by them to Louisburg."

St. Croix Courier - Mar. 28, 1895 Messrs. Epps, Dodds & Co. succeeded getting a large die hauled to their mill on Saturday last, for the Louisburg monument which is now in the hands of their workmen. The monument when finished will be a very handsome piece of work, being nicely proportioned and made from their Lilly Lake granite. The following are the dimensions: Bottom base 5ft. 6in. x 1ft. 1in. axed; die, 4ft. x 3ft. 6in., polished; column base, 3ft. 2 in. x 1ft. 1in., axed; column, 16ft. 5in. x 2ft. 4in., polished; column cap, 2ft. 10in. x 1ft. 8in., axed; ball, 2 feet diameter, polished; The ball is intended to represent a cannon ball, and is made from their dark red granite. The total height of the monument is 26 feet 3 inches. It is to be unveiled on June 17th next."

St. Andrews Beacon - Mar. 28, 1895 The monument that is to be erected by Americans at Louisburg, C.B., on the site of the old fort, to commemorate the adventurous courage of the New Englanders who captured the place in the old colonial wars, is being built by Epps, Dodds & Co. of St. George, and will be forwarded by them to Louisburg."

St. Croix Courier - Mar. 30, 1895 The new granite company composed of Frank McDougall, J.R. O'Brien, Stephen Conley, Caleb Hennessy, Harry Frauley, Chas. Lynott and Fred Bogue, have leased the buildings formerly used by Epps, Dodds & Co., and are making necessary repairs. Their engine and machinery will be put in right away. Henry Meating left on Monday for Louisbourg, C.B., for the purpose of putting up the large monument made by Epps, Dodds & Co. for the Society of Colonial wars. The monument was shipped on Saturday by rail and will be unveiled on the 17th of June. It is a beauty and will be quite an advertisement for the firm."

Gazette - May 3, 1895 St. George Granite Works. - A Reduction in Wages is Referred by the Employees. - St. George, N.B., May 2. - The granite works here all closed yesterday in consequence of a disagreement between employers and men as to wages. These works are the chief industry of the town giving employment to more than one hundred men. They are carried on by Epps, Dodds & Co., Milne, Coutts & Co., Tayte, Meating & Co., and Taylor Bros. Owing to an unusually depressed market these firms lately combined to reduce wages 10 per cent. after May 1st, twenty four hours' notice being given. The men sturdily refused to accept the reduction and walked out in a body yesterday morning and signed an agreement not to work for lower wages. How long these differences may remain unsettled is a matter of conjecture. The employers say that there are few orders on hand and they can afford to remain closed for a time. Already some of the

S.J. Daily Sun - May 3, 1895 Granite Works Strike. - The Men Employed by the Four Saint George Firms Refuse a Reduction of Wages. - (Special to the Sun). - St. George, N.B., May 2. - The granite works here all closed yesterday in consequence of a disagreement between employers and men as to wages. These works are the chief industry of the town, giving employment to more than one hundred men. They are carried out by Epps, Dodds & Co., Milne, Coutts & Co., Tayte, Meating & Co. and Taylor Bros. Owing to an unusually depressed market these firms lately combined to reduce wages 10 per cent. after May 1st, twenty-four hours notice being given. The men sturdily refused to accept the reduction and walked out in a body yesterday morning. They held a meeting on Tuesday morning and signed an agreement not to work for lower wages. How long these differences may remain unsettled is a matter of conjecture. The employers say that there are few orders on hand and they can afford to remain closed for a time. Already some of the men are leaving for the

S.J. Daily Sun - May 6, 1895 Protection and Granite. - The granite works at St. George give employment to a large work force. Many of the employees are skilled workmen who are well paid, but not so well that they are disposed to accept ten per cent. reduction. The trouble with the St. George granite business is the competition of similar products from Aberdeen. There is a duty of thirty per cent. on this finished granite, and a lower duty on rough hammered granite, notwithstanding which it is claimed that a considerable quantity of Aberdeen stone is brought into the upper provinces. The freight from the Scotch port to Montreal would be much lower than the cost of land carriage from St. George. It is probable that the rate of pay at Aberdeen is lower than in Charlotte county for the same class of labor. This accounts for the success which the imported product is said to have in the competition. Referring to the strike at St. George a Moncton contemporary wants to know whether the national policy has made them rich. This question may be answered by another. If with the provision of thirty per cent. the St. George granite works find competition so severe that a cut in wages has been necessary what would happen if there were no protection. If the national policy has not made the granite workers rich it has given them many years of work and has preserved from extinction one of the most important industries of western New Brunswick. Let the duty be abolished and the cut will not be ten per cent. but one hundred per cent."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 9, 1895 and St. Croix Courier - May 16, 1895 Bocabec Black Granite.- Though very little has been given to the public lately relative to the Bocabec black granite, the promoters of the American company have not been idle. The business depression in the States has added greatly to the difficulties of the undertaking, but the chief promoter, Mr. Irvin, is very sanguine of ultimate success. The sum of $360 was recently paid to Messrs. Gibson, Stuart & Hanson for the privilege of extending the option, so that the company evidently mean business. Mrs. A.J. Turner, of St. John, is now in Bocabec, and expects shortly to have a visit from a representative of an Ontario syndicate, who are talking of purchasing her black granite quarry."

St. Andrews Beacon - May 9, 1895 Strike at St. George.- Under date May 2 (?), theSt. George correspondent of the Sun writes:- The granite works here all closed yesterday in consequences of a disagreement between employers and men as to wages. These works are the chief industry of the town, giving employment to more than one hundred men. They are carried on by Epps, Dodds, & Co., Milne, Coutts & Co., and Taylor Bros. Owing to an unusually depressed market these firms lately combined to reduce wages 30 per cent after May 1st, twenty four hours notice being given. The men sturdily refused to accept the reduction and walked out in a body yesterday morning. They held a meeting on Tuesday morning and signed an agreement not to work for lower wages. How long these differences may remain unsettled be a matter of conjecture. The employers say that there are few orders on hand and they can afford to remain closed for a time. Already some of the men are leaving for the states. There is no change in the situation at St. George. The strikers are still out, but there is a prospect that before long a compromise will be effected, and work resumed. The employers regret the difficulty that has arisen with their men, as heretofore, their relations have been very pleasant. They say that the depressed state of business drove them to adopt the steps they did. On the other hand, the men feel that the reduction was too sweeping. They are behaving themselves in a very orderly manner, and no trouble is likely to arise from this cause. In a spirit of humor some youths placed a cannon at O'Brien's corner, a few nights ago, and elevated two legends thereon. One said Labor will assert her rights , the other, Down with Monkeyism and Scabism. Everybody treated this demonstration as a joke. Two polishers are working in Milne, Coutts & Co.'s factory, but all the other workmen are out. Tayte, Meating & Co.'s mill has not been working, in consequence of the carrying away of the trespass dam, but they are doing some polishing at Epps, Dodds & Co.'s mill. The members of the latter firm have their coats off and are working away steadily. The proprietors are not discouraged at the outlook. In order to enable them to better compete with their rivals, some of them intend putting in saws. These, it is said, will effect a saving of 10 per cent."

St. Croix Courier - May 9, 1895 The granite business is extremely quiet at present, only a few men at work, owing to trouble existing between the manufacturers and men. It is to be hoped that they may arrive at an amicable settlement and work be resumed as usual."

S.J. Daily Sun - May 10, 1895 St. Andrews. - The Bocabec black granite is still booming, and it is believed before long a large crew of men will be employed opening the quarry."

S.J. Daily Sun - May 10, 1895 A Sample Industry. - The St. Andrews Beacon says that the granite industry of Charlotte is suffering from the fact that the home market is limited. It is a truism that if the demand were larger at profitable prices the industry would prosper more than it does. But as it is the granite quarries and finishing works give employment to a large force. It seems that the Canadian market has been made somewhat less by the importation of Aberdeen granite in spite of the high protective tariff. This being so, it appears perfectly obvious that without the protective duty nearly the whole Canadian market would be supplied from Scotland. Canadian granite has now probably three-fourths of the home market. Without the protection more than three-fourths of the Canadian market would be supplied from Aberdeen, and a great part of the rest from the United States. Mr. Laurier's policy has nothing to offer the granite industry but the loss of the home market, which it is complained is not now large enough for the supply. The grit policy does not offer an outside market for an additional foot of stone, rough or finished. On the contrary, by freely giving to other countries the run of the Canadian market, the policy would make it impossible to secure any outside market by way of exchange. No country will make concessions to obtain what it can get free. To the granite industry, as to all other industries, Mr. Laurier offers no market abroad and only the loss of the market at home."

St. Andrews Beacon - May 16, 1895 The St. George Strike.- There is no change tonote in the position of affairs at St. George. At a meeting of the workmen, held on Monday night, there was a general discussion of the situation, and it was again decided not to accede to the proposed reduction, although steady work was not assured them. There has been no manifestation of disorder on the part of the strikers, and it is not likely that there will be. The manufacturers have been hoping that the men would accede to their terms, as the trade depression has very seriously affected them, both in respect to quantity and price of work. They say that if trade revives they will be only too glad to advance the wages, but at present they feel that a reduction is absolutely necessary. It is pointed out in the case of one firm that they advanced the wages of their men some time ago without any request from them. Of course, the strike has seriously affected general business, and the hope is freely expressed that a compromise will soon be reached between the men and their

N.B. Reporter - May 22, 1895 The granite cutters' strike at St. George is over. The men declined to go to work on the proposed reduction which the manufacturers declared was necessary because of the depression and the keen competition. Most of the men returned to work"

St. Croix Courier - May 23, 1895 Messrs. Tayte, Meating & Co., are engaged with their crew making temporary repairs on the trespass dam, and will, no doubt, have water sufficient to drive until the drouth."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 23, 1895 The strike at St. George is at an end, those workmen who have not gone away from the town having returned to their labours."

St. Andrews Beacon - May 30, 1895 Messrs Milne, Coutts & Co., of St. George, who have finished two MacDonald monuments, have been awarded the contract for the construction of the monument to be erected at Kingston, Ont., in memory of the dead chieftain. It will be composed of a light quality of red granite, and when finished will be very

S.J. Daily Sun - Nov. 4, 1895 If Milne, Coutts & Co. of St. George are lucky enough to get the contract for the red granite building in New York for the Young Men's Museum it will necessitate their employing about one hundred and fifty men. It is said that they are the preferred contractors."

St. Andrews Beacon - Nov. 7, 1895 Among the Granite Barons.- A gang of men from the granite works of Tayte, Meating & Co., St. George, began taking stone out of the Stuart black granite quarry at Steen Lake, Bocabec, on Monday morning. The stone will be hauled two miles to Birch Cove, from which point it can be easily transferred by water to the granite town. The quality of this rock is said to be excellent; it is easily quarried, splits readily and polishes beautifully. Messrs. Tayte, Meating & Co. intend working it up into monuments, for which purpose it seems to be splendidly adapted. If Milne, Coutts & Co., of St. George, are lucky enough to get the contract for the red granite building in New York for the Young Men's Museum it will necessitate their employing about one hundred and fifty men, says the Sun. It is said that they are the preferred contractors. Epps, Dodds & Co., Taylor Bros., and the Victoria Granite company, of St. George, are all busy, though the scarcity of water in the river has affected some of them a little."

St. Croix Courier - Nov. 7, 1895 St. George. - If Milne, Coutts & Co. are lucky enough to get the contract for the new granite building in New York for the young men's museum it will necessitate their employing about one hundred and fifty

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon Nov. 28, 1895 and St. Croix Courier - Dec. 5, 1895 The fame of Bocabec black granite has reached California. A letter recently received from the there states that an order for a monument of black granite has been sent to St. George. The stone is to come from Stuart's quarry."

Oct. 1895 - Copied from: St. Croix Courier - Oct. 6, 1955 60 Years Ago. - St. George. - The water is verylow in our river. The different granite mills have scarcely enough to run."

St. Croix Courier - Oct. 10, 1895 Messrs. Epps, Dodds & Co. have lately purchased a new engine to place in their quarry, which will enable them to get their stone in larger quantities and much cheaper than heretofore."

St. Croix Courier - Oct. 10, 1895 St. George. - The water is very low in our river. The different granite mills have scarcely enough to run."

Gazette - Oct. 11, 1895 Black Granite. - Mr. J. Dawson of Chicago is at Bocabec with a gang of men securing specimens of black granite to take home with him. He has discovered a fine quarry of the stone on his property."

St. Croix Courier - Oct. 17, 1895 St. George. - Two of our granite mills are running by night now owing to the water in the river being so low."

St. Andrews Beacon - Oct. 31, 1895 The black granite crop of Bocabec will not be harvested this year, though it is an abundant one."

St. Andrews Beacon - Sep. 5, 1895 The new firm Victoria, is progressing well. One of the firm informed your correspondent that they made several good sales on the grounds and their orders kept coming in. In answer to a question as to steam being more expensive, he replied that the coal they use costs them only two dollars and fifty cents per ton and that they use only about two barrels a day making it quite inexpensive to run the establishment. He also stated that they had a great compensation in the fact of having the railway track pass alongside their door. It would save about six hundred dollars in truckage to the railway station which they would otherwise have to pay."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Apr. 2, 1896 BLACK GRANITE.- Practical Opinions of Practical Men.- The Stone Highly Praised for its Beauty, Polish and Lasting Qualities - Admirably Adapted for Interior Decoration and Monumental Purposes - Promises to be Popular when Introduced.- One of the lines along which the St. Andrews Board of Trade considered there was opportunity for development and expansion was the encouraging of the black granite industry, large deposits of which have been found in close proximity to town. To ascertain the opinions of practical men respecting the stone a series of interrogatories were submitted to a number of men who have seen or worked it. The pith of their replies is condensed below:- Empire Park Granite and Marble Company, E.P. Costigan, manager, Syracuse, N.Y.- Sample submitted to be first-class. There is likely to be a large demand for such stone. Other qualities of black granite found in Canada are not equal to Charlotte County granite. The manufacture of the stone would be likely to prove profitable. St. Andrews would be a suitable place at which to establish works for the manufacture of the stone. Under proper conditions 200 men would not be too large a number to employ. Quincy granite being harder costs a little more to manufacture. It would cost no more to manufacture Charlotte Co. black granite than Quincy granite. The market value of black granite would be a little greater than that of grey or red granite. Would require a little time to tell which was the superior, dark Quincy or black granite. This firm makes a very liberal offer to send an expert to examine into the black granite deposits and make a report thereon. R.A. Stuart, St. Andrews, who owns black granite quarries, submits a certificate of W.O. Crosby, professor of geology in the Massachusetts Institute of Technology, relative to the attractiveness of the stone, its freedom from pyrite or any ingredient which might prove deleterious on exposure to the elements and its susceptibility to a beautiful and lasting polish. Mr. Stuart further says the supply is practically inexhaustible and that the stone can be procured in blocks as large as the market is ever likely to demand. He thinks that black granite when properly introduced will supercede black Quincy granite in great measure. The manufacture of the stone he considered would likely to prove profitable, judging from the success of the St. George granite manufacturers. He fixed the number of hands which might be employed at 100. As an inducement for a manufacturer to locate here he thought the interest on $10,000 guaranteed for twenty years should be ample. Black granite costs more to cut by hand than red or grey, (say ten per cent.) but with the use of gang saws now employed in all up-to-date granite factories, the cost to manufacture it would not exceed that of either, as it yields more readily to the saws while it requires less time to polish it than either red or grey, being a tougher but not so brittle a stone, and is in consequence susceptible of being sawn into very thin slabs. In the United States, under the McKinley tariff of 40 per cent., the whole sale trade price of Quincy black granite exceeded that of the imported Scotch red granite by 15 per cent. or more, while under the present tariff of 30 per cent. the difference is greater in favor of the black Quincy, as the black granite business of Canada is only yet an embryo. F.B. Gullett, of Toronto, Ont., says from what small samples of black granite he has seen he thought the stone very good. If the stone was found free from defects and seams when the quarry was opened up he thought it would pay to put on the market. The demand for this stone now is not very large but it will increase and he thought would sell in the United States. He knew of no other places in Canada where black granite was found. He thought St. Andrews would be a favorable field for locating works in as it would have good shipping and other facilities. As to the number of hands that it would furnish employment he thought the experience of St. George would answer this question. He thought black granite would cost 10 per cent. more than red granite to manufacture. He thought it would cost about the same as Quincy to work but that it would cost less than Quincy to quarry. The market value of the stone would be about the same as red. Charlotte Co. black granite is comparatively unknown; it would have to win its way like all other granites. Your red granite was not known outside your province before 1874. I had the honor of introducing it in Ontario and Quebec. There was not an inch of it sold until I sold it here in Toronto. Mr. Gullett advised a policy of caution in going into business, not to squander money in too large an outfit and have too many salaried figure-heads. What he would suggest would be to get a first-class quarryman whose opinion could be depended upon to make an examination. The first thing to make sure of is whether good, clean, sound granite can be obtained. He advised the starting of a small mill to show what could be done. Rough stock might also be sold. As the business increased the plant could be increased. He thought it might be arranged to get power by electricity to be generated by the rise and fall of tide. Stanton Bros., St. John.- From sample sent they considered it good granite. Think the demand for the stone would not be great for many years. Did not know of any other places in Canada where black granite was to be found. Think as a point of manufacture Saint Andrews was as good as could be found. It costs about the same to manufacture black granite as to manufacture red or grey. As between the cost of manufacturing Charlotte Co. granite and Quincy granite, they thought the difference would be in favor of Charlotte Co. granite. The market value of black granite is greater than either red or grey. At present, Charlotte Co. black granite is not as valuable as Quincy but it would be in the future. They did not think it advisable to establish a factory for the working up of black granite alone. Milne, Coutts & Co., St. George.- Know very little about black granite, having never seen the quarries since they were opened up; have no idea of the supply or the sizes that could be quarried. The black granite stone we worked cost more to manufacture than our own or Quincy. It is a very pretty stone when worked, but whether it is wanted in the market or not at the price that would pay can only be known by trying. St. Andrews is undoubtedly a good place to establish such a business and if practical men take it in hand it might pay well. Only know of one other black granite quarry being worked in Canada; that is near Stanstead, Quebec. It is coarser in the grain than yours and it is not as nice-looking. They call it Canadian Quincy, but it is very far from Quincy, which commands the best price of any granite in the market, except Westerly, which is held away up in price but has not the hold on the market that Quincy has. Trust that your efforts may be crowned with success and that in the near future we may see St. Andrews the winter port of Canada. F.J. Fuller and George C. Irvin, Boston, Mass.- The black granite found in Charlotte County is a stone of good quality. The supply is unlimited and the stone can be procured in dimension sizes suitable for the demands of the market. As far as the beauty of the stone is concerned, would say it is very desirable and a large trade can be worked up if properly put on the market. There is no other black granite found in Canada that equals it in quality. St. Andrews would be a suitable place at which to establish works. The number of hands to be employed would depend on the management. It costs no more to manufacture black granite than red or grey. It would not cost any more than Quincy. Quincy granite can be manufactured 10 per cent. cheaper than many other granites. Your black granite saws easier than Quincy but does not point quite as freely. For ordinary work the market value of black granite is no greater than that of red or grey, but for interior decoration and all polished work consider it much more valuable. The market value of black granite is no greater than that of Quincy. In our experience with granite would say that there is no stone on the market that can compare in beauty of finish with your black granite. The best granite critics of the United States are unanimous in saving that for interior decoration and polished work of all descriptions they have never seen its equal. My experience (F.J. Fuller) covers a period of forty years and I am known all over the United States and Europe and I stake my reputation on the above statement. Epps, Dodds & Co., St. George- Our experience with the stone has been very limited. Have handled a little of the stone from Porcupine Mountain and it costs considerable more to work than our red granite. Would suggest that an expert quarryman be employed to look over the stone. From his report would be able to say whether or not it would be a profitable stone to manufacture. They thought St. Andrews would be a suitable place to manufacture in; about 25 hands might be profitably employed. As an inducement to manufacturers to establish here they suggested the building of a mill, exemption from taxes for say ten years and a bonus. It costs more to manufacture black granite than red or grey; did not think its market value was any greater than red or grey granite or Quincy. George Farquharson, New York- The stone is suitable for monumental and ornamental purposes. If it can be found in sufficient and merchantable sizes, clear of clouds and streaks, a demand for the stone could soon be created. If properly handled, the business ought to prove profitable. The only objection to St. Andrews as a place for manufacturing was its distance from the quarries; 75 to 100 hands might be profitably employed. It would cost from 12 to 15 per cent. more to manufacture black granite than red or grey or Quincy. The market value of black granite would be greater than any of the above stones. It is a beautiful stone and takes a high finish. In order to compare successfully with other stones he would recommend that it be subjected to a test, either by hydraulic or other pressure to ascertain its resisting qualities. It is not a hard stone, but very tough. There is a good deal of some kind of metal in it that renders it exceedingly difficult to hammer dress but it will saw and polish readily, and saws and pneumatic tools are in the meantime revolutionizing the granite-cutting industry. If your stone will stand the ordinary pressure of granite, and I think it will stand more, you have a

St. Andrews Beacon - Apr. 9, 1896 Messrs. Epps, Dodds & Co. of this place were served last week with a writ in the Supreme court at the suit of James Dolan. The attorney for the plaintiff is H.F. Puddington, of St. John."

St. Andrews Beacon - Apr. 9, 1896 The prospectus of the Bocabec black granite company will be found on the fourth page. This company, the BEACON is assured by the local director, is getting ready for business as rapidly as the circumstances will permit. Mr. Fuller, who is interested in one of the largest of the Quincy granite concerns, will be manager of the works, a fact which ought to ensure its success."

St. Andrews Beacon - Apr. 9, 1896 BOCABEC BLACK GRANITE CO. ST. ANDREWS, N.B. – Boston Office: 230 Washington Street, Room 2. -- F.J. Fuller, President Geo. C. Irvin, General Manager and Treasurer. Directors. Frederick J. Fuller West Quincy, Mass. Geo. C. Irvin Boston, Mass. Frederick A. Stevenson St. Andrews, N.B. -- Organization. This company is incorporated under the Laws of the State of Maine. Capital stock, $250,000. Divided into 25,000 shares of $10.00 each. Business. The business of the Company is Quarrying, polishing and Selling Granite. The profits of the Granite business are well known; that the profit is absolutely sure and greater than in almost any other line of business, is shown by the success of the great Quarries of New England. We have a field to ourselves, having practically no competition, as we have the best BLACK Granite known. For Ornamental, Interior Decoration and nice Monumental work we have practically no competitors. Location of Quarry. Our Quarry is located in Bocabec, in the Province of New Brunswick, about one mile from Tide Water, within a few miles of the famous RED GRANITE Quarries of St. George, N.B. Property. This Company's property consists of eighty acres of land at Quarry and seven acres of land at Tide Water, a good, substantial, well built Wharf, Derricks, Buildings and necessary Tools. Quantity of Granite is perfectly inexhaustible. Granite lies in horizontal and perpendicular beds and is absolutely free from seams and shakes. Management. The management will come under the personal supervision of Frederick J. Fuller, president of the Company, who has a practical experience in Granite of over forty years and is well and favorably known to the dealers of this Continent as well as in Europe. Description of Stone. This granite has many original features and will bear the strictest examination. The beauty of this stone when polished is truly marvelous. We have placed this stone before the best Granite critics in the United States and they are unanimous in saying that for interior decorations and polished work of all descriptions they have never seen its equal. The following letter from Prof. W.O. Crosby speaks for itself:- (copy of letter) Massachusetts Institute of Technology Boston, Feb. 19,1895. My dear Sir: I have examined the sample of Diabase (commercially known as black granite) from the quarries at Bocabec, N.B., which you left with me, and I take pleasure in certifying that it is an exceptionally bright and beautiful stone of its class. It is the most attractive black granite I have ever seen, and I can discover no reason why it should not give excellent satisfaction in use. It is practically free from Pyrite or any ingredient which might prove deleterious on exposure to the elements. The structure of the stone is so thoroughly crystalline and dense as to make it susceptible of a beautiful and lasting polish, and I do not see how it can fail to become very popular when fairly tried. Yours very truly (signed) W.O. Crosby Outlook for Business. Having a monopoly of the Black Granite trade, one can see at a glance that with the markets of the United States, England and the British Provinces, the field is wide and profits large. Investment. In offering the stock of this Company, we do so fully believing that there is seldom an investment offered that is safer and more profitable. We propose erecting polishing works at St. Andrews, N.B., at an outlay of several thousand dollars. We shall have two large gang saws to saw our stone into slabs, as the immense possibilities of this stone for interior finish is great. For the purpose of completing our plant we offer a limited amount of the stock for sale. For further information apply to Geo. C. Irvin 230 Washington Street, Room 2, Boston, Mass."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Apr. 16, 1896 The Board of Trade met on Tuesday night, when the committee on black granite reported. The tenor of their report was that black granite in abundance existed in Charlotte County and that it was good stone, but in the present undeveloped state of the quarries the committee could make no recommendations. The report, after debate, was accepted. The suggestion was thrown out that the Board call a meeting of citizens to consider the propriety of making an offer of assistance to any granite or other manufacturing company that would start business here, but the suggestion was not acted upon. The terminal committee reported through Dr. Parker. It was resolved to forward a memorial to the Government in connection with the port, also to send copies of the same to the steamship lines doing

St. Andrews Beacon - Apr. 16, 1896 Suing for Breach of Contract.- Epps, Dodds & Co.,granite workers, of St. George, are defendants in a suit for breach of contract, entered against them by one John Dolan. Some time ago, this firm made a contract with Emanuel Connor, contractor, of St. John, through Mr. Dolan, to supply a certain quantity of building stone, which was to be used, he said, in Halifax. After the contract had been duly signed, sealed and delivered it was found by Epps, Dodds & Co., that the stone was not intended for Halifax, and that if they carried out the contract with Mr. Dolan it would be in violation of another contract which they had previously made. They decided to throw up Mr. Dolan's contract and a suit at law is the result. M.N. Cockburn, of St. Andrews, is acting as attorney for the St. George firm; Mr. Dolan is represented by Mr. Puddington, of St. John."

St. Andrews Beacon - Apr. 16, 1896 St. George Catching On.- At the suggestion of the BEACON, the enterprising business men of St. George have begun to advertise their town, adopting the envelop system, so highly commended by wide-awake men. The matter contained on the envelope is as follows:- SAINT GEORGE, New Brunswick- A leading port of Charlotte County, situated at mouth of Magaguadavic River, alongside the famous falls; unsurpassed water privilege; grand opportunity for manufacturing. Home of Red Granite industry; large deposits of limestone and slate of splendid quality; lumber and grist mills in operation; pulp mills in prospect. Railway connection [via Shore Line and C.P.R.] with entire continent. Splendid farming lands, profitable fishing privileges; delightful summer climate; paradise for sportsmen; lakes and streams abound in trout, the woods with deer. Rail distances.- 48 miles from St. John, 32 miles from St. Stephen, 35 miles from St. Andrews, 441 miles from Montreal, 768 miles from Toronto, 407 miles from Boston. Charles O. Ludgate, the well known insurance agent of St. George, was the first man to adopt the system. The envelopes are being furnished by

St. Andrews Beacon - Apr. 16, 1896 Mr. Kennedy is meeting with good success in obtaining subscriptions for his black granite company. He has $975 subscribed now."

St. Andrews Beacon - Apr. 16, 1896 Alex. Milne, Wm. Coutts, Charles Johnson, jr., of St. George, and John D. Chipman and J.T. Whitlock, of St. Stephen, apply for incorporation as Milne, Coutts & Co., Ltd., with a capital of $25,000 in $100 shares. C.C. Hennessy, Stephen Conley, O. Frederick Bogue, James R. O'Brien, J. Henry Frawley and H. Frank McDougall, all of St. George, apply for incorporation as the Victoria Granite Company, Ltd., with a capital of $5,000 in $100 shares. Both companies are to operate granite quarries at St. George."

S.J. Daily Sun - Apr. 23, 1896 St. Andrews. - Angus Kennedy is busily engaged arranging to open his granite quarry. The stone takes a beautiful polish and is very easy to manufacture."

S.J. Daily Sun - Apr. 25, 1896 and St. Andrews Beacon - Apr. 30, 1896 Red Granite for New York. - American Contractors Getting Twenty Thousand Cubic Fett from St. George. - James F. Dolan and John F. Cockerill & Son, New York, the contractors for the erection of the American Museum of Natural History on Manhattan Square, New York, were in St. John yesterday. These gentlemen are getting for the building 20,000 cubic feet of the best red granite obtainable from the quarries of Tayte, Meating & Co. of St. George. They came here from St. George and report that Tayte, Meating & Co. are doing all that could possibly be expected of them, in fact they were surprised to find the work so far advanced. Tayte, Meating & Co. are working three quarries and already have a large quantity of granite ready for shipment. They have five derricks in use with steam hoisting engines and have some forty men at work. Two steam drills are to be put in operation next week and the gang of workmen will be about doubled. The roads have been in such a condition that it would have been folly to attempt to haul any of the stone to the station for shipment. On Monday the roads, it is hoped, will be dried up sufficiently for the work, and ten teams will be employed hauling the granite from the quarries to the Shore Line station, a distance of two miles. The granite will be brought up here by the Shore Line railway and shipped by schooners to New York. This will give employment to a number of men here. Mr. Dolan says Tayte, Meating & Co. are deserving of a great deal of credit for the enterprise they have displayed in taking this contract and the satisfactory manner in which they are carrying it out. The granite, he and Mr. Cockerill declare, is the finest to be had, being evenly and beautifully colored. Messrs. Dolan and Cockerill are negotiating with Tayte, Meating & Co. for 75,000 cubic feet more of their granite for the addition which it is intended to put up in connection with the Museum. Mr. Dolan has purchased 300 tons of grey granite from B.H. Appleby for shipment to New York for general use. Messrs. Dolan and Cockerill leave for New York today."

Codes: G3 / IDX_Names: Granite;

Gazette - Apr. 25, 1896 St. George Granite for New York. - Messrs. Tayte, Meating & Co. of St. George will commence next week to haul to the shore line railway for shipment to St. John, some of the red granite they are quarrying for shipment through St. John to New York, to be used in the building of the American Museum of Natural History, in New York. James F. Dolan and John F. Cockrill, of T. Cockrill & Son, the New York contractors who have the contract of erecting the building were in the city yesterday, having come from St. George. They are getting 20,000 cubic feet of the red granite from Messrs. Tayte, Meating & Co., and are negotiating for 75,000 feet more. The granite will go from here in

St. Andrews Beacon - Apr. 30, 1896 R.A. Stuart & Co. have moved into their former quarters, in the Berry building."

St. Andrews Beacon - Apr. 30, 1896 The black granite men are not going to allow the grass to grow under their feet this summer. Sheriff Stuart, owner of the Steen Lake quarry, who was recently in St. John, received many flattering testimonials respecting the quality and appearance of his stone. Inside of six weeks he expects to make some large shipments of rough granite to St. John. Angus Kennedy is taking steps to open up his quarry. He has procured a powerful winch and derrick, and as soon as his arrangements are completed, will begin quarrying."

St. Andrews Beacon - Apr. 30, 1896 A monument in memory of Annie Kemptou, the brave little Nova Scotian girl, who preferred death to dishonor, is to be erected at Bear River. Already about $200 have been collected. Charlotte County red or black granite would make an enduring and handsome monument to commemorate such a brave girl's death."

St. Croix Courier - Apr. 30, 1896 St. George Granite for New York. - Messrs. Tayte, Meating & Co. of Saint George, will commence next week to haul to the Shore Line railway for shipment to St. John, some of the red granite they are quarrying for shipment through St. John to New York, to be used in the building of the American museum of natural history, in New York. James F. Dolan and John F. Cockrill of T. Cockrill & Son, the New York contractors who have the contract of erecting the building were in the city yesterday, having come from St. George. They are getting 20,000 cubic feet of the red granite from Messrs. Tayte, Meating & Co. and are negotiating for 75,000 feet more. The granite will go from here in

Gazette - Aug. 3, 1896 A block of granite weighing twenty eight hundred weight was brought to the city today on the steamer Hampstead. It came from Appleby's quarry and was consigned to the city granite worker."

Gazette - Aug. 5, 1896 New Brunswick Stone. - J.C. Dumaresq, a Halifax architect, was at St. George yesterday arranging for granite for new buildings he is designing for Geo.Wright, a wealthy Haligonian. Eight dwellings are to be built on South Park street and two buildings on Barrington street and the whole will cost $125,000."

St. Andrews Beacon - Aug. 6, 1896 Samuel Murray, stone-cutter, and John Thorne, farmer of St. George ..."

Kings County News - Aug. 10, 1896 St. John letter..... The grey granite of Spoon Island on the St. John River, for several years has been growing more and more popular for monumental purposes because of its beauty, its durability and the high polish of which it is susceptible. It is also used extensively in architecture and as the quarries appear to be inexhaustible it is likely that the granite industry will be a very important one in the near future. Seath, Quinlan & Co., of Carleton, employ twenty hands in monumental work, Spoon Island and St. George red granite being the material mostly used. Monuments from their work stand in the cemeteries of Victoria, Westminster, Ottawa, Toronto, Montreal, Quebec, Digby, Annapolis, Bridgetown, Amherst, Moncton and Fredericton and all the principal towns in the maritime provinces. In the Rural Cemetery their monuments to the late Robert Reed, F. Beverl (?), Mrs. A.N. Shaw and many others always attract the attention and elicit the admiration of visitors. Magnificent specimens of their work are now being erected near the Rural Memorial Fountain to the memory of the late Byron Taylor and James E. White. There is a symmetry about all of their work and a finish that always pleases and a harmony with its purpose and surroundings that is admirable..."

St. Andrews Beacon - Aug. 13, 1896 Milne, Coutts & Co., St. George, have been awarded the contract for furnishing the stone for the front of a magnificent residence to be erected in Halifax. Red granite will be used."

Aug. 1896 - Copied from: St. Croix Courier - Aug. 19, 1926 30 Years Ago. - St. George. - Fred M. Hill of Calais visited this place on Tuesday in the interest of the New Brunswick Red Granite Co., of Maine. That company is rushed up with work, and has now a full crew of men at work in Calais and at their quarry here."

St. Croix Courier - Aug. 20, 1896 St. George. - A fine new residence in Halifax is to have a front of red granite. Milne, Coutts & Co. are furnishing it."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Aug. 20, 1896 One of the calamities that was to happen within a month or two after the Liberals went into power was the annihilation of the red granite industry of St. George. Yet advices from that busy little town are to the effect that the proprietors of the granite mills cannot get men enough to carry out their contracts as rapidly as they would like. If this form of annihilation goes on for the next five years St. George will be a much bigger town at the end of that

Gazette - Aug. 28, 1896 To New York. - About 1500 feet of St. George granite have been shipped from here to New York for use in building the new museum at New York. This represents about half the amount to be sent. About 60 men are working at St. George on this order. The building contractor, John F. Cockerill, of New York is in the city."

St. Andrews Beacon Dec. 3, 1896 A Granite Baron Speaks.- R.A. Stuart, proprietor of the famous black granite quarry at Steen Lake, says:- Reciprocity with the United States on the lines of the Treaty of 1854 would mean a good market for our rough granite, but our greatest benefit would be from a treaty that would include finished material. The United States would then be our very best market."

St. Andrews Beacon Dec. 3, 1896 Items from Calais. - Advertiser. - Mr. Fred Hill, of this city, picked several Mayflowers in full bloom on Thursday at the New Brunswick Red Granite quarry at St. George, N.B."

St. Andrews Beacon Dec. 3, 1896 The St. John Sun has been talking protection all these years and it is still ignorant of the fact that the red granite manufacturers of St. George do not fear the competition of Vermont or Massachusetts granite workers, and for two reasons, first, because there is no red granite in the United States equal to that of St. George, and, second, because U.S. workmen are no better than ours and their wages are higher if anything, hence they cannot produce the finished article any more cheaply than we can. The Scotchman is the only bug-a-boo that the St. George granite man has; the Yankee has no terrors for him whatever. In fact, the shoe is on the other foot, it is the Yankee who is afraid to meet the competition of the Canadian workman. Possibly, the Canadian government can do little towards helping the St. George men to get a share of the American market, but from what we know of them, we think their disposition is to try, hence it would be advisable that they should have all the facts of the trade before them. With reference of the black granite or syenite, we think it not impossible for a prudent trade policy to create quite a boom in this stone, and as this is what we stand very much in need of down here the more information the government is furnished with respect to it the better. The SUN is fair enough to admit that the advice given by the BEACON is good. We have not always been able to get such a candid opinion of the BEACON's qualities as an adviser from our contemporary."

St. Andrews Beacon Dec. 3, 1896 Mr. George Farquharson, who has been engaged in St. George for several months past inspecting stone for the New York contract, was in St. Andrews on Monday and made an examination of the Steen Lake black granite quarry. He is well pleased with the quarry's situation and with the stone itself. He says it will make a splendid building stone itself and for wainscoting and interior finishing has no equal. It can be easily sawn and in many other respects is a superior stone."

St. Andrews Beacon Dec. 3, 1896 The St. George granite men have completed their New York contract. About 26,000 feet of stone were used. Messrs. Cockrill & Dolan expect to get the contract next year for a wing to the public building in Manhattan square, New York, for which the stone lately quarried was needed. If they get the contract it will mean 75,000 additional feet of stone."

St. Andrews Beacon - Dec. 17, 1896 Stone Cutters on Strike.- Monday the union stonecutters who recently came to Calais to work in the Maine and New Brunswick granite shed, quit work because they said the agreement made by the company with them had not been kept. It was claimed that the company had agreed to pay not less than 27 1/2 cents per hour but it was found that two of the number had received but 25 cents per hour, immediately the crew numbering 100 men left work and met at Columbian Hall and decided to continue the strike until all the demands were granted. This morning (Wednesday) the men here returned to work, the trouble having been settled by the company paying the rate agreed upon, and the discharge of the two men who were the cause of the difficulty.- Calais Advertiser."

St. Croix Courier - Dec. 17, 1896 Bonny River. - A new red granite quarry is being opened on the property of Miles Gilmore."

St. Croix Courier - Dec. 17, 1896 St. George. - The different granite mills are about closing down for the season and will not start before February 1st."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Dec. 24, 1896 Granite Men Want Tariff Reduced.- The marble and granite men have been before the tariff commissioners. Mr. Robert Reid, representing this industry, said that the state of the tariff just now, with reference to marble and granite, created a hardship for the manufacturer, as the raw material was subjected to a very heavy duty, which he thought in the interests of manufacturing should be removed. Marble at present bore a duty of from 10 to 20 per cent. according to the condition in which it was brought into the country. Italian marble entered very largely into various works in his industry. It would promote the industry very much if it was admitted in its raw condition. Mr. Reid said that his remarks concerning marble applied pretty much to granite. In 1894 there was a duty of $1 per ton of 13 cubic feet on granite and rough stones. Now the duty was 20 per cent. which was a serious charge on the Granite industry. They had no such granite here as could be got from Rhode Island or from Scotland. Hon. Mr. Fielding- Are you speaking now of the greys or the reds? Answer- Of both, sir. A change in the tariff would not diminish the use of the domestic article one iota. It would still be used for the same purposes as it was now. We cannot use our own native granite for the same purposes for which we use the imported article. Hon. Mr. Fielding- Are you familiar with the New Brunswick granite? Answer- Yes, sir; but the demand for the grey granite and olive colored granite is greatest. We have no substitute for them. There is no grey granite which has come before my notice which is equal in texture to those I have spoken of. Under the old arrangement of a tax upon the ton it was not a hardship, but under the present condition it was. Hon. Mr. Fielding - I suppose the object of the present tariff was to induce you to use the native article? Answer- Yes, I suppose it was; but we have simply had to pay more for the article which we require."

St. Andrews Beacon - Dec. 24, 1896 St. George.- It is said that the granite works will all resume work again after

Dec. 1896 - Copied from: Copied from St. Croix Courier - Dec. 24, 1925 30 Years Ago. - Lake Road, St. George. - James McGargier has purchased the Munsen farm and will open a large granite quarry in the spring, which will give employment to a number of men."

St. Andrews Beacon Feb. 6, 1896 An attempt will be made to place New Brunswick grey granite on the English market. There ought to be an opening there for black granite."

St. Croix Courier - Feb. 13, 1896 St. George. - The granite mills are all running full blast, and the prospects for a good season's work are very fair."

St. Andrews Beacon - Feb. 20, 1896 The granite quarry at Long Island, Queen's County, belonging to Levi H. Young and others, was sold at auction in St. John on Saturday for $250, Mr. A.W. Baird being the purchaser."

St. Andrews Beacon - Feb. 20, 1896 The large piece of granite that was quarried at the Shattuck Mountain quarry was hauled to mill last week. Its estimated weight was 12 tons and required 6 spans of horses to bring it in. There is another still larger piece quarried and will be hauled in this week.- Calais Advertiser"

S.J. Daily Sun - Feb. 28, 1896 and St. Croix Courier - Mar. 6, 1896 and St. Andrews Beacon - Mar. 5, 1896 St. George Granite for New York. - James F. Dolan, the big New York granite dealer, is in the city, and has purchased from Tayte, Meating & Co. of St. George 20,000 feet of the very best New Brunswick red granite for use in the construction of the Museum of Natural History at Manhattan Square, New York city. The building will be 165 feet by 68 and five stories (80 feet) high. One front will be of granite and another of granite and brick. A Sun reporter met Mr. Dolan and John F. Cockerill of T. Cockerill & Son, New York, the contractors for the building at the Royal last night. Mr. Dolan said he and Mr. Cockerill had visited St. George. They considered Tayte, Meating & Co. the best business men among the granite dealers there. They also seemed to have the best facilities for getting out the granite. The granite will be brought here by the Shore Line railway and shipped to New York by schooner. Messrs. Tayte and Meating were in town last night talking over the matter

S.J. Daily Sun - Feb. 28, 1896 As will be seen elsewhere some 20,000 feet of granite quarried at St. George is to be shipped from this port to New York by vessel. A cubic foot of granite weighs 164 pounds, or for 20,000 feet 1,640 tons. Of course the rough granite required to make 20,000 feet ready for the building would weigh more."

St. Andrews Beacon - Jan. 16, 1896 The New Brunswick Red Granite Company of Maine, report business on the increase, new orders being received daily. Superintendent Burley has been visiting Boston, and is now in New York procuring new contracts.- Calais Times"

St. Andrews Beacon - Jan. 16, 1896 An explosion of gases took place in the furnace room of the shot tower attached to the N.B. granite works, Calais. The windows were blown out and two workmen prostrated, but happily without doing them serious injury."

St. Croix Courier - Jan. 23, 1896 St. George. - The granite men are preparing to start their mills shortly."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Jan. 31, 1896 and St. Croix Courier - Feb. 6, 1896 It is probable that an attempt will be made to place New Brunswick granite on the English market. B.H. Appleby, proprietor of the famous Spoon Island quarries on the St. John river, has been looking into the matter with that end in view. The Beaver line has offered him a satisfactory rate of freight, and he is having enquiries made on the other side as to the price that might be obtained there."

Gazette - Jul. 8, 1896 Granite Shipments. - Six hundred tons from St. George quarries will be shipped to the United States on the schooner Georgie which is now lying in Rodney Slip."

St. Andrews Beacon - Jul. 9, 1896 Some nine carloads of granite arrived from the St. George quarries yesterday via the Shore Line railway, and will be shipped on board the schooner Georgia, which is lying at Rodney slip, West End. The Georgia will take a consignment of about 600 tons of the stone to the states.- Tel."

St. Andrews Beacon - Jul. 16, 1896 The application to change the venue in the case of Dolan vs. Epps, Dodds & Co. from St. John to Charlotte, has been refused."

S.J. Daily Sun - Jul. 17, 1896 and St. Andrews Beacon - Jul. 23, 1896 St. George Granite Works Booming.- The St. George granite works are working on full time, some of them having more work than they can do. Large quantities of the rough granite are being shipped by rail to St. John for the building in New York. In order to meet the requirements of the contract other firms were called upon to supply stone.- SUN"

St. Croix Courier - Jul. 23, 1896 St. George. - Messrs. Epps, Dodds & Co. have lately received their diploma and medal from the World's Fair, for the granite monuments sent by them."

St. Andrews Beacon - Jul. 30, 1896 and S.J. Daily Sun - Jul. 31, 1896 R.A. Stuart, proprietor of the Steen Lake black granite quarry, has received orders for several large monuments. These will be manufactured in St. George."

Gazette - Jun. 1, 1896 Granite for New York. - Some 3500 feet of granite for the American Museum of Natural History, New York has been shipped from here, quarried at St. George. A vessel is expected daily to take another load, now at Carleton for shipment. Tayte, Meating & Co., St. George are getting out the stone, and its quality is very satisfactory."

S.J. Daily Sun - Jun. 1, 1896 Granite Shipments From St. George. - James F. Dolan and John F. Cockerill, the gentlemen who are building the American Museum of Natural History on Manhattan square, New York, are at the Royal. They arrived Saturday night from St. George, where Tayte, Meating & Co. are getting out the red granite required for the building. There have been landed in New York already some 2,000 feet of stone and the sch. Georgia, which arrived the day they left that city, had on board about 1,500 feet more. Another vessel is daily expected here to take on board the stone which is ready for shipment at Carleton. Between 55 and 60 men are employed in Tayte, Meating & Co.'s quarry at St. George getting out the stone and conveying it to the station for shipment to this city. Messrs. Dolan and Cockerill report that Tayte, Meating & Co. are doing the work which they have in hand in an eminently satisfactory manner. Extra machinery will be put in at once and the output will be considerably increased. The architect at New York and the port commissioners have approved of the granite, and the chances are that Messrs. Dolan and Cockerill will after this contract is filled order some 50,000 or 60,000 feet more of the stone. The granite, they say, is admired by all who have seen it."

St. Croix Courier - Jun. 4, 1896 Tayte, Meating & Co., of St. George are giving great satisfaction to the New York builders who recently placed a large contract with them. Extra machinery will be put in at once and the output will be considerably increased. The architect at New York and the port commissioners have approved of the granite, and the chances are that Messrs. Dolan and Cockerill will, after this contract is filled, order some 50,000 to 60,000 feet more of stone. The granite, they say, is admired by all who have seen it."

St. Croix Courier - Jun. 4, 1896 The United States and Red Granite. - Because New York contractors are taking a lot of stone from the St. George quarries, the Globe reaches the conclusion that with better trade relations with the United States many of our natural products could find a market in that country. This is undoubtedly true of some articles - if we could get the better trade relations. But it is not true of granite. The reason why this purchase of St. George granite has been made is that the specifications under which it is used require it. The contractors must use St. George granite and no other, and must take it, tariff or no tariff. And this will be the case whenever a builder desires the beautiful stone that only St. George can supply. But when we take a step further and look for an enlarged market for our granite as a result of better trade relations with the United States, we are met with the fact that in the Canadian market the St. George manufacturers are securing profitable contracts and are able to keep their hands constantly employed; while just across the border the Calais granite works are closed down because they can get nothing to do, and, for the same reason, the Red Beach Granite Company is discharging its men with a view to suspending operations in the course of a few weeks. An ounce of cold fact like this is worth a ton of speculation concerning the good things that would be ours if we could but reach a position which is at present, from the standpoint of the granite men, as undesirable as it is unattainable."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 4, 1896 Those granite manufacturers who are throwing in their lot with Mr. Ganong in the hope of getting increased protection are making a grand mistake. Of what earthly use will a high protectionist like Mr. Ganong be with a low-tariff government in power? He cannot get another penny added to the present duty on stone, nor will his protest avail if the government should decide to cut down the duty. His presence would do them more harm than good. If the granite people want their interests looked after they should return to parliament the man who has ever been their friend - Mr. Gillmor. Then they would have a friend in court who would be of some service to them. There is an object lesson for them in the attitude of the furniture men. They have taken time by the forelock and have ranged themselves alongside Mr. Laurier, while the granite men, who have fully as much at stake, are arraying themselves against the party who are to control the affairs of the country for the next five years. Is this a wise policy?"

St. Croix Courier - Jun. 4, 1896 St. George. - Tayte, Meating & Co.'s mill is decorated with bunting this (Wednesday) morning in honor of an interesting event which takes place this evening in which two of our prominent young people take part, Charles Craig and Miss DeWar, second daughter of John DeWar, Esq. The young couple have the good wishes of the

St. Croix Courier - Jun. 11, 1896 The interesting article on the St. George granite industry, which is published on the first page of this paper, was written about a year ago. Since that time another firm, The Victoria Granite Co. Ltd., has sprung into existence to add its energies to the development of the business and to the prosperity of the granite town. St. George is making rapid progress under the fostering influence of the national policy. And it will have something to say on election day, which will be still stronger and more convincing than anything that can be written or spoken. For on that day the ballots of the sturdy granite men will get in their work for the liberal conservative candidate and for protection to home

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jun. 11, 1896 One of Charlotte's Industries. - What the National Policy Has Done For St. George and Its Vicinity. - The granite business was started in St. George in 1873 by the Bay of Fundy Red Granite Company, and soon after the New Brunswick Red Granite Company organized and started. The last mentioned company built a steam mill near their quarry and things looked favorable for a prosperous business, but within a year or so that mill was burnt and some of the stockholders who resided in St. John insisted upon establishing the plant at Carleton, St. John, and on taking the rough stone from the quarries to that place to be cut and finished. This gave dissatisfaction to the St. George stockholders and the result was that the stock watered and the St. George men were drived out at a loss. The business was run at Carleton until a few years ago, when the plant was removed to Calais, Me., and established there, to which place the rough stone is now taken to be cut and finished. When the business was first started in St. George, the principal market for the output was in the United States and a large share of stock of the Bay of Fundy Red Granite Company was taken up by United States capitalists; but owing to a lack of practical knowledge of the business and a 20 per cent. import duty against the product in the United States market, together with bad management, the business went down and that company failed in 1878, nearly ruining every one who had stock in the enterprise or dealings with the company. Soon after a few of the skilled Scotch laborers who had been brought out from Peterhead, Scotland, to work for the Bay of Fundy Red Granite Company, formed a small concern and went to work manufacturing granite monuments on a practical basis. They cultivated the home market and made the business pay. Subsequently, new companies were formed until there are now four companies operating in St. George, besides the Calais firm whose quarry is here, and is the same one formerly owned by the New Brunswick Red Granite Company, but the manufacturing is done at Calais, Me. In giving the following figures, the last mentioned company's operations are not taken into account. The four firms now doing business in St. George in the granite business are Milne, Coutts & Co.; Epps, Dodds & Co.; Taylor Bros.; and Tayte, Meating & Co. The annual output of those four firms during the past three years has been, in round numbers, as follows: 1892, $97,000; in 1893, $96,000; in 1894, $80,000, or a yearly average of $90,000. About two-thirds of this last mentioned sum is annually distributed among the employees for labor, viz., to stone cutters, polishers, quarrymen, blacksmiths, teamsters, clerks, and apprentices; the other third goes to keep up the plant and to provide for the profit and loss of the business. This gives an average monthly pay to employees of over $5,000 during the whole year; but the works are usually shut down from four to six weeks during the coldest part of the winter, when some of the employees find remunerative employment at some other kinds of work. There are about 200 men and 14 horses employed in the business. The average wages are about as follows; stonecutters and blacksmiths $2 per day; polishers, teamsters and clerks $1.50; and apprentices receive 50c. per day during the first year, 75c. per day during the second year and $1.00 per day during the third and last year of their apprenticeship. Until about four years ago, quite a number of orders were filled for the United States market, and while the products of our granite works were admitted at moderate values into the United States market at 20 per cent. import duty, our manufacturers could successfully compete for a share of that trade and have a small margin of profit left. But when the United States employed expert appraisers and our granite manufacturers were valued for duty at an extreme valuation, that market was partially shut, and when the McKinley tariff came into force with a 40 per cent. duty on manufactures of granite, our firms were driven entirely out of that market. About that time a largely signed petition was sent from here to the government at Ottawa asking for an increase of duty on manufactures of stone from 20 per cent to 30 per cent, which the government very wisely imposed in 1890, and at which rate it has remained ever since. Now 30 per cent may be considered, by those not familiar with the business, a very liberal protection, but when it is known that there is a very sharp competition in the granite business from manufacturers in Scotland and Sweden, where all classes of labor connected with the production of wrought stone costs just one half of what is paid in Canada, and the rough stone is of no more value than it is here, and ocean freights from Scotland and Swedish ports, to Montreal, are actually less than transportation charges from St. John to Montreal, it will be readily seen that foreign manufacturers can lay down in Montreal a granite monument or certain finished building stone, at very little more than one half of what it costs our people here to do it. Thus it is plain, that even though the correct values of those foreign manufactures are given in invoices of the same, our people really have only about 15 per cent. protection instead of 30 per cent. But I may add that there is a pretty well grounded opinion prevalent, whether correct or not, that in many cases, correct values are not given in foreign invoices of such goods imported into Canada, and that customs authorities at Montreal and elsewhere, through a lack of expert appraisers who would be acquainted with the correct values of this class of goods, unwittingly, allow a large portion of such goods to entry and payment of duty at nominal of values. The manufacturers of stone at St. George are satisfied with the present protection, if they could be fully satisfied that competitors in their line of trade do not get their products into Canada at an under valuation. Yet it may be readily seen that since they now have such hard work to compete with foreign products, if the duty was lowered, or if the customs authorities fail to secure correct values on importations, there will be no alternative, but of necessity they will be driven out of the business. And if that should occur, responsible people, of fair judgement and common sense, can forsee the consequence to this place, unless some other paying industry can be established to take the place of the granite industry. But where that is to come from it is difficult to see. It is to be regretted that many people do not seem to understand or realize the advantage or magnitude of this granite industry and we sometimes hear men talk of the good old days when the lumber business was in its prime. Well, let us just compare the present granite business with the lumber business in its palmy days. ..."

S.J. Daily Sun - Jun. 12, 1896 The granite workers of St. George have been advised by Mr. Gillmor's organ to vote for him and have a friend at court. They have voted for Mr. Gillmor a long time and found him a foe at court. Mr. Gillmor would not be a friend to the granite industry and a supporter of Sir Richard Cartwright. He chose Sir Richard Cartwright and left the granite industry to be saved by his opponents. The granite industry is worth far more to St. George than its magnificent lumber industry ever was. It pays $5,000 a month in wages, but if Mr. Gillmor could have his tariff the whole business would disappear in the face of foreign competition."

St. Croix Courier - Mar. 4, 1896 St. George. - Messrs. Tayte, Meating & Co. are busy making great preparations for filling the large New York order for rough stone. The have purchased a new engine and will employ from thirty-five to forty extra

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Mar. 5, 1896 A magnificent black granite monument to the memory of the deceased wife of James Russell, MPP, is being constructed by Epps, Dodds & Co., of St. George. The stone therefore has been taken from Sheriff Stuart's Steen Lake quarry."

St. Croix Courier - Mar. 11, 1896 The New Brunswick Red Granite Company of Maine is gradually increasing its force of workmen and the outlook for a good season's business is very cheering."

St. Andrews Beacon Mar. 12, 1896 The contract with Tayte, Meating & Co. of St.George, have lately received to furnish 2000 tons of stone for the State building in Manhattan Sq., New York, will necessitate a great enlargement of their quarrying staff. Heretofore seven men have been sufficient in their quarry, but the New York contract will compel them to increase that number to at least fifty. The stone will not be manufactured in any way, the New York State law requiring that all work for State buildings shall be performed within the State. The stone as it is quarried will be hauled to the Shore Line railway by teams and then taken to St. John, from whence it will be shipped to New York by vessel. It is estimated that eighty days will be consumed in filling the contract."

St. Croix Courier - Mar. 12, 1896 St. George. - James Russell, M.P.P. is having a fine black granite monument manufactured to be placed at his wife's grave. The granite has been secured from Sheriff Stuart's quarries at Steen Lake and is being manufactured at Epps, Dodds & Co. of this place. Messrs. Tayte, Meating & Co. and Epps, Dodds & Co. have each placed a steam engine in their quarries for hoisting purposes."

N.B. Reporter - Mar. 18, 1896 The contract which Tayte, Meating & Co. of St. George have lately received to furnish 2,000 tons of stone for the State building in Manhattan Square, New York, will necessitate a great enlargement of their quarrying staff. Heretofore seven men have been sufficient in their quarry, but the New York contract will compel them to increase that number to at least fifty."

St. Andrews Beacon - May 7, 1896 The Kennedy Quarry.- A powerful derrick has been erected in front of the Kennedy black granite quarry on the Frye Road, and a gang of men are engaged in opening the face of the quarry. The quality of the stone so far is excellent and there seems little reason to doubt that the stone can be obtained in any size."

St. Andrews Beacon - May 7, 1896 A Granite Curiosity.- Some Boston tourists who were down this way not long ago have been writing up their experiences. The following extract is taken from their breezy account:- ... We drove along to St. Andrews, there putting up at Kennedy's Hotel, a most excellently appointed place of public entertainment. The senior Kennedy, proprietor, was formerly a railroad contractor, and has resided in St. Andrews for 30 years. He owns red, brown, black and yellow granite quarries, and has lately started the development of them. His son has one of the finest collections in the country, and he proudly displayed pieces of money of the Caesars, the Greeks, and so on through medieval times. The party had the hotel to themselves, but they enjoyed their visit no less on this account, for the genial

Gazette - May 15, 1896 Granite for New York Museum. - Mr. George Farquharson, who is superintending the quarrying of the granite being got out at St. George by Tayte, Meating & Co. for the new museum at New York is a guest at the Victoria. He is in the city securing machinery to handle the granite."

St. Croix Courier - May 21, 1896 St. George. - Tayte, Meating & Co. have had men fighting fire (forest) for the past few days and nights at their quarry and succeeded in saving their shops, derricks, etc."

St. Andrews Beacon - May 21, 1896 Epps, Dodds & Co., od St. George, have recently taken black granite from Sheriff Stuart's quarry at Steen Lake to fill orders they have on hand."

St. Andrews Beacon - May 21, 1896 C.A. Epps, James Dodds, Henry Meating, C.C.Ludgate and R.J. Dodds, all of St. George, apply for incorporation as Epps, Dodds & Co. Ltd., with a capital stock of $15,000, in $100 shares. The quarrying and manufacture of granite is the business of the company."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - May 29, 1896 New Companies. - Notice is given in the Royal Gazette of the incorporation of Caleb C. Hennessy, of the parish of St. George, in the county of Charlotte, in the Province of New Brunswick, stone polisher; Stephen Conley, of the same place, stone polisher; O. Frederick Bogue, of the same place, stone cutter; James R. O'Brien, of the same place, blacksmith; J. Henry Frauley, of the same place, blacksmith; and H. Frank McDougall, of the same place, stone cutter, for the following purposes, viz.: To quarry, cut, polish, manufacture, buy, sell and deal in granite and all other kinds of stone; to lease, purchase, own, operate, manage and dispose of stone quarries; to purchase, lease, acquire, sell and dispose of real estate; to acquire, erect, construct and maintain buildings, machinery and all the equipments and appliances necessary for carrying on the said business; to carry on a general store in connection with said business, and generally to do all and every matter and thing necessary for and incidental to the above mentioned purposes and objects; by the name of The Victoria Granite Company (Limited) with a total capital stock of five thousand dollars, divided into fifty shares of one hundred dollars each. Letters patent have issued incorporating Alexander Milne, of the parish of St. George, in the county of Charlotte, stonecutter; William Coutts, of the same parish, stonecutter, Charles Johnson of the same place, salesman; John D. Chipman, of the town of St. Stephen, in the county aforesaid; gentleman; and Julius T. Whitlock, of the same place, accountant, for the following purposes, viz.: To quarry, cut, polish, manufacture, buy, sell and deal in granite and all other kinds of stone; to lease, purchase, own, operate, manage and dispose of stone quarries; to purchase, lease, acquire, sell and dispose of real estate; to acquire, erect, construct and maintain buildings, machinery and all the equipments and appliances necessary for carrying on the said business; to carry on a general store in connection with said business, and generally to do all and every matter and thing necessary for and incidental to the above mentioned purposes and objects; by the name of Milne, Coutts & Co., (Limited) with a total capital stock of twenty five thousand dollars, divided into two hundred and fifty shares of one hundred dollars each."

Gazette - May 29, 1896 New Companies. - Notice is given in the Royal Gazette of the incorporation of Caleb C. Hennesey, of St. George, stone polisher; Stephen Conley, of the same place, stone polisher; O. Frederick Bogue, of the same place, stone cutter; James R. O'Brien, of the same place, blacksmith; J. Henry Frauley, of the same place, blacksmith; and H. Frank McDougall, of the same place, stone cutter; to quarry, etc. - and deal in granite and other kinds of stone; to carry on a general store in connection with said business, and generally do all necessary to said business, by the name of The Victoria Granite Company (Limited) with a total capital stock of five thousand dollars, divided in fifty shares of one hundred dollars each. Letters patent have issued incorporating Alexander Milne of St. George, stonecutter; William Coutts of the same parish, stonecutter; Charles Johnson of the same place, salesman; John D. Chipman of St. Stephen, gentleman; and Julius T. Whitlock of the same place, accountant, for a purpose like to that of the company first mentioned, by the name of Milne, Coutts & Co., (Limited), with a total capital stock of twenty-five thousand dollars divided into two hundred and fifty shares of one hundred dollars each."

St. Andrews Beacon - Nov. 5, 1896 Hazen Campbell injured in granite quarry..."

St. Andrews Beacon - Nov. 5, 1896 Hazen Campbell, of St. George, who is an employee in the granite quarries at that place, was severely injured at the quarries a few days ago by a piece of flying stone hitting him on one of the eyes. He went to St. John to undergo an operation, and learned that the eye was so badly injured that he will lose the sight of that

St. Andrews Beacon - Nov. 5, 1896 St. Stephen.- About 15 granite workers arrived by train from the west Saturday to obtain work in the New Brunswick Red Granite Company's works at Calais, which institution is at present rushed to its full capacity to fill orders."

Nov. 1896 - Copied from: St. Croix Courier - Nov. 8, 1956 60 Years Ago. - St. George. - John Brown, a stone cutter in Tayte, Meating's mill met with a very painful accident on Tuesday last. He was struck in the eye by a granite chip, and will lose the sight."

Moncton Daily Times - Nov. 18, 1896Sussex. - It is generally understood a valuable mining property near Sussex will shortly change hands and be fully worked and developed. Should this prove to be correct an important addition to the industries of the place will have been made."

St. Andrews Beacon - Nov. 19, 1896 A consignment of black granite from Sheriff Stuart's famous quarry at Steen Lake was shipped on Monday to Milne, Coutts & Co., St. George, by Capt. Marshal Stinson's vessel. The stone was taken on board at Bocabec."

St. Andrews Beacon - Nov. 19, 1896 St. George.- The granite workers are working along and do not seem to be taking their usual holidays at this season."

St. Andrews Beacon - Oct. 1, 1896 and St. Croix Courier - Oct. 8, 1896 Some splendid stone has been taken out of the Stuart black granite quarry at Steen Lake lately. Several of the St. George granite men who visited the quarry last week were delighted with the quality of the stone and the ease with which it can be quarried. Work has been suspended on the quarry until a derrick can be erected."

Codes: G3 / IDX_Names: Granite;
St. Andrews Beacon - Oct. 1, 1896 In Epps, Dodds & Co. vs. Jackson, a case on review from the Parish Court of St. George, Judge Forbes on motion of Mr. A.A. Wilson, set aside the judgement in plaintiff's favor and ordered a non suit.-

St. Andrews Beacon - Oct. 15, 1896 St. George.- The stone for the New York contract is being hurried along. Messrs. Tayte, Meating & Co. say that about 9000 additional feet will be required. All the granite factories are working away."

St. Croix Courier - Oct. 22, 1896 The Maine Red Granite Company at Red Beach is employing a full force night and day. The present supply of orders for the company to fill will last them several months. A new engine and boiler has been added to the equipment of the works, which now furnishes all the power that is necessary to run the plant. What is the matter with the Calais Company?"

St. Andrews Beacon - Oct. 22, 1896 St. George.- Some of the granite works are shutting down for a time."

Gazette - Oct. 24, 1896 St. Andrews Granite. - At a recent meeting of St. Andrews board of trade a communication from the manager of a large stone company in New York, offering to visit that place and if conditions were favorable, assist in the establishment of granite works at St. Andrews was read, and his offer accepted."

Oct. 1896 - Copied from: St. Croix Courier - Oct. 25, 1956 60 Years Ago. - Calais. - The granite company has secured a large order from New York parties and has purchased the Almond quarry near Bog Brook. Seventy five cutters and a number of other hands will be employed for about four months. Other large orders are expected."

St. Croix Courier - Oct. 29, 1896 The granite men of New England will read with misgivings the announcement that New York city has determined to have real Belgian pavement, instead of American imitation, and has begun to import paving blocks from Belgium. A peculiar stone is found there which has no grain, such as our granite has, and which is much more durable. It will be used to replace granite on Broadway and Canal streets, where the heaviest trucking is done. If the experiment is a success, the loss to our quarries will be considerable. - Times."

Daily Sun - Oct. 29, 1896 Hazen Campbell, a workman in the St. George granite quarries, met with a painful accident some days since, by which he has lost one eye. While in the discharge of his duties a chip of stone struck him in the eye, inflicting a very painful wound. He immediately came to this city, and Dr. Morrison attended him, but the sight had been

St. Andrews Beacon - Sep. 3, 1896 Mountain of Black Granite.- Millions of Tons of the Beautiful Stone in Sight.- A drive of six or seven miles from St. Andrews, by way of the St. George and Glenelg Roads, will bring the traveller to a pretty little sheet of water known as Steen's Lake. Receding from this lake to the eastward, terrace upon terrace, is a huge mountain of stone, probably five hundred feet high at its apex. Covered with a thick growth of trees and hidden by the mosses of centuries, the true character of the stone was never discovered until a few years ago, when Sheriff Stuart, who is something of a geologist as well as a sportsman, in wandering through the woods in search of game had his attention directed towards it. On removing its blanket of moss and breaking off a piece of the rock, Mr. Stuart was astonished to find that it was a splendid specimen of black granite that he had uncovered. He secured control of the property and by degrees has been opening it for development. Several samples of the stone that he sent out having been well received he has now set to work in earnest to open his quarry and place the stone on the market. With that in view he has constructed a road-way from the highway to the base of the mountain and half a dozen men are now employed in breaking off the rock and cutting it into merchantable sizes. Owing to the position of the quarry this is a comparatively easy matter. There are millions of tons of sound and beautiful stone in sight, which can be quarried at little cost. Several of the St. George granite-workers have orders on hand for the stone, and at the present moment the stone that is being taken out is specially to fill these orders. Mr. Stuart thinks that he has a pretty good thing and he proposes working it for all there is in it. This black granite is especially adapted for monumental and interior work. Used in conjunction with the red granite of St. George some pretty effects are obtained. There is little doubt that in a few years the black granite of Charlotte County will be as popular as the Quincy granite is to-day. Experts who have examined it say that it is quite as beautiful and quite as durable in its composition."

St. Andrews Beacon - Sep. 3, 1896 Sixty men are at work in St. George quarrying stone for the American museum of Natural History at Manhattan Square, New York. The plans and specifications for the addition to the museum have been prepared, and it is calculated some 65,000 feet of red granite will be required for it. If St. George granite is selected it will be a great thing for that place."

Gazette - Sep. 12, 1896 Granite shipments. - There are twelve flatcars laden with granite on South Rodney wharf today awaiting shipment."

St. Andrews Beacon - Sep. 24, 1896 There are at present at Carleton some 15 carloads of granite from the St. George quarries. The granite will be shipped to the States."

Codes: G3 / IDX_Names: Granite;

Daily Sun - Sep. 24, 1896 and St. Andrews Beacon - Oct. 1, 1896 Granite for New York.- A Sun reporter had a chat last evening at the Royal Hotel with John F. Cockerill of T. Cockerill & Son, New York, who are putting up the American Museum of Natural History building on Manhattan Square, New York. Mr. Cockerill, who was accompanied by his brother, James J. Cockerill, has been at St. George looking after the granite being quarried there for the structure. The sch. Tay is now loading 300 tons of stone at Carleton for it and a despatch received by Mr. Cockerill since he came here announced the arrival of the sch. Anita at New York with her cargo of stone. It will be remembered that the Anita got in trouble on her way to New York. Mr. Cockerill says the St. George people will not be able to fill the contract before the first of the year.-

St. Andrews Beacon - Sep. 24, 1896 On motion of Mr. A.A. Wilson, in the case of Epps, Dodds & Co. vs. Campbell, an order for review was obtained returnable 25th inst. - St. John Globe."

Daily Sun - Sep. 25, 1896 New Brunswick granite, both from St. George and Spoon Island, is attracting more attention than ever, and is generally conceded to be the best material of its kind for monuments and building purposes that has been discovered on this continent. It can be quarried in blocks of almost any size required, it is unaffected by atmospheric changes, its colors are admired by every one, and it is susceptible of a very high polish. As the quarries are practically inexhaustible the granite industry in this province is likely to become a very important one."

St. Andrews Beacon - Apr. 1, 1897 Want Increased Duty on Granite. - A despatch from Washington says that representatives of the New England industry are in that city urging an increase in the duty on granite. The Dingley bill gives forty per cent., but the granite manufacturers say this is entirely inadequate and that a duty of one hundred per cent. is necessary to make up for the difference in the cost of labor in the United States and in Europe. The Wilson bill place the duty at thirty per cent., the McKinley law having given forty per cent., which was double the rate under the tariff

Gazette - Apr. 24, 1897 Killed in a Quarry. - Robert Thorne, 24 years of age was killed in the Calais Granite Quarry at St. George yesterday. He was hit on the head by a blast and died instantly."

Gazette - Apr. 27, 1897 The Walton quarry at Spoon Island has been opened up for the season."

St. Andrews Beacon - Apr. 29, 1897 Black granite monuments from Steen Lake quarry will be erected in memory of the late Harris Hatch and the late Walter G. Stinson."

S.J. Daily Sun - Aug. 17, 1897 The several granite working establishments at St. George are very busy at present. An employer informed the Sun yesterday that it was impossible to find an idle man there."

N.B. Reporter - Aug. 18, 1897 Messrs. Tayte, Meating & Co. of St. George, Char. Co., have secured the contract to build the pedestal for the jubilee memorial to Queen Victoria to be set in Dominion square, Montreal. About 30 tons of red granite will be used in the job."

St. Croix Courier - Dec. 30, 1897 A very handsome family monument was erected in the Methodist cemetery at Woodstock last week by the trustees of the estate of the late Hon. William Lindsay. It is of red granite and of a very pretty shade and is in every respect a fine monument. It was made by Tayte, Meating & Co., of St. George. - Press"

St. Croix Courier - Feb. 4, 1897 St. George. - The different granite mills are preparing to start work. Tayte, Meating & Co. have already commenced and the others will start on Monday next."

St. Andrews Beacon - Feb. 4, 1897 The St. George granite manufacturers evidently have no fears that the Liberal government will wipe out their industry as the Conservative leaders in this County have been trying so industriously for years past to make them believe. It is worth noting in connection with the interview the granite manufacturers had with the ministers that they expressed themselves eager for a reciprocity treaty with the United States. This proves that the granite workers are in accord with the Liberal platform. Reciprocity is not one of the things that Conservatives, as a rule, desire."

Codes: G3 / IDX_Names: Granite;

Gazette - Feb. 8, 1897 Granite Discovery. - Messrs. H. Surette & Co. who have been prospecting for granite about Welsford, have struck upon a fine vein of deep black granite which is capable of taking a magnificent polish. The property on which the discovery was made has been purchased for the firm and arrangements will be made immediately to open the quarry, and in the Spring the polishing and finishing works will be established at a convenient point. There in a splendid water power on the property which is capable of developing a hundred horse power. This will be used for the purpose of compressing air to operate the drills in the quarry and to furnish power for the polish mill. Messrs. Surette & Co. are extensive contractors in Nova Scotia and the owners of other granite quarries in that section of the country. Mr. Surette was in the city Friday and left on Saturday for Bridgewater to complete arrangements for the survey of the property, and locate the necessary work for the development of the water power. The granite is said by experts to be the finest and best colored of black granites that have been discovered in this province. It will be good news for the people of Welsford to learn that so important an industry is to be established about a mile from the station. The full operation of the quarry and the polishing works will give employment to upwards of two hundred men."

Kings County News - Feb. 11, 1897 and St. Andrews Beacon - Feb. 11, 1897 Granite Discovery. - Messrs. H. Surette & Company, who have been prospecting for granite about Welsford, have struck a fine vein of deep black granite which is capable of taking a magnificent polish. The property on which the discovery was made has been purchased for the firm and arrangements will be made immediately to open the quarry, and in the spring the polishing and finishing works will be established at a convenient point. There is a splendid water power on the property which is capable of developing a hundred horse power boiler. This will be used for the purpose of compressing air to operate the drills. In the quarry and to furnish power for the polish mill Messrs. Surette & Company are extensive contractors in Nova Scotia and the owners of other granite quarries in that section of the county. Mr. Surette was in Saint John last Friday, and left on Saturday for Bridgewater, Nova Scotia, to complete arrangements for the survey of the property and locate the necessary work for the development of the water power. The granite is said by experts to be the finest and best colored of black granites that have been discovered in this province. It will be good news for the people of Welsford to learn that so important an industry is to be established about a mile from the station. The full operations of the quarry and the polishing works will give employment to about 200 men."

St. Croix Courier - Feb. 18, 1897 The St. George Granite Men. - Make a Strong Case Before the Tariff Commission for an Increase of Duty. - Some Facts and Figures Concerning Charlotte County's Granite Wealth and the Magaguadavic Industry. - The St. George granite men made out a very strong case before the tariff commission in St. John, and the extent and development of this one industry is proof of the value of protection to a country with resources which can only be developed in the face of strong opposition. Five granite firms were represented, owning 6,000 acres of quarry land, employing about 300 workmen having an invested capital of $100,000 and turning out yearly goods to the value of $175,000 to $200,000, of which 80 per cent. represents the labor expended. They asked for an increase of duty for the following reasons:- (1) The difference in the price of labor between Scotland and Canada is about 90 cents, Scotch granite cutters getting from $1.00 to $1.30 per day, while our workmen get from $2.00 to $2.50 per day for the same grade of work. All other workmen, such as polishers, quarrymen, blacksmiths and carpenters, are paid at the same ratio. (2) The freight rate from Aberdeen to Montreal is about 33 per cent. less on a ton of 2240 pounds than from St. George to Montreal on a ton of 2000 pounds, which enables the Scotch manufacturers to land their stone in Montreal cheaper than can be done from St. George under the existing duty of 30 per cent. They suggested, too, that the shippers of any finished granite coming into Canada should be required to send a diagram of the shipment attached to the bill of lading, showing the polished and axed parts, with correct sizes of each stone, and correct value of each job complete, as it is evident that a greater quantity of stone has come in very much under value. An officer be put on to see that the law is carried out in this respect. They also suggested that the present duty be kept on marble (of it should be found impossible to put on an additional 10%) as it not only comes in direct competition with our granite, but is a great hindrance to the opening up of our marble quarries on the St. Lawrence, in Cape Breton and other places in Canada. In case the United States raise their tariff, they advised a corresponding raise in the Canadian tariff; otherwise business could not be carried on here, as the surplus of the Scotch granite that now goes to the United States would come to Canada under our lower duty. The St. George men are not afraid to compete with any country in the world under equal conditions. But they can't meet foreign competition when handicapped by lower wages than they pay and cheaper freight accommodations than they can obtain. To show that the St. George granite is as good or better than any other similar stone, they submitted to the commission a number of letters from dealers in different parts of Canada. A Kingston, Ont., man wrote that the monuments of the St. George red granite are the largest and most beautiful in central Ontario, and that he recommended it to his customers on account of its uniform hardness, and durability, because the workmanship cannot be surpassed, because the stone is susceptible of the highest polish, because of its beautiful color, because of the absence of black knots and freedom from iron stains. A Montreal dealer wrote that his customers are perfectly satisfied with the St. George granite, and in competition with dealers who use the American and Scotch stones, he finds his business increasing every year. A Halifax man wrote that the St. George granite is very much superior to any other red granite, both as regards color and durability. Sir Richard fell into an inexcusable error in discussing the amount of granite imported. Quoting from the returns he stated that in 1895 there was only $6,656 value of granite imported and that only a small proportion of this was Scotch. But if Sir Richard had been fully familiar with the book he was quoting he would have found that, in addition to the figures quoted, there was imported from Great Britain during 1895 stone to the value of $36,295, paying a duty of $10,888.40; and from the United States $14,460, paying $4,338 duty, making a total of $50,755, paying a duty of $15,226.50. By adding the duty of the first cost we have the sum of $65,981.50, which represents the value of the imported stone when placed in competition to our own in Canada. No doubt Sir Richard has since discovered his error and it is to be hoped that he will, when the making of the tariff begins to occupy the attention of the cabinet, recommend that the wishes of the St. George

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Feb. 18, 1897 The different granite mills are going full blast and the prospects are fair for a good season's work."

St. Andrews Beacon - Feb. 18, 1897 and Gazette - Feb. 19, 1897 Work in the different granite mills at St. George has been resumed. The works have been idle for some time but are all running full blast now. Work at the Maine and New Brunswick Granite Works in Calais still continues good, with bright prospects for continuing so for some time, as there are orders enough for a large number of hands for several months."

N.B. Reporter - Jan. 6, 1897 The New Brunswick Red Granite Works at Calais were considerably damaged by fire Thursday. Loss, $4,000."

Gazette - Jan. 26, 1897 Tariff Enquiry. - ...The granite men next came. There were six. Messrs. Robt. Quinlan of Carleton and James Dodds, Alex Milne, Fred Bogue, Nicholas Meating and Alex Taylor of St. George. Mr. Milne read a statement from five St. George companies. In five quarries there were employed 300 hands. Capital was $100,000 and last year $800,000 were paid in wages. They asked an increase in duty of 10 per cent on finished material. Scotch manufacturers could land their stone in Montreal cheaper than could the St. George men. They suggested that the present duty be retained on marble. If the United States raised their tariff, they suggested Canada do the same. Mr. Milne said Mr. B.H. Appleby requested them to read a statement, that it was understood a movement was on foot to reduce the tariff on granite. This would be fatal to the industry in New Brunswick. There was a difference in wages paid in Aberdeen quarries and in freight from Aberdeen to Canada, making a big thing against the home workers. A letter was read from Halifax stating that St.

George red granite was superior to Scotch red granite. The workmanship of the Scotch showed poorer finish than the St. George. Another letter from Kingston, running in the same strain was read. Sir Richard reading from the blue book said, the quantity of dressed granite imported in 1895, was only $6,550 worth, of which over $3,090 worth was from England and Scotland. The exportation of rough was over $37,000. The men said there must be a mistake. One had imported $2000 worth and had been told by a man that he had brought in $10,000 worth. One of the delegation said they would compete with the United States but not with England and Scotland as at present. One of the delegates expressed himself as certain that the blue book was not right on the head of the importation. That's wrong, that book, I know, said he. The delegates felt a good duty should be put on marble. It would assist in the development of the marble quarries on the St. Lawrence, for one reason."

Daily Sun - Jan. 27, 1897 Tariff Enquiry. - .... The Granite Workers. - James Dodds, of Epps, Dodds & Co.; Alex Milne of Milne, Coutts & Co.; FredBogue of the Victoria Granite Works; N. Meating of Tayte, Meating & Co.' Alex Taylor of Taylor Bros., all of St. George, and Robert Quinlan of Sleeth, Quinlan & Co. of Carleton appeared. Mr. Dodds said the St. George men represented five firms owning 6,000 acres of quarry, practically inexhaustible. They employed 300 men and the capital represented was $100,000, and the output from $175,000 to $200,000 annually, of which 80 per cent went for wages. They would like an increase of 10 per cent in the duty on finished material to protect them against Scotch competition. In Scotland labor was 90 per cent cheaper. Men got from $1 to $1.30 per day there, while here the rate is $2 to $2.50 for the polishers, while the other workmen there was an equal difference in wages. Again, Scotland had an advantage in freights. The rate from Aberdeen to Montreal was 33 cents less for a long ton than the rate from St. John or St. George on a short ton. They would suggest that every Scotch shipper be asked to send a diagram attached to the bill of lading, showing polished and axed parts, with sizes of pieces and the price of each. There should also be an inspector. They believed it often came in on an under valuation. The present duty should be kept on foreign marble, which competes with granite and prevents the development of the Cape Breton and Quebec marble quarries. If the United States tariff is increased, ours should be, because if it were not, the Scotch surplus of granite now going to the states would be sent here. Mr. Dodds also read a letter from B.H. Appleby, who also pointed out that lower wages and freights gave the Scotch granite a great advantage. He had known granite to be quarried in Quincy, Mass., polished in Aberdeen and sold in Canada. In 1893, $50,000 worth of granite was imported. American workers are asking a higher tariff on the Scotch article, for under the present duty there was imported from Aberdeen œ69,000 worth in 1893, compared with only œ12,000 worth in 1880. The Americans now ask protection. So should we. Mr. Dodds said that as there were off seasons in the quarries the men did not make over $250 to 350 a year. The trade must depend on the Canadian market. If lost, the business of $500,000 would go to other countries and the plant here would be rendered of little value. There had been some fault found with St. George granite, but they could show samples. Mr. Fielding - That is unnecessary. Everybody knows the St. George granite. I don't think the quality was complained of in the west, but the expense of getting it. Letters were read from Griffin & Keltie of Halifax and Welsh & Son of Kingston, Ont., stating that those firms had used a great deal of Scotch granite formerly and a great deal of St. George more lately, and declaring the latter to be in every way superior to the Scotch article in durability, color, and other qualities desirable for monumental purposes; also the opinion of Prof. Lawson that St. George granite was best, having less mica. Sir Richard, looking into the trade and navigation returns, said that only $37,732 worth of rough stone was imported into Canada in 1895, and only $6,650 worth polished, of which only $3,116 was Scotch. Mr. Milne - That is wrong. Mr. Fielding - This is the recognized authority. It should be correct. Mr. Milne, Mr. Dodds and Mr. Meating declared it was wrong. Sir Richard - These figures appear to be prima facie evidence that you have driven the Scotch granite out. Mr. Fielding - It looks as if the dealers did not dream of importing. Mr. Milne - Ontario middlemen do. Those figures are wrong. Sir Richard - Of course you may have other sources of information. Mr. Milne - We imported $2,000 worth from Scotland ourselves. Mr. Fielding - To compete with yourselves? Mr. Milne - We had to do it to live. There were large importations into Ontario. There is a mistake in those figures. Mr. Fielding smilingly observed that according to the figures it was not the importation of Scotch granite that interfered with the business, but that the people didn't die fast

St. Andrews Beacon - Jan. 28, 1897 Bocabec Black Granite.- Charlotte County blackgranite is gradually winning its way into popular favor, and there is little doubt that when the public are fully acquainted with its beauties and merits it will be one of the leading stones for monumental and ornamental purposes. The stone is unexcelled in quality, being of even texture, and can be quarried easily and in any size desired. The supply is practically inexhaustible. Sheriff Stuart, proprietor of the Steen Lake black granite, has received very flattering testimonials respecting the stone in his quarry, and has already demonstrated that it is a saleable article. In every case where it has been employed, satisfactory results have followed. It is to be hoped that at no distant day steps will be taken to organize a company to push the manufacture of this black granite. There would seem to be no reason why the success which has attended the red granite industry of St. George should not also extend to the black granite of the County."

N.B. Reporter - Jul. 14, 1897 A valuable black granite quarry has been opened up at Welsford, Kings Co., near Bayard's Crossing. The quality is said to surpass anything of its kind in America."

St. Andrews Beacon - Jul. 22, 1897 Twelve tons of black granite have recently been taken from the Steen Lake quarry to fill an order. The stone will be polished in St. George."

St. Croix Courier - Jul. 29, 1897 Twelve tons of black granite have recently been taken from the Steen Lake quarry to fill an order. The stone will be polished in St. George. - Beacon."

St. Andrews Beacon - Jul. 29, 1897 Two very handsome black granite monuments from the Steen Lake quarry are on exhibition in the lot above Sheriff Stuart's store. They are well worthy of inspection."

St. Andrews Beacon - Jun. 3, 1897 Queen's Granite Quarries. - H. Surette, a Quebec gentleman, who was at the Queen yesterday, is the head of a company with a capital of $20,000, which is developing the quarries near Welsford, Queen's County. He has found grey, black and red granite in large quantities, and of superior quality, and is seeking assistance from the government for the construction of a bridge on the road leading from the scene of his operations to Welsford. Mr. Surette already has an order from Glasgow, for a lot of black granite, and he anticipates establishing an important industry. - F'ton Herald."

St. Andrews Beacon - Jun. 10, 1897 A gang of men are at work at the Steen Lake black granite quarry. The proprietor has some good orders for the stone on hand."

St. Andrews Beacon - Mar. 11, 1897 St. George. - The New Brunswick Red Granite Company have started quarrying with a crew of fifty men."

St. Croix Courier - Mar. 18, 1897 A large derrick and other appliances have been moved by the Maine and New Brunswick granite company from the quarry at Bog Brook to St. George where they will get the red granite needed for their new

St. Andrews Beacon - Mar. 18, 1897 The Maine and New Brunswick granite company has secured another large contract that will furnish work for several months. - Times."

St. Andrews Beacon - Mar. 25, 1897 Some handsome specimens of polished black granite from near St. Andrews, N.B., were recently forwarded to New York parties by E.A. Charters, of Sussex, N.B., who has in hand the disposal of the said property, which is beyond doubt valuable and will prove to be a saleable article.- Industrial Canada."

St. Croix Courier - Mar. 25, 1897 A block of red granite weighing eight tons was hauled from the Shore Line depot to Calais on Thursday last by six of F.T. Waite's horses. The roads were nearly bare and the drag was a severe one. The sled stuck fast in the middle of the bridge and could not be moved until the following morning, when blocks and tackle assisted the

Codes: G3 / IDX_Names: Granite;

Gazette - May 27, 1897 Black Granite Quarry. - Some time ago the Gazette made reference to the discovery of a fine quarry of black granite at Welsford. The granite was found on a farm about two miles south east of Welsford station, and across the Nerepis river on the railroad. It was mentioned at the time that the property had been acquired by a Bridgewater, Nova Scotia firm and that they would immediately commence the erection of a polishing works at the quarry. There is an excellent water power on the property sufficing for the working of hydraulic drills and development of power to drive the polishers. The owners of the quarry have secured a contract for 2000 tons of rough stone which will be got out immediately, and shipped from St. John to Aberdeen, Scotland during the summer and winter. The getting of this stone and the opening up of the quarry will take most of the summer and in the fall the polishing works will be built and operated. Mr. Surette, the senior member of the firm who has been at Welsford during the exploration and at the opening up of the quarry, visited Fredericton yesterday for the purpose of laying before the government the necessity for some improvements to the approaches of the bridge across the Nerepis so that the stone could be hauled from the quarry to Bayard's crossing where it will be loaded on cars and brought to St. John for export. The opening up of this industry is of great importance to the people of Queen's county particularly of Welsford as it will give employment to a large number of people."

St. Andrews Beacon - Nov. 11, 1897 and St. Croix Courier - Nov. 18, 1897 Green and Yellow Porphyry. - Black granite is not the only kind of valuable stone that Charlotte County can boast of. While prospecting in the vicinity of his Steen Lake quarry, on Monday, Sheriff Stuart found a deposit of green and yellow porphyry, also a vein of quartz. He has not yet located a placer mine, but no one would be surprised if he did."

St. Andrews Beacon - Nov. 25, 1897 and St. Croix Courier - Dec. 2, 1897 Three magnificent monuments, composed of black granite from the Steen quarry, were placed in the Rural Cemetery last week. One of these stones was erected in memory of the late Harris Hatch; the second marked the last resting place of Mrs. W.D. Forster, and the third commemorated the death of Walter G. Stinson. All three designs were beautifully worked out by Messrs. Milne, Coutts & Co.'s artistic workmen. The appearance of the stone in these monuments is very chaste, and it would seem to be peculiarly adapted for monumental purposes. - Beacon"

St. Andrews Beacon - Nov. 25, 1897 and St. Croix Courier - Dec. 9, 1897 Concerning Black Granite. - There is reason tobelieve that the negotiations which have been pending so long in connection with the sale of the Bocabec Black Granite Company's property to an American syndicate are nearing completion. Matters have now got so far that the representatives of the purchasers have asked how the owners of the property want the cheques made out. This looks like business. Should this syndicate acquire the property there is no doubt that they will work for all that there is in it. The company will begin work with a capital of $20,000, all of which will be paid up before a blow is struck. Mr. Angus Kennedy, who forwarded samples of his stone to Gullett, of Toronto, to be polished, has received a letter from that firm in which they say that the stone is the most beautiful that they have ever seen, and that if it could be quarried in sufficiently large sizes there is no doubt that a large demand for it would soon be created. Sheriff Stuart, the owner of the Steen Lake quarry, is feeling his way along quietly. He has received flattering offers from people who desire an interest in the quarry. It is generally acknowledged that the Steen Lake stone is of a very superior kind."

St. Andrews Beacon - Nov. 25, 1897 Mr. Wm. Coutts, of St. George, was in St. Andrewslast week, superintending the erection of several black granite monuments in the Rural Cemetery."

Richibucto Review - Oct. 7, 1897 Dr. Harry Gove has placed an order with Sheriff Stuart for a black granite monument to be erected over the grave of his father, Dr. S.T. Gove. The deceased had expressed a preference for this stone. The monument will be a handsome one."

S.J. Daily Sun - Oct. 11, 1897 Henry Walton, the well known Spoon Island quarryman, was in town Saturday. Mr. Walton, who is almost 80 years of age, is a remarkably active man for his years. He has been operating the quarries for fifty- nine years, employing all the way from two to 20 men. This season he has carried on a big business, the grey granite sent out of his quarries going to all parts of Canada and various places in the United States."

St. Andrews Beacon - Oct. 21, 1897 W.D. Forster has ordered a handsome black granite monument, in the form of a cross, to be erected over the grave of his wife. It will be made of the Steen Lake black granite."

St. Croix Courier - Oct. 21, 1897 St. George. - Sloop Rocky Mountain of Calais, Me., arrived in port on Monday and will carry to Red Beach the quarry outfit of T. Cockerill & Son, together with a quantity of rough stone."

N.B. Reporter - Oct. 27, 1897 It is reported that the Maine and New Brunswick Red Granite Co. has received the contract to furnish the stone for a large business block to be built in New York."

St. Andrews Beacon - Sep. 2, 1897 St. George stone manufacturers find it so difficult to get satisfactory rates out of the Shore Line that it is reported they have determined upon making their shipments through St. Andrews."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Sep. 9, 1897 Black Granite to the Front. - Bocabec black granite stock is looking up. Last week, Mr. H. Oldershaw, of New Britain, Conn., representing a syndicate of Americans who have secured an option on the Bocabec quarry, of Messrs. Gibson, Stuart & Hanson, paid a visit of inspection to the quarry. He was delighted with the quality and quantity of the stone and with the facilities for shipment. He saw no reason why a profitable business might not be established with the United States, as the stone in his opinion is superior to Quincy granite. He says it will take a higher polish, the lustre will remain longer than on the Quincy and the stone he thinks can be sawn into slabs more easily. For interior decoration and for monumental work he considers the Bocabec black granite unsurpassed. Asked if there was any likelihood of his company taking over the quarry, he said that was a matter he could not be determined until he had returned and consulted with those who were associated with him. In reply to the enquiry whether it would be the policy of his company to erect polishing mills or whether they would handle the rough stone only, he said he would certainly advise the erection of polishing works for the Canadian trade. He considered Saint Andrews a favorable point for such works. For the United States market the stone would be shipped in the rough state. Mr. Oldershaw, who was accompanied by his wife, returned home on Monday."

Gazette - Sep. 13, 1897 and Daily Sun - Sep. 15, 1897Black and Red Granite. - A meeting of the directors of the Dominion Granite Co. was held at F.B. Wade's library on Friday evening last, says the La Have Gazette. This company owns large quarries at Welsford, N.B., and Shelburne, N.S. and last week a shipment of one hundred tons of black and red granite was sent from St. John, consigned to Messrs. Garston & Co., Aberdeen. The Messrs. Garston & Co. state that the red granite from the Dominion Co.'s quarry can only be distinguished from Aberdeen granite by an expert, and the sale for it is expected to be very large. The red granite on this company's quarry is said to be fully better than the best St. George's, and the increased demand for it is proving very encouraging. A large block of the black granite from this quarry is on exhibition here and is greatly admired. It is easily worked, takes a high polish, and will doubtless be a popular article in the market. The company propose sending some of their granites to both the St. John and Halifax exhibition. - La Have

St. Andrews Beacon - Sep. 16, 1897 The Red Beach Granite Company having secured the contract to furnish stone for the completion of the Manhattan Square Museum, New York, the wing of which was built with St. George granite, the building contractors are moving engine, boiler and machinery used in connection with the same job here last summer to the Red Beach quarries. The loss of the contract here is much regretted."

St. Andrews Beacon - Sep. 16, 1897 Welsford Granite. - A meeting of the directors of the Dominion Granite Co., was held at F.B. Wade's library on Friday evening last. This company owns large quarries at Welsford, N.B. and Shelburne, N.S., and last week a shipment of one hundred tons of black and red granite were sent from St. John, consigned to Messrs. Garston & Co., Aberdeen. The Messrs. Garston & Co., state that the red granite from the Dominion Co.'s quarry can only be distinguished from Aberdeen granite by an expert, and the sale for it is expected to be very large. The red granite on this company's property is said to be fully better than the best St. George's and the increased demand for it is said to be very encouraging. A large block of the black granite from their quarry is on exhibition here and is greatly admired. It is easily worked, takes a high polish, and will doubtless be a popular article in the market. The company propose sending some of their granites to both the St. John and Halifax exhibitions. - La Have Gazette."

St. Croix Courier - Sep. 16, 1897 Bocabec Black Granite [Beacon] - Bocabec black granite stock is looking up. Last week, Mr. H. Oldershaw, of New Britain, Conn., representing a syndicate of Americans who have secured an option on the Bocabec quarry of Messrs. Gibson, Stuart & Hanson, paid a visit of inspection to the quarry. He was delighted with the quality and quantity of the stone and with the facilities for shipment. He saw no reason why a profitable business might not be established with the United States as the stone in his opinion is superior to Quincy granite."

St. Croix Courier - Sep. 23, 1897 They have completed it. - Messrs. Tayte, Meating& Co., St. George, says the Telegraph, have completed the jubilee memorial for Dominion Square, Montreal. Although over thirty tons of stone were used, only twenty-one days elapsed since commencing the job which certainly speaks volumes for the push and enterprise of this firm. They have another large monument in course of construction for an American firm."

Daily Sun - Sep. 23, 1897 Dominion Granite Co. Ltd. - This enterprising firm, which carries on a large business in granite quarrying and manufacturing in N.S., particularly Shelburne Co., this spring obtained a quarry in Welsford, N.B., which contains an inexhaustible supply of red and, the seldom obtained, black granite. The company, with commendable enterprise, have pushed their industry for all it was worth, and this fall exhibit samples of the black granite in the annex of the exhibition building. There are two pieces of stone, one a huge ball mounted upon a pedestal and base, and the other a slab with the inscription: Welsford Granite. These two pieces are fair samples of the magnificent black granite which can be obtained at Welsford, and which is pronounced by examining experts to be the finest stone they have seen. It is capable of receiving a high lustre, and is particularly suited for monumental purposes. Stanton Bros. of St. John prepared the blocks for exhibition, and the splendid showing which the granite makes reflects a great deal of credit on their workmanship. The red granite quarried at Welsford is considerably above the ordinary and is suitable for all purposes. The company have made extensive shipments to England and Scotland during the season, of the black granite, which is deservedly popular there. The headquarters of the firm are at Bridgewater, N.S., but any information concerning the goods can be obtained from H. Surette, the superintendent, who is a large stockholder in this flourishing company."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Sep. 30, 1897 Mr. Angus Kennedy proposes resuming work on his black granite quarry. He has a splendid quality of rock, but so far as quarried it is affected with dries. He hopes to overcome this fault as he goes

St. Andrews Beacon - Sep. 30, 1897 Concerning Black Granite. - Mr. Gullett of the well known Canadian stone firm of Gullett & Sons, was in St. Andrews last week, and when here made an inspection of the black granite quarries in this neighborhood. He was greatly pleased with the appearance of the stone and took away several samples to polish up."

Daily Telegraph - Aug. 6, 1898 Mr. C.W. Young purchased the plant of the New Brunswick Red Granite Company, of Maine, which was sold at auction. The price paid was $20,000. This was the company that the Messrs. Burpee were

St. Andrews Beacon - Dec. 1, 1898 Sheriff Stuart, who has struck a splendid quality of black granite at the Steen Lake quarry, intends to boom the stone after the first of the year."

St. Andrews Beacon - Dec. 1, 1898 The St. George granite works, owned by Messrs.Taylor Bros., has changed hands (as intimated in the Beacon some weeks ago) and is now owned by Messrs. A.S. Baldwin, and O'Brien & Gillmor."

Daily Sun - Dec. 12, 1898 St. George Industries. - (St. Croix Courier). - The granite works at St. George are about to close down for the regular winter vacation. The past season has been a fairly busy one with all the manufacturers, though prices have been the lowest experienced for years. Milne, Coutts & Co. have manufactured about six hundred tons of stone and have had sixty men employed. Their shipments have been made to Ontario and Quebec, and it was all monumental work. They will shut down this week, two weeks earlier than they closed last season. They have some orders on hand for the spring. Epps, Dodds & Co. opened in January and will close next week. They have employed fifty five men, and finished about twenty five thousand dollars worth of stone. They shipped one large monument to Ontario. They had more men employed this year than ever before, but prices were very low and profits small. They consider the prospects good for next year. Taylor Brothers have not operated extensively this year on account of the illness of the head of the firm. The business has just been purchased by Andrew S. Baldwin and John C. O'Brien, who will continue it under the old name of St. George granite works. Tayte, Meating & Co. found the beginning of the season quiet, but have since done a good business. They have employed thirty three men and will operate about two weeks longer. Their principal product was a large arched doorway, which went to Ottawa. They have several large monuments which were sent principally to Ontario and Nova Scotia. Prices have been very fine and profits not large. They have some orders for spring work and consider the prospects quite good. Nicholas Meating, one of the members of this enterprising firm, has been in poor health for some weeks. The Victoria Granite Company, established three years ago, is, the youngest firm in the business, but since its organization, has lost two of its promoters by the deaths of Fred Bogue and Frank McDougall. The past year has been the busiest they have experienced. Twenty three men are employed, and they have orders in that will keep them running till Christmas. Their shipments have been made to Ontario and Nova Scotia. They have some orders in for next year."

Jan. 1898 - Copied from: St. Croix Courier - Jan. 23, 1958 60 Years Ago. - Calais. - Charles W. Young, president and principal owner of the New Brunswick Red Granite Company of Maine, has purchased from the estate of F.T.C. Burpee the shot works located near the granite works."

St. Andrews Beacon - Jan. 27, 1898 and N.B. Reporter - Jan. 29, 1898 Owns Granite Business Himself. - C.W. Young, who has been president of the N.B. Granite Works, Calais, for the past several years has purchased the entire business and will run it under the same name. Mr. Young has also purchased the shot tower which is situated near the mill in which the shot necessary for the work of polishing the stone is manufactured."

St. Andrews Beacon - Jan. 6, 1898 Made of St. George Granite. - The largest and one of the handsomest monuments in the Methodist cemetery, is one of red granite recently erected over the grave of the late Wm. Lindsay, by the trustees of his estate. It is from the establishment of Tayte, Meating & Co., St. George, and stands over 16 feet high. It bears the following inscription: In memory of William Lindsay, born Aug. 3, 1813, County Fermaugh, Ireland, died at Woodstock, N.B., Sept. 7th, 1895. Aged 82 years. 21 years a member of the New Brunswick Legislature. - Woodstock Sentenil."

St. Croix Courier - Jun. 28, 1898 The American sloop Rocky Mountain carried a load of rough granite from here on Monday for Red Beach."

St. Andrews Beacon - Nov. 3, 1898 Granite Works Closed. - Owing to ill health, Mr.Alex. Taylor has closed his granite works in St. George, and has gone to Colorado. It is reported that Messrs. O'Brien & Gillmor and Mr. Andrew Baldwin are negotiating for the purchase of the works."

St. Andrews Beacon - Nov. 3, 1898 Sheriff Stuart has been taking stone out of his Steen Lake quarry this week for two large monuments, which will be manufactured by Milne, Coutts & Co., St. George."

Codes: G3 / IDX_Names: Granite;
St. Andrews Beacon - Nov. 24, 1898 Douglas Bros., of St. Stephen, erected two handsome memorial stones in the Rural Cemetery this week. One, of Beaver Lake black granite, marks the grave of Dr. W.H. Osburn. The other, composed of white marble, was placed on Mr. Robert McLaren's lot."

St. Croix Courier - Nov. 24, 1898 The granite works at St. George, owned by Messrs.Taylor Bros., have been sold to Messrs. Andrew S. Baldwin and O'Brien & Gillmor."

St. Andrews Beacon - Oct. 13, 1898 Sheriff Stuart has received an enquiry from New York asking him if he could furnish polished black granite for the finishings for a large hotel there. He has replied in the affirmative."

St. Andrews Beacon - Apr. 20, 1899 Maine Granite. - The granite industry of Maine has received great impetus, as the result of place and contracts made in the last few months, and more hands will soon be employed than ever before in the history of the industry. The Booth Bros., of Hurricane Island, and the Bodwell Granite Company have secured contracts of millions of dollars, and other companies are in it. Calais ought to have a share, but has not yet been lucky."

St. Andrews Beacon - Aug. 31, 1899 St. George. - All the granite works have been running extra time lately, owing to the pressure of orders."

St. Andrews Beacon - Dec. 14, 1899 and Gazette - Dec. 15, 1899 Monuments For Great Britain. - The granite manufactures of St. George are looking forward to manufacturing monuments for the British market. Milne, Coutts & Co., have just turned out of their works a magnificent monument which is to be erected in London, in memory of the late Mrs. Owen Jones. It is composed of Spoon Island granite, and is in the form of a cross. The firm expect other orders from Great

St. Andrews Beacon - Dec. 14, 1899 For the Paris Exposition. - Messrs. Milne, Coutts & Co., will Send an Exhibit. - The famous red granite of St. George will be represented at the Paris Exposition next year. Messrs. Milne, Coutts & Co., of St. George, have prepared a handsome shaft and are now casing it up, preparatory to shipping to Paris. The shaft, which is five feet in height, is set upon a circular base. At the top is a circular piece of stone, ornamented with scroll- work in maple leaf design. Above this stands an urn. The effect is very attractive. The stone is highly polished and will be a creditable

Daily Sun - Dec. 15, 1899 Fire at St. George. - Considerable Shore Line railway property was destroyed by a fire at St. George at three o'clock yesterday morning. The fire which broke out in what is known as the polishing mill, one of the old machine shop buildings, now under lease to the Victoria granite works, spread rapidly and destroyed the set of buildings that comprised the old machine shops. These included the machine shop, the polishing mill, two blacksmith shops, the cutters' shed and outhouses. In the machine shop was passenger car No. 8 and a flat car. Both were consumed. The fire is supposed to have started from the boiler in the polishing mill. Some of the property was leased to the granite cutters and some was used by the railway for storage purposes, and for a carpenter repair shop. The loss will be quite heavy. The Shore Line had $6,500 in the Guardian, divided as follows, machine shop, $1,000; passenger car No. 8, $4,900; polishing

Semi-Weekly Telegraph - Dec. 16, 1899 Fire in St. George. - Shore Line Property Burned Early Yesterday Morning. - Granite Shed of the Victoria Granite Company, Shore Line Machine Shop, two blacksmith Shops and Two Cars Burned, One a Fine Passenger Coach. - [Special to the Telegraph] - St. George, Dec. 14. - Fire this morning destroyed between ten and fifteen thousand dollars worth of property belonging to the Shore Line here. The fire started in a building owned by the Shore Line, but occupied by the Victoria Granite company, and used as a polishing mill. It is believed the fire caught in some way from furnaces beneath the boiler in the engine room. This is not certain, but whatever the origin, the speed was astoundingly rapid. The building is a wooden one and was a mass of flames before residents of this place were on the spot. The fire was entirely beyond control of any apparatus possessed by the town, and it was at once seen it must burn itself out. Water was thrown on adjourning buildings in a vain attempt to save them. The flames soon were bursting out from a blacksmith shop attached to the polishing mill. Then the machine shop of the Shore Line and the blacksmith shop attached to it caught and some out buildings and sheds followed in the general destruction. By day break all were smouldering ruins. The granite polishing mill was formerly occupied by Epps, Dodds Co., who used it for the same purpose. They built another building about three years ago, near the falls. When they left the Victoria company took it. The stock in this building, as well as the equipments of the blacksmith shop, is a considerable loss for the company. The plant of the Shore Line machine shop has been largely removed to St. John. Still a good many tools were lost. The chief loss was that of the road's new passenger car, which was put in about a month ago for the winter. A freight car, in for repairs, was also burned. The Shore Line is insured for $6,500 in the Guardian."

N.B. Reporter - Dec. 20, 1899 Fire broke out Thursday morning in the polishing mills of the Victoria Granite Works, St. George. It spread rapidly, destroying besides the polishing mill and cutter's shed of the Granite Co., the Shore Line machine shop, in which was a passenger car, two blacksmith shops, outhouses and a flat car. The loss will be between $10,000 and $15,000. The Shore Line had $6,500 insurance."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Dec. 21, 1899 Big Fire at St. George. - Victoria Granite Mills and Shore Line Machine Shop Burned to the Ground. - A fire, which broke out at St. George about three o'clock on Thursday morning last, destroyed between ten and fifteen thousand dollars worth of property belonging to the Shore Line railway, besides a great deal of valuable property belonging to the Victoria Granite Company, a business concern in which Messrs. Messenett, Conley, McDougall and Hennesay, all young men of St. George, are the principals. The fire started in a building owned by the Shore Line, but occupied by the Granite company, and used as a polishing mill. It is believed it caught in some way from furnaces beneath the boiler to the engine room. The building was a wooden one and was a mass of flames in an instant. The fire was entirely beyond the control of any apparatus possessed by the town, and it was at once seen it must burn itself out. Water was thrown on adjoining buildings in a vain attempt to save them. The flames soon were bursting out from a blacksmith shop attached to the polishing mill. Then the machine shop of the Shore Line and the blacksmith shop attached to it caught and some outbuildings and sheds followed in the general destruction. By day break all were smouldering ruins. The granite polishing mill was formerly occupied by Epps, Dodds Co., who used it for the same purpose. They built another building about three years ago, near the falls. When they left the Victoria company took it. The stock in this building, as well as the equipments of the blacksmith shop, is a considerable loss for the company. The plant of the Shore Line machine shop has been largely removed to St. John. Still a good many tools were lost. The chief loss was that of the road's new passenger car, which was put in about a month ago for the winter. A freight car, in for repairs, was also burned. The Shore Line is insured for $6,500 in the Guardian divided as follows: Machine Shop, $1,000; passenger car No. 8, $4,000; polishing mill, $500; small shed, $100."

St. Croix Courier - Dec. 21, 1899 St. George. - The building occupied by the Victoria granite company ... destroyed by fire last Thursday morning."

St. Andrews Beacon - Dec. 28, 1899 St. George. - The Victoria granite company, whose polishing mill near the railway station was recently burned down, will probably rebuild shortly. They had been carrying no insurance, owing to the high premium charged, so that their loss was quite heavy. They will be able to use some of the old machinery that was in the

St. Andrews Beacon - Feb. 23, 1899 Maine Red Granite Contracts. - It is said that the Maine Red Granite Company, or Red Beach, have recently received the contract for the stone for a large cathedral building in one of the western cities. The work will be all finished stone with a good deal of sawing necessary. This will mean work for the cutters and finishers. The present job on hand, which was to have been a three years' job, but which the company will push through in about two years, was all rough stone work and gave employment to only quarrymen. This job will be all complete in about a month. There are at present about sixty men at work in the quarries."

St. Andrews Beacon - Jul. 6, 1899 Sheriff Stuart has cut about 30 tons of splendid granite at his Steen Lake quarry. This stone will be conveyed to St. George where it will be worked up into monuments by the artisans of the granite town."

St. Andrews Beacon - Jul. 20, 1899 St. George. - All the granite works are in active operation, and in some cases are adding to their workmen. Epps, Dodds & Co. have just completed a handsome monument of grey granite for the late James Bolton. It was taken to St. Andrews on Saturday and set up in the rural cemetery. Milne, Coutts & Co. are to construct a monument of Spoon Island granite, to be erected over the grave of Mrs. Owen Jones in London, England. It will be a massive cross, very gracefully proportioned."

Gazette - Jul. 21, 1899 and S.J. Daily Sun - Jul. 21, 1899 Milne, Coutts & Co. of St. George are to construct a monument of Spoon Island granite, to be erected over the grave of Mrs. Owen Jones in London, England. It will be a massive cross, very gracefully proportioned."

St. Andrews Beacon - Jun. 1, 1899 One of the beautiful black granite monuments which Sheriff Stuart has had on view for some time on Water street, has been purchased by Mrs. Frank Mowatt, to be erected over the grave of her son, Bryant Killikelly. It was lettered by David McAdam of St. George."

Jun. 1899 - Copied from: St. Croix Courier - Jun. 6, 1929 30 Years Ago. - St. George. - Flags are flying from the Bay of Fundy Granite works today (Wednesday) in honor of the marriage of George Maxwell, one of the employees. The schooner loaded with coal for the Victoria granite company, which ran aground on Clark's Point, was sold at auction on Monday and bid in by the captain. Tayte, Meating & Co. have sent a party of workmen to Spoon Island to procure a large quantity of granite to fill large orders."

St. Croix Courier - Jun. 8, 1899 Flags are flying from the Bay of Fundy granite works today (Wednesday) in honor of the marriage of George Maxwell, one of the employees."

Codes: G3 / IDX_Names: Granite;

Woodstock Dispatch - Jun. 14, 1899 Prosperous St. George. - From a recent letter received by a gentleman in this town from one of St. George's citizens we gleam that the Granite Town has a regular boom on. There are some 250 men employed in the granite mills and quarries, all the mills are running on full time, the proprietors are as good men as ever got into trousers as their workman say of them, and lots of orders coming in show big work in sight. Besides the granite

S.J. Daily Sun - Jun. 15, 1899 There are some 250 men employed in the St. George granite mills and quarries. All the mills are running on full time. Besides the granite works, some 50 persons are employed in the lumber mills, which will cut two or three million feet this season."

N.B. Reporter - Jun. 21, 1899 There are some 250 men employed in the St. George granite mills and quarries. All the mills are running on full time. Besides the granite works, some 50 persons are employed in the lumber mills..."

St. Andrews Beacon - Jun. 22, 1899 St. George Very Much Alive. - St. John Sun.-There are some 250 men employed in the

St. George granite mills and quarries. All the mills are running on full time. Besides the granite works, some 50 persons are employed in the lumber mills, which will cut two or three million feet this season. The grist mill is also busy."

St. Andrews Beacon - Mar. 9, 1899 All the granite factories at St. George are again in operation again. Though they have no large contracts on hand they have enough to keep them busy."

S.J. Daily Sun - Mar. 10, 1899 All the granite factories at St. George are again in operation."

May 1899 - Copied from: St. Croix Courier - May 2, 1929 30 Years Ago. - St. George. - Alex Taylor, formerly of Taylor Bros., who has spent the winter in the south, returned home last week."

St. Andrews Beacon - May 11, 1899 Four handsome monuments, composed of Steen Lake black granite, have recently been manufactured in St. George. Two of them will be erected in the Rural Cemetery and two in the Catholic Cemetery. The total cost of these four stones was about $700."

St. Andrews Beacon - May 11, 1899 When Milne, Coutts & Co., of St. George, wanted to close down the other day, they found that there was some trouble with their mill wheel. An investigation was made, when it was found that the trouble was caused by the dead body of a large salmon. The fish had evidently been drawn into the mill-race on its passage upriver

St. Andrews Beacon - May 11, 1899 Strike at St. George. - A little unpleasantness has arisen between the proprietors of the granite factories and their help respecting a Saturday half holiday. It is stated that the proprietors of the mills (with the exception of the Victoria Granite company) decided to take the holiday without consulting with the men or offering any compensation for the loss of wages thus occasioned. Last Saturday afternoon, the mills closed down as per agreement. On Monday the crew at Epps, Dodds & Co.'s factory did not return to work, and a lock- out was the result. It is reported that the men in the other factories will also go out. It is greatly to be regretted that the difficulty should have arisen, as heretofore employer and employed have always got along amicably."

Semi-Weekly Telegraph - May 13, 1899 Strike in St. George. - St. George, May 9. - Acting on a previous understanding among themselves, and against the expressed wish of the employers, the granite manufacturers of this town, with the exception of the Victoria Granite Company, closed their mills Saturday afternoon. As a result the crew of Epps, Dodds & Co., did not return to work Monday morning, but later sent a committee with a petition asking the privilege to be allowed to work an equivalent. The only reasons up to the present time, is that the mill has been closed up tight, which might mean a lengthy lockout. In the meantime 25 determined stone cutters and 15 polishers are quietly walking the streets, with a very strong probability that all the cutters and polishers in town will be with them in a few days. The trouble all arose out of the fact that the employers decided to take Saturday afternoons for four months without first consulting the men or offering

St. Andrews Beacon - May 18, 1899 St. George. - The difficulty between employer and employee at Epps, Dodds & Co.'s works, which resulted in the strike of the latter, has been satisfactorily adjusted, the men returning to work last Wednesday. The Saturday half holiday scheme has been abandoned as a result of the strike, the men being left free to do as they please. Last Saturday all the factories worked up to the usual time, 5 o'clock in the afternoon."

St. Andrews Beacon - May 18, 1899 There is an abundance of work at all the granite factories. The new company which operates the Taylor mill, is picking up a good business. It has fifteen men employed."

Codes: G3 / IDX_Names: Granite;
S.J. Daily Sun - May 26, 1899 St. Andrews. - Black Granite Monuments. - St.Andrews, N.B., May 25. - Two massive and elegant Steen Lake black granite monuments have been erected in the Roman Catholic cemetery, one on the Charles Bradley lot, the other on the Michael Riordan lot. They were made by Milne, Coutts & Co., to the order of R.A. Stuart, sheriff of Charlotte county, who owns the quarry at Steen Lake, from which he supplies stone as well as furnishing

St. Andrews Beacon - Nov. 23, 1899 St. George. - In a few days some of the granite works will be closed down for the season. Several of the young men left on Monday for Vermont to enter the employ of Davis Bros. for a few months."

St. Andrews Beacon - Sep. 7, 1899 Labor Day was observed in St. George by a grand procession of the granite cutters, and the carrying out of a general programme of sports, including races, a base ball match, etc. The procession, which was preceded by the band, was a splendid one and reflected much credit upon the town. The sports were also first class and

St. Andrews Beacon - Sep. 28, 1899 Owing to the low state of the water in the Magaguadavic, the granite mills at St.

George have not been able to run to their full capacity lately."

Aug. 1900 - Copied from: St. Croix Courier - Aug. 4, 1960 60 Years Ago. - Milne , Coutts & Co. the well- known granite manufacturers of St. George have been awarded a silver medal for their handsome exhibit at the Paris Exhibition."

St. Andrews Beacon - Aug. 30, 1900 The Granite Syndicate. - The Promoter Thinks That The Deal Will Go Through Safely. - Mr. Charles Campbell, (formerly of Pennfield), who has been promoting the interests of the syndicate which has in view the purchasing and consolidating of the granite interests of St. George, was in town this week, consulting Mr. Francis P. McColl, who is one of the capitalists heading the movement. Mr. Campbell told the Beacon that Mr. McColl proposed making a personal inspection of the properties this week. He had no doubt that the deal would go through, and that before long all the valuable red granite privileges at St. George, as well as the grey granite of Spoon Island, would be under the control of the syndicate. The syndicate is capitalized at $1,000,000. All the granite mills at St. George, with the exception of the new mill recently started by Mr. McGrattan, are included in the deal. The company have in view the carrying on of the manufacture of granite at St. George, on a much larger scale than heretofore, the present companies being compelled to refuse many orders owing to lack of capital. Only recently, said Mr. Campbell, they were compelled to turn down a $35,000 order from New York. It is not unlikely that the three mills operating near the bridge - The Bay of Fundy, Epps, Dodds & Co. and O'Brien & Gillmor - will be consolidated and all the manufacturing done at that point. It is part of the scheme to have an electric railway from the quarries. Options have been secured on all the quarries, including that of Mr. Chas. W. Young, of Calais, also on some of the water power. Mr. Campbell says there is no red granite on the continent equal to that of St. George, and with sufficient capital to develop the business he thinks that it has a great future before it. Asked whether his company proposed incorporating the black granite quarries of the county, Mr. Campbell said that no decision had been reached on that point. No options had been taken on these properties, though some parties interested in black granite had offered to sell. Also asked as to the future movements or intentions of the gentlemen who are now operating the granite factories at St. George, in the event of the deal being consummated, Mr. Campbell said that there would be positions for some of them in the new company. There were others who would retire from the business altogether."

St. Andrews Beacon - Dec. 6, 1900 The Proposed Granite Syndicate. - Charles Campbell passed through town on Thursday en route to New York, where he has capitalists interested in his big scheme to form a syndicate for the purchase of the granite quarries and mills at St. George. Mr. Campbell thinks he can complete the deal before the end of the year, as he has received assurance, that the capital will be forthcoming as soon as the proper inspection of the properties can be made and other preliminaries arranged. - Courier."

S.J. Daily Sun - Dec. 11, 1900 Corner in Red Granite. - A consolidation of all the granite industries at St. George, Charlotte Co., is being effected. The Bangor News says: The syndicate will control the red granite trade of Canada, and will make a great effort to prohibit the importation of Scotch stone. The syndicate will probably buy up all the quarries and water privileges on the Magaguadavic and may introduce other industries which the enormous and easily available water power

N.B. Reporter - Dec. 12, 1900 A consolidation of all granite industries at St. George, Charlotte Co., is being effected. A syndicate will probably buy up all the quarries and water on the Magaguadavic and may introduce other industries."

St. Croix Courier - Dec. 20, 1900 The Beacon and Red Granite. - The Publication of Unreliable Statements May Seriously Injure the Staple Industry of St. George. - Editor. - The Beacon man dies hard and in his death throes endeavors, like the dying Arab, to give his conquerors a parting cut in the ribs. But not having the traditional dagger he uses the weapons with which nature has most liberally provided him, and kicks. In a late issue of the Beacon, it is stated that somebody had 'pulled the wool over the eyes of the St. George granite dealers,' but the statement does not explain in what way this has been accomplished. I wonder if it has never occurred to the editor that he not only had the 'wool pulled over his eyes,' but had his leg considerably stretched as well by his 'friends' in the late contest. But now that he has been whipped, why can't he take his medicine like a little man and not keep up this eternal kicking? He seems to have a particular spite against the granite dealers and is on the lookout for anything that will in any way count against them, or discredit statements made by them. In the last issue of his paper he says that during the month of August only $98 worth of dressed granite was imported from Scotland and claims that he gets his information from the trade statement for August. Now, I do not know who supplies the information for this trade statement, but one thing is certain - either the trade statement or the Beacon is coquetting with the truth, for, if either of them will take the trouble to enquire at the customs house in Montreal, he will find that there was at least one importation valued at $123 entered on August 24th, as the enclosed copy of broker's account will show. It may be barely possible that this was the only importation from Scotland during August, but it is hardly possible, as the parties getting this only supply a few of their customers with Scotch granite, while there are two wholesome firms in Ontario importing it, besides many of the dealers who buy direct. But this statement shows that someone has, to say the least, blundered. Personally, the granite men felt friendly toward the Beacon man and were sorry to see him made a scape goat of in the late contest, but he could not expect them to change their policies just to please him. He surely must concede to them the right to vote as they please. If he would keep their goodwill he should stop this picayune business, quit throwing mud and bury the hatchet. He should give us some interesting news - tell us how large an ocean boat could swing in St. Andrews harbor, or something lively of this character, give the public the trade statement for July as well as for August, be fair and quit kicking. Red Granite."

St. Andrews Beacon - Feb. 1, 1900 The Victoria Granite Company, St. George, have their new works, near Dewar's lumber mills, boarded in. With a little repairing they will be able to use the engine and other machinery in the burned factory."

St. Andrews Beacon - Feb. 15, 1900 The Granite Factories. - There is no town of its size in New Brunswick that stands on a better business footing than the town of St. George. It is founded on a rock - that rock red granite - and so long as the eternal hills last it must continue to thrive. Just now there are four granite factories actively employed in manufacturing the stone, having more men on their pay roll than ever before. These are the Bay of Fundy Granite Company, Epps, Dodds & Co., Tayte, Meating & Co., and the new company which recently took over the Taylor Bros. concern. A fifth factory will be in operation soon after the first of next month. This latest establishment is the property of Messrs. Messenett & McDougall, two industrious young men who were formerly associated with the Victoria Company. The partner's names are Walter Messenett and John M. McDougall. They are now finishing and equipping their factory, which is located fifty feet from the Shore Line track, a short distance from the Dewar mill. The building, which is being erected under the supervision of Samuel Austin is 36x60 feet, the extreme height to the peak being 24 feet. On the right of the building, facing the railway is the blacksmith shop, 16 feet square, while on the opposite side the engine room - 25x30 feet- is located. The factory is being equipped with the machinery owned by the Victoria company before the late fire. Messrs. Messenett & McDougall have a splendid quarry of dark red granite within sight of their mill and within sight of their mill and within easy reach of the railway which passes their doors. As both men are well acquainted with the stone business, and are pushing fellows, they will undoubtedly make a success of their venture."

St. Croix Courier - Feb. 15, 1900 New Granite Firm at St. George. - The recent disastrous fire at St. George, by which the buildings of the Victoria granite company were destroyed, has rendered it necessary for the company to suspend operations for the present. Two members of the company, Messrs. Messenett and McDougall, have formed a partnership and propose to carry on the granite business in all its branches on their account. They have already constructed the necessary buildings and have equipped them with the necessary machinery and expect to be ready to begin operations in a very short time. The new works are located on the road leading to Second Falls and consist of a cutting shop, 60x35 feet, with fourteen posts, an engine house, 20x25 feet, and a blacksmith shop, 15 feet square. Messrs. Messenett and McDougall are good workmen and are enterprising and progressive. There is little doubt that their new venture will be

St. Croix Courier - Feb. 15, 1900 St. George. - All the granite works are now in active operation. Orders are plentiful and it is said that some of the works are employing more cutters than at any time last year."

St. Andrews Beacon - Feb. 22, 1900 Granite Manufacturers Will Not Accede. - At a meeting of the New England Granite Manufacturers' Association held in Boston on the 13th the schedule of wages and hours of labor presented by the National Granite Cutters' Union ..."

Feb. 1900 - Copied from: St. Croix Courier - Feb. 27, 1930 30 Years Ago. - Henry McGrattan is erecting a granite mill directly opposite O'Brien & Baldwin's establishment."

S.J. Daily Sun - Jan. 2, 1900 Joseph Scott, a stone cutter, who resides on Broad Street, has been appointed a special policeman, was sworn in and went on duty last night ..."

St. Croix Courier - Jan. 4, 1900 The Victoria granite company, who were heavy losers in the recent fire, are arranging to

St. Croix Courier - Jan. 25, 1900 St. George. - Milne, Coutts & Co. commenced operations for 1900 on Monday and the other granite firms will commence shortly."

St. Andrews Beacon - Jul. 12, 1900 The St. George granite manufacturers have discovered that the cry that was raised over the preferential clause in 1896 was only an election bugaboo. Last year, under a 25 per cent. preference they did the best year's business that ever they did. The additional preference, is not causing them the slightest uneasiness."

St. Croix Courier - Jun. 14, 1900 In Favor of The Bridge. - Editor. - ... rail connection... St. Stephen ... St. George possesses the finest granite on the continent - I mean the red variety. With this property syndicated as seems not unlikely in the near future there is no good reason why it should not place its products in all the large cities of the United States. The possibilities of the trade are so vast that I hesitate to outline them. How much red granite do you see in Boston, New York or Chicago? Visit any cemetery in the cities I have named and you will be surprised that there is scarcely any red granite, and the quality of the grey cannot compare with that of St. George. The cities of the United States have a right to St. George granite and St. George should have the best railway facilities obtainable... Yours, &c. Bluenose."

S.J. Daily Sun - Jun. 19, 1900 Hopewell Hill, June 14. - W.J. McAdam, granite worker, has left the employ of J.A. Tingley, and will start business on his own account at Hillsboro."

S.J. Daily Sun - Jun. 23, 1900 Hampstead. - June 21. - George Carle, a stone cutter of this place, cut thirty eight feet of stone the other day."

St. Croix Courier - Jun. 28, 1900 The Granite Industry. - In parliament on Friday last, when Hon. Mr. Fielding was pushing through his bill to give effect to his 33 1/3 preference amendment to the tariff, Sir Charles Tupper referred to the fact that the duty on granite from Scotland was now only two-thirds what it was three years ago and that was a great blow to the Canadian granite industry. He pointed out that when Mr. Fielding brought in his preferential tariff he had secured many a Canadian industry by previously advancing the general tariff on many articles. This precaution had not been taken in respect to granite, and Sir Charles suggested that it be taken now. Hon. Mr. Fielding said that he hoped the case was not so bad as represented, It was often found that tariff changes which seemed to be serious did not in the end prove harmful. Mr. Ganong assured Mr. Fielding that the matter was one of great importance. He described the extent and importance of the granite industry in Charlotte county and elsewhere, pointing out that the scale of wages was higher than in Great Britain, and that high freights and climatic conditions had to be met. The finance minister was obdurate and the bill was passed."

St. Andrews Beacon - May 3, 1900 St. George Granite Business. -...from St. George that Mr. ...all, late of Eastport has se- ...a all the granite works in St. ...wealthy syndicate. The rum- ... at it is sought to bring all the ... of the Province within this ... McGrattan's new mill along- ... machinery is now being placed in ... ill will be one of the best equip- ... granite town. It will be operat- ...n."

May 1900 - Copied from: St. Croix Courier - May 5, 1960 60 Years Ago. - Charles Campbell of Pennfield has secured options upon all the granite properties at St.George. He expects to interest large capitalists and it is probable that a great development of industry will result."

N.B. Reporter - May 9, 1900 A proposed amalgamation of the granite firms at St. George is being discussed, with a probability of the business being very largely increased."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 17, 1900 Red Granite Boom. - St. George Red Granite Men Expecting Great Things in the Near Future. - The St. John Telegraph publishes the following relative to the reported amalgamation of the red granite factories at St. George, the first intimation of which appeared in the Beacon of May 3:- Mr. Charles Campbell is at the Royal Hotel. Mr. Campbell belongs to Pennfield, Charlotte county, and for some time has been promoting a big business enterprise. In St. George no less than the purchase of all the granite mills and quarries there by an American company, the development of the industry then to follow as never before. Mr. Campbell is so far advanced in his negotiations that he has secured options on six properties. These are mills and quarries of Milne, Coutts & Co., Epps, Dodds & Co., O'Brien & Baldwin, Tayte, Meating & Co, Messenett & Mcdougall, and the quarry of C.W. Young. This latter is the old Burpee quarry. These concerns now employ some 300 hands and turn out something like $200,000 worth of monument work. The options which Mr. Campbell has secured are good till November 1. He was not prepared to give the names of the people who contemplate being owners of this extensive business, but added that there were three parties, one of whom, he felt assured, would complete the transaction. They are in Boston, New York and Chicago. The transfers made, the new company will be prepared to handle the largest of contracts, building fronts, entrances and buildings in their entirety, deck and bridge work, besides monumental work. The company will equip the mills they intend to work with the most improved and modern machinery, latest automatic tools and air lifts. In all probability the quarries will be fitted with steam derricks and drills. It is also very probable that an electric railroad will be built connecting quarries and mills with the sea and vessels may be reached expeditiously. The electric power would be developed at the Magaguadavic Falls, which, it is claimed, are capable of development of 20,000 horse power. The properties on which Mr. Campbell has options cover 8,000 acres, comprising all the granite property to be had, and extending from the west shore of Lake Utopia to within two miles of Passamaquoddy Bay at Bocabec. The granite mountains vary from 300 to 800 feet in height and four or five shades of granite are there, including the far famed St. George dark red stone. St. George is the only place in America where this dark red granite is to be found and it is there in inexhaustible supply. The company, he expects, would be capitalized at $1,000,000, which would make a fully equipped start and provide a good working capital. The old Burpee quarry would be first developed as it is easiest of access. If the deal be completed there will be a big boom given that section of the country, other industries would likely start up in St. George, the town would have an electric lighting system, and other benefits would accrue. Mr. Campbell leaves Wednesday for Boston to see the people who are interested with him in this matter. If he succeeds in promoting the company, and he is well assured of this, the matter will go right ahead. Mr. Campbell also has an option on some 10,000 acres of well watered land near St. George, where it is thought an excellent game preserve could be established. It had been rumored that he had also an option on the Spoon Island quarries on the St. John river, but as to this he would not say anything definite."

St. Andrews Beacon - May 17, 1900 Messrs. Charles H. Lynott and Wm. J. Doyle, of St. George, have recently acquired possession of the granite quarrying privilege at Utopia Lake, formerly the property of James Thom. It is said they contemplate entering into the granite business."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - May 17, 1900 The Red Granite Industry. - Charles Campbell of Pennfield Secures Options on the St. George Properties. - A Business Which is Capable of Great Developments and Which Needs Only Capital to Accomplish Great Results. - There are few, if any, towns in New Brunswick which possess greater natural advantages for the prosecution of any manufacturing enterprise than St. George. From its lakes away up near the centre of the province, the Magaguadavic River comes pouring down, gathering volume as it flows, until at St. George it is precipitated over the falls, and after that wends its way quietly to the sea. As it is now, without artificial assistance other than necessary dams, the river can furnish many thousands of horsepower. And by tapping adjacent lakes the supply can be almost indefinitely increased. The Shore Line railway affords facilities for the shipment of freight, while the river itself, navigable to the town, may be at any time utilized for transportation purposes. But it is not only its water power that makes St. George a desirable spot for the investment of capital. The timber on the upper portion of the river and its branches is yet largely uncut, while all around are hills of red granite, which at present form the basis of the chief industry of the town. St. George is unique in the possession of these red granite deposits. At no other point on the continent is similar rock to be found. Varying in color from the deepest red to lighter tints and capable of receiving a finish as smooth and as brilliant as the finest steel, for years, the work of turning the red granite into monuments and all kinds of building material has been carried on. Firm has been added to firm, until at present five or six prosperous concerns are in existence. Notwithstanding this, the edge of the granite has just been scraped and the hills still remain, with their wealth of valuable stone almost yet untouched. The lack of capital has prevented a full development of the industry and it frequently happens that, because of the absence of proper and modern facilities for moving and handling the stone, profitable contracts must be refused. It has been recognized for some time that by the introduction of additional capital only can the industry be carried on to an extent at all commensurate with the supply of rock and the demand for the finished product. But it was not until Charles Campbell of Pennfield undertook the work that any practical step was taken in the direction of providing the additional capital. Recently, however, he has secured options on the mills and quarries of all the St. George firms, including Milne, Coutts & Co., Epps, Dodds & Co., Tayte, Meating & Co., O'Brien & Baldwin, Messenett & McDougall and Chas. W. Young. It is understood, also, that he has options on the famous Spoon Island gray granite quarries on the St. John River. Armed with these options, Mr. Campbell proposes to got to the United States where he is assured that there is capital awaiting the investment, provided the purchase price of the different properties is satisfactory. Mr. Campbell should have no difficulty in placing his proposition. Under his opinion he practically has control of all the red granite on the continent and the only grey granite of any account in the province. The red granite quarries cover 6,000 acres and extend from the west shore of Lake Utopia to within two miles of Passamaquoddy Bay at Bocabec. The granite mountains vary from 300 to 800 feet in height. The industry is capable of almost unlimited development. Owing to the limited capital at the disposal of the firms now in the business, the red granite has never been properly advertised or exhibited. The sales made in the past have been made because of the knowledge of the existence of the stone in a few of the leading centres of business in Canada. Throughout the greater part of the country and the United States, the fact is unknown that the stone can be obtained here. The spread of such knowledge by means of judicious advertising and the pushing of sales would mean a great increase in the demand and the amount of business done. The existing firms employ about three hundred hands and turn out about $200,000 worth of monument work yearly. Should the proposed company be organised, they will not only be equipped to undertake the largest contracts for building fronts, entrances, and buildings in their entirety, dock and bridge work, and the like. This will mean not only a large development in the industry itself, but should result in attracting other capital to the town, with corresponding advantage to the people."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Nov. 1, 1900 A Successful Industry. - To the Editor of The Beacon. Sir - In view of the fact that the Conservatives of Charlotte County and more especially those of the parish of St. George are endeavoring by any and every means to convince the electors that the Granite industry is suffering, under Liberal rule, I feel that it will be but right to let the truth be known through the medium of your paper. When Mr. George E. Foster visited St. George in 1896 he assured his hearers that after four years of Liberal administration not a wheel would be turning. Mr. Ganong went further and limited the time to six months. As is well known, the liberals came into power, only to find the business at a standstill and the granite workers suffering under a so-called 10% cut in their wages, but which was in reality a 20% reduction. This was after 18 years of Conservative rule. Mr. Foster's remarks as well as Mr. Ganong's were of course intended to intimidate the Granite employers and it had considerable of an effect. Now, Mr. Editor, what do we find after four years of Liberal rule? Are affairs in such a deplorable condition as predicted by Messrs. Foster and Ganong? Not by any means, but on the contrary we find a degree of prosperity hitherto unknown in the Granite industry. More men are employed, more mills are running, two new firms have started since the advent of the Liberals came into power. In fact the increase in business and the general prosperity of the past four years have been so marked that the attention of American capitalists have been attracted and they have been endeavoring for some time to purchase the entire granite business interests of St. George. Evidently if the capitalists know a good thing, the present owners are equally as wise, since they are not inclined to sell at reasonable figures at all events. Perhaps it would not be out of place to state here that the values of the various properties have suddenly advanced. For instance one purchased but a few years ago for twenty-two hundred dollars ($2200) is now held at ninety thousand ($90,000). Another, an investment of four or five thousand dollars being held at forty-five thousand dollars ($45,000). The Tory manufacturers are asserting that the preferential tariff as adopted by the Liberal government is ruining their business inasmuch as it allows Scotch granite which they claim is manufactured more cheaply, to be imported under the reduced rate. A statement which is entirely at variance with the facts. In the first place, Scotch granite does not come into Canada to any great extent, as proven by the trade and navigation returns, which show only $10,674 worth in direct competition. A leading firm here claims to have sold over half this amount, which assertion may be partly correct, as it is well known that the manufacturers have a happy faculty of 'importing Scotch granite' quarried at the St. George quarries. In regard to the scale of wages paid in Scotland, all granite workers knew that the granite cutters union established there a few years ago forced the manufacturers to pay a rate equal to that paid in Canada and in certain instances a higher rate. Mr. Editor, I send you the foregoing statements, all of which can be proven, in order to show the fallacy of the predictions of Messrs. Foster and Ganong. Those gentlemen, Lilliputian puppets of the great Cumberland false prophet, who four years ago predicted motionless mills, empty granite sheds and starving granite workers, were as silent as the phenix in regard to the granite question, during their last visit here on Monday evening Oct. 22nd, because the unparalleled prosperity of the granite industry stood out in bold contradiction to all their evil predictions. Thanking you, Sir, for your valuable space, I am, yours truly, Fair Play. St. George, N.B., Oct. 29, 1900."

Codes: G3 /　　　　　　　　　　IDX_Names: Granite;

St. Croix Courier - Nov. 1, 1900 The Granite Men Have A Word To Say. - The Beacon Called to Account for One of its Reckless Assertions - They Speak from the Inside and Tell Why St. George Will Give Mr. Ganong a Big Majority. - In its last issue the Beacon did a lot of whistling to keep its party's courage up. Majorities for Mr. Armstrong were figured out in almost every polling place, whereas the editor knows, from his weary pilgrimages through the county, that only in two or three polling places has he any possible chance of securing a majority. In the total he will be far behind the conservative candidate. The leaders of his party knows this well, and the most that they hope for is to be able to replace Mr. Ganong's majority obtained in 1896. The Beacon told in its last issue of contentment in St. George with the policy of the liberal government and of a majority that the granite town would give to Mr. Blair's candidate. The granite men have a word to say about that, and they speak from the inside in the following letters:- St. George, N.B., October 30, 1900 Editor Courier: Dear Sir, - Anyone outside of St. George reading the article in the last issue of the Beacon might be misled into the idea that the granite manufacturers are perfectly satisfied with the liberal government and its preferential tariff. To settle that point and show the Beacon that he is on the wrong track, we, the undersigned granite manufacturers, state over our own signatures that the liberal platform with preferential tariff at present and free trade in the future is detrimental to our interests, that under conservative rule, with a strong national policy, we see a better and more prosperous future for the granite industry, and that it is our intention to make an effort to again bring into power the party that framed that policy by voting for G.W. Ganong on November 7th. Tayte, Meating & Co. Epps, Dodds & Co. Milne, Coutts & Co. Messenett & McDougall. -- St. George, N.B., October 29th, 1900 Editor St. Croix Courier: Dear Sir, - The last issue of the Beacon has a very flattering item on the granite business in St. George - how it has prospered under the liberal preferential tariff; how much more money the manufacturers are making; how much more wages the men are getting, etc. Now all this sounds good, but it would sound better if the editor would give us his authority for making the statements. Who told him all this? Did any manufacturer give him this information? Or did he dream it? Or is he a mind reader? According to his argument the lower the tariff on Scotch granite and the nearer we get to free trade the more prosperous he will be. That sounds very nice as a theory, but let us look at it practically. The chief competitor of New Brunswick red granite is Aberdeen red granite. The wages paid for cutting and polishing in New Brunswick are more than eighty per cent. higher than in Scotland. The freight rates to Ontario - our principal market - are about the same from Aberdeen as from St. George. Now Mr. Blair, when speaking here, told us that the preferential tariff had done great things for Canada. Among other things it had reduced the price of any article imported from Great Britain the amount of the reduction in the tariff and had fixed the price on similar articles, whether imported from a foreign country or made in Canada. On that point I agree with him, as Scotch granite can now be laid down in Canada cheaper by 1/3 of the duty of 1896 than it could be in 1896, and has fixed the price of similar granite made in Canada. The granite dealers have had to cut their prices to meet this competition, while wages have remained the same, and steel, emery and supplies of all kinds have advanced in price. That is probably what the Beacon thinks has made us prosperous. Mr. Blair told us that we had plenty of bone and sinew and would soon be able to stand alone. That sounds good, but how long could the granite industry stand alone in competition with cheap labor in Scotland? We cannot expect men to work for European wages when they can go over the line into the United States and get living wages where granite is protected with a fifty per cent. duty. If the liberal rule is so beneficial to the granite industry how does it come that every granite manufacturer in St. George is a liberal conservative? Surely they must be blind to their own interests to fight against a government that is making them prosperous - that is, if we can believe the Beacon. The fact of the business is just this. Liberal rule, with free trade looming up in the distance, means death to the granite industry in St. George. The granite manufacturers are hard working, practical men and know their own business better than the Beacon does. They know whose policy is best for them. This Mr. Armstrong will find out on the 7th of November when he counts up the 'old time Gillmor majority' he figures on. Oh yes, St. George is all right. Red Granite."

St. Croix Courier - Nov. 15, 1900 St. George. - The granite works are all running full force as yet, but some will begin to shorten their crews soon. Milne, Coutts & Co. are putting on extra men, being behind work on account of the summer's

St. Andrews Beacon - Oct. 4, 1900 Black Granite at Paris. - A specimen of black granite from the Steen Lake quarry, which Prof. Bailey had polished and sent to the Paris Exposition, has elicited the following enquiry:- Amsterdam, Holland, September, 1900. Geological Survey, Bocabec, St. Andrews. Gentlemen! I had the pleasure in seeing your granite syenite and serpentine at the exhibition in Paris and as I do a great deal of businesses in those articles for the whole Europe and at the principal churchyards at Paris I even erected very large memorials, so I should like to know of you, whether, on the continent of Europe there may be occasion, to do any Businesses with your granite, either for selling your stone in rough Blocks to the manufacturers of granite, syenite and serpentine, or that you deliver it quite at all worked after the drawings either ordinary chiseled for Bridges and slizes or polished ordinary chiseled for Buildings. It would please me very much, to get one or more samples of yours, of which one side polished, in order to see the color and further to get your prices for the rough stones per cubic Meter, delivered one of the European steamers. Yours respectfully, L. Binger."

St. Croix Courier - Oct. 11, 1900 St. George. - The work in the different granite mills has been greatly retarded owing to lack of rain. The river was lower than for years. Now that the much needed has arrived business will assume a different aspect. A number of our young men have gone to Vermont to work at the granite industry. More will follow next week."

St. Croix Courier - Sep. 13, 1900 St. George. - Tayte & Meating's mill was shutdown last week for repairs."

St. Croix Courier - Apr. 4, 1901 St. George. - Wm. Coutts is in a very critical condition and the end is expected at any

Codes: G3 / IDX_Names: Granite;

N.B. Reporter - Apr. 17, 1901 William Coutts, of the granite firm of Milne, Coutts & Co., died at St. George Saturday morning after a short illness."

St. Andrews Beacon - Apr. 18, 1901 St. George mourns the death of Mr. Wm. Coutts (of the granite firm of Milne, Coutts & Co.), which occurred on Saturday morning last, after a short illness. The deceased was a Scotchman by birth, and came to St. George over twenty five years ago to go onto the granite business with the Bay of Fundy Granite Company. Some years later, he became a member of the firm of Milne, Coutts & Co. His wife, - a daughter of the late Moses Parks - and two children survive him. There were few men in the county who had more friends than the deceased. Of a gentle, kindly disposition, yet manly withal, he was a man to make friends and to hold them when made. As a business man he was the soul of honor and integrity, besides being industrious and enterprising. Much of the success which the firm has enjoyed has been due to his industry and ability. Few men were better acquainted with the details of the granite business than he. ... The deceased was about 57 years of age."

St. Andrews Beacon - Apr. 13, 1901St. George. - The pulp mill project and the granite consolidation still hang fire, with very little hopes of their materializing in the near future."

St. Andrews Beacon - Apr. 18, 1901 St. George. - All the granite workers are actively employed."

St. Croix Courier - Apr. 25, 1901 Tayte, Meating & Co. have opened a general store in connection with their granite industry and are now carrying a good stock of staple goods at very moderate prices."

St. Croix Courier - Aug. 1, 1901 St. George. - Haymakers, stone-cutters, polishers and mill men are in demand here at the present time, but more particularly the former."

St. Croix Courier - Aug. 22, 1901 St. George. - Tayte, Meating & Co. are rushing through a lot of building columns for a building in Ottawa. The columns are quite large, of red granite and all polished. The building in which they are to be placed is to be completed before the arrival of the Duke and Duchess of Cornwall in Canada, hence the rush."

Weekly Record - Fri., Dec. 27, 1901 A beautiful gray granite monument, handsomely carved has been placed in the family lot of the late Nelson Arnold Esq. in the Upper Corner Cemetery and bears the inscription 'In Memory of the late Nelson Arnold'. The shaft was furnished by the well-known establishment of Mr. P. Kinsella, St. John, N.B."

St. Croix Courier - Feb. 14, 1901 Vess. Lynott, formerly of St. George, but now residing at Red Beach, is on a trip to Boston, New Haven, New York, Philadelphia, Washington, Baltimore and other points in the interest of the Maine Red

St. Croix Courier - Feb. 14, 1901 St. George. - The streets of St. George are almost clear of idle men. The usual vacation of the granite workers is over and the mantle of business is again thrown over the town. It is understood that all the works have started in with good prospects."

St. Andrews Beacon - Jan. 10, 1901 The St. George Granite Works will reopen in a few days. Usually these establishments close down until February, but pressure of orders this century compels an earlier opening."

S.J. Daily Sun - Jan. 11, 1901 The St. George granite works will reopen in a few days, owing to the pressure of orders."

St. Croix Courier - Jan. 17, 1901 St. George. - Epps, Dodds & Co. intend starting their granite mill on Monday next. It is understood they will put on all their crew at the start. All the granite works will be booming by February 1."

St. Andrews Beacon - Jul. 4, 1901 Largest Piece of Granite Ever Quarried. - Rockland, Me., June 28. - The largest solid piece of granite ever loosed in a quarry in this country was separated from its natural bed in the John L. Goss quarries, Crotch Island, Stonington, a few days ago. Some idea of its dimensions can be gained when by careful measurements it was estimated to weigh 52,000 tons. This enormous mountain of granite is 325 feet long, 50 feet wide and 38 feet in depth. 'This,' says Mr. Goss, 'is the largest piece of granite ever loosed in this country.' Months of careful work were expended in loosening this giant piece of granite from the pyramid-like mountain where it rests. The peculiarity of the granite formation at Crotch Island alone, makes this enormous piece of quarrying possible. The granite is a veritable mountain, shelf upon shelf, and in order to separate one layer from the other it is necessary to drill hundreds of holes into which dynamite is

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jul. 18, 1901 Maine Granite to Scotland. - (Bangor News) - The most important event in the granite industry ever contemplated in this country has been arranged to take place next month when John L. Goss, owner of the extensive quarries on Crotch and Moose Islands, Stonington, in conjunction with W.S. White, manager of Booth Bros. & Hurricane Island Granite Co., will ship the first cargo of granite ever sent from this country to Scotland. Not only will this be the first cargo ever shipped from the United States to Scotland, but it will be the first ever sent from this country to a European port. The importance of this innovation to the granite industry of Maine and New England can scarcely be estimated for it marks an era in this great business, and on its success depends a great deal. In fact, should this enterprise prove satisfactory it means the revolutionizing of the granite trade in the United States. The question of shipping granite to Scotland, which is akin to sending coals to Newcastle, in a figurative sense, has been carefully studied by Messrs. Goss and White and some months ago a man was sent to England and Scotland to study the conditions and to report the probable results of such a shipment. The report was favorable for an American shipment and therefore the August cargo. The conditions that make this move on the part of American granite manufacturers possible have been brought about through natural causes, the playing out of the famous Scotch granite quarries, operated for centuries as the source of supply for England, Scotland and Ireland. The most famous of these quarries is at Aberdeen, Scotland, where the best building stone of Great Britain has for centuries been quarried. Into the structure of the great cathedrals of Great Britain, the government houses, and the palaces of the aristocracy, Aberdeen, or Scotch granite has entered. From years of quarrying, the quarries have become coal mines as to depth. One result has been that it is no longer possible to quarry dimension stone of any appreciable or commercial value, because the strata which at first created the fame of Scotch granite quarries, have almost disappeared. It has become an architectural business in England that the architect who wishes to use granite in the house structure must needs fashion his house to the stone rather than the stone to the house. This is solely on account of the scarcity of granite in the quarries, which centuries of building has robbed of their native treasures. England has become somewhat alarmed over the scarcity of building stone and has been importing granite from Sweden and Russia, and arrangements have been made by importers of granite to delve into the granite mountains of Newfoundland for a supply for England. The Maine experiment, however, is sure to attract great attention from the English people. The vast and yet uncovered fields of granite in Maine and New England tidewater places offer immeasurable advantages and inexhaustible sources of supply of granite for the world at large. This fact and the knowledge that the English markets are suffering because of the denuding of the Scotch quarries led Messrs. Goss and White to send a man to Europe to investigate. The first shipment, which will be divided equally between the Crotch Island (Stonington) granite and the Hurricane island granite, will be from two to three thousand tons and will be sent direct to Liverpool, England. The vessel which is owned by Mr. Goss and others will load direct at the quarries at both places. The fact alone is significant in the light of the truth that there are but few quarries in this country where a cargo can be loaded upon a vessel directly at the quarries for a foreign port. At present, in England, all pieces of granite under 40 cubic feet sell for $1.15 to $1.25 a foot, and all sizes above that at $2.25 a cubic foot. On account of the youth of the Maine quarries, 75 per cent would be high priced sizes. Basing on estimates of transportation Mr. Goss says that they can put the Maine granite in Glasgow, Aberdeen or Liverpool at $1 per foot where Scotch granite now sells at $2.25."

St. Andrews Beacon - Jun. 13, 1901 The St. George granite manufacturers have received permission to string telephone wires on the Western Union poles from their factories to the railroad station."

St. Croix Courier - Jun. 13, 1901 St. George. - The polishing mill of Milne, Coutts & Co. has been closed for a few days on account of some break in the machinery. The granite companies have their telephone system completed, having permission from the Western Union Telegraph Co., to place the wire on their poles from the works to the station. The many friends of H.D. Phillips, formerly of this town, but late of Phillips Bros. granite manufacturers, Barre, Vt., will learn with regret that he is in a very critical condition in Ashville, N.C., where he went for the benefit of his health a few months ago."

St. Croix Courier - May 9, 1901 Utopia. - Chas. Woodbury and Levi Goodall, jr., are at work in the granite mills, St. George."

St. Andrews Beacon - May 23, 1901 Sheriff Stuart visited the Meddybemps Lake black granite quarry, Me., on Monday. This quarry, which was the property of Fred Hall, has recently been purchased by a Boston syndicate for $10,000. While it is a good stone it is not the superior of the Steen Lake granite."

S.J. Star - Nov. 8, 1901Of St. George Granite. - At a meeting of the building committee of the Central Congregational parish, Bangor, which was held late on Wednesday afternoon, the contract for the new granite church was awarded to W.N. Sawyer. The new church will be built of Bay of Fundy red granite with trimmings of Indiana limestone. The granite will be quarried in St. George and will be cut in Bangor this winter. The limestone is being cut in Roxbury. The new church which is to be one of the finest in New England, will cost $50,000. Of this sum $45,995 has already been pledged. The old edifice, it is thought, will furnish nearly $3,000 worth of building material. E.R. Burpee is one of the committee and one of the largest

S.J. Star - Nov. 11, 1901 Maine Granite Industry. - (Calais Times) - The granite industry of Maine is now enjoying a period of great prosperity, large orders being in hand for both rough and cut work, while many important contracts are pending. All of the companies are employing larger crews than for a number of years past, and wages are higher than for a number of years, with good help none too plentiful. In some departments of the work it is impossible to get men enough. Some of the quarries have so much work that new contracts are being refused every week."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Nov. 27, 1901 St. George. - The granite mills are running on short hours owing to the shortness of daylight. They expect to run this year up to Christmas, as business is good."

St. Croix Courier - Sep. 19, 1901 The polishing works in the granite mills of Milne, Coutts & Co., Epps, Dodds & Co., and O'Brien, Baldwin & Co., are closed this week in order to repair the sluice leading to the different wheels."

St. Andrews Beacon - Sep. 26, 1901 Came from St. George. - Charlottetown letter:- One of the largest monuments ever brought to this province arrived here by the Princess, Wednesday night. The monument was from the granite works at St. George, N.B. It weighs about 15 tons with a five ton base. This monument will be erected in Sherwood cemetery by H.C. McLeod, to the memory of his first wife, who was a Miss Dawson of this city."

St. Croix Courier - Apr. 3, 1902 and St. Andrews Beacon - Apr. 3, 1902 The Beautiful Magaguadavic. - Another Enthusiastic Visitor Tells of the Scenery and Industries at The Granite Town. - In an Interesting Letter Published in The Yarmouth Herald. - Friend Lawson: Months ago I promised to write concerning another of the industries of Charlotte county, but my time has been so fully occupied as to prevent my doing, so I will now seek to fulfill my promise. ... But amid all the changes which took place in earlier days there was one source of wealth which had not been touched. Some of the people from the old country could not but observe the striking similarity existing between the red granite which was so abundant in the hills which surrounded their New Brunswick home and added so materially to the beauty of its scenery, and the Aberdeen stone which had become so famous for ornamental or monumental purposes; and a little delving into the sides of mountains and cliffs convinced them that this stone was quite as good as the home article. A company was formed to quarry and manufacture the St. George granite. St. John and other places became interested and in their initiatory attempts much experience was gained and much labour and money lost - nothing at all unusual in the beginning of such enterprises. After the burning of one factory with its machinery and the consequent heavy losses incurred, the business hung fire for a time but the work was not abandoned. New companies were formed, more capital and labor were employed, and against a keen competition, and despite the sentiment in favor of the Scotch granite, a market was found not only in the maritime provinces but in the upper provinces and in the United States as well. Some very fine buildings in New York, Boston and elsewhere in the union are built of St. George red granite and these buildings are both handsome and durable, the stone maintaining its color under the severe exposure of our North American climate and proving its durability under the most trying tests. Under the protective policy adopted by the United States, dressed building stone of all descriptions was placed under the ban of prohibition duties, and this in large measure, has destroyed the export trade. The most that is done now is exportation direct from the quarries, and in the rough, for there are some who will use nothing else but this stone, and in fact it is not to be duplicated elsewhere on the continent. Under more generous tariff regulations between the two countries doubtless the numerous quantities of excellent building stone now lying about the quarries, would find a ready market; and if builders requiring good and beautiful stone would enquire of the proprietors, ample satisfaction, both in regard to terms and quality, could be easily and satisfactorily arranged. No better or cheaper building stone can be obtained than at St. George. The demand for the finished monuments and ornamentations of various kinds have largely increased in Canada, with remarkable tariff concessions, the newest and best machinery and tools are employed, and the output is yearly increasing, and constant improvement in handling and manufacturing is apparent. Six factories well equipped with polishers, lathes, saws for sawing the granite blocks into slabs of required thickness, are now engaged in this work in the town. The most of these factories also have stores where large supplies are kept, and large supplies are needed in this business. I will here give the names of the firms now doing business in this line: Epps, Dodds & Co., Tayte, Meating & Co., O'Brien, Baldwin & Co., Milne, Coutts & Co., McDougall and Messinet, McGrattan & Co. In some of the factories trip hammers, sand air blasts, etc., are installed while derricks are inside the large buildings as well as outside. Overhead rollers and pulleys of heavy construction for removing the blocks from place to place in the buildings for convenience of cutting, polishing, lettering, and the ponderous lathes which are used for turning round monuments, pillars and urns, all attest to the heavy work and expense involved in carrying on the business in and about the factories. The quarries are from three to six miles from St. George in the steep side of the mountains, which are seen on both sides of the river, and in unequal distances from its waters, but always leaving a wide interval or gentle undulating space, affording room for farms and roadings ... Well here then in the sides of these mountains the drill bores its way deep into the solid wall and stone powder, not dynamite, for the latter shatters in a downward direction, so powder must be used and the holes bored in such a way as not to shatter the rock more than possible. After the blasts, then the removal of the blocks or broken stone, much of it too good to be wasted by tramways, and thrown down the sides of mountains out of the way, until artificial mountains are built up of this waste, almost as high as those from which it has been taken. Then the labor of getting the huge blocks to the level roadway or car tracks, for heavy team wagons, as well as the cars of the Shore line railway, are utilized to bring the rough stone to the factories to be smoothed and polished. The chain and clog drivers, the hoisting and transportation gearing required, for all this may be imagined, but the work is done and very rarely have serious accidents taken place. I am pleased to add that each year shows a gratifying increase in the business. The factories are not shut down for very long during the winter months, and at this writing I am told that the prospects for the present year

S.J. Daily Sun - Apr. 19, 1902 Hampstead (17th). - B.H. Appleby and Ernest Walton have been operating their quarries for afortnight."

S.J. Daily Sun - Apr. 24, 1902 St. George (23rd). - Parties here are shipping some of the red granite to Bangor, Me., for the purpose of building a Congregational Church. Mr. Burpee, one of the principal movers in this scheme, was formerly a resident of St. John."

Codes: G3 / IDX_Names: Granite;

S.J. Star - Apr. 29, 1902 The stone cutters of St. George have organized and there are rumors that a strike will be declared."

St. Croix Courier - Aug. 14, 1902 St. George. - Coronation Day. - ... granite works were closed..."

St. Croix Courier - Dec. 4, 1902 Joseph Meating, of the granite firm of Tayte, Meating & Co., is at present in Boston erecting a monument to the memory of his sister, Mrs. Thomas Maxwell. Mr. Maxwell placed the order with this firmduring a recent visit to St. George."

St. Andrews Beacon - Dec. 14, 1902 Mr. Charles Epps, of the firm of Epps, Dodds & Co., St. George, was so pleased with the appearance of the Steen Lake black granite monuments that he purchased all the loose stone at the quarry from Sheriff Stuart. It will be worked up into monuments."

St. Croix Courier - Dec. 25, 1902 St. George. - The granite mill in the gully, formerly occupied by Tayte, Meating & Co., has been torn down."

Daily Sun - Feb. 3, 1902 St. George, Feb. 1. - The granite sheds of Epps, Dodds and McDougall and Messenett have opened for work again for the season."

St. Croix Courier - Jan. 2, 1902 New Granite Quarries. - Calais People Have Secured A Promising Property. - Hon. G.M. Hanson, Hon. M.N. McKusick, C.B. Gardner and F.W. Hinckley have control of the Hawkes granite quarries in Charlotte and have interested a syndicate of wealthy New Yorkers in the property. Representatives of a Boston syndicate were after these quarries, but while they were dickering over the price and conditions of sale the Calais gentlemen, who realized the commercial value of the property, stepped in and in a business-like manner, purchased it outright, shutting the Massachusetts syndicate out in the cold, reports a Charlotte correspondent of the Commercial. These quarries, which cover an area of four hundred acres, are located within half a mile to a mile from the main line of the Washington County railroad, and attain an elevation of from three hundred to four hundred feet. A valley runs directly along the the face of the mountain extending down almost to the railroad and the shipment of the stone, next to its actual existence in quality and quantity the most important part of the business, is made extremely simple. There are no hills to climb nor muck holes to cross and the largest columns quarried can be safely hauled to the cars for shipment. There are five colors of stone obtainable in almost unlimited quantities - grey, dark red, light red, pink and black - all of excellent quality and capable to attain a very high polish. The pink and black are very handsome and are said to be very fine by those qualified to judge. There is an unlimited supply of each and columns of any dimensions can be procured. The old Moosehorn mill privilege, located within a quarter of a mile of the quarry and of Charlotte station, has been purchased by the parties who now own the quarries, and here will be located the polishing works, where many men will find employment the year round, and the immediate vicinity will in time develop into quite a settlement fostered and maintained by the quarry and its allied industries. Even should the New York parties interested fail to take hold of the matter with the intention of pushing it, enough local capital is already pledged to assure the successful launching of the enterprise, many of the solid town of Calais and vicinity being only too eager to secure an interest in the property. The opening up of these quarries will mean much to the residents of Charlotte, who are confident that the spring of the approaching year will see the establishment of a business which will prove a bonanza for the promoters, who were not slow in catching to a good thing when opportunity presented."

St. Croix Courier - Jan. 2, 1902 Strike Settled. - The granite manufacturers at Red Beach have granted the demands of their men, who have been out on strike for some weeks, and the men resumed work on Monday. The men obtained the nine hour day and an advance of ten cents per day on their pay."

St. Croix Courier - Jan. 9, 1902 St. George. - The granite works of Henry McGrattan commenced operations on Monday

Daily Sun - Jan. 15, 1902 St. George. - The granite sheds have been closed down for a short vacation. They will soon be reopened again and run at full blast."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jan. 16, 1902 Maine minerals. - ... All over the county there are great rocky hills, most of them being nothing more or less than huge granite rocks, and they are expected to increase the wealth of the residents of the county in no small amount in the course of the next few years. The quarries of Red Beach and some other places in the county are well known all over the state and, for that matter, the greater part of the country, but the others are now bidders for fame and their products must first be introduced to the people and their worth proven before they will become a prominent factor in the industries of the county. Charlotte's Good Granite. - Among the most likely of these quarries are those at Charlotte. They have been worked slightly in past years - that is to say, a small section of one of them has. The location of these quarries is peculiar, to say the least. There is in town a row of hills or mountains, as they are called by some. They are located about a mile from the station and in such a manner that half way between them and the station there is an excellent water power for a polishing mill, which would be required to prepare the granite for shipment. The work of constructing a spur track in to this water power would be a comparatively easy job, the land being particularly well suited to railroad building. From the water power to the quarries a tramway to bring the rough granite to the polishing mills and finishing sheds could be very easily constructed. Here is where the odd arrangement of the quarries comes in. The valleys between each row of these hills are of such a formation that a line of tramway could run on each side of each row and that the distance would be, in each case, practically the same. There is found in this quarry or quarries greygranite, pink granite and red granite, all of the best hues. The experts who have examined it say that it is one of the best granites in the world to work, that columns of any desired size can be taken out of it with absolute certainty. This of itself is a great thing, as it is the matter of being able or unable to get out these columns for a building that controls the letting of a contract for furnishing the material for the construction of a big edifice. Another interesting feature of these quarries is the estimate of practical men that it will require at least a hundred years of constant work to remove all the granite that there is in the ledges. There is also a small ledge of black granite, but it is not of an exceptionally large size. This quarry or series of quarries are controlled by Messrs. McKusick, Hanson and Gardner of this city. Convenient For Shipping. - Mr. Gardner has also a quarry located on the coast that is so convenient to the water it would be absolutely unnecessary to use teams or trams to load the product of the quarry upon the vessels, all that would be required being two derricks, one to swing the granite blocks from the quarry out, the other to lift it aboard the vessel."

St. Croix Courier - Jan. 23, 1902 The Granite Town Mourns Its Loss. - Alexander Taylor Dies Suddenly After a Brave Fight Against Disease. - Active in Business Life. - Many Left to Mourn. - Our St. George correspondent writes: St. George mourns the loss of one of her most prominent and highly respected citizens in the death of Alexander Taylor, who passed quietly to rest on Monday morning last at 9 o'clock. Mr. Taylor had been in failing health for some time but death came suddenly at the last, for scarcely had his friends missed him from the street when the startling news came that he was dead. The departed was a son of the late Alexander Taylor, who died a few years ago, and Elizabeth Taylor. He was born at Blackburn, Aberdeenshire, Scotland, on March 12th, 1862. When a lad of twelve years of age he came to America with his parents, who settled in Hallowell, Maine. After a residence of about two years in that place the family moved to St. George, the father entering the employ of the Bay of Fundy Red Granite Co., for a very short time. He established a granite business of his own in 1876, in which our late lamented friend was interested. In 1889 Mr. Taylor, sr., while on a business trip through the upper provinces, was seized with a violent illness and died suddenly at Quebec, at whose death

Alexander, jr., assumed the responsibility of the business as senior partner of the firm of Taylor Brothers, his two younger brothers, John and William, joining with him. Very sad it is to relate that not one of those young men remain alive. Three years ago, feeling that the dread disease, consumption, which had taken his two brothers, was working on him and feeling that he could no longer attend to his business duties, sold his property to John O'Brien and A.S. Baldwin, by whom the business is now being carried on under the name of the St. George Granite Works. After disposing of his business Mr. Taylor went to Colorado and spent the winter of 1889 in that state with the hope that a change of climate would be beneficial. But the progress of the disease could not be stayed and slowly but surely its work has been going on until the final cord is snapped and Death has claimed its victim. Mr. Taylor was married on Jul 12th, 1892, to Miss Almeda McRae of Whittier's Ridge, who, with two little daughters, Vera, aged eight years, and Helen, aged four, survive him. Besides his wife and children he leaves a mother and three sisters, Mrs. Elizabeth Laing and Mrs. Black (half sister) of Quincy, Mass., and Miss Annie Taylor, who lives with her mother in St. George. ...."

St. Croix Courier - Jul. 3, 1902 St. George. - Dominion Day. - ... granite works were closed for the day ...."

Daily Sun - Jul. 26, 1902 J. Alton Tingley, proprietor of the steam granite works at the Cape, recently shipped large consignments of monuments to Moncton and Wolfville, N.S. Although his establishment is well equipped, Mr. Tingley finds more work than he can handle."

S.J. Star - Jun. 2, 1902 The granite workers of St. George are out on strike for a nine hour day and increased wages. About 300 men are out."

Codes: G3 / IDX_Names: Granite;

S.J. Daily Sun - Jun. 3, 1902 St. George. - The Granite Workers Are Out On Strike - Speedy Settlement Expected. - The stone cutters, some 150 in number, struck yesterday and their action throws about 300 workmen out of employment. The men ask for a restoration of wages to the old scale, which was reduced 10 per cent some seven years ago by mutual consent, business then being pretty dull. The men claim that the past two years have been good ones for the proprietors and that the original promise of making good the old rates should now be carried out. The men gave the bosses until May 15th to consider the proposition and 15 days more grace ere action would be taken. No answer being forthcoming, the union ordered a strike and it went into effect yesterday. The strikers and bosses are still on friendly terms and both sides have strong hopes that an amicable arrangement will be speedily effected."

S.J. Star - Jun. 3, 1902 The strike at St. George has thrown about 300 men out of employment. It is hoped a settlement will soon be reached."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jun. 5, 1902 St. George Granite Industry Tied Up By A Strike. - The Employees and Newly Organized Union Fail to Reach an Agreement and the Men Go Out. - A Statement of the Points of Difference - Good Feeling Prevailing and a Settlement Hoped for. - It is not often that a Charlotte county community is disturbed by the inauguration of a strike but one is in progress now that threatens to be long continued, for each side seems determined to carry its point. The disturbed community is the pleasant and prosperous village of St. George, the leading centre of the red granite industry in Canada. It is this industry that has given the town its air of prosperity and a more than local reputation for progressiveness and it is in the red granite mills that the difficulty has arisen. Excepting for the evident idleness of its usually busy mechanics, a visitor would not know that any difference had arisen, for employers and the recent employees mingle in their customary friendliness and no harsh or unkind word has been spoken on either side. The hope is freely expressed that such conditions shall prevail until the troubled waters are smoothed, and such a condition seems easily possible in a community like St. George, where the employers have worked side by side with the men and cannot be regarded as 'grinding monopolists' by any stretch of the imagination. At the present time the management of each side is in the hands of cool heads and there is no appearance of any bitter feeling. In March of the present year the employees organized a labor union for the purpose of bringing united effort to bear for securing better terms and better wages. On March 29th, they presented to the employers a 'bill' containing a scale of wages demanded and of conditions under which they were willing to work. They asked for an answer by May 15th, and, on that date, received a communication from the employers asking for an interview with the executive committee of the union. Two interviews followed and then the committee reported to the union, presenting them with a 'bill' formulated by the manufacturers. In this bill the scale of prices was considerably reduced from those named in the original bill but its sections were unanimously adopted until the 'miscellaneous' sections were reached. This bill reads as follows: Bill of Prices for St. George. 1902-1903. 8 Cut work per sup. Ft. ... $ 0.45 10 ''''' ... .50 Bocabec Granite ... .80 and .85 Good Peaned For Polishing Red, grey or black granites, per sup. Ft. .40 Bocabec granite ''' .70 Good Peaned Beds Red, grey or black granites, per sup. Ft. .20 ''''' finished ... .22 Bocabec granite ''' .35 Rustic Work Plain margin drafts 10 cut per lineal ft. .15 Margin drafts backed up ''' .30 Panels on rock face work to figure full size of face ... Hands raised « in. or under 1 foot long .50 For each additional foot added

... .25 Raised Letters « inch and under, per inch ... .20 3/4 ' ' ' ' ' ... .25 1 ' ' ' ' ' ... .33 Headed letters and one half ... Two periods shall count as one letter Joints Two ft. and under, per lineal foot ... .10 Over 2 feet ... .12 Sunk Letters 1 inch and under, ... .06 « ' ' ' ... .08 2 ' ' ' ... .10 Anything over add in proportion ... Roughing Round Work Columns 1 foot dia. and under, with hole in each end, per lineal foot .20 Over 1 foot dia, per sup. foot ... .15 Urns 2 ft. and under in length each .40 Over ' to figure same as columns. Markers 2 feet and over, good peaned for polishing to figure same as bases, dies and caps ... Under 2 feet add ... .05 Tops, round and bevelled, figure once and one half, nothing to measure less than 6 inches ... Posts Hammered or peaned for polishing to figure same as other stone, and no stone to figure less than 1 foot sup. measurement. Hpep. round or double O.G. or column tops to figure double ... Washes Hammered, or peaned 3« and under either way per lineal foot ... .22« Over 3« add in proportion ... Gable to figure same as wash ... When moulding forms a circle or Gothic at centre, measure full square of stone, and add actual measurement of Gothic or circle ... Square grooves « inch deep and under to count 2 members ... Double check to count one member ... V grooves 3/4 wide and under, per lineal foot ... .15 ' ' over 3/4 wide per lineal foot ... .20 Bound Work Cut By Hand Good peaned for polishing per sup. ft. ... .45 Moulding or round work ' lineal ' ... .30 Miscellaneous (1) Common drill holes .02 (2) Lewis holes .20 (3) Nine hours shall constitute a day's work for six days in the week, and each man shall be paid by the hour. (4) The regular working hours shall be from seven to twelve and one to five. (5) Pay day shall be on or before the 15th of each month. (6) Any man who may be discharged or who may leave on his own accord, shall immediately be paid off, or be given a negotiable due bill. (7) Each man shall have his pay based on the foregoing bill, and shall be expected to earn at least 10 per cent over and above his pay. (8) Extra roughing to be paid for by special agreement. (9) It is also mutually agreed that there shall be no discrimination made between Union and non-Union men. (10) This bill of prices to take effect June 1st, 1902, and continue indefinitely, the time to be at least one year; and then it shall not be changed unless three months notice has previously been given, by either party. It will be seen that section three granted the nine hour day instead of the ten hour day previously prevailing. The Union rejected sections five, seven and nine. They wanted the pay day to come on or before the twelfth of each month and objected to the other two clauses on general principles. In lieu of the foregoing they presented the following 'miscellaneous' sections: Miscellaneous as Amended Common drill holes .02 Lewis holes .20 Nine hours shall constitute a day's work for six days in the week. Tine, from 7 a.m. to 5 p.m., allowing one hour for noon. No man shall work for less than $2.00 per day, and there shall be no reduction in the rate of wages from the rates which prevailed when ten hours constituted a day's work. Pay day shall be on or before the 12th day of each month. All work not specified in this bill to be done by the day or by special arrangement. Any man who may be discharged or who may leave of his own accord, shall be immediately paid all due him or be given a negotiable due bill. Extra roughing to be paid for by special agreement. Piece men who are now working by the piece shall be allowed to continue the same; but if it be mutually agreed upon, they may work by the day. In case of dispute between men and manufacturers, a grievance committee shall be appointed by the Union to figure work. This bill of prices shall take effect June 1st, 1902, A.D., and shall continue indefinitely, the time to be at least one year from June 1st, 1902. And then it shall not be changed unless three months notice has been previously given by either party. But by mutual consent it may be changed at any time. The employers declined to accept these and the strike resulted. A Courier representative was in St. George on Monday and interviewed the interested parties. The employers' side of the controversy is perhaps best told in a joint interview with Alexander Milne and George Craig. The men made their demands about April 1st and their committee was met by a committee of the employers and a mutually satisfactory bill was formulated but the union failed to ratify it. The employees were given a raise of ten per cent in the nine hour day but they demanded that and ten per cent extra. There was a strike in 1895 on account of a cut of ten per cent but there is not a day man working who is not getting more than he did before that cut down. The piece men work under much more favorable conditions and make more money than before that cut down. The difference is nearer twenty than ten per cent to their advantage. Since this present difficulty arose Milne, Coutts and Co. offered to let the men take their works and run them at the wages they ask and at the end of the year pay the firm seven per cent on its investment and divide equally any profit made over that. The employees could select any competent man to examine the books and make the division. This offer was rejected. We have practically given them everything in the way of wages. We want to employ such men as we wish but they demand that no man shall be paid less than $2,00 per day. There are men who can't earn more than $1.50 per day and it is unfair to ask us to pay more than that for them. The question of the date of the pay day can be easily adjusted. The men know that they have always been able to get money when they wanted it, whether it was near pay day or not. If, as they say, they are willing to earn ten per cent extra for the employers, they should be willing to embody it in the written bill. Some men would earn the pay just exactly by the written bill and no more while others would earn the extra ten per cent. There should be a clear understanding in writing on this point. We cannot pay the scale of prices paid in the United States for there, in a better market, the manufacturers are protected against the Scotch granite, made under more favorable conditions, by a duty of fifty per cent while it enters the smaller Canadian market under a duty of only twenty two and a half per cent. Our prices are regulated by the price in Canada for Scotch granite. It is an actual fact that we can buy Scotch monuments and resell them in Canada at the same price as we ask for ours and make ten per cent profit on the sale. The manufacturers require every man to work by the hour. The scale of prices is made to set a man's pay and govern the amount of work he is expected to do. Piece work is to be done away with. O'Brien, Baldwin & Co., Tayte, Meating & Co., Epps, Dodds & Co., Messenett & McDougall, H. McGrattan, Milne, Coutts & Co., all the manufacturers, are affected by the strike of the cutters but all have adopted the nine hour day and, where polishers are still at work, they are getting ten hour's pay for a nine hour day. We have made the best offer we can and prefer to remain closed rather than to acceed to the demands made on us. Every man on the union committee, sent to interview us, agreed to our bill and said that it was fair and that they would not return to ask for more. The union, under what seems to us as unwise direction, would not agree to it and the strike has resulted. We regret any interruption to the harmony that has always prevailed between the employers and employees and trust that the present disagreement will soon be terminated. Nicholas Meating, of Tayte, Meating & Co., stated that his firm had recently paid one man $61.00 for twenty days' work. That was a little above the average but the men usually get from $2.25 to $2.50 per day. Piece men have been in the habit of working as they please. They would go to work when they liked and quit when they liked. This caused dissatisfaction among the men paid by the day and they wanted all to work nine hours and to be paid forty cents per foot instead of thirty six cents. We granted all their demands but asked them to make ten per cent for the manufacturers over and above their wages to pay for the blacksmiths and others whom we had to hire. The column cutter men, who do machine or round work, did not strike until the union required them to, and the quarrymen are still at work. About one hundred and fifty men are out on strike and about that many more are directly affected, though practically the whole community is indirectly affected. It means that $6000 cash, monthly, is tied up until the strike is ended. Before the strike of 1895 they had forty cents a foot but they had to cut the stone finer and better. They have been making more wages lately than they ever did. They formerly used sand but now use chilled shot and can finish easier. The Red Beach mills pay a little better than we do and have an eight hour day but we have been paying all we can and live. Freight rates are against us and Scotch competition is strong, while little concerns, that operate under small expense, are springing up all over Nova Scotia and some in New Brunswick. The strikers' story is perhaps best told in an interview with John A. O'Malley, the secretary of the union, and E.D. Harvey, one of its prominent members. The progress of negotiating between the union and the employers was outlined as given above. They stated that the union recognized the justice of the employers' demand that the men should earn ten per cent over and above their wages. Every man was willing to do that but they objected to it being incorporated in the bill. If it was, the estimate might be made by the employers from the work of any single day, while it should be made from the average work during a month or two months. The men want a fixed time set for pay day and thought the twelfth of each month a convenient date but that difference could be easily adjusted. The men felt that the union should be recognized and, for that reason, objected to the ninth clause. In May of 1895 a strike was started when the men were notified that they would have to work under a reduction of ten per cent in wages, applying to both daymen and piecemen. Before that no man worked for less than $2.00 and some got as high as $5.00 per day. Some were offered as low as $1.50 per day. The men stayed out during May and then went back under the cut but with the promise that the former rate would be restored as times improved. They have worked under that cut ever since and this spring the union was formed. The union has placed the scale of prices about where it was previous to 1895. The employers have apparently accepted that scale of prices but have curtailed it by adding the clause requiring us to earn an added ten per cent for them. The manufacturers have been and are enjoying a season of prosperity and the union feels that the former wages should now be restored. They appreciate

St. Andrews Beacon - Jun. 5, 1902 St. George Strike. - Three Hundred Men Thrown Out of Employment in Consequence. - The granite cutters of St. George went out on strike Monday morning. About six weeks ago the cutters handed the mill owners a memorandum demanding a nine-hour day and a restoration to the rate of wages which prevailed prior to the strike six years ago, when there was a cut of 10 per cent. The stone cutters claim that at that time it was agreed that as soon as the granite business improved the old rate of wages would be restored. The men hold that the works have had two years good business and there has been no appearance of the promised restoration of the wage rate (except in one case, where some concessions were made.) The men gave the mill owners until May 15 to come to terms, and them extended the time until June1 to finish off the work on hand and to admit of holding conferences between the union and the employers. The negotiations failed and the men were ordered out. Between 200 and 300 men, cutters, polishers, blacksmiths, apprentices, etc., are out and all the granite shops are closed down. A message from St. George on Tuesday stated:- 'Strike still on; everything quiet; both sides claim its a fight to the finish.' Wednesday's report: 'No change in situation.'"

St. Croix Courier - Jun. 5, 1902 and St. Andrews Beacon - Jun. 12, 1902 To Build a New Mill. - Mr. Murphey, of the St. George pulp and paper company, closed negotiations, on Monday evening, with Tayte, Meating & Co. by which he secured control of all the privileges and property owned by that firm above the lower bridge. Tayte, Meating & Co. will at once commence the erection of a large mill on the bank of salt water at the rear of their new store, continuing operations in the old mill until the new one is ready. They will be supplied with electrical power by the new company."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jun. 5, 1902 and St. Andrews Beacon - Jun. 12, 1902 A very handsome monument, manufactured by Tayte, Meating & Co. of St. George was erected in the St. Stephen rural cemetery last week by Nicholas Meating on C.H. Clerk's lot. It is made from Westerly, Rhode Island granite and is of imposing sarcophagus design, bearing the inscription 'Eliza Clerk, 1849-1901.'"

St. Andrews Beacon - Jun. 12, 1902 St. George Strike. - Union Men Take Exception to Published Statements. - The granite strike at St. George still continues. There are those who think the end is in sight, but may others are a little pessimistic on this point. Up to Monday morning, ten of the best workmen had left town, securing employment at Red Beach and elsewhere. Several more men are arranging to leave this week. Should the strike continue much longer, many of the best men will undoubtedly go away. Good order prevails and so far there has been good feeling between employer and employed. On Monday, The Beacon was visited by Mr. John A. O'Malley, secretary of the Granite cutters Union, who took interviews published last week in the St. Stephen paper. He says it is not a fact, as stated by the employers' representatives in that interview, that the union committee agreed to the employers' bill and 'said that it was fair and that they would not return to ask for more.' Mr. O'Malley gives this statement an unqualified denial. He says that the committee made no such statement. He further says that the committee had no authority to settle the strike. They were simply instructed by the Union to confer with the employers, ascertain their views in writing and bring them back to the Union for consideration. The committee he says, had two meetings with the employers. At the first meeting the employers submitted a bill, which the committee said would cause trouble if presented to the union. The employers withdrew this bill and prepared a second bill. This bill, Mr. O'Malley says, would have been accepted, but for sections 7 and 9. The first of these objectionable sections stated that 'each man shall have his pay based on the foregoing bill, and shall be expected to earn at least 10 per cent over and above his pay.' This section, the Union men claim, can be construed to mean nothing else than that the ten per cent raise which the men ask for shall be returned to the pockets of the manufacturers. Section 9 was objectionable to the men because it was designed to destroy the Union, without which they could not hope to succeed in their demands. Mr. O'Malley says the men, for peace sake, agreed to everything in the employers bill but these two sections, and these they could not, under any circumstances, agree to. Another statement in the interview to which objection is taken, is the one which says that piece men's habits of going to work when they liked and knocking off when they liked 'had caused dissatisfaction among the men paid by the day.' He says there is no disagreement between day and piece hands, nor ever has been. The statement 'there are men who can't earn more than $1.50 per day and it is unfair to ask us to pay more than that for them,' Mr. O'Malley declares, is intended to prejudice the men before the public. He says the Union does not want the manufacturers to pay men any more than they are worth. If the manufacturers find a man does not earn $1.50 per day they can put hi, on piece work, so that he should not receive any more than he would earn. The allusion to Scotch granite and its effect upon wages, is said to be for political effect more than anything else. He alleges that most of the so-called 'Scotch granite' is quarried from the lighter stone in the St. George quarries; that it can be quarried cheaper than the ordinary granite, and that this is one reason why the manufacturers can make ten per cent more on 'Scotch' than on native stone. Very little real granite is imported from Scotland. As for the labor conditions in Scotland, he says that the men in Scotland have shorter hours than in St. George. This fact, he declares, can be proved by Scotch workmen now in St. George. An unqualified denial is given to the statement in the interview referred to that 'since this present difficulty arose Milne, Coutts & Co., offered to let the men take their works and run them at the wages they ask and at the end of the year pay the firm seven per cent on its investment and divide equally any profit made over that.' Mr. O'Malley says no such proposition was ever made. The statements referring to wages earned by men under the old system Mr. O'Malley says are colored to suit the employers' case. The best paid hand does not get over $2.50 per day, while the piece men have to work hard for all they earn. Occasionally, a piece hand by hard driving can make a big bill, but he soon uses himself up. He cannot keep up the pace. Mr. O'Malley complains that in arriving at the average wage for publication the manufacturers have only struck an average on the larger wage earned and have overlooked the smaller earnings. For example, a man might make a big bill of wages one week, and the next make a small one. The correct average of the man's earning power should be taken not on the first week, but on the two weeks. In concluding the interview, Me. O'Malley says that the men have not made an unreasonable proposition. Statistics show that the mortality among the St. George granite men is higher than at any other place. He attributed this to the long and exhaustive hours that the men of St. George had to work. Their lives were shortened in consequence and their usefulness to the community was shortened in the same degree. At Red Beach, Me., the men only worked eight hours, from 7 to 4. The result is that

St. Croix Courier - Jun. 12, 1902 St. George. - The strike among the stonecutters continues without any evident signs of settlement. Quite a number of men have left town to seek employment elsewhere, while many more will follow in a few days. The strike has the appearance of being a long one and men are engaging in other work as fast as opportunities will permit. Tayte, Meating & Co. are making excavations for the foundation of their new mill which will be built near their store. The building will be 50x125 in size and filled with all the modern appliances for handling stone, etc. They will take down their mill in the 'Gully' and use the lumber in the erection of the new one."

S.J. Daily Sun - Jun. 17, 1902 The stone cutter's strike at St. George has resulted in a few of the men going to Newfoundland. Last evening, Fred Cameron, J.E. McGinn, Henry Brown, Geo. Fotheringham, Harry McGowan, James Kennihan and Thomas Armstrong left for St. John's where they will be employed upon the erection of the new court house."

St. Croix Courier - Jun. 19, 1902 and St. Andrews Beacon - Jun. 19, 1902 St. George. - The stone cutter's strike has resulted in a few of the men going to Newfoundland. On Monday evening, Fred Cameron, J.E. McGirr, Henry Brown, George Finnegan, Harry McGowan, James Kernighan and Thomas Armstrong left for St. John's, where they will be employed upon the erection of the new court house. - Sun, 17th."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 19, 1902 The St. George Strike. - The strike situation at St. George was unchanged yesterday (Wednesday) morning. none of the factories had resumed work, nor had a settlement been effected, but the committees for each side were working with that end in view and it was thought a settlement would soon be reached. Tayte, Meating & Co. are taking advantage of the strike to tear down their old mill, which is on the Pulp Company's ground. They will build nearer the shore."

Daily Sun - Jun. 20, 1902 St. George Strike Ended. - The striking workers of St. George, who went out three weeks ago, returned to work yesterday, except thirty-five, who have gone away to other places. The men are to have the nine hour day, and the company are to have the privilege of hiring their men by the day if they desire it. The terms are entirely satisfactory to the men."

N.B. Reporter - Jun. 25, 1902 The strike of granite workers at St. George ended Wednesday."

St. Andrews Beacon - Jun. 26, 1902 St. George Strike. - The Manufacturers and Men Come to Terms And Work Is Resumed. - The settlement of the strike at St. George, which The Beacon last week intimated was near at hand, was reached just after the paper had gone to press. The men are given shorter hours and there is also an increased scale of wages. The result was reached by mutual concessions. Work was resumed the following day. About 35 men had left the town before the strike was concluded."

Richibucto Review - Jun. 26, 1902 St. George Granite Workers' Strike Over. - Agreement Reached - Men's Terms Accepted With Some Modification. - St. Andrews, June 30. - The strike of the granite workers at St. George ended today, the manufacturers agreeing to the men's terms, with some modifications. Work will be resumed tomorrow morning. General satisfaction is expressed over the close of the trouble."

St. Andrews Beacon - Mar. 13, 1902 The granite workers of St. George are agitating for the nine-hour system."

St. Croix Courier - Mar. 27, 1902 Stone is Red. - About the Granite for New Central Church Here. - St. George Quarry. - Bangor Man Who is Superintending the Cutting of the Granite Writes of New Brunswick Town. - (Bangor Commercial). - Walter C. Sturtevant of this city who is in St. George, N.B., superintending the quarrying of the stone for the new Congregational church, has written the following entertaining letter to the Commercial Editor: Thinking perhaps Bangor people might be interested to know something about this place, which might almost be a bit of old Scotland in the new world, I send you a few notes written in the granite quarries of Magaguadavic (Macadavic for short) from which the granite for the new Central Congregational Church is being taken. ... The Quarries. - Three miles north of the town are the famous granite quarries of Epps, Dodds & Co., from which the granite is shipped for the Central Church. It is of a dark red colour, which has made it famous throughout the country. It is said by those who have made the study of granite and granite cutting a specialty, that there is no stone equal to it for durability nor in the world, except perhaps in Scotland. Maine abounds in what is called red granite, but which is really a pink or salmon colour, while this is a beautiful dark red, which neither time nor weather changes. In the stone yards of St. George can be heard the click of hundreds of stone hammers, and the whirr of the machinery as the hard stone is polished. Well may the citizens of this little town be proud of their stone cutters. Intelligent, industrious, sober, law-abiding, they are the solid foundation of the place. Longfellow's description of the Puritan fathers will apply to these men also 'giants they are in mind for they believe in God and the Bible.' ... Walter Sturtevant St. George, N.B., March 15"

St. Croix Courier - Mar. 27, 1902 St. George. - The stone-cutters of the town have organized a local union recently. Hitherto there has been no organization among the working men and it was thought by some that it would be well to organize. About all the cutters have joined. It is thought the men will ask for a nine hour day at the same scale of wages they are now receiving, ten hours being at present the working time."

St. Croix Courier - May 1, 1902 Stonecutters May Strike. - Awaiting May 15 for Answer to Demands as to Hours and Pay. - A despatch from St. George to the Telegraph says: The labor situation here is interesting. The stonecutters recently organized and some three weeks ago presented to the bosses of the several works a new schedule of prices which they adopted. In doing so, they set May 15 as the date on which they would wish an answer as to whether or not their demands would be complied with. It the answer was negative then they are decided to go on strike June 1st. This means quite a serious situation. There about one hundred and fifty stonecutters and if they strike there would also be affected the polishers and quarrymen, meaning some three hundred men to come within the scope of the trouble. There are six manufacturers. Some years ago there was a cut of 10 per cent. in wages. The men struck but were unorganized, and finally returned to work, accepting the cut rate. Now they want the old rate and something extra for the finer work, also the

St. Andrews Beacon - May 1, 1902 The St. George stone-cutters, who recently organized, are asking for shorter hours and better wages."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 1, 1902 St. George Granite Industry. - 'Sojourner' writing from St. George to the Yarmouth Herald says: Since I wrote, re the granite industry, some large orders have been placed with the different firms for building stone and monuments, notably, the stone for a beautiful church now building in Bangor, Maine. This stone is being shipped directly from the quarries on heavy cars of the Boston & Maine Railway, but alas! the fourth freshet we have had in this county has so injured the road bed of the Shore Line Railway, and impaired its larger bridges and culverts, as to render such heavy traffic dangerous, if not impossible, to the serious injury of all business on its line - a state of affairs which should not be allowed to continue longer than is absolutely necessary for making repairs. Messrs. Epps, Dodds & Co., of this town, are putting the finishing touches on the monument to be erected in Halifax, on the 24th of May next, to the soldiers who have fallen in South Africa during the present war. Nova Scotia is doing well in placing this memento of the heroism of its sons in its capital. The monument is a very fine one and reflects much credit on its designers and builders."

St. Croix Courier - May 2, 1902 The stone cutters of the town recently organized a union and gave notice that on and after June 1st they would expect to work but nine hours per day, demanding the same wages they were getting for a ten hour day. The manufacturers were given until May 15th in which to answer the request of the stone cutters. The answer was formally given and negotiations are now pending towards a settlement. Committees from both manufacturers and the union have met together and discussed matters and it is hoped the difficulty will be settled satisfactorily to all concerned."

St. Croix Courier - May 2, 1902 Thomas McGrattan received a bad cut on his eye from a granite chip while at work Saturday last. Charles Frauley met with a similar accident a few weeks ago and had to go to St. John for treatment."

St. Andrews Beacon - May 22, 1902 Messrs. Epps, Dodds & Co., of St. George, have almost completed the memorial monument which is to be erected in Halifax in honor of the Nova Scotia lads who fell in battle in Africa. It is a beautiful piece of work and reflects much credit upon the skill of Messrs. Epps, Dodds & Co.'s workmen."

St. Andrews Beacon - May 29, 1902 The Calais granite company's works were destroyed by fire on Sunday morning. The fire started about 9.30 o'clock and in a short time all that was standing of the buildings was the shot tower. The works, which were largely owned by Chas. W. Young, have not been operated for two or three years. They were insured for

St. Andrews Beacon - May 29, 1902 A Magnificent Monument. - Built in St. George for N.S. Soldiers Who Fell in Africa. - Through the kindness of Messrs. Epps, Dodds & Co., The Beacon is able to furnish its readers with a detailed description of the Nova Scotia soldier's monument which is being constructed in their works in St. George, and to which reference has already been made. The monument is of heroic size, being about 24 feet in height and weighing about twenty five tons. It has a ground base of Nova Scotia granite, 8 ft. square and 14 in. thick. This base was set in place last October during the visit to Halifax of the Prince of Wales. Resting upon the ground base is another base, six feet square by two feet two inches thick, composed of Stanstead granite, hammered, with the Nova Scotia coat of arms in front and beneath it the motto: 'We bloom beneath the snow.' On top of this is a plinth of the same stone 4 ft. 8 in. square by 9 inches thick. Above is a panelled die, in which there are bronze panels representing battle scenes. On the four corners, resting upon the plinth, are four red granite polished columns, with round bases and carved capitals. Above the panel die is a fine hammered cap, 5 ft. 4 in. square by 2 ft. thick, which rises gracefully towards a red granite die, on which on two aces are carved two flags intertwined, a wreath with crown above on the front, and a scroll, bugle and torch on the fourth side. The names of all Nova Scotia soldiers who fell in South Africa will be cut inside the wreath and on the scroll. This die is all polished around the carved work. Mr. Archibald McVicar, of St. George, is doing the carving in a most skilful and artistic manner. Above this die is another cap with maple leaves carved around the four sides. The whole is surmounted by the bronze figure, twelve or fourteen feet in height. This figure represents a Canadian soldier in khaki uniform, bare-headed, with his gun at rest upon the ground and a bandolier about his shoulder. It is very life-like and striking. The statue, as well as the bronze panels, have been cast by the Henry-Bonard Co. of New York. It was originally intended that the unveiling of this splendid monument should take place on the 24th of May, but owing to delay in placing the designs in the hands of the artisans, this idea could not be carried out. It is likely now that the ceremonies will take place after the Ministers return from the coronation."

St. Croix Courier - Oct. 2, 1902 Tayte, Meating & Co. have about completed their order for building columns which they have been working on for some time. the order comprised thirty columns in all. Twenty four were of medium size and were finished by O'Brien, Baldwin & Co., who received the order, the former concern furnishing the stock. The balance of the lot, which are larger than are usually turned here, being sixteen feet in length by two feet two inches in diameter, have been successfully gotten out and finished by Tayte, Meating & Co. The columns are of light colored stone known as 'Lily Lake' granite, which takes a very deep polish and has a rich appearance when finished. The stone will go to Montreal to be used in a church in that city."

St. Croix Courier - Oct. 2, 1902 30 Years Ago. - The Passamaquoddy Red Granite Co. is the name of the new company owning the Lake Utopia quarries. The proprietors of the Molly Hill quarry have bought a piece of land and a wharf property near the mouth of the river that will be open to navigation at all times of the year."

St. Croix Courier - Sep. 4, 1902 30 Years Ago. - Men are now engaged in getting out granite at the head of Lake Utopia. A quantity of the stone will be shipped to New York this season to introduce it in that market."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Sep. 4, 1902 Messrs. Tayte, Meating & Co., whose mill is to be removed in consequence of the pulp operations, have the foundation for their new mill erected on the water front just west of the lower bridge. They have not decided when they will remove, but it will probably be in the holidays. This firm, in addition to a large amount of monumental work, are turning several immense pillars for a new building in Montreal. All the other granite firms of the place are doing good business."

St. Andrews Beacon - Feb. 26, 1903 St. George. - All the granite mills have started up and are running eight hours with the exception of Tayte, Meating & Co., who have their new mills ready but are waiting for power which is to be furnished from the Pulp and Paper Co electric plant. The business outlook for this firm is better than ever and installed in their new home the concern will be able to do even larger business and turn it out more quickly and easier than before. The company is to be congratulated on its new quarters."

St. Andrews Beacon - Jun. 25, 1903 A handsome monument of St. George red granite, from the works of Mr. Henry McGrattan, has been placed in the Catholic cemetery, St. Andrews, by Mr. John McFarland, of Woodstock, in memory of his deceased wife, who was formerly a Miss Hughes, of this place."

St. Andrews Beacon - Mar. 26, 1903 St. George. - The Pulp and Paper Co. are supplying Tayte, Meating & Co. with steam power until they have their electric plant running."

St. Andrews Beacon - Sep. 10, 1903 The St. George granite factories are working on water power pending the repair of the pulp mill dynamo."

St. Andrews Beacon - Dec. 8, 1904 Pulp vs. Granite. - The Granite People Not Altogether Pleased. - The granite concerns in St. George, who are dependent upon the Pulp Company for their power, were compelled to shut down recently while repairs were being made to the pulp mill machinery. One concern that tried to operate their old water wheel had the water speedily cut off from them, much to their discomfiture. The granite people are beginning to realize that the pulp men have the long end of the bargain and that the contract piaces them very largely at their mercy. The failure of the pulp company to establish a paper mill in connection with their pulp works, as it was expected at the outset they would do, robs the town of a great deal of profit that might otherwise result to them from the magnificent water power which they have at their door. This power is wholly in the hands of a foreign corporation who employ very little local help. It is reported that an attempt was recently made to get control of the water power at Second Falls, but the project fell through."

St. Andrews Beacon - Dec. 15, 1904 Explanation. - From Manager of St. George Pulp & Paper Company. - Editor The Beacon:- In your issue of Dec. 8th an article appears under the heading 'Pulp vs. Granite' which is so entirely out of harmony with the facts in the case as to deserve some explanation. The article referred to opens with the statement that 'The granite concerns of St. George who are dependent upon the Pulp Company for their power, were compelled to shut down recently while repairs were being made to the pulp mill machinery.' As a matter of fact, the wheels of the St. George Pulp and Paper Company were stopped bu anchor ice which is likely at this season of the year to interfere with the operation of any water wheels whenever the weather is sufficiently cold for this anchor ice to form. Advantage was taken of this interruption caused by anchor ice, to make certain needed repairs to the water wheels themselves, of the necessity for which the granite concerns had all received two months notice, hence they had abundant opportunity to prepare for it. Since the installation of the generator supplying the power to the granite concerns, the old flume or causeway which originally carried water to the wheels of the granite concerns, has been allowed to fill up with driftwood and other debris. At no attempt on the part of any of the granite men was made to clear the debris, much less, to start any of the old wheels, the statement that 'one concern had tried to operate their old wheel had had their supply cut off,' is maliciously false. That every agreement made by the St. George Pulp & Paper Company with the granite concerns has been faithfully kept, that granite concerns will know, and no complaint from any of them, of any nature or kind, has ever been received by the St. George Pulp & Paper Company. ... Yours Truly, B.G. Murphy"

St. Andrews Beacon - Dec. 15, 1904 Letter From a Granite Man. - Editor of Beacon:- Sir - In your last issue I notice a communication in reference to the power the Granite Forms have from the Pulp Co. Now, Mr. Editor, the power we have today is far better than we ever had in the past. As regards the mills being shut down for a few days, it was not any great drawback, as business is slack this time of year; and as for the Pulp Co. having the long end of the bargain, they paid for what they got, and the Granite men are not such fools as your correspondent would lead the public to believe. If the party supposed to have been your correspondent would go to work in the pulp mill or some other mill he would have less time for writing false statements to the papers. St. George. A. Milne"

St. Andrews Beacon - Feb. 11, 1904 St. George. - The granite factories are resuming operations ... Messrs. Tayte, Meating & Co. have a steam drill rig at work in their yard boring for water. They have gone through one ledge and expect water when they strike the second bed rock."

St. Croix Courier - Jul. 21, 1904 A handsome monument of Quincy granite has been erected by Mrs. John Roy over the grave of her daughter, Mrs. Robert Mallery, in the rural cemetery."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 16, 1904 The St. George granite works are doing a thriving business. Milne, Coutts & Co. are adding a new office to their works. Among the contracts they have on hand is a magnificent grey granite monument for the grave of Mr. McCann, of Rolling Dam."

St. Andrews Beacon - Jun. 23, 1904 St. George. - Louis McGrattan of H. McGrattan & Sons, has been in Woodstock the past week, setting up monuments manufactured by his firm."

St. Andrews Beacon - May 5, 1904 Mr. George E. Hall, the well known granite worker of St. George ... obit."

St. Andrews Beacon - May 12, 1904 The St. George industries are all employed. In the granite works, though there are no large contracts on hand, there is sufficient work in the shops to keep every one busy."

St. Andrews Beacon - Oct. 20, 1904 Open Letter to Mr. Ganong. - From One of the Leading Granite Companies of St. George. - They Recognize the Prosperous Conditions and Refuse to be Turned Aside from their Duty. Mr. G.W. Ganong, St. George, N.B., Oct. 10, 1904 Dear Sir. - We have received your letter of the 5th, asking our support in the coming election, and have decided to answer it in an open letter. You say that the Liberal administration has deprived us of the protection we had, by giving the preference. We ask you, what you will do in case of a conservative victory? Are not Mr. Foster and a large majority of your party committed to the so called Chamberlain policy? How would this policy affect our business, if you say we need more protections? We might say, in connection with the Granite industry of St. George, without fear of contradiction, that it never flourished, as it has during the Liberal administration of the past eight years. The best proof of this lies in the fact that there are now six concerns doing business where before there were but four. That under the administration of the conservatives, the employees worked ten hours a day and eight months was a long working year. That they now work nine hours a day and are employed the year round, that in place of the ten per cent reduction of wages under conservative rule, the men are now enjoying a twenty per cent increase of wages. The policy of the Liberals administration has not only been of benefit to the stone workers of St. George, but has increased business in every line. We have only to point to the new stores of Messrs. Frauley Bros., Grant & Morin, Hanson Bros.? All new, first-class, up-to-date stores, and no man living can imagine such concerns flourishing under conditions existing prior to 1896. Conditions are better here, Mr. Ganong, and the increased output and enlarged capacities of your own business, the Soap factory and Haley & Sons' concern in your own town, must be proof positive to you that we in this county have shared in the general prosperity of the Dominion under the Fielding Tariff. We would ask you what your views are, on the immigration policy of the present government? And in this connection would say, that where formerly our only market was Ontario and Quebec, the Liberal government has opened up an enlarged and ever increasing market in the Northwest and Manitoba. One half of our output now goes to the West. Think of the market the Grand Trunk Pacific will open up to us. Can you in justice to yourselves, your country and your own town ask us to go back to the days of stagnation and Conservative administration of affairs? We are convinced that, taking into consideration the present condition of the whole Dominion, the certainty of the return to power of the Liberal Government, and the flourishing condition of the Granite industry here, it would be against our interests, against the interests of our town, against the interests of our county, to support you in the present campaign. Yours very truly, Utopia Granite Co. St. George, N.B., Oct. 19, 1904."

St. Croix Courier - Apr. 20, 1905 Douglas Bros.' ware rooms are filled just now with a handsome lot of monuments in grey, black and red granites and different kinds of marbles. These stones are going into York, Queens, Sunbury and Northumberland as well as Charlotte county, the firm having an established reputation for good work all over the province. One stone, of very handsome design, has been ordered by J.H. Richard, of Boiestown, to be placed at his wife's grave."

St. Andrews Beacon - Aug. 24, 1905 Handsome Monuments. - Two very handsome monuments have recently been brought to St. Andrews from the McGrattan stone works, St. George. One of them has been erected in the Catholic cemetery in memory of the late Angus Kennedy. It is of Quincy granite, beautifully polished and ornamented, with a base of polished red granite. It has been setup on the Kennedy lot at the northwest corner of the burial ground, and is easily visible from the road. Though the pieces are very ponderous, Mr. McGrattan very quickly set them in position, using his sloven as a derrick by removing the front wheels. The second monument has been placed in the rural cemetery by Mr. Joseph Handy in memory of his father, the late Levi Handy. It os fo red granite, the design being very chaste."

St. Andrews Beacon - Dec. 7, 1905 The granite and pulp mills were closed down on Friday last, as a consequence of ice having interfered with the water wheels at the pulp mill from which nearly all the granite mills derive their power. The granite interests here are making arrangements for the presentation of their case before the Tariff Commission. They will request an increase of duty upon manufactured granite. It has been suggested that an effort be made to have the commissioners visit to St. George during the course of theft enquiry."

St. Andrews Beacon - Dec. 28, 1905 St. George. - The different granite concerns here closed their establishments on Saturday, 23rd inst. These will be down for a period of four to five weeks."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jun. 15, 1905 St. George. - ... There are the granite works of Milne, Coutts & Co., Epps, Dodds & Co., Tayte, Meating and Co., O'Brien & Gillmor, Messenett & McDougall, and McGrattan & Sons, all as busy as they can

St. Andrews Beacon - Jun. 29, 1905 A very fine quarry of black granite has been opened upon the Alfred Gillmor estate, St. George. The stone works well and is likely to become popular."

St. Croix Courier - May 25, 1905 ADVERTISEMENT: Memorials Many things must be considered in the construction of a Monument. Not only should the design be artistic, but the material and workmanship the best. We aim and succeed in combining all these at all times. Douglas Brothers, Manufacturers of all kinds of foreign and domestic granite and marble monuments, sarcaphagus, tablets, markers and curbings. Prices and Designs on Application. Special attention given to cleaning and lettering monuments in cemeteries. Water street, St. Stephen, N.B. Main street, Calais, Maine"

St. Andrews Beacon - Nov. 30, 1905 St. George. - As a consequence of an increased demand for granite many of the granite cutters recently knocked off have been re-engaged."

St. Andrews Beacon - Sep. 21, 1905 St. George. - The granite manufacturers report a quiet season in red granite. Two quarries of black granite, of good quality, have recently been opened up near Red Rock lake. As there is an increased demand for this granite it is satisfactory to know that the want can be supplied at home."

Kings County Record - Sep. 22, 1905 ADVERTISEMENT: T.F. Sherrard & Son Moncton, N.B. Importers of Marble and Granite. Manufacturers of Monuments, Tablets, Gravestones and all other cemetery work. Most modern machinery for polishing marble and granite. New lettering and carving machinery run by compressed air. Write us for prices and

Semi-Weekly Sun - Apr. 4, 1906 Capitalists Interested in Iron Ore Veins. - Lepreaux is not the only part of Charlotte Co. that may boast of iron deposits, if we may believe the assertions of a mineral expert who was a recent visitor to this part of the county. He says that on the property formerly owned by Mrs. O'Herrin, now in possession of O'Brien and Baldwin, granite manufacturers, there is every indication of the presence of a large body of this useful ore. So enthusiastic are some capitalists over the matter that a large sum of money has been offered for the property.A new power wheel is being placed in position by the pulp company. The polishing departments of several of the mills are down in consequence. Two of the granite firms are using their old water wheels to run their mills."

St. Andrews Beacon - Apr. 5, 1906 Epps, Dodds & Co., Granite Workers, St. George. - Among the granite manufacturers of St. George there are none who stand higher in public estimation than the firm of Epps, Dodds & Co. This firm, which was established in 1881, is now composed of Chas. Epps and Henry Meating, the other two members of the company (Messrs. Coffey and Dodds) having died. In their extensive works alongside the Falls they manufacture monumental designs in red, grey and black granite, employing about thirty hands. The value of their output is about $18,000 per year. Their stone is obtained chiefly from the hills near St. George. At the present time they have a crew of men operating a black granite quarry at Steen Lake. Like the rest of the granite manufacturers of St. George, Messrs. Epps, Dodds & Co., are impressed with the necessity for more protection."

St. Andrews Beacon - Aug. 23, 1906 A Granite Proposition Before Town Council. - Messrs. Messenett & McDougall, granite workers, of St. George, have given an option on their works to Mr. C.V. Wetmore, with the intention of selling out and removing to the West. A St. Andrews company is talking of taking over the works and removing them here, provided the town would grant a bonus, a free site and exemption from taxation for a term of years. The proposition is now being

St. Andrews Beacon - Aug. 30, 1906 A sample of polished Glenelg granite which Sheriff Stuart brought back with him from St. George on Monday, is displayed in his store. It is a beautiful black and white mottled stone."

The News - Dec. 7, 1906 St. George Granite Men Pleased With New Tariff. - St. George, N.B., Dec. 4.- The granite men here feel that Fielding's new tariff is in the interests of the granite industry, but claim a higher protective duty is necessary and that column cutters and carborundum should be placed on the free list, as they are not manufactured in Canada."

St. Andrews Beacon - Dec. 13, 1906 St. George. - The granite men feel that the new tariff is in the interests of the granite industry, but claim a higher protective duty is necessary and that column cutters and carborundum should be placed on the free list, as they are not manufactured in Canada."

St. Andrews Beacon - Feb. 15, 1906 St. George. - The granite establishments of Epps, Dodds & Co., and Milne, Coutts & Co. resumed operations on Monday, 12th inst."

St. Andrews Beacon - Jan. 11, 1906 Tariff Commissioners. - Hear Saint George Granite Men and Others. - Hon. Messrs. Fielding, Paterson and Brodeur, with Mr. John Bain, secretary - the members of the tariff commission - Reached St. Stephen by regular train at noon on Friday last. Immediately upon arrival they were met by President Vroom and other members of the St. Stephen Board of Trade and escorted to the Salvation hall where they began their hearing. [See Daly

St. Croix Courier - Jan. 25, 1906 30 Years Ago. - ... Two valuable horses, one belonging to the Bay of Fundy Red Granite Co. and the other to Thomas Barry, were killed at the company's quarry at St. George on Monday. A stone weighing sixteen tons had been loaded on a sled in the quarry and lowered down to the road beneath by means of ropes, three horses being attached to the sled to guide and start it when it required moving. Upon arriving in the road the ropes were taken off. The immense weight upon the sled, notwithstanding all the horses could do to the contrary, forced it down the slight incline toward the brow of a hill on the road, when it soon became evident that the horses were unable to control it. It continued to press them onward until it reached th brow of the hill and then shot them down at a terrific speed. When near the foot, the leader fell and was dragged forward, and the pole horses were forced off the road and into the woods at a rapid rate. The sled bringing up upon some rocks, stopped its headway and that of the horses, and the immense stone rolled over on them crushing one to death instantly and injuring the other in a shocking manner. The pole horse escaped without serious injury. The driver only relinquished the reins in time to save himself from injury."

St. Andrews Beacon - Jun. 7, 1906 Quite a few men employed by the granite companies work for short periods lately owing to a lack of stock."

St. Croix Courier - Mar. 1, 1906 Accidently Killed. - Charles B. Mingo Meets a Sudden Death at Red Beach. - Charles B. Mingo was the victim of a shocking accident which occurred on Thursday morning last at Red Beach in the lath mill of O.S. Tarbox. The mill had been in operation only a few days and Mingo, who was employed as machinist in the granite works, was watching the men operate the lath machine when a large wooden pulley burst, the parts flying in all directions. The workmen escaped injury, but one of the heavier pieces of the pulley struck Mingo on the head, crushing his skull. He was removed to his home and Dr. Russell and Dr. Brehaut summoned, but their skill was unavailing and the unfortunate young man passed away a few hours after the accident occurred without having regained consciousness. The tragic affair cast a gloom over the community where the deceased was held in high esteem, and expressions of regret were heard on every hand. Charles B. Mingo was born in Red Beach and, after graduating from the Calais high school entered the employ of the Maine Red Granite Company. Three years ago he was united in marriage with Miss Myrtle Martin of Red Beach, who, with one child, survives him. To the young wife, so terribly bereft, the deep sympathy of the community goes out, also to the sorrowing parents and other relatives of the deceased. Mr. Mingo was only twenty eight years of age. Deceased was a member of Mekwamkesk tribe of Red Men, was a prominent officer of the stonecutters and granite workers union, the members of which organizations attended in a body the funeral held on Saturday. Three years ago a cousin of the deceased was killed by the bursting of a friction wheel while operating a hoisting engine."

On Saturday, however, the strikers agreed to forget their differences and work was resumed at the plant on Monday. The whole affair was the result of a misunderstanding."

Semi-Weekly Sun - Mar. 3, 1906 New Kind of Granite is Great Success. - St. George, Feb. 27. - Some years ago granite dealers in Quebec sent samples of black stone here to be manufactured. The granite took a very fair polish and its introduction to the trade created a demand that compelled our manufacturers to import large quantities of this stock from Upper Canada. It proved expensive. Freight rates were high, and shipping the stone from Quebec to St. George, from St. George to points all over the dominion, had a tendency to eat into the profits. The facts were that there was no money in handling the stone, but to hold the trade one was compelled to keep a certain amount of black granite in stock. There is, however, a better article right at home. Some time early last summer, Miles and Edward Gillmor found a huge boulder of granite on the Red Rock road, about six miles from St. George. They were convinced that the boulder was black granite and they lost no time in bringing samples of their find to the granite men here. Local dealers, as is customary, were for a time sceptical of the merits of the stone, but time proved its superiority to the Quebec article. The stone takes a very high polish, making a splendid monument. It is sold under the name 'Egyptian Black', and bids fair to rival the red granite that has made St. George known over the continent. Several parties are now at work quarrying it, and every granite concern in town handles it in large quantities. H. McGrattan and Sons have recently opened a quarry of this stone in Bocabec. They are convinced that the granite is A No. 1, both as regards color and quality. The granite mills are closed today. The power wheels are being overhauled. I. Phillips, electrician, of Halifax, is here superintending the repairs."

Hanson's property, the stone being of a most promising character. The quarry is quite close to the river, making it an easy matter to place the stone on scows and tow it to St. George. This will probably be done. Messrs. Epps, Dodds & Co., of St. George, are quarrying black granite from the Steen Lake quarry. This is an

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Mar. 8, 1906 Mr. Henry Meating returned on Thursday last after several days' stay in Chamcook on business in connection with the opening up of a new quarry there. The operations of the quarry will be in charge of Mr. Elisha Leavitt. All the granite concerns deriving their power from the St. George P. & P. Co.'s plant were down on Tuesday and Wednesday last, because of trouble with the power plant of that company."

St. Andrews Beacon - Mar. 22, 1906 Messrs. Henry Meating and Sons are much pleased with the quality of the stone found in their recently opened black granite quarry on the farm of Chas. Hancock, Bocabec. They are confident that they now have a stone inferior to none, and obtainable at a cost much less than they would necessarily have to pay for the quarried

St. Andrews Beacon - Mar. 22, 1906 Black Granite Becoming Popular. - A Chance for a Great Industry at St. Andrews. - The rising popularity of black granite for monumental purposes is shown by the increasing number of orders for that kind of stone that are being received by the granite manufacturers of St. George. One traveler, who recently returned, brought back with him almost nothing but black granite orders. Fortunately, there is an abundance of that kind of stone within easy reach of the manufacturers of of the county. Like the red granite this description of stone is largely confined to Charlotte county. Sheriff Stuart, who owns one of the finest black granite quarries that there is in Canada, at Steen Lake, has given Messrs. Epps, Dodds & Co., of St. George, the right to cut stone there. This firm have now to cut stone there. This firm have now got a number of men employed at the quarry getting out stone. Samples that they have cut from the new quarry which they have opened near the top of the hill are of the finest description, the color being uniform and the stone easily worked. A reporter of the Beacon visited the quarry on Monday, and noted the operations that were going on. The stone is being taken from a point about a quarter of a mile up the hill from the road. A horse power derrick has been erected to move the stone as it is cut. The great blocks will be hauled to the wharf a few miles below, and from there shipped to St. George. Mr. Stuart looks for an extensive business. There is enough stone in sight to last for a thousand years. This quarry is admirably situated for doing business with St. Andrews. By road it is about seven miles from town but the hauling distance to the water is considerably less. There is a great opportunity in this stone for a big business here. Who will take it up?"

St. Andrews Beacon - Mar. 29, 1906 Industries of Charlotte County. - ... Granite Workers - Milne, Coutts & Co, St. George. - The wealth of the eternal hills is one of the most valuable assets that Charlotte County possesses. In its development much money is invested and many men find lucrative employment. Indeed, were it not for the treasure of red and black granite which exist in the hills adjacent to St. George that enterprising little town would not occupy the important commercial position that it does at the present time. One of the most enterprising firms engaged in the Granite industry at St. George is the Bay of Fundy Red Granite Works, of which Messrs. Milne, Coutts & Co. are proprietors. This firm was established in 1875. Its record has been one of progress. Originally the company obtained their motive power direct from the falls, but when the Pulp company acquired the water rights at the Falls a few years ago, the water power was exchanged for the more modern power of electricity. In their works the hand tool in recent years has largely given place to the pneumatic tool which is operated by compressed air and many other improvements have taken place. At the present time 45 men are employed by this firm. The output of the factory, which consists largely of monumental stone, is marketed chiefly in Ontario and Quebec, though some of their stone has been carried as far as the Pacific slope. The value of their output is about $25,000 per year. One of the great difficulties that the granite workers of this section have to contend with is the unequal competition of the Scotch stone. This feature of the business was very clearly presented to the tariff commission when they visited Charlotte County. Discussing the subject with a member of the firm recently, he stated that the only solution of the difficulty was to raise the duty on Scotch granite sufficient to put them on an equal footing with the Scotch manufacturers, having regard to the latter's wage conditions and those prevailing here. This winter the Scotch firms, he stated, are doing work very cheaply as work is scarce and a great many men are out of employment. This statement was confirmed by a letter from their agent in Aberdeen. Writing under March 2, he says:- 'There is a lot of Canadian orders in Aberdeen this year. One manufacturer who ships quite a lot direct was telling me he never had so many orders from Canada for Spring shipment. Hope they may continue, for there are hundreds of men idle here.' -- Tayte, Meating & Co., St. George. - Another of St. George's leading granite firms is that of Tayte, Meating & Co. This firm began business in 1885 in what is known as 'the gulley', where they operated with considerable success until the advent of the Pulp Company, when they disposed of their property rights to that company and established themselves in new quarters at the harbor front. Their new premises are supplied with all the modern improvements. They obtain their motive power from electricity. This firm has 33 men employed. The whole of their output, valued at about $17,000 per year, finds a market in Canada. The firm says that there has been a falling off in their business amounting to about $9,000 since 1896. They attribute this decline to Scotch competition. -- Messenett & McDougall, St. George. - Among the young business firms of St. George, that of Messenett & McDougall is worthy of particular attention. These enterprising young men launched themselves on the commercial sea in the year 1900. They manufacture building and monumental stone in red, grey and black granite, marketing their output in Ontario, Quebec, Manitoba and the Maritime Provinces. The value of their output is placed approximately at from $9,000 to $10,000. Their factory is operated by a powerful steam engine. Eighteen men are in their employ. The chief need of their industry, remarked a member of their firm to the Beacon, is more protection. 'We should have a duty of 50 per cent, the same as the United States, to enable us to compete with the cheap labor of

St. Andrews Beacon - May 3, 1906 St. George contributes to San Francisco earthquake relief..... incl. granite

St. Andrews Beacon - May 17, 1906 A Beautiful Stone. - The first monument to be placed in the burial ground of the Church of the Transfiguration, St. Patrick, was erected last week by Colin Stuart, of Portland, Me., in memory of his deceased wife, who died Jan. 31. The design, as worked out by Messrs. O'Brien & Baldwin, stone cutters, St. George, is very handsome. The lettering is the work of Mr. Tilley Moran, who is an artist in that line. The stone is of grey Quincy granite. Since its erection it has been inspected by a large number of persons who pronounce is a beautiful piece of workmanship."

St. Andrews Beacon - Nov. 29, 1906 The Victoria Granite Co.'s mill ... will probably finish this season's operations during the coming week."

St. Andrews Beacon - Oct. 4, 1906 All the granite works in St. George are busily employed. Tayte, Meating & Co., Milne, Coutts & Co., Epps, Dodds & Co., O'Brien & Baldwin, Messenett & McDougall and the Utopia Granite Works have all the orders that they can fill. While strolling through the granite shed of Milne, Coutts & Co., the Beacon's attention was drawn to a small monument in the form of a cross, which was a counterpart of the monument made by this firm for the late Sir John McDonald. This order had also come from Kingston, Ont. Two magnificent monuments of Spoon Island granite, weighing about ten tons each, are being constructed in this shop for the late Rev. J. de Soyre's grave and for Mr. Chas. M.

St. Andrews Beacon - Oct. 11, 1906 Messrs. Tayte, Meating & Co. are still operating the Glenelg black granite quarry in Bocabec. They have got out four scow-loads of stone this season."

St. Andrews Beacon - Oct. 18, 1906 St. George. - The granite and lumber dealers operating along the N.B. Southern road are vigorously complaining of the treatment accorded by them by the railway authorities in withholding cars. The granite men are particularly subjected to annoyance from this cause. It is to be hoped that before long some company will take over this line and operate it in a more business-like way."

St. Andrews Beacon - Sep. 20, 1906Granite Factories Coming. - One at St. Andrews, Another at Chamcook. - It is very probable that the plant of the Messenett & McDougall granite works of St. George will be removed to Chamcook. Mr. C.V. Wetmore, who is organizing a company to take over the plant, was at Chamcook last week negotiating with Mr. Rankine for a water privilege. There is a good water power at the place. It is also convenient to the railway and to the black granite quarries, from which it will likely draw its chief stone supply. Messrs. S.L. Lynott and R. Keating of Red Beach, Me., (formerly of St. George) have leased the larrigan factory at St. Andrews and intend entering upon the stone business. Both are expert granite men and know all the details of the trade. It is their intention to put in a 'Jenny Lind' polishing machine and begin work at once. The Beacon wishes them success."

St. Andrews Beacon - Sep. 27, 1906 St. George. - General regret is felt over the threatened removal of Messenett & McDougall's granite plant to St. Andrews."

St. Andrews Beacon - Apr. 4, 1907 Hubert Seamans, of St. George, had his hand and arm painfully bruised by being caught in a belt in Epps, Dodds & Co.'s mill one day last week."

St. Andrews Beacon - Apr. 11, 1907 The Glenelg quarry is now in operation. Manager Stuart says that there is a rapidly increasing demand for the stone and that the outlook is promising."

St. Andrews Beacon - Apr. 25, 1907There seems to be a scarcity of work in the granite sheds here. During the past week Messrs. Henry McGrattan & Sons were forced to let several men go, several young men have gone away for the time."

Granite Town Greetings - Aug. 21, 1907 The well known firm of Epps, Dodds & Co., have found it necessary to put in a surfacing machine in order to keep up with business which is coming in to them. The firm say the result, so far, has been very satisfactory. The machine is run by Mr. Palmer Bailey, and is cutting from forty to sixty feet a day."

Granite Town Greetings - Aug. 21, 1907 While working on the new surfacing machine in Tayte and Meating's mill, Jos. Meating met with a very painful accident, by which the forefinger of his right hand was almost severed. Dr. Taylor was called and dressed the wound finding it necessary to take several stitches. The doctor hopes to save the finger."

Granite Town Greetings - Aug. 28, 1907 A scow load of Red Granite came in Friday from the quarry of H. McGrattan & Sons. Their new derrick was put in operation unloading the stone, and proved a complete success."

Granite Town Greetings - Aug. 28, 1907 Large shipments of granite have been going forward this week."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Aug. 28, 1907 A small excursion party from Perry, Me., arrived here Wednesday. After visiting the Granite Works and other points of interest they returned in the evening."

Granite Town Greetings - Aug. 28, 1907 Mr. H. McGrattan, of the Utopia Granite Works, was in St. Andrews Thursday and erected a monument on the Avery lot in the rural cemetery."

Granite Town Greetings - Aug. 28, 1907 A beautiful monument is about completed at the works of Tayte, Meating & Co., of Quincy Granite. It is to be erected in the Waycroft lot in the cemetery at Fredericton. The design is very handsome, and the workmanship of the very highest and most artistic order, and will be a standing advertisement for the firm of Tayte, Meating & Co."

Granite Town Greetings - Aug. 28, 1907 Last week a stone weighing eight tons was quarried and successfully loaded in the yard of Milne, Coutts & Co. under the supervision of Mr. Fred. Baldwin. It is to make a base 7-0x5-0x2-0 for a layered granite monument now under construction."

Granite Town Greetings - Dec. 4, 1907 ADVERTISEMENT: 'Lest We Forget' Due respect for our departed loved ones demands that we erect not only Artistic but Enduring Memorials Marble has proved such a failure that some cemeteries now prohibit its use. Granite is everlasting and our Egyptian Black Granite is far more Artistic and Expressive than any other granite. We have hundreds of beautiful designs from $4.00 to $4,000. Write at once for designs and samples if youare interested, stating about what expense you anticipate. The result of our business shows that our Red and Grey Granites leave a firm place on the market, and a detailed explanation why we are enabled to produce the best at the lowest price is unnecessary. H. McGrattan & Sons, St. George, N.B."

Granite Town Greetings - Dec. 4, 1907 The Granite Cutter's Union held a special meeting Thursday evening."

St. Croix Courier - Feb. 7, 1907 St. George. - All the granite firms will open their shops for business on Monday next. McGrattan & Sons have been at work for some time and Tayte, Meating & Co. expected to begin operations on Wednesday of this week. H.H. McLean ..."

St. Andrews Beacon - Feb. 14, 1907 Sheriff Stuart will operate his Glenelg quarry this season himself, selling the stone to whoever may want to buy. Geologists have pronounced this so-called black granite to be greenstone porphyry. It is fast becoming very popular for monumental purposes."

St. Andrews Beacon - Feb. 28, 1907 Just as soon as the weather conditions will permit, Sheriff Stuart will begin the development of his Glenelg greenstone porphyry quarry. The works will likely be erected on the Rankine property, Chamcook, where there is a good water power."

St. Andrews Beacon - Jan. 3, 1907 St. George. - ... These fall, which are justly celebrated for their grandeur, have been practically harnesses to furnish power for four granite mills and a pulp mill. The leading granite manufacturers of the town are Tayte, Meating & Co., H. McGrattan & Sons, Epps, Dodds & Co., Milne, Coutts & Co. and Messenett & McDougall. On account of the existence of immense quarries of both red and black granite within a short distance of the mills and their exceptional facilities for manufacturing, these firms are able to successfully compete in quality and workmanship and price all over the Dominion in both building and monumental granite."

St. Andrews Beacon - Jul. 11, 1907 St. George. - The granite factories are doing a quiet business."

St. Croix Courier - Jul. 18, 1907 The polishers in McGrattan and Co.'s mill are out on a strike. The men receive $1.50 per day and ask for $1.75. The company say they cannot give it and the men think they cannot support their families on $1.50 with provisions at present prices."

St. Andrews Beacon - Mar. 7, 1907 It is reported that some of the partners in the firm of Tayte, Meating & Co. are willing to sell their shares in the business. If report is true a good chance for investment is offered."

St. Croix Courier - Mar. 14, 1907 St. George. - The granite mills have commenced operations after their annual vacation."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Mar. or May 30, 1907 St. George. - A number of the stone cutters who went to Red Beach a short time ago have returned home on account of scarcity of work there. The new scow being built for Henry McGrattan and Sons is nearly completed. It will be used for bringing stone from the Bocabec quarry."

St. Croix Courier - Mar. 21, 1907 St. George. - A.R. Tayte, of the firm of Tayte, Meating & Co., has offered his share of the business for sale. It is said George Craig is to be the purchaser."

Granite Town Greetings - Nov. 6, 1907 Messrs. Tayte, Meating & Co. report an unusual number of orders on hand for this season, and a growing demand for the products of their plant."

Granite Town Greetings - Nov. 13, 1907 Bethel. - H. McGrattan & Sons have resumed operations at their quarry here."

Woodstock Despatch - Nov. 20, 1907 Large Monument. - A very beautiful monument which has been shipped from St. George to be set up here, in memory of the parents of the late Peter Fisher, of Woodstock, is at present stored in the Star Line Freight Shed. The monument is the work of Gallagher Bros. of Woodstock and will be set up in the Old Burying Ground here. - Fredericton Gleaner."

St. Andrews Beacon - Nov. 21, 1907 The granite workers of St. John have completed organization of a union and adopted an increased scale of wages. They passed a resolution fixing a scale of thirty one cents an hour for monumental work and thirty nine cents an hour for building work, on and after March 1. The men now receive $2.00 a day on monumental work and $3 a day for building work, the day being nine hours."

St. Andrews Beacon - Nov. 21, 1907 Greenstone Porphyry. - Mr. Henry Meating, of Epps, Dodds & Co., St. George, who has been quarrying at the Glenelg greenstone porphyry quarry owned by R.A. Stuart, says he is greatly pleased with the stone. Not only can it be quarried easy but the stone is getting darker and richer in tone as the quarry is opened up. He thinks that the owner has a very valuable property."

St. Andrews Beacon - Nov. 21, 1907 Epps, Dodds & Co., St. George, have recently brought to St. Andrews some very handsome monuments in greenstone porphyry. One was placed in the Joseph Craig lot, Chamcook. The other two were erected in memory of Mr. and Mrs. John M. Breed and Captain John Stinson and family in the rural cemetery. Mr. Henry Meating superintended the erection."

Granite Town Greetings - Nov. 27, 1907 Epps, Dodds & Co. are sending out a very handsome calendar."

Granite Town Greetings - Nov. 27, 1907 The noise of the wood sawing machine and the granite cutting machine is heard in all directions."

Granite Town Greetings - Nov. 27, 1907 The granite workers at a meeting Monday night completed organization of a union and adopted an increased scale of wages of thirty-one cents an hour for monument work and thirty nine cents an hour for building work on and after March. They elected John W. Ward president; John Sullivan, vice president; Daniel Gilson, recording secretary; Daniel Donovan, financial secretary; Frederick Fawcett, treasurer. - Sun."

Granite Town Greetings - Oct. 2, 1907 Robt. Maxwell had the misfortune to get two fingers jammed while engaged in the granite works."

Granite Town Greetings - Oct. 16, 1907 Many of the granite firms are having a rush of work, - which is unusual at this season. If orders continue coming in, there is every prospect of the mills running through the winter, without the usual shut

Granite Town Greetings - Sep. 4, 1907 Owing to a large number of rush orders Tayte, Meating & Co., are running their mill extra time."

Granite Town Greetings - Sep. 11, 1907 ADVERTISEMENT: You Can't Dodge the Fact that Tayte, Meating & Co. are the men you want to furnish you Monuments from New Brunswick and Foreign Granites. We do not beat any Drums but we do beat all competitors for first class work and stock. Write or give us a call Tayte, Meating & Co. St. George, N.B."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Sep. 18, 1907 The annual repairs to the water wheels at the pulp mill is now going on, and the granite works are shut down in consequence."

Granite Town Greetings - Sep. 18, 1907 Capt. Johnson left by train Monday on his regular trip through Upper Canada in interests of Milne, Coutts & Co."

St. Croix Courier - Sep. 19, 1907 St. George. - The granite mills dependent on the Pulp Co. for power are closed down while they are putting a new wheel in the pulp mill."

Granite Town Greetings - Sep. 25, 1907 Hiram Leavitt met with a serious accident while working in H. McGrattan's & Sons' quarry. Dr. Taylor advised his removal to the hospital at St. John, where itwas found necessary to remove his eye in order to save the sight of the other."

Granite Town Greetings - Sep. 25, 1907 Robt. Maxwell injured his hand quite severely while quarrying for Simmons & Co., bridge contractors."

Granite Town Greetings - Apr. 1, 1908 An accident occurred at the mill of Epps, Dodds & Co., Thursday, when B. McCarten injured one of his fingers so badly that amputation was necessary."

Granite Town Greetings - Apr. 8, 1908 The hills near St. George can furnish as good granite as there is in the world. If the business men of the town will have faith in their home industries and will make investments to develop what is close at hand, the time will soon come when the river will be thronged with vessels from April to December."

Granite Town Greetings. - Apr. 15, 1908 Several of our young granite cutters who have been working in Vermont granite centres, have arrived here. The settlement of the strike will make their stay very brief. Some will leave next week to resume their old positions."

Granite Town Greetings. - Apr. 15, 1908 The fine industrial concern of H. McGrattan & Sons is working a full crew. Business is good and orders are coming in every day. The present outlook indicates a prosperous season for the firm."

Granite Town Greetings - Apr. 15, 1908 Tayte, Meating & Co. have secured the contract for furnishing supplies to the Alms House for one year."

Granite Town Greetings. - Apr. 15, 1908 Geo. Anderson, an employee of Milne, Coutts & Co. had two fingers badly injured, monday, while turning astone."

Granite Town Greetings - Apr. 29, 1908 H. McGrattan & Sons scow, loaded with black granite, was brought into port Friday morning by Percy Catherine, with his gasoline boat. After discharging, the scow will be taken back for another load."

Granite Town Greetings - Aug. 5, 1908 ADVERTISEMENT: Nothing Succeeds Like Success H. McGrattan & Sons Manufacturers of Monumental and building work of every description, from St. George and other granites. Our plant is equipped with pneumatic tools, polishing and surfacing machines, and all modern machinery for turning out the highest grade work at reasonable prices. Send for a sample of our black granite, it takes a high polish and is well suited for monumental work. Try us, we can give you prompt delivery. We are equipped for convenience and can save you money. Monuments erected in any part of the County. Saint George New Brunswick."

St. Andrews Beacon - Aug. 6, 1908 St. George. - The granite strike has not yet been settled. A great many of the best men have left town. The stoppage of this industry has made the town unusually quiet."

St. Andrews Beacon - Aug. 13, 1908 Granite Deadlock Unbroken. - Employer's Proposition Not Alluring Enough for Men. - There is little hope of any settlement being reached in the granite strike at St. George. A few days ago the employers offered the men an increase of five cents per day, in lieu of the demands that they had made, but this offer was not sufficiently alluring and it was declined by the men, who declared for their original proposition. Thus matters stand. Nearly all the strikers have left town, 32 of them leaving by Monday night's train for the west. The factories are all closed with the exception of the McGrattan factory, which is being kept open by the proprietors, all of whom are practical men."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Aug. 19, 1908 Obituary. - Mr. Henry McGrattan. Mr. Henry McGrattan died on Tuesday last, after an illness of several months. Mr. McGrattan during the past two years had been in failing health. He was 71 years of age and leaves a widow, five sons -- John, Edward, Louis, Leo, and Charles and two daughters, Mrs. Murray and Miss Bessie, all at home. St. George has lost, in Mr. McGrattan, a citizen whose enterprise did much in making the town known over the country. Aggressive in business he never hesitated, he overcame obstacles and faced difficulties that would have daunted the ordinary man. Progressive in his methods he compelled success to follow him. Courage in his convictions and confidence in his ideas made of him a nation builder, the town is bigger and better because of him. In his younger days Mr. McGrattan followed the lumber business, he was boom master here for years - when St. George was a lumber town. About twenty years ago he opened a meat store and from this has grown the large general store of H. McGrattan & Sons. Eight years ago, with his boys, he built and started the Utopia Granite Works and succeeded in building up one of the largest granite concerns in town. A grist mill operated by the power used in the granite mill was added to the plant a few years ago. Mr. McGrattan together with his brother, the late John McGrattan built many public works in the country, including the wharf at Back Bay and the bridge at Maces' Bay. Possessing a genial disposition, of a nature, jovial, Mr. McGrattan made friends everywhere. His death is a distinct loss to the community. The funeral was held Friday morning from his late residence to the Catholic church, where the solemn services for the dead were offered, thence to the new burial grounds. The pall bearers were: James O'Brien, Thomas McGowan, J. Sutton Clark, Jas. O'Neill, Robt. Radley and Senator Gillmor. A large number or relatives, friends and citizens followed the remains to their last resting place."

St. Croix Courier - Aug. 20, 1908 That Granite Seizure. - The Customs Department at Ottawa makes a Unique Ruling. - St. George, Aug. 14, 1908. - The last issue of the Beacon states that the recent seizure of Scotch granite in St. John has been adjusted by the importers paying a 'nominal fine.' That statement, without any further explanation, would lead the public to believe that the importers had violated the law and had got off with a fine. As this matter has been referred to before in the public press it is no more than fair to Milne, Coutts & Co. that the facts should be made public. On the 22nd of April last they entered a small shipment of Scotch manufactured granite at St. John ex S.S. 'Victorian' for different points in Quebec and Ontario. A few days after that date they were notified by the commissioner of customs at Ottawa, that the granite had been seized in St. John for undervaluation and undermeasurements. They at once took the matter up with the department at Ottawa, and by submitting estimates from the Scotch manufacturers before the orders were placed, which agreed with the manifests, showed that there was no undervaluation, and by the order from their Canadian customer, with sizes and original of sketches sent to Scotland with same sizes, which agreed with the measurement of stone, proved most conclusively that there was no undermeasurements. This proof was all submitted early in May, but it took the department until July 22nd to verify their proof, detaining the granite in St. John three months and putting Milne, Coutts & Co. to great inconvenience as the granite was sold to be delivered by May 1st. Although the original charges could not be proved the department seemed to think it would not do to let the granite be released without some reason for stopping it, so they fined the importers the amount of the commission paid their buyer in Scotland with duty added, which amounted to the nominal fine of $9.12. It may be somewhere in the tariff regulations that the buyer's commission must be added to actual cost, but the writer has never seen it, nor heard tell of ir before. Officer Lynott, who seized the granite, evidently had no knowledge of the cost of granite in Scotland, nor data to go by, but seeing how low it was involved at, jumped at the conclusion that there was a 'nigger in the fence' somewhere, and seeing visions of glory and incidentally a few shekels drifting his way, felt that it was his duty to seize it. The manufacturers in st. George, to whom he submitted the sketches accompanying the manifests, for estimates, agreed with him that the granite could not be manufactured for the manifest price. The failure of the department to find any undervaluation, except the buyer's commission, must surely show these gentlemen how cheaply they can manufacture granite in Scotland, and what they are 'up against' in trying to manufacture New Brunswick granite in competition with Scotch manufacturer's work, and at the same time show the public to what extent an officer without technical knowledge of values of imported goods, or information to guide him, can inconvenience an importer by seizing goods and holding them until he finds out what they cost where manufactured, or until such time as the commissioner of customs has time to look the matter up. If the law could be amended so as to give the collector of the port where seizures are made power to deal with such seizures it would facilitate matters and prevent unnecessary 'hold ups.' Fair Play."

St. Andrews Beacon - Aug. 20, 1908 Henry McGrattan. - With the death of Mr. Henry McGrattan, which occurred last Wednesday, St. George has lost one of her best and most enterprising citizens. The deceased was a native of St. George. In his early days he was engaged in lumbering and river work. Later on he entered into the grocery and meat business. Several years ago with hi sons he established a granite factory on the upper side of the St. George bridge. This was supplemented a year or two later by a grist mill. The firm has been running these enterprises with success until the present time. Some months ago, Mr. McGrattan, sr., contracted a cold which he was unable to shake off. He continued to fail gradually until the time of his death. The deceased was a devout member of the Catholic church, a good citizen, a staunch liberal, and in every respect a worthy member of the community. He is survived by a widow, five sons and two daughters."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Aug. 20, 1908 The Granite Strike. - Story of the Difficulties at St. George as Told in the Correspondence. - St. George, N.B., May 11, 1908. - John E. McGirr, Esq., Sec'y, Granite Cutters' Union, St. George, N.B. Dear Sir, We, the undersigned granite manufacturers of St. George, having considered carefully the bill of prices recently presented by your union, regret to have to inform your union through you that owing to the dullness of the granite business through sharp competition, both with manufacturers in Canada and foreign granites, it is impossible to comply with the request of your bill. The granite business is in a much worse shape now than it was in 1902, when the present bill of prices and hours of labour were agreed on. After weighing the matter carefully, we have come to the conclusion that the present bill of prices, hours of work, and time of payment is as much as the business can stand and all we can afford to pay. Yours respectfully, Tayte, Meating & Co. Milne, Coutts & Co. Epps, Dodds & Co H. McGrattan & Sons. -- St. George, N.B., May 20, 1908. Messrs. Milne, Coutts & Co., St. George, N.B. Gentlemen, Having received a communication signed by you, we wish to acknowledge receipt of same. St. George Granite Cutters' Union, John E. McGirr, Secretary. -- St. George, N.B., Aug. 6, 1908. The Granite Cutters' Union, St. George, N.B. Gentlemen, The granite manufacturers of St. George wishing if possible to end the present deadlock which they consider detrimental to the interests of all concerned in it, as well as to the general welfare and prosperity of our town, offer the following terms: The old bill of prices. Nine hour day, with a raise of wages of (5), five cents per day for the balance of the year and additional raise of (5), five cents per day beginning at the first of next year (1909). This agreement to be signed by both parties for a term of three years. Trusting that you will give this offer due consideration and find it satisfactory and give us an early reply, we are, Yours respectfully, The Granite M'f'rs of St. George, per C. Johnson, Acting Secretary. -- St. George, N.B., Aug. 7, 1908. The Granite Manufacturers, St. George, N.B. Gentlemen, The Granite Cutters' Union beg leave to notify you that they cannot accept your proposition of the 6th inst., and when you can send a proposition favoring eight hours, two pay days a month and the same pay, notify the chairman of the committee, Bernard McGarten. Arthur Callaghan, Cor. Secretary. --"

St. Croix Courier - Aug. 27, 1908 St. George. - The strike is nearing a close. O'Brien and Baldwin started their mill Monday morning, granting the men the eight hour day and fortnightly payment."

St. Andrews Beacon - Aug. 27, 1908 Messrs. O'Brien & Baldwin, granite cutters, St. George, have entered into an arrangement with the striking cutters whereby business has been resumed. The other factories will likely follow suit."

North Shore Leader - Aug. 28, 1908 Granite Cutters Grievance Settled. - At St. George Friday, the Granite Cutters' Union and O'Brien & Baldwin reached a settlement. Some concessions were made by both sides. The men have gained an eight hour day, two pay days a month and an increase over the old bill of prices. Many who have left town for other granite centres will probably return. The other granite firms will likely agree to the new conditions."

St. Andrews Beacon - Feb. 20, 1908 St. George. - The granite mills, which have been closed down for several weeks, are gradually opening up again, and in a few days all of them will be in full swing again. Their closing down gives the town a quiet aspect."

Granite Town Greetings - Jan. 8, 1908 The five granite concerns, namely Utopia Granite Co., O'Brien and Baldwin, Tayte, Meating & Co., Epps, Dodds & Co., and Bay of Fundy, whose business is the manufacture of red, grey and black granite for monumental and building purposes, have had an exceptionally prosperous year. The introduction of up-to-date pneumatic and other machinery has tended to reduce the cost of production and rough hand labor and place our local works in a better position to compete for work than heretofore."

Granite Town Greetings - Jan. 8, 1908 The Granite manufacturers have been served with a new bill to take effect June 1st, 1908. The leading features of the demands of the cutters are, an eight hour working day and pay every two weeks. The other items of the bill are about the same as those now in force. A section, dealing with the cutting machines specifies that no man who has not served a three years apprenticeship,, shall be allowed to run a machine. At present the men work nine hours a day and are paid by the month. In the articles of settlement between the union and the manufacturers, signed some three years ago, it was agreed that any changes desired on the part of either party would require a five month's

St. Croix Courier - Jan. 9, 1908 The Granite Business at St. George. - (Greetings). - The past year has been a very good one in the granite trade. Not for years have the concerns worked so late in the season. Tayte, Meating and Co., H. McGrattan & Sons and Epps, Dodds & Co. have added cutting machines to their plants; the other firms will, it is said, have them soon. The quality of work turned out has been of a better class than usual and report says the Spring orders are more plentiful than last year, at this time."

Granite Town Greetings - Jan. 15, 1908 ADVERTISEMENT:You Can't Dodge the Fact that Tayte, Meating & Co. are the men you want to furnish you Monuments from New Brunswick and Foreign Granites. We do not beat any drums but we do beat All Competitors for first class work and stock. Write us or give us a call. Tayte, Meating & Co. St. George, N.B."

Granite Town Greetings - Jan. 15, 1908 ADVERTISEMENT: Granite Monuments. If You Are Particular Come to us with your orders for Monumental work of every description. We're Particular,and never let a job go out unless it's good enough to suit people who are Particular, We have every facility for erecting monuments in any part of the country. Local orders Will Receive careful attention. Orders filled in any kind of Granite. Send for samples and designs. Epps, Dodds & Co."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jan. 16, 1908 ADVERTISEMENT: Photo of crane in pit. Glenelg Porphyry Quarries R.A. Stuart & Sons, Props., Dealers in Black and Dark Grey Porphyries. Best and Handsomest Monumental Store in the market. Polished monuments erected in any part of the county. Prices Fine for Winter Orders. Correspondence Solicited St. Andrews, N.B., Jan. 9th, 1908"

Granite Town Greetings. - Jul. 15, 1908 The Wandering Stone Cutter. - -- It was back in the days of Bible story In the bygone times of Solomon's glory That mighty man with wisdom stored, Determined to build a house of the Lord. -- And he sent to Tyre, that wonderful town That mighty city of great renown, To find an architect, trained and skilled, To design the house that he wished to build. -- And Hirian came from his native land, And with him came workmen - a mighty band From Tyre and Sidon cities of yore, And stonecutters among them - four thousand score. -- The stone was bankered on Moriah's hill; They worked with patience and skill, And the building arose with its walk sublime, To be the marvel of after time. -- The wonderful work came on apace, And the heart of Israel's hauty race Swelled high at their monarch's invitation To come and aid at their dedication. -- But the stonecutters thought themselves treated wrong; United and skilled were they, and strong; So they counseled together and thought it best To ask that the wrong should be redressed. -- A committee was sent from them to bring The matter in hand before the king; And the mighty monarch was wise to see That these men he had best agree. -- For unless he did, they would quit his land And the wonderful temple he left to stand An unsightly ruin on Zion's hill, And the stonecutters thus defeat his will. -- 'Come listen, ye workmen! And hear the decision; Hark to the sentence the Wise Man shall give; Ye striking stonecutters who work with precision Your king, and your master decrees you shall live -- 'Without you I cannot erect this great temple, This wonderful building, so nearly complete; I could not replace you; and, as I am yielding, With all the strikers, I am going to treat. -- 'I have heard your request, and I grant your petition; Return to your banker and work with a will; Toil on till each pillar and porch, and addition, Now modelled in beauty, is furnished with skill. -- 'But think not a moment that ye are victorious, For transient and fleeting your triumph shall be Over Solomon, the Wise Man, and monarch most glorious, For wisdom and judgement and power hath he. -- A grevious curse unto you shall be meted; Cursed be the stonecutter now, and for aye! When this wonderful building is done and completed, The striking stonecutter shall wander away. -- 'Ye ever shall wander from nation to nation Houseless and homeless; a vagabond race; Ye shall come, at the call, and the kind invitation, And go, when you're ordered to some other place. -- Both you and your children forever and ever, Shall wander o'er this world from mountain to main; Both working and tramping, but never, no never Have fired habitation, in health or in pain. -- 'This is the sentence the Wise Man hath spoken; This is the curse that on he shall place; This is the promise that ne'er shall be broken, You shall, always be homeless upon the earth's face. -- Now back to work the strikers hie, With skill the point, and hammers ply; They work away and never shirk Till they have finished the mighty work. -- Then true to the curse that on them lay, They pack their tools, and tramp away; They turn their backs on the scared sod, And they leave the temple crowned Mount of God. -- They wander down to the sounding surge; They seek, and at length they find a barge; They sail across to the Grecian shore, And their tools resound on the stones once more. -- At Corinth old, and Athens great, Raise pagen temples, and half of state; Until the land of old Greek story Was seen to blaze with sculptured glory. -- And when this wonderful work was done, The stonecutters turned to the setting sun; For not by sculptured wall nor dome, Did the 'vagabond' stonecutter find a home. -- And crossing o'er the waters wide, He encamped by Tiber's yellow tide, Raised mighty wall, and carved lofty dome In the wonderful city of ancient Rome. -- And as time went by in endless march, Cut Circus wall, and triumphal Arch; And when the Roman sun went down He tramped, away to some other town. -- And crossing over the mountain wall, He entered the shades of the forest tall; He tramped through Germany, Gaul and Spain. Through snows of winter, and summer's rain. -- He crossed the channel to

Britain fair, And you hear the stonecutters hammer there, As he steadily worked by Thames side. Till the mighty London spread far and wide. -- And very soon on every side, By rushing river and ocean tide, Great cities arise in every land, The work of the stonecutters cunning hand. -- For feudal lord he built the wall Of dungeon deep, and turret tall; And for bishop good, in the church's march, Carved buttress-cap, and Gothic arch. -- Built Royal palace for king of power, With banquet hall and lofty tower, And everywhere his skillful hand Did much to beautify the land. -- While other found peace, and rest and home, The stonecutter still was forced to roam, From country to country o'er dale and ill; For the curse of the Wise Man followed him still. -- So when men looked out on the stormy seas And, the great world seeking Genoese Had led the way to the Western world, The stonecutters banner was soon unfurled. -- On the western shores of Atlantic wide, The 'vagabond' stood by the ocean side; And so it was here, as in days gone by, With skill, the point and hammer ply. -- And cities arose, on every side, From Atlantic old to Pacific wide; From the Southern Gulf with its skies serene, To the Northern Lakes, with their waters green. -- The skillful stonecutter did his best To build a home in this glorious west; But he finds no permanent board or bed, For the ancient curse is still on his head. -- It is even so now, as in bygone day, When the job is done he must tramp away; From city to city, by fortune led, To work again for his daily bread. -- When the job is finished, his tools he'll pack, And tramp away, down the railroad track, And watch his chances near and far; To steal a ride in a cattle car. -- Or, if fortune smiles with face more fair, He may find as eat in a reclining chair; But whether the 'vagabond' walk or ride, From the ancient curse he cannot hide. -- It follows, where'er their race they run, In storm of winter or summer sun; It follows where'r they take their flight; From frozen Pole to Equator bright. -- No rest to them on earth is given, May their souls find rest, and a home in heaven; Such is the legend learned in youth; But I do not vouch for its literal truth. By a Union Granite Cutter."

St. Andrews Beacon - Jul. 16, 1908 St. George. - The strike among the granite workmen is beginning to be felt. An attempt was made by outside parties to secure a solution of the trouble, but the employers will not listen to any addition to the cost of manufacture and the men refuse to return to old conditions. Many of the men have gone away. Mr. George Craig, one of the best workmen, left on Monday for Vermont."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jul. 16, 1908 The Granite Strike. - A Correspondent Deals With Features of the Difficulty at St. George. - Editor: In these days of union troubles, strikes, failures in business, etc., our little strike in St. George don't cut much of a figure. Still it is of as much moment to our town, and effects every one in probably a greater proportion than larger strikes in big cities where there is a much greater diversity of interests than here. The granite business in St. George has had many ups and downs since its birth about thirty five years ago. It goes without argument that it has been a good thing for the town in a general way, distributing a great deal of money and making work for a community that had suffered severely because of the decline of the lumber business. It goes without argument that more money has been lost on it, and more men of acknowledged business ability have failed to run it successfully than in any other business in New Brunswick. About all the men connected with it for the first decade were men who had made a success of some other business and accumulated a goodly share of this world's goods. Without exception they all failed to hold their own at it and some of them in a short time lost the savings of many years in other lines of business. The men at present carrying on the business have as a rule gone into it in a small way and grown up with it, and by hard work, strict economy and carefulness managed to pay their debts and keep a good credit. Up until about fifteen years ago, they had the bulk of the trade of the Dominion divided among the shops here, with prices fixed by themselves in competition with each other. But since that time there has been a very material change in the business. Manufactories have sprung up in the principal cities of Canada, and dealers who were buying the bulk of their work in St. George previous to that date are now making their own work and catering for the better class of retail work. As that class of work is mostly in the cities, these shops naturally get it and the St. George people are left only the country dealers to depend upon for trade. There they are met by the agents of foreign granites, manufactured in Aberdeen at prices that the St. George men find it very hard to compete with, and, in many cases, cannot compete with. The result is that they lose the work, which goes to Scotland. These Scotch agent have designs of all ordinary work with a price laid down, at any pint in Canada, and the New Brunswick manufacturers have to meet these prices or let them have the work. Up until 1902, they fairly held their own. In that year the nine hour day was adopted. This advanced the price of manufacturing so that it was only on the ordinary work, with much stock and polishing, and very little cutting, that they could compete. Since that time their output has fallen off nearly one third and, had they followed the trend of other manufacturing plants in Canada, they would have cut their wages in proportion to the cut in price. This matter has all been explained, but in the face of a falling market and hard times the demand is now made for an eight hour day and an advance in wages which, the dealers allege, is beyond their power to give. If the strike is persisted in it means the end of the granite business in St. George. Red Beach in Maine is an illustration of what a course of this kind will accomplish. Anybody who will compare Red Beach with its open shops twenty years ago, and Red Beach today can easily see that the experience has been detrimental to the granite business and to the town generally. And this will prove to be the case here, if persistently pursued. Your truly, Granite."

St. Andrews Beacon - Jul. 23, 1908 The granite industry of St. George is still at a standstill. Neither side is willing to withdraw from the position it has assumed, and it is difficult to see what the outcome will be. It seems a pity that a more conciliatory spirit had not been exhibited at the outset. The workmen of St. George are not an unreasonable class, and if the olive branch had been held out to them by their employers at an earlier period in the difficulty, an amicable understanding might have been reached. There is little doubt that, under present methods, the granite business cannot stand much, if any, additional expense. Competition is keen from some quarters and there is not much margin for profit. The men are beginning to realize this fact, but having put their hand to the plough they do not feel like turning back. It would pay both sides - and would certainly pay the town - if they swallowed their pride and endeavored to come to terms."

Granite Town Greetings - Jun. 3, 1908 Sheriff Stuart has a crew of men at work in his greenstone porphyry quarry at Steen Lake."

Granite Town Greetings - Jun. 3, 1908 The Smith & Young Granite Manufacturing Co. has been organized at Red Beach, the

members of the new concern being Frank B. Smith, Fred C. Smith, H.H. Smith and Chas. D. Young, all well known residents of Red Beach and skilled workers in stone. The company purchased the polishing mill and stone cutting business carried on for several years by O.S. Tarbox and hope to enlarge the output of the plant. F.B. Smith will be manager of the stonecutting works with Chas. D. Young as assistant, and H.H. Smith will have charge of the polishing department, assisted by Fred C. Smith. Many friends of the firm wish for it success."

St. Croix Courier - Jun. 4, 1908 St. George. - The whistles of the different granite mills were not heard Monday morning owing to the men being out on strike. The men want eight hours and a pay day every two weeks. It is hoped that a reconciliation will soon be made between employers and employees."

Granite Town Greetings - Jun. 10, 1908 Granite workers and fishermen are excluded from the Workingmen's Compensation Act. Why?"

St. Andrews Beacon - Jun. 11, 1908 St. George Strike. - The strike of the granite cutters at St. George has not yet been terminated. All the cutters are out. A few polishers remain in some of the shops; these will go out when the jobs on hand are completed."

St. Andrews Beacon - Jun. 11, 1908 R.A. Stuart & Son announce a clearance sale of their clothing and furnishings. Mr. Stuart intends devoting his entire time to the developments of his porphyry quarry."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Jun. 17, 1908 Nelson A. Dodds, an expert granite letterer from St. George, is employed at the rural cemetery placing inscriptions on a number of monuments. - Courier."

St. Andrews Beacon - Jun. 18, 1908 Tayte, Meating & Co., St. George, have opened a black granite quarry on the Towns end property at Steen Lake. The stone has a very promising look."

St. Andrews Beacon - Jun. 18, 1908 Glenelg porphyry quarry is turning out some particularly fine blocks of stone just now. It is to be used in filling St. George orders. Israel Thorne, of St. George, is acting as quarryman for Messrs. Stuart. He is a thoroughly competent man and is well acquainted with the character of the stone."

Granite Town Greetings - Jun. 24, 1908 The granite cutters held a special meeting Monday night. It is rumored that their is a possibility of the cutters and manufacturers settling their differences."

St. Croix Courier - Jun. 25, 1908 New Granite Works. - Elsewhere in this issue Alfred Price makes an important announcement to any who may be in need of stone work or monuments of any kind. On his own premises on Queen street, St. stephen, he has erected a polishing shed 20x30 feet, with engine house 16x10 feet, in which he has installed a six horse power steam engine. It is a self-contained business and having no middleman's profit to pay, he is in a position to quote very low prices. Mr. Price is a skilled workman of long experience, familiar with the details of his business. He has access to the best markets and handles the best grades of red, gray and black granite, marble, an other stones. A call at his place of business will be found profitable."

St. Croix Courier - Jun. 25, 1908 ADVERTISEMENT: St. Stephen Granite Works Queen Street -- I handle the best Grey Granite, Black Granite, Red Granite and Marble to be had in the world. I manufacture by steam power and have no rent to pay. Everyone connected with the business is a worker, and my customers have no middleman's profit to pay. I can do your work 20 per cent below any competitor. I do all kinds of Stone and Monumental Work And Guarantee Satisfaction. It will pay you to get my prices before you place an order elsewhere. Alfred Price, Proprietor."

Granite Town Greetings - Mar. 11, 1908 The click of the granite cutter at Tayte & Meating's may be heard these days in the lower part of the town during working hours, it indicates warm weather and the approach of the Spring time."

Granite Town Greetings - Mar. 11, 1908 Complete Tie-Up Of Granite Work; 4,500 Men Idle. - U.S. granite strike..."

Granite Town Greetings - Mar. 25, 1908 Geo. Lee, an employee of H. McGrattan & Sons met with a serious accident Monday. While turning a stone the blocking slipped and caught his hand jamming two fingers so badly that amputation was necessary. Mr. Lee has much sympathy in his misfortune."

Granite Town Greetings - Mar. 25, 1908 Walter Bullock is confined to his home suffering with a badly cut eye, the result of being hit by a flying piece of steel. It was feared at first that he had lost the sight of the eye, but it is now thought it can be saved. The young man is employed as a granite cutter by Epps, Dodds & Co."

Granite Town Greetings. - Mar. 25, 1908 The granite mills are all working up to their full capacity, and exhibit no signs of the depression that has affected other industrial centres."

Granite Town Greetings - May 6, 1908 A settlement with the granite polishers in Red Beach has been reached - the agreement to run for three years. By the terms agreed upon the men are to receive 23 « cts minimum per hour, eight hours to constitute day's work. All overtime to be time and a quarter. One apprentice shall be allowed to four journeymen."

Codes: G3 / !DX_Names: Granite;

St. Andrews Beacon - May 7, 1908 Seizure Scotch Granite. - Milne, Coutts & Co. Make a Statement. - (St. John Star). - For some time, the granite industry at St. George has suffered serious depression. A number of quarries have been closed down because of slow orders, this being due to exceptionally keen competition from outside. During the past few months the manufacturers have been endeavoring to learn the cause of the trouble and believe that they have now reached a solution. They feel that Scotch granite is being admitted to Canada at a very low valuation. As a result of what they have learned, representations have been made to the Preventive Department at Ottawa and on instructions received Officer Lynott of St. George, yesterday seized in St. John twenty nine cases of valuable manufactured granite imported on the steamer Tritonia from Scotland. The granite was consigned to Milne, Coutts & Co., and billed to Toronto parties. It is being held pending further instructions from Ottawa. The collector of customs at St. John says that the matter was not handled through his department but direct from Ottawa and he personally knows nothing of it. Mr. Harold Sobsfled, of the Reford line, states that while he has not kept a check on shipments of granite from Scotland, he does not believe that these have been increasing to any marked extent of late. The granite cutters, however, feel that by taking this action, they have made a very important move in their own interests. They have been unable to meet the competition especially in red granite and have suffered in consequence. Some considerable excitement is said to prevail at St. George because of this recent action. Milne, Coutts & Co. have a large manufacturing plant in St. George and one member of the firm represented the manufacturers before the Tariff Commission at which time the duty was increased to meet the demands of the manufacturers. The increase was satisfactory, and this firm's action in importing the Scotch article is hardly understood. The outcome is awaited with much interest. -- The Firm's Interest. - Respecting the seizure, Messrs, Milne, Coutts & Co. have made the following statement to the Beacon:- 'We have been importing Scotch granite for the last eleven years in a small way for such of our customers who wanted it and preferred keeping all their account with us, so long as we could sell them the imported granites as cheaply as the other manufacturing firms. We have an agent in Aberdeen, a gentleman who buys for a number of American firms. When we sell a Scotch monument we make a tracing of it putting on the sizes, where polished, etc., and take off a dozen copies, and send them to our agent in Aberdeen. He places them in the hands of as many manufacturers for quotations and naturally buys from the lowest bidder. When the job is ready to ship he examines it and directs the maker where to ship it to. They are all billed to us at their various destinations, as soon as they are passed at the customs. We endorse the through bill of lading to the customer and forward it with our invoice for the price sold at delivered in Canada. 'This lot seized amounted to œ61. We have on file in our office prices from 8 or 10 dealers on this work, an it was invoiced at the price we bought it for, and was paid for in a 3 months' draft on London. There was no undervaluation outside of officer Lynott's brain, which we can easily prove when given a chance to do so. The idea of undervaluing is a childish one at least. No sensible man living in Canada would think of it, as our accounts are kept with each customer and all paid by drafts. The monuments are numbered, a sketch of each job with number and sizes accompanies every job, so all a customs officer has to do is to go over our books and check off the monuments and prices and refer to our bank account where he will find the drafts, and run up the customers accounts and our bank accounts with them. It would not take much of an accountant to tell whether we had been going straight or crooked. If you could go over our Scotch accounts we could plainly show you that there is no chance for undervaluation.' -- Mr. Frank Hibbard, a former accountant of the firm, who was in Fredericton last Thursday, stated to the Beacon representative that he was thoroughly conversant with the methods adopted by Milne, Coutts & Co. in carrying out their Scotch business, and he was satisfied that the officer that made the seizure was laboring under a misapprehension. He said the firm's business was always done 'on the square' and he felt there would be no difficulty in establishing their innocence. The Beacon has been unable to secure an interview with the officer who made the seizure, but he is doubtless prepared to give good

Granite Town Greetings. - May 13, 1908 The granite manufacturers met on Monday night. It is rumored that steps will be taken for a settlement with the workers and it is hoped the threatened strike in June will be avoided."

Granite Town Greetings. - May 20, 1908 ADVERTISEMENT: Nothing Succeeds Like Success H. McGrattan & Sons Manufacturers of Monumental and building work of every description from St. George and other granites. Our plant is equipped with pneumatic tools, polishing and surfacing machines, and all the modern machinery for turning out the highest grade of work at reasonable prices. Send for a sample of our black granite, it takes a high polish and is well suited for monumental work. Try us, we can give you prompt delivery. We are equipped for convenience and can save you money. Monuments erected in any part of the County. Saint George New Brunswick"

St. Andrews Beacon - May 28, 1908 Business at the granite factories is none too brisk. The proprietors have been hastening forward the completion of pressing orders, in anticipation of the workmen's strike which is expected on the 1st of June. The men want an eight hour day, Saturday half holiday and an increase of ten per cent in their wages. Many of the workmen realize that the time is not propitious for a strike, so that it may be of short duration."

St. Andrews Beacon - May 28, 1908 Red Beach Granite Strike. - The strike of the granite polishers in the Red Beach granite works still remains unsatisfied. The men have now been out three weeks, and there seems little prospect of an early resumption of work. The polishers who had been receiving $1.60 per nine hour day, were given an advance of wages on request, to $1.88 per day of eight hours. This was apparently satisfactory to the men and an agreement was drawn up and signed by both employers and employed. The agreement also made it obligatory on the workmen to give reasonable notice in case of dissatisfaction from any cause. But the managers of the Union with which the Red Beach polishers are affiliated refused to sanction the agreement, insisting that the men must be paid $2.25 per day. The manufacturers refused to comply with the increased demands, and the strike was on. The going out of the polishers practically shuts down the Red Beach works. - Calais Advertiser."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - May 28, 1908 The stone cutters held their regular monthly meeting last night. The settlement with the employers appears as far off as ever, present indications are that the men will strike in June. - Greetings. Sheriff Stuart has a crew of men employed in opening up his greenstone porphyry quarry at Steen Lake. There is an increasing demand for this beautiful stone particularly for monumental purposes."

Granite Town Greetings - Nov. 11, 1908 Large quantities of granite chips are being taken up by the dredge. It is probable that the practice of throwing waste material in the river will be stopped, as it is understood that the proper authorities have the matter in hand, and will vigorously enforce the regulations concerning this matter."

St. Andrews Beacon - Nov. 19, 1908 and St. George Greetings - ?Dredging Granite. - Large quantities of granite chips are being taken up by the dredge. It is probable that the practice of throwing waste material in the river will be stopped, as it is understood that the proper authorities have the matter in hand, and will vigorously enforce the regulations concerning the matter. - St. George paper."

Granite Town Greetings - Sep. 2, 1908 The Granite Cutters Strike is Settled. - Mills Resumed Operations Monday. - The trouble between the granite cutters and manufacturers has been adjusted by all the firms who had not signed the new bill of prices doing so on Saturday. The mills resumed operations on Monday with small crews, as a large number of men have left town. It is expected, however, that many will return. The strike has been on since June and the settlement is a great relief to everyone in town, as every branch of business felt the effects of the long struggle. The granite firms and the employees, have signed an agreement to run for three years, and it is believed that business will now go along without

St. Andrews Beacon - Sep. 3, 1908 The granite strike is now a thing of the past. Work has been resumed in nearly all of the granite mills, but workmen will be scarce for a time. Some of those who went away during the strike will not return."

Granite Town Greetings - Sep. 9, 1908 Sheriff Stuart was in town Tuesday arranging for a shipment of his celebrated black granite. This stone is becoming very popular."

St. Croix Courier - Sep. 17, 1908 30 Years Ago (Sep. 12). - A handsome red granite tablet has been shipped this week from Henry Rudge's Stone Works in this place by John Taylor of Harvey Station, for a family monument in Inverarity, Scotland. This tablet has been pronounced by experts as good a specimen of our quarries as has yet been turned out."

St. Croix Courier - Sep. 17, 1908 The Granite Seizure. - Customs' Authorities Only Justify It On Flimsy Pretext. - Editor: The last issue of the Beacon strives to make good its contention that Officer Lynott was justified in making the recent seizure of Scotch granite in St. John, and claims that the seizure was confirmed by the department imposing the fine. Below are the facts of the case, and we are content to let your readers determine for themselves whether he has 'made good' his assertion or not. The granite was seized for alleged undervaluation and under measurement, the officers report to the department claiming that it was undervalued at least 30 per cent. To prove our assertion that the seizure was not justified or confirmed on the claims of the above report, we would ask you to publish the enclosed letter from the commissioner of customs showing plainly that neither charge could have been sustained, but that the fine was imposed because the agent's commission was not added to the invoice, an entirely new customs ruling as far as we can find out. We trust that this will set at ease the perturbed minds of some of our friends who are still suffering under the hallucination that the importers were trying to evade the customs law and that Fairplay's former letter was a tissue of falsehoods. Fairplay"

Granite Town Greetings - Sep. 23, 1908 A scow load of granite from Sheriff Stuart's quarry arrived here Friday. Most of this lot will be used by Epps, Dodds & Co. for monumental purposes. The demand for this granite is increasing."

Granite Town Greetings - Apr. 14, 1909 Owing to an accident to one od the water wheels the granite mills were compelled to shut down for a day. Repairs were made, and everything is running smoothly again."

Granite Town Greetings - Apr. 28, 1909 The granite works of H. McGrattan & Sons present a busy appearance. Business is good and there is every indication of a prosperous season. This firm will erect monuments in any part of the country."

Granite Town Greetings - Aug. 4, 1909 If the parties exploiting a recent find of black granite in Welsford, as the only black granite in New Brunswick, will write to H. McGrattan & Sons of this town, they will be pleased to send a sample of their celebrated Egyptian black from their Bocabec quarries. Beautiful monuments made from this stone can be found in many cemeteries in Canada."

Granite Town Greetings - Aug. 4, 1909 Harry King left on Saturday's train for St. John and other points. Before he returns he will consult some capitalists in reference to amalgamation of the granite business of this town."

Granite Town Greetings - Aug. 18, 1909 Some very large blocks of granite are being hauled from the railway to the granite sheds."

Granite Town Greetings - Aug. 18, 1909 and St. Andrews Beacon - Aug. 26, 1909 H. McGrattan & Sons will furnish the granite trimmings for the Bank of New Brunswick, now building at Fredericton. The job is moulded and ten cut. They will also furnish the columns for the new Canadian Bank of Commerce at Halifax. This firm have erected a handsome red granite monument on Michael Doyle's lot in the old Catholic burial ground. The design is boulder style, with polished scroll and roll, and the workmanship is of a high grade. The best dealers in the country are handling the work of this company, and their efforts are meeting with substantial success, as they are keeping pace with the demands of the trade."

Granite Town Greetings - Aug. 18, 1909 Owing to an accident to the machinery Epps, Dodds & Co.'s granite mill was shut down for a few days last week."

St. Croix Courier - Aug. 19, 1909 St. George. - Epps, Dodds and Co. started their mill Monday morning. It was down last week owing to a broken motor."

Granite Town Greetings - Aug. 25, 1909 A large quantity of manufactured granite was shipped from here last week by N.B.S. Ry., to different points in Canada."

Granite Town Greetings - Dec. 1, 1909 H. McGrattan & Sons received an order last week for one of the largest monuments ever manufactured in St. George. The order came from Toronto, the design combines the massive and beautiful and is a striking sample of the artistic possibilities of granite."

St. Andrews Beacon - Dec. 9, 1909 St. George Greetings. - H. McGrattan & Sons received an order last week for one of the largest monuments ever manufactured in St. George. The order came from Toronto. The design combines the massive and beautiful and is a striking sample of the artistic possibilities of granite."

St. Andrews Beacon - Dec. 30, 1909 H. McGrattan & Sons are to erect a large granite monument to the memory of the late Mr. Timothy Lynch, at his grave at the Hermitage, Fredericton."

St. Croix Courier - Feb. 11, 1909 and Granite Town Greetings - ? Harry E. Lee, formerly of Fredericton, an expert granite carver and letterer, has moved here with his family and will enter the employ of Douglas Bros."

Granite Town Greetings - Feb. 17, 1909 Some of the granite mills are opening up and as spring advances conditions in town will improve."

Granite Town Greetings - Feb. 17, 1909 A meeting of the Granite Cutters Union was held Tuesday when matters of grave importance were discussed by the members."

St. Croix Courier - Jan. 21, 1909 New Granite Quarry. - An expert quarryman has recently aroused quite an interest in the grey granite quarry situated a few miles from town on the Little Ridge Road, and operated by Alfred Price. The fine grain of the stone, its desirable color and the ease with which it can be quarried present the possibility of a new suburban industry giving employment to a number of men. Mr. Price feels confident that this deposit of granite with his black granite quarry, and his ability to furnish granite of any color or quality, will compel him to enlarge his plant at an early date. He has facilities for doing good work very cheaply and states that his orders for this year are far ahead of those in hand last year

Granite Town Greetings - Jul. 7, 1909 Quite a large quantity of granite came in by rail last week. A lot of black stone is now being used for monumental purposes, this color seems to be the prevailing 'style' at present."

St. Croix Courier - Jul. 22, 1909 A quarry of a very handsome black granite was opened this week by Levi Ferson on his property in Dufferin. The stone is of dark color, of fine texture and neatly mottled. Samples have been sent to St. George to be polished and if expectations are realized the stone should supply an already existing demand. The crop is an

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Jul. 29, 1909 Black Granite, an Old Discovery. - The St. John Star says that a black granite quarry, 'the only one of its kind in the Province,' has recently been discovered in Welsford. Black granite was discovered in Charlotte county ten or more years ago and quarries have been in operation for several years. For further information the Beacon would refer the St. John paper to the St. George granite dealers, who have turned out some fine specimens of this stone, or to Sheriff Stuart, one of the early discoverers of the stone, who owns and operates a quarry on the Glenelg road, alongside Steen lake. Some beautiful samples of this stone may be seen in any of our cemeteries."

Granite Town Greetings - Jun. 2, 1909 Beautiful red granite is being brought down from Lake Utopia by scows, for Milne, Coutts & Co, The quarry is near the beach, and no difficulty is experienced in loading. Scows are towed by motor boat. Owing to the low run of tides the scow, owned by H. McGrattan & Sons, and loaded with granite, has been 'nipped on' at Bocabec. It is expected it will float during this week."

Granite Town Greetings - Jun. 9, 1909 Henry Meating, of Epps, Dodds & Co., went to Chamcook Thursday to superintend loading a scow with granite. Charles Epps, of Epps, Dodds & Co., has been ill for some days, and not able to attend his duties at the Co.'s works. Lou. McGrattan, of H. McGrattan & Sons, went to St. John Monday to superintend the erection of a monument in that city. Mr. Lawlor, representing building contractors of St. John, was in town a few days last week in consultation with granite dealers in reference to some stone work to be used in construction of some buildings now under contract."

Granite Town Greetings - Jun. 16, 1909 It required six horses to move a boiler, belonging to Tayte, Meating & Co. from Letang to the new mill at Dewar. A scow loaded with granite for Epps, Dodds & Co., grounded at the little island, and filled on the flood tide. After repairs had been made she was raised and brought to the wharf."

Granite Town Greetings - Jun. 23, 1909 Chipman McAdam, granite dealer, Amherst, was in town a few days last week, placing orders for monumental work. A large amount of finished granite chiefly monumental work, was taken away by steamer Connors Bros. last week, to be forwarded from St. John, to various points in Canada."

Granite Town Greetings - Mar. 3, 1909 ADVERTISEMENT: M.T. Kane Manufacturer and Dealer in Monumental and General Cemetery Work of the Best Selected Canadian and American Granites. First class work guaranteed and prices as low as can be quoted for honest work. Our work is a standing advertisement, and our business is increasing accordingly. We will deliver and erect monuments in any part of St. John and Charlotte counties. Write for prices and designs. Importer and Dealer in Domestic and Foreign Granites. Black Granites A Specialty Works Opposite Cedar Hill Cemetery -- Street Cars pass the door.. Phone, Works, 177-21, Residence, 165-11. West St. John, N.B."

Granite Town Greetings - Mar. 10, 1909 Almost the full complement of men are at work inthe granite sheds. While orders are not coming in as fast as usual at this season of the year, still the outlook for a good season's work is promising. Shipments of finished stone are already going forward."

Granite Town Greetings - May 5, 1909 Stock in some of the granite mills is running low. The condition of the roads make it almost impossible to get stone from the quarries."

Granite Town Greetings - May 12, 1909 and St. Andrews Beacon - May 20, 1909 A handsome granite monument, in memory of the late Henry McGrattan, was set up last week in the new Catholic cemetery by the firm of McGrattan & Sons. The monument is of light red granite in the form of a rustic cross, and stands thirteen feet high."

Granite Town Greetings - May 12, 1909L.A. McAdam erected a handsome red granite monument in the Apohaqui cemetery for Wellesley Parlee, in memory of his wife and children. The firm has also laid off plots at the Sussex Corner cemetery for Mrs. George Myers and Nelson W. Eveleigh. Both lots are enclosed in granite copings. - Kings County Record."

St. Croix Courier - May 20, 1909... The granite works at Red Beach, the home of the famous Red Beach Granite used in large buildings all over the country, employ many men, and the plaster factories give work to many more. Red Beach, which is ward seven of Calais, is one of the most beautiful spots in New England, and makes an ideal summer resort. ..."

Granite Town Greetings - May 26, 1909 A large stone weighing about six tons was hauled in from the station last week to Epps, Dodds & Co.'s mill, where it will be sawed into blocks to be used for monumental purposes."

Granite Town Greetings - May 26, 1909 H. McGrattan & Sons have erected a beautiful monument in the new Catholic cemetery on the lot of Cornelius Sullivan. The monument stands about five feet high, the bases are hammered grey granite, surmounted by a die of black granite, in which is cut a cross. The monument is of a very attractive design, and the workmanship reflects much credit on this well known firm who have many orders for local monumental work to be

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Dec. 15, 1910 Big Quarry Deal. - St. George Granite Quarries May Enter Syndicate. - Ottawa, Dec. 10. - Mr. Samuel Bilsky confirmed the report in the Free Press that he and Mr. John Black, mining engineer and capitalist, of Montreal, had acquired a string of stone quarries extending from Ottawa to New Brunswick. Mr. Bilsky denied the rumor that he and his associates had cornered the stone market and had made half a million on the deal. He did not care to ..?.. the amount involved in the ..?.. of the quarries. Has St. George Been Taken In? - (St. John Telegraph). - It is predicted that within the next few days the Granite Works at St. George, which at present are operated by five different companies, will pass into the hands of a syndicate. Mayor C.H. Magee of that town, who arrived in the city yesterday, said that outside capitalists are interested, and that the purchase of the works will take place. The transfer, he felt, would be of benefit to St. George, inasmuch as under one management the running expenses could be considerably curtailed and more capital put into the development of the industry. Mr. John McGrattan, a member of one of the St. George granite firms, was in town this week. He told the Beacon that no deal had been consummated with respect to the St. George granites factories, but that prices had been obtained from the several manufacturers by a legal gentleman in St. John, who represents outside capitalists. He did not think that these capitalists had any connection with the reported Ottawa merger. Mr. McGrattan stated that an inspection of the St. George properties would likely be made this week. He thought all the granite men in St. George were disposed to enter the syndicate. Black Granite Not In It. - Sheriff Stuart, who owns one of the finest black granite and porphyry quarries in New Brunswick, told the Beacon that his quarry had not been purchased by any syndicate. He did not know whether the St. George red granite quarries were included in the Ottawa 'deal' or not."

Granite Town Greetings - Dec. 16, 1910 Says Syndicate Is Likely To Take Over St. George Granite Works. - It is expected that within the next few days the Granite Works at St. George which are operated by five different companies will pass into the hands of a syndicate. Mayor C.H. McGee of that town who arrived in the city yesterday, said that outside capitalists are interested, and that the purchase of the works will take place. The transfer, he felt, would be of benefit to St. George, inasmuch as under one management the running expenses could be considerably curtailed and more capital put into the industry. ... St. John Tel. In reference to above while such a scheme has been on the carpet for some time and some few years ago had an appearance of being brought about, our suave mayor in his efforts after cheap maturity has rather stretched the point. While no doubt but such a scheme will some time in the future be a reality and at present efforts are being made toward its accomplishment and a promoter is expected here today to look the ground over, from whose efforts it may be brought about, it is still in the embryo and may take a long time to effect the purpose of amalgamating the various interests, and secure the large capital necessary for conducting a business of such a magnitude as it will be necessary to institute, for the proper carrying on the work necessary to make it a success."

St. Andrews Beacon - Jan. 6, 1910 St. George. - ... The granite industry, the chief industry, is quite up to the previous years, most concerns working full time up to the Christmas holidays."

Granite Town Greetings - Jul. 6, 1910 The Champlain Statue. - The unveiling of the Champlain monument on the 25th, was an event of much historic interest. It is doubtless fitting that the first statue erected in St. John, with the exception of a symbolic statue in memory of the men who died in South Africa, should be that of the man who discovered and named the great river which enters the bay. It is none the less significant of racial good feeling that the first statue erected in a distinctly British city should be in honour of a citizen of France at the event. ... The event was an important one to St. John, but no less important to the people of St. George. It was indeed fitting that this great work of art should be a product of the greatest granite town New Brunswick has veer known. Many words of praise were given Mr. Meating, who set the monument up, for the efficient and magnificent work done. The entire monument with the exception of the bronze statue of Champlain, which was designed by Architect McCarthy was tuned out of the mill of Epps, Dodds & Co. The base measures 12 ft square and the entire stone has an aggregate weight of 31 tons. At the corners of the monument on the lower part are bronze dolphins. The lettering and carving was done by Mr. George Craig and is spoken of as being a fine exhibition of the art. On the central portion of the stone is a large wreath enclosing the wording 'Champlain 1604 1904.' Further up underneath the statue are many symbolic designs, representing various historic reminiscences. The architect expressed himself as being pleased with the stone which was placed under his statue and stated that the work could be in no way improved upon and we congratulate Epps, Dodds & Co., in being able to put out such monuments. The above cut shows the monument, with the architect standing along side, as it stands on Queen Square, St. John today."

Granite Town Greetings - Mar. 2, 1910 Milne, Coutts & Co. resumed work again on Tuesday morning."

St. Andrews Beacon - Mar. 3, 1910 St. George. - ... the granite works at St. George, which were closed down all winter, have been started again and as a result everything is now astir in St. George. He expects that the shipments of granite of this year will surpass those of previous years. Prospects, he said, never looked brighter and they have at present a large number of orders in from Ontario."

S.J. Standard - May 18, 1910 Granite Cutters Strike in Maine. - May Result in Throwing Several Hundred Quarrymen Out of Work. - Want Two Discharged Men Reinstated. - Ellsworth, Me., May 17 - The throwing out of work of several hundred quarrymen is threatened as a result of the strike today at the South Brooksville quarries of 75 granite cutters. They demand only the reinstatement of two of their number who have been discharged and maintain they will stay out until the discharged men are again at work."

Codes: G3 / IDX_Names: Granite;

Evening Times & Star - May 19, 1910 The Champlain Monument. - The Champlain monument committee held a meeting this morning in the mayor's office and discussed the erection of the monument. It was decided to make a payment to the contractors for the base of the statue, as requested by the sculptor, Hamilton McCarthy. The granite blocks for the base arrived in the city yesterday from St. George, and work will be commenced at once to prepare the pedestal for the statue. It is expected that all will be in readiness for the unveiling on June 24. By virtue of his office as mayor, Dr. J.H. Frink succeeds ex-mayor Bullock on the committee, and he attended his first meeting of the committee this morning."

St. Andrews Beacon - May 26, 1910 Workmen of Messrs. Epps, Dodds & Co., St. George, have put up the base of the Champlain monument, St. John.It is a very substantial and effective piece of work. Erection of the heroic figure of Champlain in bronze will follow, but the actual unveiling stands until June 24, the anniversary of the day upon which, in 1604, Champlain discovered the harbor and river."

St. Andrews Beacon - Nov. 3, 1910 Mr. Henry Meating, of St. George, placed a very beautiful black granite monument in the O'Neill lot in the Catholic cemetery this week."

St. Andrews Beacon - Nov. 17, 1910 Some fine stones from the Stuart black granite porphyry quarries have recently been erected in the cemeteries here. This stone is deep toned, takes a beautiful polish and is peculiarly adapted for monumental purposes."

Granite Town Greetings - Nov. 25, 1910 History of St. George. - ... As a result of the threatened American invasion during the war in 1812, Mr. Vernon, one of the settlers, has built a small fort on the left bank of the tidal part of the river near the residence now known as Mount Vernon. This block house was afterwards torn down. ... During the Fenian Raid in 1865-66 two forts were built on the hill above the present school building. Much of the material used in these came from the older one built by Vernon, which was torn down for the purpose. ... Now we come to the starting of that industry to which St. George largely owes its growth from village to a town, the granite works. When the quarries were first worked is uncertain but we are told that the first shed built was by Frederick Burpee, in 1872 where that of O'Brien and Baldwin is now located. The store in connection, with Bay of Fundy shed was built in 1873, and the shed itself in 1874-75. Other sheds were built later,there being five now in operation as the industry still remains the leading one of the town. ..."

Granite Town Greetings - Nov. 25, 1910 Louis McGrattan left on Monday for Sydney, C.B., where he will open up a branch of their granite business. While sorry to lose him from the town all wish him success in his new venture."

St. Andrews Beacon - Apr. 13, 1911 The extensive plant of the Maine Red Granite Co. at Red Beach, owned by George H. Hunt, was totally destroyed by fire lately. While of late the plant has not been operated to its capacity, still the business gave employment to a number of men, and the loss will be severely felt in the village. The loss will amount to about $25,000, on which there is an insurance of $17,000."

St. Croix Courier - Apr. 27, 1911 A granite tablet bearing the coat of arms of New Brunswick has been completed at St. George and forwarded to Halifax to be placed with the arms of the other provinces in a memorial tower there."

St. Andrews Beacon - Aug. 24, 1911 Montcalm Monument. - The red granite bases for the Montcalm monument, which is being erected in Quebec by the St. John Baptist Society, have been shipped to their destination by Messrs. O'Brien & Gillmore of St. George. The monument which is to be surmounted by a bronze statue of the great French leader, will be fourteen feet in height. It is composed entirely of red granite, and is one of the largest pieces of monumental work ever attempted at St. George. The workmanship is most creditable. The cost will be in the vicinity of $4,000."

St. Andrews Beacon - Aug. 24, 1911 There is a reduction of duty on building stone under the reciprocity agreement. This ought to be of assistance to the granite industry of Charlotte county. At one time the St. George granite dealers did quite a large U.S. business, but now they are practically confined to the Canadian market with the Scotch granite as a keen competitor. St. George has good water transportation, which would be an important factor."

St. Andrews Beacon - Aug. 31, 1911 St. John Globe. - The iron work from the old Red Beach granite works, owned by the Maine Red Granite Co., has been sold to junk dealers in St. John and will be brought here by the sloop Rocky Mountain this week. The destruction of this plant by fire in the early part of the year brought to a close what was once an important industry, but which has languished in recent years, and while some granite cutting is still done at the Beach as it is called, the industry is declared practically wiped out."

St. Croix Courier - Aug. 31, 1911 A few years ago the granite men of St. George had an object lesson in Calais of what the market of ninety millions would accomplish for their industry. While they were prospering, they saw thousands of dollars sunk in an unsuccessful effort to establish in the good city across the way shops for the cutting and polishing and shipment of red granite."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Dec. 22, 1911 The granite mills are finishing up their work and most of them will close down for the winter during the next week. The McGrattan and Milne, Coutts mills closed this week. The Tayte, Meating and Epps, Dodds Co.'s mills are finishing up a few orders. The O'Brien & Baldwin mill, it is expected will run most of the winter."

Granite Town Greetings - Jul. 14, 1911 The Carson Auxiliary sloop Navy Isle towed a scow load of granite for Epps, Dodds this week leaving again on Wednesday afternoon, another load is expected in a few days."

St. Andrews Beacon - Mar. 2, 1911 St. George Greetings. - The granite shops are again in full swing, the Messrs. Epps & Dodds, Milne & Coutts and McGrattan & Sons starting up Friday of last week, the others following on Monday of this

Weekly Record - May 19, 1911 ADVERTISEMENT: Granite Works. J.A. Tingley, Hopewell Cape, N.B. Manufacturers of Monuments, Tablets, &c., in Grey and Dark Granite. My plant is equipped with the latest labor saving machinery, which consists of eight pneumatic tools (driven by compressed air) for lettering, carving, drilling and cutting rough granite. Send for designs and prices. You don't pay two profits when you buy from me because we have the machinery for manufacturing every part in our own plant."

S.J. Globe - Nov. 30, 1911 Sudden Death of a St. George Manufacturer. - St. Andrews, N.B., Nov. 30. - Nicholas Meating, of the Tayte, Meating Co., granite manufacturers, St. George, died suddenly this morning. He got up and dressed as usual, and shortly afterwards expired suddenly. He has been in poor health for a time past. He was 62 years old, and leaves a

Granite Town Greetings - Oct. 13, 1911 and St. Andrews Beacon - Oct. 19, 1911Messrs. Tayte, Meating & Co., of St. George, recently shipped a monument to Richardsonville, D.I., the inscriptions on which were as follows:- Joseph M. Conley, aged 105 years and 10 months, Eliza J. Conley, aged 72 years, and Elizabeth A. Conley, aged 79 years and 7 months. The son purchased the stone is between 80 and 90 years."

S.J. Globe - Sep. 8, 1911 Death of Mr. Alex. Milne. - Mr. Alex Milne, of the well known firm of Messrs. Milne, Coutts & Co., granite workers, died very suddenly of hemorrhage at his home in St. George on Wednesday. The deceased was about 58 years of age and is survived by his wife, one son, Gideon, now in the United States, but formerly in Mr. D.C. Clinch's office here, and a daughter, Mrs. Mersereau of St. George. Mr. Milne was of Scotch descent and was born in Aberdeen, Scotland. He was one of the first to engage in granite work in this province."

St. Andrews Beacon - Sep. 14, 1911 Obituary. - Alex Milne. - A big, generous,manly heart was stilled when death entered the chamber of Mr. Alex Milne, of St. George, on Wednesday last. 'sandy', as he was affectionately known by scores of friends, was a prime favorite with every one, and his death, though not unexpected, is deeply deplored. Mr. Milne was a Scotchman by birth, having been born at the town of Lonnay, 53 years ago. He came to St. George with a number of other Scotch granite cutters about the year 1874, and shortly afterwards entered into a partnership with Alex Milne, (called 'big Sandy' to designate him from his partner of the same name), James Watt and William Coutts. Theycarried on a stone business for a time in 'the gully', and when the Bay of Fundy Granite Company closed its interests in St. George, they secured possession of that company's works and have operated them ever since. Mr. Milne, who has just passed away, was the last surviving partner of the old firm of Milne, Coutts & Co. He was the dean of the granite business and for twenty five years had been managing director of the Company. The deceased is survived by a widow, formerly a Miss Wetmore, and a son and daughter and grandson, also an aged mother, two sisters and a brother in Scotland. His daughter is the wife of Mr. William Mersereau, of St. George. His son, Gideon, has been employed at Hartford, Conn. He was a member of the Presbyterian church and of the Masonic body. His funeral on Friday was held under the auspices of the latter, and was one of the largest ever seen in St. George, for everybody loved the warm-hearted Scotchman, and sympathized with his family in his early death."

S.J. Globe - Feb. 6, 1912 Want To Shut Out European Granite. - Result of International Cutters' Association. - Ottawa, Feb. 6. - Whereas, the importation of European granites is prejudicial to our industry, we have decided to ask the government to apply the duty on these goods as it should be, and to that effect we request the government to appoint a competent customs appraiser to determine the value of imported granite, and that the said officers have a knowledge of their trade in order to be able to judge of the real duty to be paid on above mentioned goods.' Armed with this resolution, a deputation representing the Granite Cutters' International Association have asked Hon. J.D. Reid and Hon. F.D. Monk to correct what is declared to be an abuse permitted by the late government. The granite men state that there have been irregularities in the application of the tariff on imported stone, the result being that there have been very heavy importations of European granite, causing Canadian quarries to shut down and the men employed in them to cross the border into the United States. The deputation stated that the proper application of the tariff will increase the local output by two-thirds and bring back Canadian cutters from the United States."

Codes: G3 / IDX_Names: Granite;

Granite Town Greetings - Jul. 5, 1912 The Messrs. H. McGrattan & Sons are now working on a large monument the total weight of which will be about 18 tons, made from a light red granite, which will be erected at Sydney, C.B., and unveiled August 27th, to commemorate the first landing in Canada of his late majesty then Prince of Wales. The monument is of the rustic style and consists of 2 large stones the inscription in round raised letters will be, Erected to mark the first landing made by H.M. Edward VII (the Prince of Wales) on Canadian soil July 28th 1860. Unveiled by H.R.H. Duke of Connaught Aug. 27th 1912. The stone will likely be shipped about the middle of August."

S.J. Globe - Mar. 7, 1912 St. George. - The granite mills are all in operation with the exception of Tayte, Meating & Co."

St. Croix Courier - Mar. 14, 1912 and Granite Town Greetings - Mar. 15, 1912 Busy Season in Prospect for St. George Factories. - On account of some legal trouble in the deal between H. McGrattan & Sons and Tayte, Meating & Co., which willcause some delay, the Messrs. McGrattan started their own mill on Monday, and will keep running it for the present. This makes all the mills now in full blast except Tayte, Meating & Co.'s. - Greetings."

Granite Town Greetings - May 10, 1912 Jas. Matheson left on Wednesday for New Glasgow, N.S., where he will work at his trade as granite cutter."

St. Andrews Beacon - Oct. 24, 1912 St. George. - A handsome black granite monument for the late John Pye has been placed in the St. Andrews cemetery by Epps, Dodds, & Co. The granite factories are all at work again."

St. Andrews Beacon - Sep. 26, 1912 St. George. - There are four granite mills which have been in active operation all season, - Milne, Coutts, & Co.; Epps, Dodds & Co.; O'Brien & Baldwin; and the McGrattan Brothers. All of these are furnished with electrical power by the Pulp Company. The past week the pulp mill has been closed down for repairs, and the granite works have also had to shut down."

St. Andrews Beacon - Dec. 11, 1913 Black Granite. - At the last meeting of the town council, Ald. Douglas presiding, the letter of Mr. R.A. Stuart with reference to bonusing a black granite industry, was read and referred to a committee composed of Alds. Horsnell and Hibbard to look into available sites for such works and to report back at a special or regular meeting. The aldermen were unanimously of the opinion that the project should be encouraged."

St. Croix Courier - Dec. 25, 1913 G.S. Tarbox of Red Beach has installed at his quarry on the Carson road, a steam drill and air compressor, which operates three pneumatic drills. These drills strike from 2000 to 4000 clips a minute and will do the work of 45 men. The stone is shipped not only to American points but also to points in the Maritime Provinces."

St. Croix Courier - Feb. 6, 1913 The Red Beach Granite Co., O.S. Tarbox, manager, has been awarded the contract for the Scarboro, Me., soldier's monument, a $7500 job to be erected at Dunston's Corner, West Scarboro, Maine."

St. Andrews Beacon - Feb. 27, 1913 Joseph Murray, of the granite firm of H. McGrattan & Sons, who are establishing a branch of their business in St. John ..."

St. Andrews Beacon - Jul. 21, 1913 One of the handsomest monuments in the rural cemetery was placed therein by Epps, Dodds & Co., of St. George, in memory of the late Capt. George Green, of the 1st Royal Regt. It is composed of Steen Lake granite and is in the nature of a sarcophagus."

St. Croix Courier - May 29, 1913 Chas. McGrattan, of the firm of McGrattan and Sons, St. George, was a recent visitor to Woodstock. The firm is to tender for the granite work in connection with the new public library in the Carleton county town."

Codes: G3 / IDX_Names: Granite;

St. Andrews Beacon - Nov. 20, 1913 Develop Black Granite. - Opportunity For A New Business At St. Andrews. - The following is a copy of a communication which has been sent to the Mayor and council of St. Andrews. It speaks for itself: - Gentlemen, During the past summer, I had an inquiry from a party in New York, representing capitalists who were looking for Black Granite properties in Canada, pending result of the Tariff Bill then before Congress. The Tariff on manufactured granite entering the United States has since been cut in half, and I have more recently had further inquiry from the same party, with a view of purchasing property. Now, gentlemen, I think that if sufficient encouragement were offered these parties, they could be induced to locate a manufacturing plant here, at St. Andrews, which would be a very popular thing at the present time. About seven years ago, when the late R.T. Wetmore was promoting an industry of this kind, here, which unfortunately fell through in consequence of his long illness and subsequent death, the Town corporation, at that time, offered him as a bonus, a site for plant yard and wharf, at the Shore between the Railway station and wharf, on land owned by the town, and also, an exemption from all taxes except school taxes, for a number of years, and a cash sum of one thousand dollars per year, for three consecutive years. Now, I believe that if this same offer were renewed and extended to these New York parties, a plant giving permanent employment to 40 or 50 skilled artisans, commanding high wages, would be established here at an early date. A tramway could be built at a small expense, as the grade is all descent from the quarry at Glenelg to the present wharf at Birch Cove, and the rough stock could be lightered from there to the plant at St. Andrews, at a fraction of the present cost of transportation to St. George, where the stone is at present manufactured. The American market is now practically open to this business, while the Canadian market is continually growing, and the demand for this particular kind of stone is increasing on every side. Please take this matter up at your next meeting, and if you can offer something tangible in the way of a bonus, I will be pleased to lay it before my correspondent, at an early date. I am, gentlemen, yours very truly, R.A. Stuart. St. Andrews, N.B., Nov. 17th, 1913."

St. Andrews Beacon - Feb. 19, 1914 All the granite mills in St. George have resumed operation."

St. Andrews Beacon - Jan. 3, 1914 St. George. - English capital is expected to enlarge and develop the granite business..."

Kings County Record - Jun. 12, 1914 Another Plant Started In Sussex. - W.J. McAdam Has Installed Modern Stone Cutting Machinery and Will Give Employment to a Number of Hands. Rough Granite Speedily Dimensioned. - ....?.... the installation of a stone-cutting plant which will give employment to a number of additional men. Mr McAdam formerly imported most of his cut stone or finished them by hand. The rapid increase in his business, and the big jump in the amount of the raw material he used made this rather expensive and he was forced to turn his attention to a more modern plant. Within the last couple of months he has erected a complete set of machines which enables him to do work which was formerly done by residents of other places. The equipment has enabled the proprietor to already turn out a large amount of stock from his yards and the demand for it is increasing. So far the yards have only been able to supply sufficient stone to meet the immediate demands for direct orders, but later on it is the intention of the proprietor to cut stones for other monument firms and already a number of enquiries have come into the Sussex concern. The plant is modern in every respect and has been erected on Mr. McAdam's property on Court Street. With it the largest of rough granites are speedily reduced to dimensions, and are then finished up by hand, lettered and made ready for erection. The finishing of the stone will, it is hoped, give employment to a good class of labour here and bring additional families to the town. So far there has been plenty of work to do and it is expected that the machinery will be kept busy during the winter months, filling orders for outside houses. Mr. McAdam is to be congratulated on his enterprise. Not only will he keep in the town a considerable sum of money which was formerly sent away each year to pay workmen in other centres, but the outlook is that quite a few dollars will reach here for orders, the product of Sussex labor, which formerly went to the United States for work."

St. Andrews Beacon - Mar. 5, 1914 A movement is on foot, it is said, looking to the merging of the granite interests of St. George. St. John and St. Stephen parties are reported to be interested in the matter."

St. Croix Courier - May 28, 1914 Ernest D. Harvey Passes. - ... He entered theemploy of Milne, Coutts & Co., Ltd., as a stone polisher and afterwards served an apprenticeship with Tayte, Meating & Co as a granite cutter, remaining in their employ fourteen years. On account of impaired health, he retired from the granite business and was for a few years engaged with John Dewar & Sons, Ltd., as a clerk. In March, 1908, he again entered the employ of Milne, Coutts & Co., as book keeper and manager of their general store ..."

St. Croix Courier - Oct. 15, 1914 G.S. Tarbox, of Red Beach, has secured a contract to supply three thousand tons of granite to be used in the construction of the new wharf being built by the Eastern Steamship Corporation at Lubec."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Dec. 16, 1915 Some Red Beach Work. - The soldier's monument at Dennysville, Me., was erected last week. It is a fine imposing memorial and would be a credit to any town ten times the size of Dennysville. The base is eight feet square and weighs eight tons. The die is of polished black granite from the Red Beach quarries, weighs six tons and has the following inscription: 'In grateful and loving remembrance of the men of Dennysville, Edmunds-Marion who offered their lives a willing sacrifice that the nation might be saved.' The monument is twenty three feet high, weighs twenty eight tons and is surmounted by an heroic size statue of a soldier, carved from gray granite. The monument complete will cost some $2500.00. The committee in charge of the work were E.B. Sheehan, A.L. Lincoln and Mrs. Ida V. Woodbury. O.S. Tarbox of Red Beach was the contractor."

St. Croix Courier - Jul. 22, 1915 Awarded Contract For Large Granite Supply. - Jos. McVay & Son to Ship Five Thousand Tons of Stone From Dufferin For Moncton Bridge. - The granite hills of Dufferin are to be the scene of much activity for several months to come, for in competition with a number of concerns in the province, Jos. McVay & Son have secured the contract to supply two thousand cubic yards of granite for the piers and abutments of a large bridge being built in Moncton. The granite will be cut from the Brown quarry, now owned by Mrs. Avery and will amount to five thousand tons, or about one hundred and thirty five car loads of dressed stone. Forty men and six double teams will be employed, together with a lot of machines that will be operated by compressed air. Quarrying will commence today and will be continued as long as the weather will permit in the fall or winter. Fifty car loads are to be delivered this fall and the contract completed next July. Shacks have already been erected and the firm will board their men on the grounds. It is probable that the granite will be carted to St. Stephen and loaded near the old Shore Line station, though it is possible that it will be placed on scows at the Ledge and brought to the C.P.R. wharf at St. Stephen if the firm finds that scheme to be feasible. The contract is in good hands and the enterprise of the Messrs. McVay will assure the employment of a lot of men at good wages for some months to come."

St. Croix Courier - Jun. 10, 1915 30 Years Ago. - An important discovery has been made at St. George. Hitherto those working the granite quarries have found it difficult to get stone of sufficient magnitude to cut to large sizes. Last fall Alex. Taylor, of that place, secured a quarry. In opening it up this spring he finds that the granite is suitable for work requiring very large bodies of stone, and shafts of any length or thickness may be obtained from it. So far as the St. George men know, there are no quarries of red granite in the world where similar valuable material may be found. Another valuable feature of the stone is that its color does not vary, so that orders of any extent may be filled with material of one shade

Kings County Record - Nov. 12, 1915 Markhamville Girl at Panama Exposition. - ...Cora Mabee ... The mineral exhibit is very fine. In looking over it hurriedly I found several good specimens of granite from St. George and 'the golden north', being a Klondike exhibit, and 'the Silver South', being a Cobalt exhibit, were very odd and interesting..."

St. Croix Courier - Jun. 29, 1916 30 Years Ago. - Large quantities of granite arebeing forwarded to the upper provinces by the St. George granite companies."

St. Croix Courier - Nov. 2, 1916 A new quarry of excellent red granite has recently been uncovered by the Bay of Fundy

Co. in the canal district, St. George parish."

St. Croix Courier - Dec. 2, 1920 30 Years Ago. - .... Epps, Dodds & Co. have got their travelling cranes finished and find it works most satisfactory. It will take up a stone between twelve and fifteen tons in weight and carry it to any part of the mill, which saves a good deal of handling. This work was done by Samuel Austin, assisted by Mr. McLaughlin of St. Andrews, and it is certainly a very great credit to them. Mr. Austin has nearly completed a very neat dwelling for Charles Epps. It is situated on Wetmore's hill and presents a very fine appearance."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Dec. 28, 1922 The Granite Men's Side. - The Editor, The Courier, St. Stephen, N.B. - Dear Sir; - We, as one of the firms manufacturing granite in the Town of St. George, wish to take exception to some of the statements made by several of the members of this Memorial Committee in the Town of St. Stephen, that it was through lack of interest shown by St. George manufacturing concerns that outside plans were being considered. As work in St. George in granite was not any too abundant, we were very anxious to secure any memorials of this nature, as the ordinary monumental work had fallen off. We were in communication with Mr. Huestis, one of the members of the committee, by telephone some number of times, but could not get any definite information regarding a design or when it was to be submitted for tender. Some months before, in the early part of the season, we had the selected design tendered us for a price by Miss Loring of Toronto. We did not know that it was the St. Stephen memorial. We quoted her a price for a memorial of this design in one piece die for the sum of $6000. F.O.B. St. George. We learned later from one of the committee that she had submitted a price to them of $9600, manufactured at St. George, and the same design manufactured at Toronto $7500. The difference between our price to Miss Loring and the one given to the committee would be $2100, less, say $500 for a foundation, which would leave $1600. It looks to us that if the committee had decided to use St. George product, that Miss Loring would have made a profit of $1600, or she increased the price to influence the committee to use Ontario stone. In September, two of the members of the firm, at the suggestion of Mr. Ganong, made a special trip to St. Stephen to meet the Memorial Committee, as we supposed to do business. We looked over the site where the memorial was to be erected, the plans and specifications, submitted samples of our granite and quoted a price of $6000 in a three piece die erected, the committee to have the foundation to receive the same put in at their own expense. At the completion of our meeting, we were very much disappointed at not closing the deal. We were told that the matter would be given later consideration. Our granite was questioned by the committee as to its fitness for this class of workmanship and the committee seemed to be very confident in the ability of Miss Loring as a designer and sculptor and that she wished to do the sculptor work herself as it could not be properly executed by any other person. There is in the town of Woodstock, N.B., a memorial which will stand inspection by any designer or sculptor and we defy anyone to find a defect in either the workmanship or granite, which requires more skill to execute the work than in the design selected. We are not designers but we can manufacture any design submitted, and statuary we have made by a Canadian firm. Had we been tendered with a sum of $250, which we understand Miss Loring was paid to furnish the one selected, we could have furnished not one, but dozens, for selection. We buy photo designs 12x16 inches from $1.00 to $1.50 each in most any design imaginable in granite. We do not have very much use for them, but had we been able to have found out what the committee wanted or had in mind we then could have submitted several. After this meeting we decided that there was no further need to trouble the committee as we felt that this meeting was only for the purpose of saying that we had been given a chance. We are quite sure that if this had been a memorial of St. George and there were four granite manufacturers doing business in St. Stephen, that there would not have been any tenders asked for except from the four above concerns and that the memorial would now have been erected by a Charlotte county manufacturer. We take this opportunity to notify the committee, that as far as we are concerned the matter is closed. Yours very truly, H. McGrattan & Sons."

Apr. 1923 - Copied from: St. Croix Courier - Apr. 23, 1953 30 Years Ago. - H. McGrattan and Sons, who havethe contract for the stone for the Saint John dry docks, have begun operations at Dawson Mountain where the stone will be quarried and cut. The contract will take about three months to fill and will furnish work for about 50 men."

St. Croix Courier - Dec. 6, 1923 30 Years Ago: Black Granite. - A Company Formed to Open the Bocabec Quarries. - (Courier of Dec. 7th, 1893). - Sheriff Stuart and J.M. Hanson of St. Andrews and William Gibson of Benton have entered into copartnership for the purpose of opening up the Bocabec black granite quarries, and the work will be commenced early in the spring. The new firm is to be known as Gibson, Stuart & Hanson. The quarries lie about a mile and a quarter from the shore of the bay and will be connected by tramway with a wharf at which vessels can land. A site for the proposed wharf has been secured, and a right of way leading to it. As there is an even grade from the quarries to the shore, the cost of transportation will be very slight. The stone, when polished, shows a very dark gray color, and a handsome grain, that may be compared to a mixture of powdered coal and rock salt, the black predominating so that a shaft of it would look almost like polished jet, though of a softer and more transparent hue. The stone takes a brilliant and apparently durable lustre and

Feb. 1924 - Copied from: St. Croix Courier - Feb. 11, 1954 30 Years Ago. - After being closed since Christmas the granite mill owned by Meating, Epps & Co. Ltd. resumed operations on Monday."

St. Croix Courier - Jul. 24, 1924 30 Years Ago. - Calais. - The death of F.T.C.Burpee, which took place in this city on Monday last, caused general regret. During his residence here he won the respect of all. For many a year he was a resident of St. John, N.B., and at different times was interested in the hardware and granite business. On the removal of his granite business to this city, Mr. Burpee came here to reside, and built a shot tower here, of which he was proprietor at the time of his death. He was about sixty two years of age. He leaves a wife and daughter, the latter of whom arrived from England only a short time before his father passed away. The remains were carried to St. John for burial."

Apr. 1930 - Copied from: St. Croix Courier - Apr. 7, 1960 30 Years Ago. - St. George. - Milne, Coutts and Company Ltd., established more than 50 years ago, has installed machinery recently which will double the output and lower prices to the consumer by from 20 to 40 per cent. The machinery has been installed by John W. McGrattan, who is a practical granite manufacturer and now foreman of the company. They will be exhibiting a stock in the Town of St. Stephen that will outclass anything that has ever been exhibited in Charlotte County in red, grey and Swedish granite. Anyone contemplating a monument should secure their prices before ordering elsewhere."

Feb. 1931 - Copied from: St. Croix Courier - Feb. 23, 1961 30 Years Ago. - St. George. - The granite mills have repair crews working preparatory to the opening of the mills on April first."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Nov. 6, 1952 Elmsville Quarry First Objective. - Plan Outlined to Revive Granite Industry. - A meeting of representative men from St. Stephen, St. George and St. Andrews was held at the home of H.B. Robinson, St. Andrews, Thursday evening, Oct. 30, and prospects of reviving the red and black granite business of Charlotte County were discussed. Reports Read. - Samples of granite from Finland, Quebec and local quarries were on display. Extracts from reports by eminent geologists were read. On Nov. 21, 1951, Dr. E.H. Kranck, professor of petrology of McGill University, and T. Norell of the Norell Granite Company, the largest importers of granite from Finland inspected many of the old quarries, gave their opinion in their report of that date that Charlotte granite is superior in quality and color to that of most other granites of similar structure and color found on the eastern seaboard. Mr. Norell offered to act as sales agent for Charlotte County quarries when production can be started. Plans of Financing. - It was the opinion of those present that in order to revive the industry, a syndicate should be formed consisting of not more than 50 units of $1,000 each. When 25 units had been taken up, it was felt work should be started to open up the Spinney-Holt quarries at Elmsville, which are said to have the best black granite in the County, for which in the past there has always been a good demand. It was the opinion of the granite men present that this stone can be sold at $6 per cubic foot. Estimates of the cost of opening up these quarries and the prospective profits that might be expected were carefully gone into, and it was that a net profit of upwards of $2 per cubic foot could confidently be expected when the quarries are in proper working order. Just as soon as they were placed on a profitable basis, other quarries would be developed in like manner. Wholesale Only. - In this way the syndicate would practically control the granite business of Charlotte County. It is not the intention to have a finishing plant, but to wholesale rock to the trade. Already several units have been spoken for and it is hoped that the syndicate will soon be closed so that work can be started and an industry be developed which will be of benefit to Charlotte County and all concerned."

St. Croix Courier - Nov. 6, 1952 See Good Prospects For Restoring Granite Trade. - The red granite of Charlotte County is first mentioned and its extent described in the Report of Progress, Geological Survey of Canada, 1870-71, and the rock was compared favorably with the well known red granite of Aberdeen, Scotland. In 1872 the commercial possibilities of the stone were recognized by Charles C. Ward, while on a fishing trip on Lake Utopia. Mr. Ward abandoned his fishing and discovered 'immense ledges of beautiful dark red granite,' and this led to the commencement of the industry. Mr. Ward became the secretary of the Bay of Fundy Red Granite Company, made up of New York capitalists and practical granite men. This company purchased acres of land and erected a $75,000 plant at the Magaguadavic Falls. Three Companies. - In 1875 three companies were operating, the Bay of Fundy Red Granite Company, the New Brunswick Red Granite company, and Brothers Michael. The Bay of Fundy Red Granite Company employed about 100 men. Their plant was working night and day to fill orders for columns for the Roman Catholic Cathedral in Boston, for polished columns for the Parliament Buildings in Ottawa, and for the Post Office in Saint John. The Bay of Fundy Company was purchased by Milne, Coutts & Co. in 1881. The New Brunswick Red Granite Company's $30,000 mill at the falls was burned and they never recovered. The Brothers Michael were shipping red granite in the rough from a quarry on the east side of the river, which was taken over by Epps, Dodds & Co. Later Developments. - By 1897 three other companies were operating - Tayte, Meating & Co., Epps, Dodds & Co.; and the Victoria Red Granite Co. About 300 men were employed. Stone had been supplied for the Museum of Natural History in New York and a great many other public and private buildings. At the time the companies were also finishing imported American stone and had begun to develop the black granite. Duties on manufactured granite for the United States was well nigh prohibitive, and the St. George product was marketed almost wholly in Canada. By 1931 Milne, Coutts & Co., Meating, Epps & Co., H. McGrattan & Sons, and O'Brien & Baldwin were operating and their output was valued at $117,207. The bulk of this business was for ornamental stone. Only Finishing Plant. - Today the only finishing plant that is operating is the St. Stephen Granite Works at St. Stephen. The granite area extends westerly from the St. John River to the St. Croix River, a distance of 60 miles, and in this area there are about 50 inactive quarries. The following giving the imports of granite into Canada is taken from the Customs Year Book of 1950: From Rough Sawn Mfd. Sweden $53,718 $5,150 $94,772 Finland 18,456 5,051 14,108 U.S.A. 73,915 29,263 12,705 148,089 39,464 121,585 The local red and black granite is only surpassed by that from Sweden and Finland, but the difference is so slight and the difference in price so wide that there appears a great opportunity to revive this basic industry, owing to the large imports to Canada from other countries. Body blow. - The industry was dealt a severe body blow when the United States imposed the McKinley tariff of 40 per cent import duty. As a result about 75 per cent of the business of these companies was shut off. Today the situation is entirely changed and the import duties to the United States are no longer prohibitive. Lack of capital, primitive methods, with little or no mechanical equipment at the quarries are some of the other reasons that caused these companies to cease operations. It is considered that with ample working capital, good management and modern methods, the granite business of Charlotte County can be revived and developed into a prosperous and growing industry."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Nov. 27, 1952 Plans To Revive Quarries Outlined. - Native Granite Industry Has Future - Robinson. - This is an opportune time to revive the granite industry in Charlotte County, H.B. Robinson of St. Andrews told a group of County citizens who met in the Town Hall here Wednesday evening, Nov. 19, to hear his outline of what might be accomplished if a modest sum can be raised in capital to launch the venture. Can Compete. - There is a definite market for this granite, Mr. Robinson assured the meeting. He presented reports by qualified men to show that the product can compete successfully with Canadian and imported stone, and said that it can be produced at a cost which promises an enticing margin of profit. Those present included C.T. Ballantyne, E.B. Ross, St. Andrews; P.K. Fitzgerald, Guy R. Day, Albert Yardley, St. Stephen. County Needs Industry. - Pointing to the benefits to Charlotte county which would rise from such an enterprise, Mr. Robinson said that one of the needs of this section is more industry. 'This granite business is a basic industry and at one time was thriving,' he continued, 'but for one reason and another it has fallen by the wayside. This would appear to be an opportune time to revive it, and that is why this meeting has been called.' 'The granite business dates back to the 1870's, the old horse and wagon days, when primitive methods were employed in quarrying, with practically no mechanical equipment such as we have today. These quarries were practically surface quarries; they never went to any great depth. When they got cluttered up they moved to a new spot. In this connection I might say that the history of most of all quarries is that the stone improves at depth. 'In 1872 the Bay of Fundy Red Granite Company was formed by New York capital. It built a large finishing plant at the falls at St. George, said to have cost $75,000. it did a large business, working night and day to fill its orders for the building trade, consisting of polished columns and building stone, about 75 per cent of which went to the United States. Six Companies Active. - 'This business developed and at one time six companies were operating in the district and employed 300 men. 'You might ask why this basic industry has petered out. 'There are many reasons. 'First and foremost was the McKinley tariff of 40 per cent on finished stone going into the United States. This severe blow cut off 75 per cent of the business, and with the keen competition among the then operating companies, there was not enough to go around and the building trade was lost. 'Today the tariff is no longer prohibitive. 'Other reasons why these companies faded away was the fact that at their finishing plants they had no way of controlling the granite dust, such as we have today; as a result many men got silicosis and workers considered it signing their death warrant to work in the plants. Other Factors. - 'There were strikes and labour unrest, the older men died and there was no one to carry on where they left off. Also there was the question of not keeping up with the times and modernizing their equipment, due no doubt to lack of capital. 'These companies business was principally in red granite, of which there are vast quantities in the vicinity of St. George. They supplied polished columns to the Roman Catholic Cathedral in Boston; the Parliament Buildings at Ottawa; the Saint John Post Office, and stone for the Museum of Natural History in New York, as well as to a number of other public and private buildings. 'The CPR station at McAdam and the St. George Post Office were built of local stone. Trial at Merger. - 'As far back as 1932 I tried to merge the then operating companies; but was unable to do so. Ever since that time I have been interested in the possibilities of reviving this basic industry. 'During the last eight years I have considered many plans to get this business started again. About a year ago, through Mr. Whimster of the Canadian Pacific Railway's department of industrial development, I contacted Dr. E.H. Kranck, professor of petrology at McGill University, and T. Norell, the largest importer of granite from Sweden and Finland, and engaged them to come down and look over the quarries. 'They inspected many of the black, red and grey quarries and Mr. Norell said, 'The Charlotte County Granite is superior in quality and colour to that of most other granites found on the Eastern seaboard. He also offered to act as sales agent for our output when we went into production. 'Mr. Ross and Mr. Fitzgerald recently inspected some quarry operations in Maine. At one of these plants where they were filling a large red granite building order after seeing our red granite samples, the operator said in effect, 'If you were in production I could have given you a large order, as I like your granite better than that I am now using.' Compares Favorably. - 'You see for yourself by inspecting the samples on the table that our black and red granite compares most favorably with that of Scandinavia, and of course can be sold much cheaper. 'During 1950 over $300,000 worth of granite was imported into Canada. From Rough Sawn Mfd. Sweden $53,718 $5,150 $94,772 Finland 18,456 5,051 14,108 U.S.A. 73,915 29,263 12,705 148,089 39,464 121,585 Total ... $307,138 'Surely there is an opportunity for Charlotte County to supply some of this granite. Quarries Secured. - 'As a result of my investigations and work, over the past years, to form a nucleus to revive this industry, I secured the Spinney- Holt Quarries. The black granite at these quarries is said to be the best in Canada. 'I also secured the rights to quarry granite on the properties of H.M. Stuart and those of Milne, Coutts Co. Ltd., the latter consisting of upwards of some 2,000 acres, on a royalty basis. 'Practically all the expense in time and money is working up to, and getting these matters rounded up have been taken care of by myself. 'Now with your financial support it can be made operative. I offer this set-up to the granite Syndicate as it seems the best way of making a start, and best for the syndicate members. 'Every industry that operates helps us all. If we have no confidence in our own natural resources, how can we expect to have them developed? Plan Outlined. - 'The Granite Syndicate will have a capital of $50,000 consisting of 50 units of $1,000 each. 'As soon as $25,000 is subscribed, the members will elect a committee of not more than four members, who will engage of a quarry-master; he will in turn engage his workers, and the committee will consult with him and supply him with the necessary material and modern equipment to open up the first quarry, to supply granite in the rough to the trade. 'When this quarry is on a paying basis, other quarries will be opened up in like manner, as the demand for the granite warrants. 'When the business of the Granite Syndicate is on a paying basis, it is proposed to form a limited liability company to take over the syndicate on a profitable basis to its members. 'We must crawl before we can walk by starting in a conservative manner and expand as business warrants. $20,000 To Start. - 'From figures prepared by Kenneth G. Fitzgerald of the St. Stephen Granite Works, to the equipment necessary to put the first quarry in operating condition, and wages for our foreman and five workers for about two months, before production can be started, should not exceed $20,000. 'From that time on sales of granite from the quarry should begin to bring in money. Mr. Fitzgerald states that with the above mentioned crew, and the quarry in proper working condition, they should produce at least 400 cubic feet of granite per week, at a net profit of upwards of $1.50 per cubic foot. 'A copy of the syndicate agreement has been prepared and is open for your consideration. It is a very fair document; it can be terminated, changed or varied at any time by a majority vote of the members of the Syndicate. 'As I have said before, it is only the intention of the Syndicate to quarry and sell granite in the rough to the trade. If, as and when the business develops, profitably, the building trade and other lines can be considered. 'I wish to take this occasion to thank C.T. Ballantyne, a prominent Montreal lawyer, who now makes his home in St. Andrews, for the help he has given me in preparing the Syndicate agreement.' Future in Rough Stone. - Mr. Robinson said that in 1932 W.J. Wright, provincial geologist for New Brunswick, made an intensive study of the granite business and in a report dated 1934 wound up with the following conclusion: 'I believe the industry could be strengthened by supplying more rough stone. An attempt should be made to sell this stone to the building trade and to local finishing plants. Increased production would lead to the proper development of the quarries and the installation of modern machinery. Better facilities would enable the companies to obtain stone more cheaply for their plants. One strong company with a proper selling organization could handle the situation to much better advantage. Dr. Kranck's Opinion. - Dr. E.H. Kranck, petrologist of McGill University, in his report of Nov. 21, 1951, states: 'The St. George granite, so far as color, grain, size and texture is concerned is technically very favorable. Particularly the homogeneity of the rock must be regarded as excellent. The only factor which will render certain difficulties is the jointing which in most quarries will give rise to a fair amount of waste.' Peculiarities of Trade. - T. Norell in his report of the same date makes the following statements: 'For some particular reason red granite is not of interest to the Maritime trade; elsewhere in Canada and in the United States, it is one of the largest sellers. The black is a specialty item in the States, where it finds a market.' 'The selling of the granite itself should be handled from Montreal, which is centrally located to the Maritimes, New York, Boston, Baltimore, Buffalo, Detroit and Chicago, and the domestic points of interest. The firm Norell Granite Company, would in respect to the above be pleased to act as your exclusive sales representative, both for the rough and manufactured stock. 'All sales in Canada would be made on a net 30 day basis; to the United States cash against documents.' 'The biggest seller of red granite is the Finnish Balmoral Red ... Almost 100 per cent of the black brought into Canada and the United States originates in Sweden. 'The freight rate from either South Finnish port or Gothenburg, Sweden, to Montreal, Saint John, or Halifax is the same, $13.25 per ton (2240 lbs.) 'The duty on the import of rough granite into Canada is 12 1/2 per cent; on sawn granite 15 cents, and on manufactured 20 cents. 'The duty to the United States from respectively Sweden, Finland or Canada, is on the rough, 10 cents per cubic foot, on manufactured, that is pointed, hewn, etc., 15 per cent. In conclusion, he says; 'It is felt, however, that someone or some body of foresighted men should go into this business seriously, as the St. George are granites are of national importance and could

St. Croix Courier - Sep. 22, 1955 First In About 15 Years. - St. George Pulp-Paper Ships Granite to P.E.I. - St. George. - First shipment of red granite from once-active quarries in this district in about 15 years was made this week by St. George Pulp and Paper Co. Ltd. Two railway carloads of the granite were shipped to a Summerside, P.E.I. building contractor for an undisclosed price described as 'fair'. Three more carloads - 75 tons of granite per carload - are expected to be shipped later this week bringing total tonnage of the order to 375. St. George Pulp and Paper manager H.E. Atkinson told the Courier yesterday (Wednesday) he did not know whether the shipment signalled a return of an active granite industry here which at one time employed about 500 expert stonecutters. The St. George granite - long held as the finest for color in the world - was recommended for a Summerside construction project by architects, Mr. Atkinson said. The granite was shipped unpolished as it will be used as exterior building blocks. Mr. Atkinson said he believed there was a resurgence in Quebec, New Hampshire and Vermont granite industries, but that high shipping costs, the fabrication of 'granite' today from plastic, high cost of equipment and the fact competing companies were in the business on a full time basis while St. George Pulp and Paper was not, were facts to consider. However, we are always looking around for work and would certainly not turn down the chance to make money. A dozen mill employees under Mill Foreman Kenneth Patterson have worked about two weeks on the Summerside order, it was learned, St. George Pulp and Paper owns quarries once operated by five oldtime firms in an area between St. George and Bonney River - a distance of six or seven miles - on the east side of the Magaguadavic River. Connors Bros. Ltd., of Black's Harbor owns a fewer number of quarries - about four or five ones capable of being worked immediately - on the west side of the river between the two centres. The Summerside order was extracted from the Cottrell quarry at Canal, about four miles from St. George. The once flourishing industry ceased here for a combination of reasons arguable even today among residents of St. George. Some stonecutting experts remain on the payroll of St. George Pulp and Paper, a generation removed from the men who actively engaged in the industry here.

Last of the six flourishing independents - Milne and Coutts Co. - ceased operations here two years ago. It was engaged in monumental work and used a black stone prevalent here as well. No estimate of the quantity of red granite in this district has been made, but it is extremely plentiful with St. George Pulp and paper owning 'countless' quarries, mainly on the east side of the Magaguadavic."

St. Croix Courier - Aug. 23, 1956 PHOTO. - Caption - The new Milltown War Memorial is taking shape at Ken Fitzgerald's St. Stephen Granite Works on Queen Street. Alex Rathburn, who has 45 years of experience in the business operates a surface cutter on one of the cenotaph's sections while the proprietor, Mr. Fitzgerald, looks on. For story, please turn to page 9. - (Photo by The Harvey Studio). Page 9. - PHOTO - caption - A Gray Granite quarry at The Ledge, leased by Ken Fitzgerald's St. Stephen Granite Works, is the source of stone for Milltown's new $2,000 cenotaph which, it is expected, will be erected in Memorial Park sometime during the first week in September. Frank Dodds, one of the granite works employees, leans on quarrying equipment he uses to extract the stone. - (Photo by The Harvey Studio). Builder of War Cenotaph. - Only Company Exploiting County's Granite Reserve. - Only one small business in Charlotte county, Ken Fitzgerald's St. Stephen Granite Works on Queen Street, is taking advantage of the county's granite supply, judged by many among the best in the world. First Monument. - Mr. Fitzgerald and his two assistants, who have all the work they can handle, turn out a steady supply of black and gray granite tombstones and, by straining themselves to the limit, occasional lots of granite building blocks for which the demand is 'heavy'. Right now, the local company is shaping its first monument since Mr. Fitzgerald took over the concern here in 1947 - the $2,000 Milltown war memorial which it is expected to be erected in Memorial Park sometime during the first week in September. Granite for the cenotaph comes from a quarry Mr. Fitzgerald leases at the Ledge. The burly, goodnatured Fitzgerald, commenting on the lack of interest in the county's granite deposits, says there appears to be a reluctance on the part of southern New Brunswick citizens to invest in operations based in their own part of the country. Good Stuff. - It seems strange to see building granite brought in from Quebec and Ontario and the United States when we have so much good stuff lying around here. The quarries at St. George used to support about 300 men at one time, but no one is engaged in it now. The addition of a special wire saw, costing about $10,000, enables a company performing mostly tombstone work to branch into the lucrative building block trade Mr. Fitzgerald says. The St. Stephen Granite Works, which does not have one, fills the few building orders it receives by cutting with pneumatic air tools. With such equipment, Mr. Fitzgerald says a small firm like his could employ 10 men. Mr. Fitzgerald, a native of Queensport, Guysborough County, N.S., entered the granite trade in 1930 at Queensport, moving to Saint john to join the M.T. Kane & Co. in 1935. He left that firm in 1947 when he bought the local company, then owned by the late Joseph Price. Firm's Founder. - Mr. Price's father, the late Alfred Price, founded the works here about 50 years ago. Assisting Mr. Fitzgerald are Alex Rathburn, stonecutter and quarrier of 45 year's experience; and Frank Dodds, stone polisher and quarrier of 18 year's experience. Mr. Fitzgerald, who owns a black granite quarry at Digdeguash Lake and leases a grey granite one at The Ledge, does the lettering on monuments by sandblasting and any decorative stone sculpture desired by tombstone buyers. An interesting statistic: 40 per cent of the county and district customers buy their monuments before they die."

St. Croix Courier - Jan. 10, 1957 Wins Gallery Granite Work. - The St. Stephen Granite Works has received a contract to supply granite for the proposed Beaverbrook Art Gallery in Fredericton, owner Ken Fitzgerald said yesterday (wednesday). The contract specifies the local company must supply gray granite blocks for the first story of the building, outside walks, terraces and steps. Mr. Fitzgerald, while he did not know the exact amount of granite involved, said it was 'an awful lot.' He said he would hire three extra stonecutters to add to his staff of three (including himself), buy a stonecutting machine and that work would begin right away at a quarry he leases at The Ledge. The first shipment of granite must be made by May, he said. He might also, he added, obtain some granite in the St. George area. The art gallery will be located beside the Lord Beaverbrook Hotel on Queen and opposite the parliament buildings. It is a gift to the province of Lord Beaverbrook."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jan. 31, 1957 High Class Stone, Low U.S. Tariff. - Sees Bright Granite Industry Future. - Here is a review of the granite industry of Charlotte county, which flourished in the late 19th century particularly, its present condition and future prospects by Harold B. Robinson of St. Andrews, who is helping to promote a revival of the industry here (please see page one). Mr. Robinson is helping to form a new company, the Charlotte County Granite Co. Ltd., which will take over the St. Stephen Granite Works, and with the aid of fresh capital, attempt an expansion of the business. The old companies he refers to in the article were located in St. George and district. Here is the article: Artist Discovers. - In 1872 a New York artist by the name of Charles C. Ward, while on a hunting trip with an Indian guide, discovered immense ledges of dark red granite. He returned to New York and formed the Bay of Fundy Red Granite Company of which he became secretary. The company purchased acres of land and built a $75,000 plant at the Magaguadavic Falls, St. George. By 1875 there were three companies operating, namely: The Bay of Fundy Red Granite Company, The New Brunswick Red Granite Company and Michael Brothers. The Bay of Fundy Red Granite Company employed about 100 men and did some excellent work. They supplied polished red granite columns, about 20 feet in length, for the Roman Catholic cathedral in Boston and also for the parliament buildings in Ottawa. The New Brunswick Red Granite Company's $30,000 plant was burned down and the company discontinued operations. Milne-Coutts Co. purchased the Bay of Fundy Red Granite Company in 1881. Epps, Dodds and Co. took over the business of Michael Bros. From 1897 on several other companies were formed, namely: Tayte, Meating Co., Victoria Red Granite Co., Meating, Epps and Co., H. McGrattan and Sons, and O'Brien and Baldwin. Big Export. - At around that time 300 men were employed in the thriving granite business and had a combined output of considerable proportions, 75 per cent of which was exported to the United States and 25 per cent for the Canadian market. In addition to the red granite they also supplied black, gray and colors in between. The post office at Saint John, the CPR station at McAdam and the post office at St. George were all made of Charlotte county granite. The granite business prospered until the United States imposed the McKinley tariff of 40 per cent duty on finished granite. As a result the companies could not compete and all export business to the U.S. was cut off and at that time the small Canadian demand was not sufficient to keep all the companies going so they gradually closed up. Milne-Coutts Company survived and has a good dividend record having paid out to its shareholders 73 per cent on its capital stock from 1923 to 1942. Only a few years ago it was taken over by the St. George Pulp and Paper Co. Ltd., principally for the pulp on its property. J.W. Wright, provincial geologist for New Brunswick, who made an intensive study of the granite business, said in his report of 1934: 'I believe the business could be strengthened by supplying more rough stone. An attempt should be made to sell this stone to the building trade and to local finishing plants. Increased production would lead to the proper development of the quarries and the installation of modern machinery. One strong company with a proper selling organization could handle the situation to much better advantage.' Superior Quality. - Dr. E.H. Kranck, professor of petrology at McGill University, and T. Norell, the largest importer of granite from Scandinavian countries, who inspected many of the Charlotte county quarries in 1951, said in their report: 'The Charlotte County granite is superior in quality and in color to that of most other granites on the eastern seaboard.' So much for past history. Today the United States import tariff is no longer prohibitive, viz: Unmanufactured granite unsuitable for building, monumental or paving stone is duty free. On unmanufactured granite, but roughly squared for shipping purposes, the duty is .09 cents per cubic foot. On manufactured granite the duty is 14 per cent of the Canadian value. In 1947 P.K. Fitzgerald, who is one of the best granite men in the country, was asked by the town of St. Stephen to come there and take over the St. Stephen Granite Works, as the owner had died. Over the past years Mr. Fitzgerald has not only built up the monumental business, but has gone into the commercial business as well. He supplied the granite for the Bank of Montreal building at Fredericton, and has now secured a contract for the granite for the $850,000 art gallery, which Lord Beaverbrook has given to Fredericton. The St. Stephen Granite Works owns the best black granite quarries in the county, and has access to others of various colors on a royalty basis. A new company is now being formed under the name of the Charlotte County Granite Co. Ltd., to take over the St. Stephen Granite Works and provide the necessary capital to build and equip a modern finishing plant, so as to be able to handle any class of granite business. Big Business. - It is interesting to note that last year Canada imported $661,785.00 of granite from foreign countries, on which import duties ranging from 12« per cent to 25 per cent were paid. As Charlotte county's red, pink, black, white and gray granites compare most favorably with the foreign importations, a considerable amount of this foreign business should accrue to the Charlotte County Granite Co. Ltd., just as soon as it is in a position to make deliveries. As this company will, in addition to its own quarries, have access to the most important quarries in Charlotte county, it need have no fear of any immediate competition, if ever. This is a basic industry. There is no question as to the quantity or quality of the Charlotte county granites. It is therefore only a matter of having a modern finishing plant, good management and working capital to become a successful and growing undertaking."

Codes: G3 / IDX_Names: Granite;

St. Croix Courier - Jan. 31, 1957 Formation of New Company To Exploit Area's Granite Reserve Is Announced. - Firm Plans to Acquire Local Concern; Ottawa Urged to Employ Stone. - The formation of a new company to exploit Charlotte county's granite reserves was announced by Harold B. Robinson of St. Andrews at the annual meeting of the Charlotte county Board of Trade last Thursday evening in the Queen Hotel. Mr. Robinson told the board that he and others were forming a concern to be called the Charlotte County Granite Co. Ltd. to build up the long-dormant granite business of the county. The new company, which Mr. Robinson later told the Courier will be capitalized at $100,000, is acquiring the St. Stephen Granite Works, established in 1947 and the only active granite company in the county at the moment. 'We are planning to acquire or build a modern plant and expand the business,' he said. Site of the plant is not yet decided. Mr. Robinson asked the board to pass a resolution asking the federal government to use as much county granite in the construction of $865,000 worth of public buildings scheduled for construction in New Brunswick this year. The board unanimously passed a motion to this effect. Production Manager. - The St. Andrews man later told the Courier that Ken Fitzgerald, owner of the St. Stephen Granite Works, would become production manager of the new concern when it is formed sometime this winter or spring. Officers of the company would be announced later. Mr. Robinson told the board that Mr. Fitzgerald had won contracts to furnish granite for the Bank of Montreal and the Lord Beaverbrook art gallery, both in Fredericton. He added the American market was now 'wide open' due to a lowering of tariffs and that there were sales prospects as well as in the Maritimes and other parts of Canada. The resolution asking the federal government to use as much county granite as possible was moved by Mr. Robinson and seconded by Charles Ballantyne of St. Andrews. Mr. Robinson said the new company would be prepared to produce red, pink, black o\gray or white granite for building and other purposes. He added later he anticipated stock in the new company would be publicly offered for sale."

St. Croix Courier - May 16, 1957 Defer Decision: Granite Firm Requests Tax, Water Exemptions. - The Charlotte County Granite Co. Ltd. organized earlier this year to exploit the county's granite resources, asked the Town Council Monday afternoon to consider granting free water privileges and exemption from taxes for an unspecified period. Harold B. Robinson, chairman of the board, in a letter to the Council, announced the company was contemplating the establishment of a plant in St. Stephen or St. George. Details were vague, but the company is apparently considering the construction of a building in either town. The company took over control of the St. Stephen Granite works earlier this year. Ken Fitzgerald, proprietor of the St. Stephen company, will be production manager of the new firm. New equipment, including a granite cutting machine, has been installed in the small plant of the existing works on Queen street. The councillors said they would require more information before making a decision and the matter was ..?.. for further consideration."

St. Croix Courier - Nov. 28, 1957 Letter From Shareholder Says: - Should Encourage Granite Industry. - Editor, Saint Croix Courier: Sir: As a resident and property owner in Charlotte county, I like many others want to encourage the development of industry, when it is sponsored by reliable people and has all the earmarks of a successful and growing industry which will employ more and more workmen as it expands. I am proud and glad to read in your columns of the way the president and directors of the Charlotte County Granite Co. Ltd. and their friends have dipped in their pockets, to revive and rebuild the granite business here, and I believe they should be encouraged. Many of us invest in shares of companies far from our native soil, and overlook the opportunities near at hand, which does nothing to help build up our community. At many Board of Trade meetings that I have attended, the cry goes up' 'We want more industries,' but what are we doing about it? Is it a case of letting 'George' do it? Do we want outsiders to control our natural resources? We all know that Charlotte County is blessed in having vast quantities of various colors of granite, and that the business was most profitable in the 'horse and buggy' days, and would have still been going strong had it not been for the fact that the U.S. raised the import duty to 40 per cent, making it prohibitive to ship the red granite from St. George at a profit. At that time there were six companies operating and employing over 300 men. Today the duty is so low that granite can again be exported profitably, and it is the intention of the Charlotte County Granite Co. ltd. to ship granite to the U.S. just as soon as they are in a position to do so. It seems to me that the prospects for expansion are excellent, as a result I have become a shareholder. I thought that a letter from a satisfied shareholder might induce others to do the same, and by helping build up the industry we will be helping ourselves. A Satisfied Shareholder. St. Stephen."

St. Croix Courier - Sep. 19, 1957 Company Expands. - Granite Firm Chief Says Outlook Bright. - Its prospects for the future termed ' very encouraging ' by President P. Kenneth Fitzgerald, a granite industry located here now is in the process of expansion at its Queen Street headquarters. Reorganized as the Charlotte County Granite Company Limited, the firm is completing work on as office building to house administrative personnel. Construction of a wing extending the present plant is due to start shortly. Associated with Mr. Fitzgerald in the company are J. Arthur Giddens, Rolling Dam, vice-president; Harold B. Robinson, St. Andrews, secretary-treasurer; Burton M. Hill, St. Stephen, Charles T. Ballantyne, St. Andrews, and Arthur W. Stewart, St. George, directors. Mr. Fitzgerald said between $5,000 and $6,000 is being invested in the enlargement program. The office building, on which work started about three weeks ago, is 25 feet long and 18 feet wide. The 15 by 75 foot wing for stone cutters will contain facilities for dust removal and heating. About 10 men now are employed at the plant, the president said. Among them are five granite cutters. It is expected the staff will be increased as the industry gets into high gear. Demand Grows. - In its present form, the concern succeeds the St. Stephen Granite Works, which was owned and operated by Mr. Fitzgerald. Modern machinery is being installed and directors feel that with an upsurge in the Canadian demand for granite the revived industry will prosper. A number of granite quarries in the county are owned by the company. In addition, it has rights to other county quarries, on a royalty basis. Use of granite in public buildings has been stepped up in recent years. An example is the Lord Beaverbrook art gallery under construction in Fredericton, in which the product of the Charlotte County industry is being employed."

Board of Trade, members of the organization were told ..?.. Joseph Flewelling, chairman of the board's industrial committee said the action was instigated by an investigation which found that sandstone from Quebec and Limestone, Me., had been used in government construction in Charlotte. Authorities at both the federal and provincial levels had been in..?.. of high quality and quantity of county granite. In return, the company had been assured that the matter was under investigation and that current employees had been told that it is available in ample quantities. Flewelling added that a brochure on the topic, requested by ..?.. was being prepared by ..?.."

St. Croix Courier - Oct. 2, 1958 Official Announcement. - CC Granite To Be Used For Veterans Cemetery. - All the granite required for the 18 foot, 20 ton central memorial monument in the new Cedar Hill Cemetery section for all New Brunswick war veterans, located just outside Saint John, will be supplied by the Charlotte County Granite Co., of St. Stephen. This was announced over the weekend by A.B. Jones of Saint John district administrator of the federal department of veterans affairs. Mr. Jones said the $10,000 cemetery perched on a hillside overlooking the Bay of Fundy, would be completed in plenty of time for the official ceremonies, VE day next May, inaugurating the veterans' burial site. Meanwhile, P.K. Fitzgerald, president of the Charlotte County Granite Co., told the Courier all the granite used in the monument would come form their quarry at the Ledge. He thought the job would be completed by the middle of November. Considered a big job by the executive, the digging of the granite is expected to take about three weeks. The remainder of the time will be consumed in hueing the impressive monument which will also have a steel cross imbedded on its face. He said the company would not hire additional men as the present staff could handle the contract without any trouble. ..."

St. Croix Courier - Feb. 19, 1959 CC Granite Co. Being Kept Busy. - Charlotte County Granite Co. Ltd. continues to expand, it was learned by the Courier this week following a meeting of the first annual meeting of the company. A company spokesman said while the past year has been designated as a 'depressed' one, the company has shown a profit for the first quarter. Officials are looking forward to a bigger and better year for 1959. The company had been very busy with orders, it was reported and has just been awarded the contract for granite to be used in the New Brunswick Provincial Building to be constructed on Charlotte St. in Saint John. The contract for the granite is valued at upwards of $40,000. Meanwhile, the county granite company has delivered the 'Cross of Sacrifice' to Cedar Hill Memorial Cemetery Field of Honor. The cross will be set on a granite base with two steps leading to the cross built around the monument. The cross itself is made in the shape of a sword pointing downward and will stand about 13 feet above a platform. The memorial consists of all grey granite from The Ledge Quarry."

Codes: G3 / IDX_Names: Granite;

Kings County Record - Apr. 28, 1960 Huge Blocks of Granite Soon Become Attractive Memorials. - No Time Or Effort Wasted As Intricate Machines Go To Work. - Despite the fact that huge blocks of granite are 'sawn' into slabs by strands of wire, operations at the Nelson Monuments, Ltd., plant on Western Street, the formal opening of which is to be held next Tuesday afternoon, are quieter than normally found at any active business office. The 'saws', which are strands of special wire on huge spools at either side of the granite blocks, do their work silently and efficiently under water which is being continually sprayed onto the granite. The actual sawing is the result of the special abrasive which is dropped onto the wire, with the water, as the cutting process goes on. Residents who feared that operations would mean the shriek of saws going through stone, such as in their own backyards or at sawmills when wood is cut, need have no worry about noise from the Nelson plant. Following operations at the humming plant in their sequence, the great blocks of granite, some of them weighing tons, are brought to the plant by special trucks. The black granite which is imported from Sweden, and the red granite, which comes from Finland, are delivered to Saint John by ship and then trucked to Sussex. From the company's own quarry at Evandale comes the blue-gray granite, also a popular stone. The blocks are placed in orderly piles - keeping the lot on which the plant is located orderly and neat, so as not to lessen the appearance of that part of town for other residents and passersby. Each type of granite is placed in segregated piles, to be conveniently accessible when required for operations. Special forklift trucks, capable of lifting up to 10 tons of the massive stones as quietly and easily as one would lift a roast of beef from one's home freezer, pick up the granite blocks and bring them into the actual plant for placing on the sawing platforms. The platforms are themselves a miracle of efficiency, and are operated automatically, by electricity, on running tracks. They move from front to back as the sawing of the granite block proceeds, placing the block in the required position for the sawing-off of another slab. Over each platform is the equipment from which the abrasive and the water seep down on the wires which, with the help of the abrasive, quietly and steadily cut their way through the stone. This is where the experience and watchfulness of the sawyer comes into play. Operations must be done to an exact degree, so that the wire doesn't 'slip' or otherwise cut on a wayward pattern. Danger signs are placed around the sawing platforms, warning people to keep their distance. Although the Nelsons have never known it to happen, if the taut wire should break and strike a person in, say, the neck, the old French Revolution cry of 'Off with his head' could easily become a deed well and truly done. Similarly, if a careless hand or arm should touch the wire, a severe 'burn' or cut could be suffered. One great secret of the smoothness of operations at the Nelson plant is the fact that it is all on one floor - of concrete - and was designed by the Nelson brothers themselves after many years of experience and learning what was required, along with extended visits to modern plants of this nature in the United States and Canada. There is no waste of time, and thus money, as the operations progress from stage to stage. Once the huge granite block has been sawn into smaller blocks or slabs, of the size required for the order which is being filled, they are taken from the sawing platform by the forklift trucks and placed in tidy piles. From here they are lifted to the polisher, where the dull unfinished stone takes on the polished sheen one sees when viewing the memorials at cemeteries. Here again the operation requires the skill and sureness of hand of an expert polisher. The stones are laid flat under equipment to which is fastened the polishing wheel. This is made of felt, but felt so hard that it resembles steel or other metal. The polishing wheel is guided up and down the stone, and from side to side, and between the wheel and the stone flows water and a very fine abrasive - much the same, in fineness, as milady's face powder. Several Stages. - It takes several operations of the high-speed polishing wheel and its abrasive to finally put on the stone the gleaming face, almost mirror-like and as smooth as the proverbial silk. Expertness in operating the polishing wheel is a paramount need as a few seconds too much polishing on any one spot of the stone could 'burn' it or cause other marks. Actually, the polishing process is the same in principle as that done in polishing glass or jewelry. The longer the granite slab is polished the darker its color becomes. Conversely, the more such a stone is hammered - if such were done - the lighter it would become in colour. Once the slab is through the polishing process it goes to the cutter, where it is shaped as the customer wants it. There are standard sizes, of course, but custom orders require special sizing and shaping. It is fascinating to watch the stone cutter, with his hammer and chisel, slicing off excess pieces on the sides of the stone; apparently with as much ease as one trims a piece of soft wood or masonry with a hammer and chisel. Once the cutter has finished his job the stone moves to the contour grinder, where a high-speed overhead grinding wheel, also operating under water, shapes the stone into the straight or curved pattern required. The bottom of the stone is smoothed and evened, for proper placing at its eventual site, such as a graveside. How It's Lettered. - By now the stone is ready for the lettering, which is in charge of Harry Nelson. First the stone is placed on a flat carrier or small truck. The letters, of alloy, are put on a board; carbon paper and a bit of rubbing transfer the letters to tracing paper. The tracing paper is placed on the stone and the letters are rubbed onto a sheet rubber stencil. The letters are cut out with a knife and the bare or unlettered parts of the stone are covered with hot rubber paste. The stone is then moved to the sand-blasting room, an enclosed section, where a mixture of fine sand and compressed air is shot against it. The operator stands behind a curtain so that he is behind the blasting process, and in no time the work is finished, with the lettering done just as it is seen at the cemetery. The blasting sand drops down into a receptacle and much of it is reclaimed automatically, to use in the next operation. Enclosing this section of the plant prevents any dust coming out into the general plant. The stone is now ready for shipment."

Codes: G3 / IDX_Names: Granite;

Kings County Record - Apr. 28, 1960 Nelson Monuments To Open New Sussex Plant on Tuesday. - Building, Equipment Modern to Last Detail; High-Quality Products – After almost a year of preparation, in constructing th building and installing the myriad of technical machinery that is required for its work, the plant of Nelson Monuments, Ltd., on Western street, Sussex, will have its formal opening on Tuesday afternoon, starting at 2 o'clock. The ribbon-cutting ceremonies, signifying formal start of operations, will take place between 2 and 2:30 p.m. but it is hoped that those who wish to attend the ceremony will gather a little before that time. Members of the Sussex Town Council, representatives of the various governments, the Atlantic Provinces Economic Council and the Canadian Manufacturers Association and the general public are cordially invited to be present, and it is expected that there will be a large gathering to wish this new Sussex industry every success. Nelson Monuments, Ltd., an old established firm in the manufacture of cemetery and other memorials, has been located at Lower Cape, Albert County, for many years but in 1959 reached a decision to move to Sussex, a more central site, and one allowing expansion. Here, since May of 1959, the company had been busy day and night in erecting the commodious one-floor structure which now represents one of the most modern plants of its kind in Canada. The building, of prefabricated steel, was designed and erected by the Nelson brothers themselves, with the help of their employees, and now it is fully equipped and under way in its actual production. The building, 125 by 60 feet and 25 feet high, is completely insulated and heated and already the company is bustling to fill the orders now on hand and in prospect. The entire plant was designed for 100 per cent efficiency and proper economy of operation, and the machinery and other equipment are the most modern obtainable. President of the company, which has been a family business for many years, is M. Russell Nelson; vice- president is G. Maurice Nelson and secretary-treasurer is Harry Nelson. Office manager is R. Joseph Davis. At the moment there are 15 employees, several of whom have moved here, with their families, from the Lower Cape area. Many of these are planning to buy or build their own homes here, thus adding to the general economy of the town and area. Finest of Granite. - The company, which enjoys a production greater than any other such plant in Eastern Canada, makes not only granite cemetery memorials but especially ordered and designed monument memorials weighing up to several tons. The best available granite is used - black from Sweden, red from Finland and blue- grey from Evandale, N.B., - and expert workmen ensure that every stage of production, from the basic stone to the finished polished and lettered memorial, is done to perfection. All memorials leaving the plant must pass a rigid test of finish before being sent to their destinations. Hundreds of tons of granite are imported periodically and made ready for production for clients all over the Maritime Provinces and sections of Quebec. A large part of the New Brunswick trade is retail, with much wholesale business done throughout Nova Scotia. The new Sussex plant has been designed not only for complete efficiency of operation now but for expansion as needed in the years to come. The plant building contains modern offices, attractive showrooms and adequate space and facilities for the manufacturing processes. In the making of memorials the granite blocks are first 'sawn' - and noiselessly - by wire, under water and abrasive, and then polished, shaped and contoured, finally being lettered by the sand-blasting process. More than 2,000 tons of granite are used annually in the making of memorials. In Business Half-Century. - The company was founded half a century ago by George W. Nelson, at Lower Cape, and now his sons are carrying on the business. Both Russell and Maurice Nelson have sons whom they would like to see follow in their grandfather's footsteps with the company when they have completed their studies. When the company decided to move to Sussex they expressed appreciation of the continuing co-operation shown by Mayor George E. Horton, Deputy Mayor Ralph T. Pearson and members of the Town Council. The firm was founded at Lower Cape in 1909 by George W. Nelson and Percy R. Nelson under the name of Nelson Bros. Under their management it enjoyed continued growth and prosperity. In 1937, owing to illness, Percy Nelson retired from the business and sole ownership was acquired by his partner. Under the name of Geo. W. Nelson & Sons, the firm continued under his management until 1946, when he retired, and the ownership and management were acquired by his sons, Russell and Maurice. After eight years of expansion, which saw the addition of much new and modern machinery, and the adoption of the newest methods of manufacture, the firm was incorporated in 1954 as Nelson Monuments, Ltd., owned solely by Russell and Maurice Nelson, and with Harry Nelson as secretary- treasurer. Widely Known. - As a result of these years of successful operation, the firm now has a backlog of experience, both in management and manufacture, that has gone far toward making it a leader in the field of memorial art. It has on its books the names of thousands of pleased customers, and its craftsmen have all had years of experience in the production of memorial monuments. The company not only produces monuments but, through its own employees, delivers and installs the memorials, in itself a task requiring experience and knowledge. Until 1957, the Nelson Brothers imported all their granite, from Canada, the United States and Europe, but in November of 1957 they investigated an interesting- looking granite area at Evandale. The location was the site of what had been, many years before, a small quarry and there they found surface granite which had all the attributes of top-quality stone, and in supply believed to be practically unlimited. Monuments from the Evandale granite have been received with wide favour throughout the Atlantic Provinces and Quebec."

Kings County Record - May 5, 1960 PHOTOS. - CAPTION.- Scenes at the formal opening on Tuesday of the modern new Sussex plant of Nelson monuments, Ltd. Upper left shows a group of official visitors watching one of the employees at his specialised task. From left to right are Hon. Claude Taylor, New Brunswick minister of education; Mayor George E. Horton, of Sussex; Premier Hugh John Flemming; Hon. R. Gordon L. Fairweather, the province's attorney- general, and H.N. Jonah, Q.C., MLA, Sussex. Picture at lower left gives a good indication of the large-sized crowd attending the formal opening. At upper right is seen Mayor Horton cutting the ribbon, signifying the plant's formal opening, and at lower right are shown the officers of Nelson Monuments. Left to right, standing, are Harry Nelson, secretary-treasurer, and Russell Nelson, president. Sitting is Maurice Nelson, vice- president. - Dick Simpson Photos."

Kings County Record - May 5, 1960 New Industry Formally Under Way In Sussex. - A new industry just opened in Sussex, that of Nelson Monuments, Ltd., was warmly welcomed by representatives of the federal and provincial governments, Kings County, the town, the Canadian Manufacturer's Association and the Atlantic Provinces Economic Council at formal ribbon- cutting ceremonies held at the site on Western Street Tuesday afternoon. Nelson Monuments, an industry established at Lower Cape, Albert County, half a century ago and now operated by sons of the founder, moved to Sussex last year and Tuesday saw their plant, one of the most modern in Canada, officially underway. A large number of citizens and visitors attended the ceremonies and radio and television microphones and cameras were much in evidence. A general inspection of the plant followed the brief addresses, and later in the day the company was host at the reception and banquet for the official party and special guests. Russell Nelson, president of the company, welcomed the speakers and public at the opening ceremonies and thanked the town officials and all who had assisted the company in locating here. H.N. Jonah, QC, MLA, Sussex, was master of ceremonies on behalf of Mayor George E. Horton, who is recovering from an illness but was present at the opening. He extended a warm welcome to the new industry on behalf of the Town of Sussex. CMA, APEC pleased. - Harvey Murray, executive vice-president of Sussex Ginger Ale. Ltd., an old established industry here, spoke on behalf of the Canadian Manufacturers Association and extend greetings to Nelson Monuments. APEC was represented by Parker D. Mitchell, Lancaster, vice-president, who extended congratulations on behalf of that organization. Lloyd Nickerson, of Queenstown, private secretary to Hon. A.J. Brooks, QC, member for Royal and minister of Veterans Affairs, expressed the regrets of Mr. Brooks and Tom Bell, MP for Saint John-Albert, at their inability to attend, due to pressure of business at Ottawa. He expressed their interest in the new industry and read a telegram of best wishes from Mr. Brooks. Hon. C.B. Sherwood, MLA for Kings and the province's minister of agriculture, was pleased that the industry had chosen Kings County as its new site, and Hon. Claude Taylor, New Brunswick minister of education, and a neighbour of the company officials when they resided in Albert county, regretted their loss to Albert but assured Kings County that 'they are fine citizens and enterprising businessmen.' Premier Hugh John Flemming said it was just as important when an old established industry expanded as when a new industry was created. The old industries have been helping to support the province for many years and he was sure Nelson Monuments, Ltd., would continue to assist the progress of New Brunswick for many years to come. He appreciated their enterprise and extended warm congratulations. Hon. R. Gordon L. Fairweather, MLA for Kings and the province's attorney-general, was pleased that a New Brunswick commodity (granite from Queens and Kings Counties) was being processed in New Brunswick, whereas in other instances raw materials go out of the provinces for manufacture. The plant also imports granite from Europe for its stones. Present Plaque to Town. - Maurice Nelson, vice- president of the company, presented Mayor Horton with a granite plaque, made of Kings County granite and the first piece made in the new plant. Mayor Horton, accepting the gift on behalf of the town, said the town authorities had worked diligently to bring the industry here, and he was pleased that success had crowned their efforts. The new plant was a great credit to the town, the County of Kings and the province, and he looked for its still further expansion. Mayor Horton officially cut the ribbon and declared the plant formally open. Members of the Town Council and Elmor G. Perry, town clerk, attended the ceremonies. Secretary-treasurer of the company, Harry Nelson, and its office manager, R. Joseph Davis, were present to assist in welcoming the visitors. The new building, bedecked with flags and shining in the brilliant sun, made an attractive setting."

Evening Times-Globe - Jan. 3, 1961 ADVERTISEMENT: Granite for the newly completed Provincial Building Charlotte St., Saint John, N.B. was supplied by Charlotte County Granite Co. 72 Queen St. St. Stephen, N.B. Phone 608"

St. Croix Courier - Jan. 19, 1961 Fire At Granite Works. - A furnace explosion is believed to have been the cause of a fire at the Granite Works Tuesday night. Firemen from St. Stephen and Calais answered the alarm at 7.55 p.m. and reached the scene in time to prevent the blaze from spreading beyond the furnace room. People living nearby reported hearing an explosion at the works shortly before the fire was discovered. The top of the furnace was blown off, according to the firemen. A truck in the building was evacuated without damage. No one was injured. Firemen said if they had reached the scene a few minutes later, the building might have been a total loss. No damage to equipment was reported."

Evening Times-Globe - Mar. 23, 1961 Granite Industry To Be Awakened. - Fredericton. - Education Minister Henry G. Irwin announced Wednesday that development is to begin on 800 acres of granite owned by the St. George Pulp and Paper Ltd. in Charlotte County. He said the company has completed arrangements for the development with the Melrose Granite Company based in Quebec and Vermont and it will employ 40 men at the outset, building up to 200 later on. Mr. Irwin said the announcement culminates 'months of effort on the part of your government to bring about exploitation of a valuable but long dormant natural resource.' The inability of several small companies to get together, pool their resources, and finance installation of heavy modern equipment reduced the industry to 'sporadic efforts to meet competition,' he said."

Kings County Record - Apr. 27, 1972 Nelson Monuments Recognized as Being Of Highest Quality. - The firm of Nelson Monuments, Ltd., was founded in 1909 by Percy George Nelson and has been operated by the Nelson family continuously since that date. The firm was incorporated in 1954, began quarrying operations in 1957 and relocated in Sussex in 1960 as the first step in a planned program of expansion, which saw the building of a complete new plant, fully equipped with the latest machinery for monument manufacturing. This expansion and development has placed Nelson Monuments in a leading position in the granite and memorial industry in the Atlantic Provinces. In addition to the head office in Sussex, a sales office and display are maintained at Saint John, and the services of trained representatives are available in all the principal cities and towns in the Maritimes. The company maintains its own fleet of trucks to deliver and erect all its memorials, and also maintains equipment to add lettering to existing monuments in the cemeteries in any area the firm services. Nelson Monuments provides the facilities of the largest granite quarrying and memorial manufacturing and finishing organization in the Atlantic provinces, and its aim is to give the best possible product and service at an economical cost, and to promote and develop the Atlantic Provinces resources and economy. Majestic granites of exceptionally fine quality are imported for the manufacturing plant in Sussex. As it is impossible for one quarry alone to guarantee delivery of sufficient granite for the plant from year to year, the firm's experts in granite, after visiting various quarries throughout the world, have made selections from several companies, thus ensuring a constant supply. Officers of the company are M. Russell Nelson, president; Merrill A. Nelson, vice-president and plant manager; Carter B. Nelson, second vice-president and quarry manager, Eric R. Nelson, secretary-treasurer and office sales manager."

St. Croix Courier - May 24, 1973 A History of the St. George Granite Industry by M. Eulalia O'Halloran. - Part 2 - Demise of the Industry. - The St. George granite industry began in 1872 and expanded quickly. For 80 years it was a source of revenue but ground to a near halt during World War II. Who knows whether its bones will rise again? The stone has been used in several well known public buildings in the New England States and eastern Canada and the ornamental stone is known all over Canada. But the granite business had many difficulties. As early as 1910 statements like the following were being made (Parks, 1914): 'It must be noted that it has never been the practice of the owners to ship tough stone, but to employ practically all the product in the mills at St. George.' 'The decrease in production therefore, is not due to a lessened market for rough stone but to a decline in the demand for finished monuments. This decline was due chiefly owing to the birth of manufacturing plants at other centres where other stone is more easily obtained. As there no outlet for St. George rough stone, the quarrying industry has declined with the lessened demand for finished work.' The following were some of the facts of life for granite operators of 1910. Rough stone delivered at the mills was valued at from $1.00 to $1.25 per cu. ft. The average value of finished material was about $5.00 per cu. ft. The amount of red stone (granite) cut in the mills in 1910 was about 9,000 cu. ft., of which rather less than half was of the dark-red type. The product was worth approximately $45,000. The amount of black granite cut was 1,4000 cu. ft. having an approximate value of $22,000. To this must be added a considerable amount of imported stone, which would raise the total output to about $75,000 in 1910, and of grey about 3,000 cu. ft. A few of the teamsters who were employed years ago were Rankine McIntyre, Alex. Daigle, Charles Henry Sr., Lawrence Perry, George Henry and James L. McCarten (who was the very last one). But by the 1930's the industry really began to languish in spite of its natural assets. In 1932 it was suggested that the decease in number of employed was partly accounted for by: 1. The then modern practice of buying stone from contractors at a fixed price per cubic foot, thus dispensing with regularly employed quarrymen like Messrs. Farquharson, Dukendief, Louis Stevens, Oscar Leavitt and Fred Baldwin who had grown up in the business. 2. By using large amounts of imported stone. The cost of foreign production and foreign freight rates were so low that stone quarried in Sweden could be imported through Scotland and landed in Saint John and brought to St. George almost as cheaply as it could be procured from the St. George quarries. By 1932, the following companies were still operating: Milne, Coutts & Co., Mgr. - Arthur W. Stewart; Meating, Epps Co., Mgr. George F. Meating; Henry McGrattan and Sons, Mgr. - Charles W. McGrattan; and O'Brien and Baldwin, Mgr. - C.L. Tilly Moran. That year a scheme was proposed to stabilize the ailing industry. Henry McGrattan & Sons were to amalgamate with the Meating, Epps Co., under the name of Meating & McGrattan, but the scheme was abandoned. The last shipment of Swedish granite to arrive in Saint John by boat and transported to Milne, Coutts Co., of St. George was just before World War II. Mr. Arthur W. Stewart was still in charge at that time. Little quarrying was done during war years, and foreign stone was not available. Immediately after World War II (about 1946) there was a demand for grave stones and Gillmore and Cotterelle filled many orders. But this was only a temporary demand. A vigorous industry could not thrive on occasional contracts like these. The death was slow. Percy G. Tayte, son of Anthony R. Tayte of the old Tayte and Meating Company, John W. McGrattan and Sylvester Southard collected many orders for monuments which kept a small crew busy finishing and delivering for a few more years before the final closing of the last operators, Milne, Coutts Co. In

1953 the Milne, Coutts Co. property was purchased by the St. George Pulp & Paper Co. for the timber on it. Much of the grout has been salvaged to face up river banks and piers. This was the end of the St. George granite business. Possibilities of Revival. - Appraisals. - An appraisal of the quarries was made for the New Brunswick Department of Industry and Reconstruction by Fletcher, and results were reported by Patterson (1946). It estimated that investments of several hundred thousands of dollars would be necessary to establish a modern operation. In 1854-55, Harold C. Atkinson, Edward C. Hennessey, and Kenneth Patterson, who were interested in renewal of granite industry, spent much time in investigating the potentialities. Mr. Atkinson discussed Canadian marketing potentials with the largest Canadian (Montreal) importer of Scotch and Scandinavian granites. He also met with a large New England producer. Both companies were quite enthusiastic, but stressed the fact that St. George interests could not compete in the markets unless they obtained modern heavy mobile equipment. This, of course, they were unable to finance. Undoubtedly, the necessary investment would be much greater today. Dr. A.A. Ruitenberg, District Geologist of the New Brunswick Department of Mines, has presented a report (1968) on geology and mineral deposits of the Passamaquoddy Bay area. In this he reviewed the granite resources after having examined the quarries during the summer of 1967. His efforts were hampered because most of the old workings are flooded or filled with grout. Nevertheless, his work, which includes careful maps, is of much interest. Dr. Ruitenberg agrees with Patterson and Atkinson that the only way to revive the industry is to adopt modern quarrying methods. Modern Quarrying. - The most common modern quarrying method is known as 'channelling.' This involves drilling adjoining holes, by pneumatic power to outline blocks that are to be removed. It is also possible to cut a narrow channel with a high-temperature torch, which reduces granite to small powdery scales. In either case, quarrying costs per cubic foot of stone decrease with increasing size of the blocks accepted by the industry is about 10 tons and larger blocks are often required. Hauling these requires costly modern heavy equipment (Nelson, 1967). Efficiency. - It would be pointless to invest in this expensive equipment unless it could be used efficiently and profitably. Operations would have to be extended below the surface zone of intense weathering and large quarries developed. The largest granite resources seem to be of the light-to-salmon-red type like that found in quarries south of Lily Lake. Accurate estimates of these reserves are difficult because the quarries are filled with grout. Considerable costly exploratory work, including removal of surface rocks and diamond drilling would be necessary even before deciding where to locate suitably large quarries. According to Dr. Ruitenberg, it is probable that large quarries could be established in the areas where there are exposures of red and salmon granites but improbable that large amounts of good black granite can be found anywhere. An efficiency study would have to assess the necessary capital investments, operating costs, land and water transportation costs (local demands are small and many markets are far away), exploration costs, the capacity of markets, tp absorb granite products, and finally, the study should examine changing market demands. In the past, the greatest demand was for dark- red granite used for monumental purposes and building stone. Apparently this situation has changed. Black granite is now more popular for monuments and lighter red and pastel-colored varieties are favored for building stone. (J.C. Smith, 1967). Thus, to be successful, any revived industry would have to be confident of substantial resources of many varieties of granite. Without these, it could not hope for long-term survival. According to Dr. Ruitenberg, only 20% of the suitable stone available can be recovered even with the best quarrying techniques. There is an 80% waste. So any efficiency study should appraise the market for possible secondary products, which could be made from the waste, for example, curb stones, crushed stone, poultry grit and stone for heavy construction. The effects of foreign competition would also have to be investigated. Stone is now being imported from several Scandinavian and African countries in both the rough and finished condition. Prospects. - In the overall view, the possibilities of revival are not bright. Recollections. - I have lived all my life in or near the light and shadow of the granite industry. Even during my grandparents' time many of those who were connected directly or indirectly with granite were my family's friends and neighbors. Understandably it has everlastingly affected my life. Many granite people departed long ago, many of them long before I arrived, including my greatgrandfather, Wilson A. Hamilton, who was a polisher (or finisher) for Tayte & Meating Co.There is hardly a name mentioned in this paper that I have not heard many times. Their descendants are here, or they still come and go as visitors, and we are always happy to see them. Among our older townsmen there are several of the first granite cutters and polishers and many younger men who joined the industry after it was established. Among these are Arthur V. Callaghan, J. Ambrose Murphy, George Lee, Merle Meating, Willard B. Campbell, James Henry and Hugh L. Meating. The granite industry touched the lives of nearly every St. George family in some way. I can still remember its sights and sounds. Footsteps hurrying by in early morning, crunching the snow in winter; horses and wagons arriving with workmen from Canal, Caithness or Mascarene sometimes with sleigh bells tinkling; trundling of heavy truck wagons leaving for the quarries and returning later, laden with blocks of granite in the rough for finishing in the mills' and the comic forgetful man hurrying off to the quarry (with horse and wagon and dog) who discovers when he is half-way there, that he has mistaken the tea kettle for his lunch box, and must sheepishly return home and be late for work. I remember hearing of opposition to the first air compressor installed by the Milne Coutts Co., to operate pneumatic equipment and also used to blow the whistle and now 'Little' Sandy Milne used to say it was only good for one thing, 'to blow that d— whistle.' After the 7 a.m. whistle, the drills rattled; the granite cutters began their clinking; the surface cutters, column-cutters and polishers made their own heavy, steady sounds; the derricks squeaked as they moved huge stones from place to place and mixed with all this clamour were the shouts of the workmen themselves. The whistle blew again at noon, at one o'clock, and at four and, twice every day, crews of men covered with granite dust emerged from the mills. I used to meet them on my way home from school at noon. The finished stones were crated and hauled by wagon to the railway station, to be shipped by the Shore Line which later became the Grand Southern and eventually the C.P.R. Relics. - These sights and sounds have long since passed and there are few relics left to show that an industry once thrived there. In 1961 I visited two granite quarries in the Lily Lake area, No. 41 of Tayte & Meating, and No. 40 of O'Brien & Baldwin. The openings were filled with waste rock, and the depths indeterminable. At the bottom of one quarry I saw a broken wheel once turned by a horse that had helped remove stone years ago. As I stood looking down I tried to picture how it must have been then. It must have required much courage, patience, and determination to make a start and keep going. It had all been accomplished in the most difficult and primitive way. And now, the quarries were overgrown with trees. The quarries were very deep. Where there were 500 men who worked in the granite industry, the quarrymen, the stone-cutters, the teamsters, the polishers and finishers, the blacksmiths who sharpened tools, the stone cutters, the water carriers, the derrickmen, the machine hands, the scrollwork designers, the shapers and monuments and columns, the letterers and the shipping craters? Where were the owners, the directors, and the shareholders? Gone - all gone away! The only relics were inanimate things, like red granite wheel, partly attached to an iron rod behind O'Brien & Baldwin's old red mill. One time it polished fancy edges, flutes, and hollows, and had swung like a pendulum. The Tayte and Meating Company Mill still stands, robbed of its machines and now used as a pulp storage. The old red mill that belonged to Epps & Dodds Co., (later by Meating, Epps Co.) the cement office, and the second Bay of Fundy store (the first, built in 1883, had burned) have all been taken over by the St. George Pulp Co. The store has become a residence. Only blocks, chips and bits and pieces of granite, a rusted wheel, scattered parts of a derrick, wooden pulleys, and an old grindstone are left to remind us that St. George was once called 'The Granite Town'. All is quiet and serene. I must not forget to say that back in 1902 we had a 'paper', The Granite Town Greetings. That same year the horse watering trough at the old town pump was finished by Thomas Armstrong and Edward McGarr. It was made of red granite with '1902' cut its face side. This trough was Bob Wetmore's conception and Sandy Milne, Dr. Henry I. Taylor and others were involved in its creation. This antique and the old town pump were removed some years ago, for a period. But both are back in place now (a few flowers need to be planted in the trough.) We still have the Presbyterian Manse, built in 1904 of native red granite when the Rev. Mr. Hilock was minister. Ernest Jackson and another man (name unknown) made and installed the intricate granite window frames, a work of art. We also have the Post Office, built of granite in 1936, and a memorial name of a society of lasting importance, 'The Granite Chapter, Order of Eastern Star.' Our oldest artificial relic, and one in which we feel too little pride, is one of Canada's earliest works of white men, (see Spinney and Grearson, Contribution from CCHS No. 21). I refer to the red granite medallion believed to have been carved in 1604 by a member of the DeMonts settlement on St. Croix Island. This is preserved in the New Brunswick Museum, Saint John. It was found in the St. George area (Lake Utopia) about 1862. Our medallion is more than 350 years old and it was at one time considered as a suitable insigium for our Charlotte County Historical Society but the head of Queen Charlotte was preferred. Our Society is still without an insignium and I would like to advocate here that the medallion be chosen for this purpose. Apart from these historical society partisan considerations, the ups and downs of industry and the

St. Croix Courier - May 24, 1973 (a few paragraphs omitted) PHOTO. - The O'Brien and Baldwin Company Mill. PHOTO. - Tayte & Meating Company's Second Mill. PHOTO. - Exterior of the Milne, Coutts and Company Sheds 1898 A History of the St. George Granite Industry byEulalia O'Halloran. - Part 1 - According to geologists a molten mass of red granite intruded the roots of a great mountain chain in the St. George area. The mountains were intensely folded during Ordovician and Silurian rocks. This intrusion occurred during Devonian times about 380 million years ago (Tupper and Hart, 1961). Millions of years of erosion of this mountain chain finally exposed its roots which are the St. George granites (as we know them) today. Bailey (1870-71) described their extent and compared them favorably with the well known granites of Aberdeen, Scotland. Start of the Industry. - The first interest in commercial exploitation of this resource dates back to an 1872 fishing trip to Lake Utopia by Mr. Charles Ward, a New York artist and photographer. Mr. Ward was fascinated by the immense ledges of beautiful dark red granite and it was his enthusiasm that 'sparked' St. George's first granite firm. The Bay of Fundy Red Granite Company in 1872. It was made up of New York capitalists and practical granite-men with Mr. Ward as secretary. This company purchased 1,320 acres of land, and erected a $75,000 plant at Magaguadavic Falls. According to Parks (1914) the first monumental stone manufactured by this company was a large red granite cross marking the resting place of the Reverend Samuel Thompson (1861) in St. Mark's cemetery, St. George. The Granitemen And Their Products. - It was a Scotchman, Mr. McLachan, who brought out the first experienced granite-cutters for the Bay of Fundy Red Granite Co. They came from his homeland to St. George in 1872-74. I have not been able to discover exactly who Mr. McLachan was. It could have been Hubert McLachlin, medical doctor, St. George, who is listed in McAlpine's Charlotte County Directory, 1886-87. There is nothing to associate this man with granite, but many names are mispelled in this directory, so I am wondering if he was the man responsible for inviting the Scottish stone workers to our area. [NOTE - name was McGlashan] Mr. Wm. Coutts' obituary in a clipping from an unidentified newspaper tells us the story of some of these first workers. In 1868 William Coutts, Alex G. Milne, James Watt, and Alex Milne came from Scotland to America, and to St. George in 1874, and were employed with the Bay of Fundy Granite Company for nearly two years. In 1876 these four men formed the firm of Milne, Coutts and Company. They began to manufacture granite in the 'Gully' until 1894, when they purchased the Bay of Fundy Granite Company where the industry progressed extensively for many years. The 'Gully' is the narrow gorge below the Magaguadavic River Falls and may be seen from the highway bridge at the west end of St. George. Alex Milne was known as 'Big Sandy' and Alex G. Milne as 'Little Sandy'. The two men were cousins and Mr. James Watt Sr. had been employed as foreman of the Bay of Fundy Red Granite works; when they bought out the company in 1884 they renamed it Milne, Coutts and Company. Mr. Watt retired about 1885. That same year Capt. Charles Johnston retired from the sea, joined the new company, and purchased the controlling interest of Mr. Watt who died in 1892. In 1911 Capt. Charles Johnston became manager and installed a column cutter. He remained with the company until his retirement and death a few years later. In 1932 or 33 his interests were sold to Arthur W. Stewart who had been with the company a few years. Mr. Stewart had been formerly employed by Meating, Epps Company as bookkeeper or office manager. Eventually he became manager of Milne, Coutts Company and held that post until the firm closed out in 1953. A hewn beam crossing the gully shown in James L. Watts picture (See Appendix, Fundy Fisherman, 26 February 1969) was used as a footbridge by many of our first granitemen. It accommodated those employees of Milne, Coutts and Company who lived in that part of town that was nicknames 'South Boston'. They crosses the gully on their way to and from the granite sheds. All the granite workers were not from Scotland. Many came from Saint John and other parts of New Brunswick. At that time the lumbering industry was on the decline and many woodsmen left the forest for the granite sheds to become stone cutters or stone polishers, which took about three years of learning. Others became expert quarrymen, and some who were artistically gifted learned to do lettering, engraving and scrollwork. Examples of their fine work may be seen in cemeteries in St. George and elsewhere. Besides gravestones, their products included urns, letter-presses (with names or plain), door-stops, bookends, polished balls of granite in different sizes, hat-pin heads (for your sweetheart or someone else's), hairpins, table tops, and scenes cut or sandblasted on flat pieces of polished granite. All varieties of granite had their uses and a common use was for foundations, especially in older homes in this vicinity. On one special occasion, 'curling stones' were cut and polished. A red granite newelpost, a work of art, was made and finished by the Meating, Epps Co. It was sent to the Chicago Columbian Exposition, 1893, celebrating the 400th anniversary of Columbus discovering America, or the Chicago World's Fair, where it received first prize. It was eventually placed in Henry Meating's residence, now occupied by his grandson Harry Meating. A more massive production is shown in figure 9. It was manufactured before 1911 to serve as a base of an Ottawa war memorial (perhaps the Boer War). The Roosevelt Cairn was made by Milne, Coutts & Co., and was taken by scow to Campobello where it was then assembled by Frank N. Chaffey and John W. McGrattan. Columns for the Roman Catholic Cathedral in Boston, Mass., and columns for the Parliament Buildings in Ottawa, and stone for the American Museum of Natural History, New York, were supplied by St. George. Quarrying Methods. - In those early years, granite was quarried by hand methods. These methods produced much waste material or 'grout'. Rows of holes were drilled along natural fracture lines and blasted to produce blocks with relatively straight edges. Small blocks could be handled with hand winches and derricks. Horse derricks were used in most quarries for large blocks. The hoisting cable was wound on a windlass turned by a long pole or boom hauled by a horse walking in a circle. The Bay of Fundy Granite Company cut granite first at Young's Front (also called Burpee) Quarries (Figure 10) and later at the Burpee Quarries (sometimes called the Saint John Quarries). These were near the intersection of Highway No. 710 and the Manor Road. From there it was moved by train to a nearby stone shed for polishing. In summer, granite was also transported from Lake Utopia through the 'canal' then down the Magaguadavic River to the granite sheds. Much later tricks were used. Granite Polishing. - At first Lake Utopia sand was used in polishing the granite. Later on, steel shot replaced sand for smoothing rough surfaces. The stone was next washed clean of all traces of shot, then polished with coarse carborundum, an extremely hard compound of carbon and silicon. The second polishing was with fine carborundum, and the third (final) polishing to a gloss was done with whitening and scouring blocks. The scouring blocks were cut from trunks of willow trees, placed upright in the polishers so the end grain, saturated with whitening, was in contact with the stone. Felt was sometimes used instead of willow blocks but in either case the result was a fine polished surface. Shipping. - After polishing the products were often hauled down the Lower Road to the Red Store Wharf at Breadalbane and transported from there by boat to Saint John. In winter oxen were used on this route to haul larger stones for special jobs. Breadalbane was at the mouth of the Magaguadavic River about two miles from St. George. Sailing were used to discharge winter supplies there when ice prevented them from coming up the river to the St. George wharf. The 'Red Store' was located on the wharf. Over 100 years ago many people, including a number of Scottish families in that area, drove to the Red Store for supplies. Later our St. George stores hauled supplies from the Red Store wharf. One St. George man, H. Vernon Connell, now in his eighties, remembers hauling hogsheads of molasses to town over these two miles of winter roads. Rise and Fall of the Industry. - As mentioned earlier, the Bay of Fundy Red Granite Company initiated the St. George granite industry that was to have a life span of 60 years. That company played an important role but its history was brief and many other companies came and went. Table 1 summarizes the story. I have been able to assemble more detailed information on some of these firms by inquiry and reading. Dr. Ruitenberg's map (Figure 10) shows the sites of quarries they operated. Wright, 1934, presented similar maps including black granite quarries of the Bocabec, Chamcook and Bayside areas. He gives the local names for several of these. Developments to 1875. - In 1875, Matthew visited the area and recorded his observations in Report of Progress for 1876-77. He described operations of three companies, the Bay of Fundy Red Granite Company, the New Brunswick Red Granite Company, and the Brothers Michael. The Bay of Fundy Red Granite Company then employed about 100 men. Their plane was working night and day to fill orders for columns for the Roman Catholic Cathedral in Boston and had supplied polished columns for the Parliament Buildings in Ottawa and for the post office in Saint John. The New Brunswick Red Granite Company had been operating Young's Front (Burpee) Quarries on the west side of Magaguadavic but their $30,000 plant, or mill, at the falls had been burned. For a short period their stone was finished in Saint John, but that mill also burned. The Brothers Michael Quarry had been recently opened on the east side of the Magaguadavic, and they were shipping stone in the rough. This quarry was later owned by the Epps, Dodds Company. The 27 July 1876 issue of the St. Croix Courier had this to say:- Manufacturing facilities of St. George. The red granite business, still in its short clothes, and one saw-mill in operation are all that we can claim as a manufacturing town. The 19 July 1877 issue reported:- Annual meeting of the Bay of Fundy Red Granite Co., April 10, directors elected - Hon. R.B. Stevenson, Pres. B.R. Lawrence, Treas.; Thomas Barry; C.C. Ward, Sec.; Henry Rudge; J.S. Brown, (New York); Robert Ellin, (New York). At or about that time the Bay of Fundy Red Granite Company employed

65 men in the finishing factory and an additional 15 in the quarries, located about five miles north of St. George. The company's dam was directly under the bridge which has since been rebuilt. The rushing water fell through a flume and turned a water wheel at the base. At that time the power was transferred, by means of a cogwheel, to the main shaft behind the mill, situated behind the hill. Power was taken off the long shaft at various points in the mill for operating lathes, column- cutters, and polishing machines. St. George Granite Works. - Alex Taylor, III, born in Blackburn, Scotland, came with his family to America in 1872. He settled in St. George in 1874, and was employed by the Bay of Fundy Company by nearly two years. Then, in 1876, he established with his three sons the St. George Granite Works. In 1897, [1887???] he died suddenly while on a business trip to the province of Quebec. Alex. Taylor, jr., assumed responsibility for the business as senior partner with his brothers. Within a few years the two brothers had died but Alex. jr. continued the business for nearly thirty [three???] years before selling out in 1890 or 1900. [????] The new owners were John O'Brien and Andrew S. Baldwin. They continued the business under the same name. S.L. Tilley Moran, a son-in-law of John O'Brien, became manager. State of the Industry 1897. - In 1894 (St. Croix Courier 1954 in '60 Years Ago' reported) 'the granite manufacturers combined (last week) and built a new dam at the head of the falls, and now have plenty of water.' Bailey (1897) reported that the Bay of Fundy Red Granite Company, which had been purchased by the Milne, Coutts and Company about 1881 [1884???], was shipping stone by rail over the Shore Line joining St. George and Saint John. (This line was built in 1875 by Russell Sage, was taken over by Grand Southern in 1882 and in the early 1900's became part of the CPR). Three other companies, Tayte, Meating and Company, Epps, Dodds and Company, and the Victoria Red Granite Company, were also operating in 1897. By this time, they had begun working with black granite and besides exploiting local resources they were finishing imported American stone. They supplied stone for the Museum of Natural History in New York and many other private and public buildings. However, U.S. duties on manufactured granite were 'well nigh prohibitive' and the St. George product was marketed almost wholly in Canada. In 1902, a New Yorker bought rights to build a pulp mill below the falls at St. George and promised to supply power to the stone sheds for 99 years. In 1920 this company was sold to New York World Company, and in 1927 to the International Paper Co. In 1933, the mill was sold to the Lacroix family. In spite of all these changes, this Company was always known as The St. George Pulp and Paper Company Ltd. Conditions 1920-30.- An important report of this period was that made by Dr. William Parks (1914) based on his own field work in 1912. He found the following six firms or individuals quarrying granite at that time: Milne, Coutts and Company; Epps (fig. 7), Dodds and Company; Henry McGrattan & Sons (fig. 8); Tayte, Meating and Company (fig. 5); O'Brien and Baldwin (fig. 2 and 9); and John Maxwell who was operating the Young Quarries. A contract of some interest was let in 1923 (St. Croix Courier, 1953, '30 Years Ago'): Henry McGrattan and Sons undertook to supply stone for the Saint John Dry Docks. It was taken from the Dawson Mountain quarry, and the work continued for three months, furnishing work for thirty men, The total annual value of the product at that period stood at about $75,000. The red granite finished in 1910 was valued at about $45,000; the black and gray, about $22,000, and imported stone finished in St. George, about $8,000. The Resource. - In 1934 Dr. W.J. Wright with assistance from Hazen Baldwin, a well known quarryman of this district, prepared an excellent report on the granite industry. It shows the vast extent of the granite formations that extend 60 miles westerly from the Saint John to the St. Croix River. Granite has been quarried in many places in this area but the most important were at Spoon Island (Hampstead, N.B.) and at St. George. Wright's report describes the location, history of development, including ownership changes and the condition of most of the known quarries at that time. I would recommend it to any of you who wants information on particular quarries in Charlotte county. It describes not only those near St. George but others on the Digdeguash, on the Bocabec, on Chamcook Mountain, and at Bayside. The last produced granite under the trade name, 'Irish Black'. It would be beyond the scope of this paper for me to quote Dr. Wright's report and I am not including his map (plate 33-10) showing positions of quarries in the St. George area. The quarry numbers refer to sections of the report in which they are described. As Dr. Wright's Index may (inset) shows, the St. George quarries lie along the southern margin of the granite formation and extend westerly from Lake Utopia to Oak Bay, a straight line distance of 13 miles. In this area there are at least 50 quarries, some of which have been operated since 1872. They have supplied stone to all parts of Canada and the eastern United States, and building stone for many noted structures in Montreal, Boston, and New York, the supply being unlimited. The stone quarried in the St. George area falls into two general classes, commonly called 'St. George Red' and 'Black Granite'. The red granite varies in color, from place to place, from deep-red through light- red, salmon-pink, flesh-colored, ivory, gray and almost pure white. Particular colors were obtained from particular quarries, offering customers a wide range of selection. Resume of Industrial Development. - The Bay of Fundy Red Granite Company began operations using simple hand methods. It was Milne, Coutts and Company that installed steam or pneumatic power for drills and derricks in the quarries. These could be moved from quarry to quarry as old ones were abandoned and new ones opened. Milne, Coutts and Company also used electric power, of which about 75 horsepower was used and obtained from the St. George Pulp & Paper Company under the agreement referred to above. The plant equipment included 1 compressor (Can. Rand Co.) delivering air at 80 lbs.; one pneumatic surfacing machine (Tron & Holden); 8 polishing machines (Jenny Linds, Union Foundry Co., St. John, N.B.); 10 stations for pneumatic tools; 2 plug drills; 1 cutting lathe; 6 polishing lathes; 1 pendulum polisher; 5 vertical polishers; and a column cutter installed about 1911. Twenty-two men were employed; stone cutters received from $2 to $2.75 per day of 8 hours and polishers $1.50 to $1.80 per day. In 1910, 720 feet of red stone, 300 to 400 ft. of Spoon Island grey, and a small amount of black stone were cut. This is exclusive of imported stone. The Company paid $1.00 per cubic ft. for red stone quarried from their own property and delivered at the mill. Tayte and Meating Co. was one of the oldest St. George Granite concerns. It operated the largest column- cutter in the area. This Company's property was sold about 50 years ago to the St. George Pulp and Paper Co. Tayte and Meating Company mill (fig. 5) consisted of one building 115 ft. by 40 ft. and two other buildings each 23 ft. by

60 ft. About 40 horsepower was used, obtained from Pulp Co. The equipment included: 2 compressors (1 auxiliary); 1 pneumatic surfacing machine; 1 column-cutter; 2 polishing lathes; 4 polishing machines (Jenny Linds); 1 vertical polishing machine; 1 pendulum polisher; 9 stations for pneumatic tools; and 1 plug drill. Seventeen men were employed in the period about 1910. The mill operated by Epps, Dodds and Company (fig. 7) was 110 ft. by 70 ft., and equipped with 1 pneumatic surfacer; 1 gang-saw; 8 stations for pneumatic tools; 1 compressor; 5 polishing machines (Union Foundry Co., Saint John); vertical polishers and polishing lathes. About 40 horsepower of electrical energy from the Pulp Co. was used. Twenty men were employed. After the death of Mr. Dodds, the Epps, Dodds Company name was changed to Meating, Epps Company (fig. 1). Mr. Henry Meating carried on operations for 35 years and the business was continued by his sons, George and Nicholas Meating. Charles Epps of Epps, Dodds Company invented a machine for quickly making (or forming) granite balls of all sizes. The first granite balls were hand-made by Daniel Matheson Sr., who came from Prince Edward Island many years ago. One of the Mooreland quarries (No. 22) (near highway east side of Magaguadavic River north of Milne, Coutts property) was first worked by Thomas Colmer about 1892 and afterwards used by Epps, Dodds Company, has claim to fame. A column 15 ft. long was removed from it. The O'Brien and Baldwin Company mill (fig. 2 and 9) was 150 ft. x 45 ft. and equipped with 3 polishing machines (Jenny Linds); 2 vertical polishers; 1 cutting lathe; and 2 polishing lathes. About 40 horsepower of electrical energy was obtained from the Pulp Co. There was no pneumatic plant. In 1910 about 30 men were employed in mill and 6 in quarry. The Henry McGrattan and Sons mill (fig. 6) was about 100 ft. by 50 ft. and used 30 horsepower of electrical energy, at a cost of $20.00 per horsepower per year. The plant contained 2 compressors delivering air at 80 lbs. pressure; 1 surfacing machine; 5 polishing machines (Jenny Linds); 1 polishing lathe; 10 stations for pneumatic tools; and 1 plug drill. In 1910 between 25 and 50 men were employed. In 1910 the amount of New Brunswick stone cut was: Red granite 2,000 cubic feet. Gray granite (Spoon Island) 800 cubic feet. Black granite, 350 cubic feet. Black Granite Quarry in the Digdeguash area was owned by Stephen Spinney and Eldon Holt and worked by then for several years. They sold out to Kenneth Fitzgerald of St. Stephen, who recently sold to Nelsons of Sussex. The Nelsons are still removing stone from this quarry. Frost Mountain Quarry was owned and worked by Alex. Maxwell, George Maxwell and Arthur W. Stewart. Walter Messenett and John McDougall formed the Victoria Red Granite Company and erected a granite shed on Riverview Avenue, St. George, where they finished and shipped stone by the nearby railroad. Walter Messenett and John McDougall later joined Milne, Coutts Co., and the machinery was taken over by them. Thereafter and until his death, Mr. McDougall served as bookkeeper for the Milne, Coutts Company. Charles Young Quarries were operated by the New Brunswick Red Granite Company in about 1875, and are sometimes called the Saint John quarries. They were afterwards owned and operated by Messrs. Burpee who shipped rough stone to Saint John. About 1893 they

St. Croix Courier - May 24, 1973 PHOTO. - Old Time Granite Works."

Codes: G3 / E7 / IDX_Names: Granite; Mineral Paint - General;

St. Andrews Standard - Jul. 22, 1874 Red Granite. - It appears that Charlotte County abounds with Red Granite. Levi Young, Esq., of Digdeguash, St. Patrick, has recently discovered a large bed of that stone on his lands, adjoining the river. He had some of the stone quarried, and sent to the polishing mill. Its contiguity to the river, and the cheap mode of shipment will give Mr. Young an advantage over other quarries. It is reported that some other valuable mineral deposits have been discovered in the same vicinity, among which are iron and mineral paint."

Society of New Brunswick, 1898. - Jan. 26, 1897; in the morning.Felt at Campobello and Deer Island. Light."

Codes: G3 / GYP / IDX_Names: Granite; Gypsum;

Eastport Sentenil - Dec. 27, 1876 Red Beach. - Business is yet good; the lumbermen are proposing to get out large quantities of cordwood and small lumber, which find a ready market at the depot of the Red Beach Plaster Co. The Bradwell Granite Co., have stopped work until spring on the Cook quarry. The Maine Red Granite Co. having a large quantity of granite quarried, have also suspended work on their quarry until warmer weather. The granite mill is running night and day, turning out work that cannot be excelled in this country. The Company took first prize at the Centennial Exhibition for samples of their work and granite."

Eastport Sentenil - Apr. 11, 1877 Red Beach. - The granite and plaster mills are still running of full time. Several cargoes of ground plaster have been shipped from here this spring. The first cargo of rock plaster for this season arrived yesterday in the Sch. Lizzie Newton, Capt. Hatfield."

Eastport Sentenil - Feb. 18, 1878 Red Beach. - The Red Granite Company have a saw in successful operation cutting the granite into slabs, doing the work of many men; they are also preparing to put in more heavy polishing machinery. The Stmr. Ella Knight touched here this week, taking in seven hundred bbls. plaster in one hour."

Eastport Sentenil - Aug. 10, 1879 Red Beach. - The Plaster Co.'s mills are in active operation manufacturing plaster. The Company are also putting in machinery, and proposing to manufacture phosphate of lime, intending to establish as good a reputation for that as they have for manufacturing plaster. The M.R. Granite Co. have been spiking a large quantity of granite lately."

Eastport Sentenil - Feb. 4, 1880 Red Beach. - The Granite Co.'s works still run not withstanding the cold weather. Plaster Co., have been running their grinding works night and day so far, they have also just completed their works for marketing Phosphate under the supervision of Mr. William Pine of Eastport, an engineer who thoroughly understands the business. Mr. C.H. Newton, the Co.'s agent intends to manufacture an article equal, if not superior to the celebrated Bradley

Eastport Sentenil - Nov. 8, 1882 The Red Beach Plaster and Granite Companies have added largely to the water reservoir of the stream on which their mills are located. The waters of Pine Lake have been led into Noah's Lake by a canal, and new dams have been built on the last named lake. The new machinery for the Plaster Mills has been put in position, and the extensive repairs are about completed. - Times."

Eastport Sentenil - Jan. 17, 1883 Red Beach. - notwithstanding the heavy outlay for buildings, machinery and other improvements, the Plaster, Polishing and Phosphate mills are hung up for want of water. We had a thaw yesterday, it rained about ten minutes. ... The rocks are being fast put on to the site, for a red granite church. It will take about five

Eastport Sentenil - Mar. 7, 1883 The Maine Red Granite Co., and the Red Beach Plaster Co., are sorely in need of water to fill present orders. - Generally speaking, the water supply of these two important industries is second to none, but this winter's drought has diminished the fountain head, and a lack of power has been the consequence."

Codes: G3 / GYP / IDX_Names: Granite; Gypsum;

Eastport Sentenil - Mar. 7, 1883 The Maine Red Granite Co., and the Red Beach Plaster Co., are sorely in need of water to fill present orders. - Generally speaking, the water supply of these two important industries is second to none, but this winter's drought has diminished the fountain head, and a lack of power has been the consequence."

Eastport Sentenil - Jan. 30, 1884 Industrial Survey of Maine. - Washington County. - Red Beach and Robbinston. - Within the territorial limits of Calais, and about ten miles south of the city proper, is the village known as Red Beach, with a post office of the same name. A fine little deep water harbor extends in here, at the head of which is the outlet of an excellent water power stream which has been improved and utilized by two of the most enterprising and successful corporations in Maine. They are the Maine Red Granite Company and the Red Beach Plaster Company. The business of importing plaster rock from Nova Scotia and grinding it here has been carried on for the past fifty years, the works having been enlarged from time to time until they have reached their present magnitude. They now grind 10,000 tons of rock yearly, and have facilities for making from 350 to 400 barrels of calcined plaster and as much more of land plaster daily. They have large cooperage works where their barrels for packing are made, mostly by machinery. This product is sold by the cargo in the principal cities along the Atlantic seaboard, giving constant employment to quite a number of vessels. Four years ago this company commenced the manufacture of the Red Beach bone phosphate, and they have recently enlarged their facilities for supplying a demand of 2000 tons per year. They are constantly receiving very flattering testimonials from farmers who have fully tested the merits of their fertilizer, and their sales are rapidly increasing. In connection with their plaster mills they have a grist mill which grinds from eight to ten thousand bushels of corn yearly. The Granite Industry. - About a mile back from the plaster mills the outcropping of the red granite occurs, comprising twenty acres and occupying a hill where it can be easily quarried. The polishing and cutting works are located on the stream below. There is a strongly constructed building, 240 feet long by an average width of about 80 feet. An elevated travelling crane runs on a track through the building, which can deposit dressed or undressed granite blocks at any part of the works. The machinery is all run by water power and includes one of McDonald's stone-cutting machines, which is estimated to perform the work of twelve men. This machine has been recently put in here and is now doing good work. They have two column cutters, a large variety of polishing machines, lathes and every facility for doing a large amount of the very best work. They have recently purchased and are now working an Ingersoll steam drill at the quarry. They are now doing a large lot of polished work for the county buildings and post office now being erected at Lima, Ohio. Sixty men are employed at the quarry and in cutting and polishing departments, and this has been about the status of operations during the past three years. G.G. McGlashen, who had eighteen years' experience in Scotland before taking charge here, has designed the whole, and here is a fine school for those who are curious in mechanical operations. Mr. McGlashen has samples of polished Scotch granite, but they do not compare at all favorably with the warmth and beauty of color of the Red Beach article. That this kind of stone is the country rock here for miles distant, is shown by the coast-line ledges and beaches which have given the locality its name. On land owned by George C. Shattuck, about two miles west, is an inexhaustible supply of black granite, and fine pieces in polished work were there ready for shipment on the day of our visit. A striking contrast, which renders the beauty of each kind more prominent, is now among the leading ideas of builders, and we consider it fortunate for the company that an excellent quality of black granite is so near at hand with which to fill orders. Some of this granite is now sent up to St. Stephen by water, and there takes the cars for its destination; and a very important matter to be considered is the large amount of valuable granite on and near the line of the proposed Shore Line Railroad, which will afford an immense amount of freight westward. A new stone dam has recently been erected near the polishing mills, and the water supply is abundant in seasons of drought. In all departments of the business here over one hundred men are employed,

Eastport Sentenil - Nov. 12, 1884 The Courier says Samuel H. Nickerson of Calais, who is interested in the Red Beach Plaster Co. was in Cherryfield the first of the week. He left on Wednesday for points south and went on business connected with the company. Mr. Nickerson reports that the annual product of this company is nearly 40,000 barrels of plaster and 500 tons of phosphate. He also states that the Maine Red Beach Granite Co., which is practically one concern, are quarrying about 40,000 feet of granite, which is dressed and polished at their works and shipped to western markets. Both concerns employ about 150 men."

Eastport Sentinel - Oct. 15, 1890 The Red Beach plaster and granite companies make use of the New York steamer for shipment of goods. For the past two weeks a tug boat has towed the barge I.M. Todd loaded with barrels of plaster, and a scow with load of finished red granite to this place where the freight is put aboard the Winthrop."

Eastport Sentinel - Oct. 14, 1891Red Beach. - Owing to dry weather for the past month the plaster mill has not been running on full time; but dry weather does not interfere with the granite mills as when the water is low they use steam, and have been working about fifteen hours a day."

Codes: G3 / GYP / IDX_Names: Granite; Gypsum;

Eastport Sentinel - Oct. 14, 1891Red Beach. - Owing to dry weather for the past month the plaster mill has not been running on full time; but dry weather does not interfere with the granite mills as when the water is low they use steam, and have been working about fifteen hours a day."

Eastport Sentinel - Dec. 14, 1892 The Maine Red Granite Co. at Red Beach, also the plaster mills at that place, continue to make large shipments of their respective products. The three masted schooner William Cobb, plaster loaded, from the above place and bound to a southern port, was in the harbor Monday, and the company's lighter, the Rocky Mountain, landed another lot of 360 barrels for transhipment by the International steamers, it being part of an order being forwarded to Australia. In addition to the plaster the lighter had a quantity of polished granite, intended for New York parties."

Eastport Sentinel - Jan. 25, 1893 Times: At Red Beach, quarrying has been suspended, and operations in the granite works have been reduced. The plaster mills are not running on full time owing to ice and a low supply of water."

St. Andrews Beacon - Mar. 21, 1912 Operations were resumed at the plant of the Red Beach Plaster Co. during the week, after a long period of idleness. The granite business at Red Beach is also good this year, and the outlook for the remainder of the year is brighter than it has been for some time. Calais Times."

St. Andrews Beacon - Jan. 28, 1897 The Tariff Inquiry.- … The Albert Manufacturing Company favored an increase rather than a decrease on plaster of paris. They would cheerfully welcome reciprocity on calcined plaster. Mr. Osman told the commission that he would give up his business in Canada for the privilege of selling in the Boston market alone... The limeburners desired a reciprocal agreementwith the United States. The granite-workers pleaded for an increase of 10p.c. on finished material to protect them from the Scotch dealers. Low wages and advantageous freight rates favored the Aberdeen granite dealers. Should the American duty be raised they desired a corresponding increase to shut out the Scotch. Sir Richard asked them if it was only the finished stone they had to compete with and they said that it was. From the last blue book he showed them that the importation of rough granite had been $37,000 and the finished $6,000. The gentlemen assured Sir Richard that the blue book must be wrong."

Codes: G3 / LEGI / IDX_Names: Granite; Legislation, etc.;

Royal Gazette - Jul. 30, 1873 CAP. XCIII. An Act to incorporate the Bay of Fundy Red Granite Company, Limited.Sec. Sec. 1. Company incorporated. Liability of 2. Capital stock. shareholders. 3. Board of Directors; number 7. Damage for lands, of; vacancy, how filled. &c. taken, how 4. Office of Company, where determined. established. 8. Power of Company to 5. Calls on shares, how levied make railway, &c. and collected. 9. Property and shares to be exempt from taxation for three years. Passed 14th April, 1873. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Jacob S. Brown, Abraam Volk, Charles C. Ward, John M. Moffitt, George G.M. McGlashan, Douglas Wetmore, B.C. Kenway, and Charles W. Weldon, their associates, successors and assigns, are hereby erected into a body politic and corporate under the name of ""The Bay of Fundy Red Granite Company,"" for the purpose and with the power of purchasing, holding, leasing and selling granite land and mineral rights, and of quarrying and manufacturing red granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, assigning, selling and conveying real estate, machinery, vessels, vehicles and any other property required for constructing, holding and operating roads, railroads and tramways for the transportation of red granite and other substances and supplies to and from thequarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads and tramways may be used, and of acquiring, purchasing, contracting, hiring or holding such wharves, water lots, docks and piers as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, for the protection and safety of shipping, and constructing and holding dwellings and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes or any of them, and the said Company shall have all other powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be two hundred thousand dollars, in shares of not less than one hundred dollars each, which shall be personal property, transferable and assignable as such, by assignment recorded in the books of the Company; and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars, by the issue of new shares, on a vote of a majority in interest of the stockholders; the Company may issue stock in payment for lands, mineral rights or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up stock as if paid for in money; the Company may also issue bonds bearing interest in such form and for such amounts, and payable at such times and places, as the Directors from time to time may appoint and direct, and the same shall be signed by the President and shall have the corporate seal attached or affixed thereto; provided that such lands shall not exceed two thirds the amount of paid up capital of said Company, and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The office for conducting the general affairs of the Company shall be at Saint George, in the County of Charlotte, or such other place in New Brunswick as may be deemed expedient by the Company; the Board of Directors shall consist of not less than five or more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, either in the City of Saint John, or in the Parish of Saint George in the County of Charlotte, and an Agent there for the transaction of business connected with the Company, service on whom of all processes, notices and other documents, shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time, of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares; and whenever any call shall be made by the stockholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John, requiring payment of the same within thirty days; and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder, and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser or puchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further, greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him, shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer, to the extent of any amount remaining unpaid on such share or shares; provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company may be requisite for the laying, construction or erection of any road, railroad or tramway, or of any building, wharf, dock or other place for storing or shipping the stone or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or rights of way can be made with the owner or owners thereof, said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or rights of way, and such petition shall set forth by metes and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners and occupiers thereof, and any further particulars which the case may require; whereupon if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint the time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners and occupiers of such lands, either if practicable by personal service, or if not by notice in one or more newspapers published at the City of Saint John and one published in the County of Charlotte, requiring them to attend at the time and place appointed and shew cause why an order for such conveyance should not be made; and at such time and place the Judge may either proceed at once to order the parties interested to make all necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, one by the respondents, and the third by the Judge; or if the respondents do not appear, two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers so appointed shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company or of any discovery by them upon their own lands of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of of such appraisers, or any two of them, shall be returned in writing and upon oath to such Judge as soon as may be, whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice, either by their Attorneys or as aforesaid; and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation, and in case of rejecting the same shall proceed as before to the appointment of other appraisers, and so on as often as the case may happen; if the valuation be approved or modified the Judge may make such order in the premises as to the payment of costs and amends, and the mode of conveyance of such lands or rights of way, as he may deem expedient, and any conveyance made under such order shall be registered in the County in which the premises conveyed shall lie, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may when required make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers, on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters and shipping places for granite, or other productions of the said Company, upon any land owned or lawfully held by the Company or acquired under this Act, or upon the shores of the harbour or other lands of the Crown above or below low water mark, license therefor having been first duly applied for and obtained from the Governor General of Canada or the Lieutenant Governor of New Brunswick in

Daily Tribune - Mar. 13, 1873 Legislature. - ... The House then went into further consideration of the bill to incorporate the St. George Red Granite Company, and the Attorney General moved in amendment that the bonds and debentures issued by the Company shall not exceed two-thirds of the paid up capital. Carried. The bill was then agreed to with certain amendments. ... The House then went into"

Royal Gazette - May 7, 1873 CAP. LXXXVI. An Act to incorporate the Saint George Red Granite Company Limited. Sec. Sec. 1. Company incorporated. 7. Value of lands 2. Capital Stock. required, by whom 3. Office of Company for appraised and valued. general affairs, where 8. Where Company may situate. build railways, &c., 4. Office must be ept either bject to certain at Saint John or Saint regulations of George. Sessions. 5. Calls, how levied and 9. Property of Company collected. exempt from taxation 6. Liability of shareholders; or three years. proviso. Passed 14th April 1873. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Peter Cormack, James I. Fellows, Isaac Burpee, Stephen S. Hall, Charles H. Fairweather, and JohnP.C. Burpee, their associates, successors and assigns, are hereby constituted a body politic and corporate, by the name of ""The Saint George Red Granite Company,"" for the purpose and with the power of purchasing, holding, leasing and selling Granite Lands and Mineral rights, and of quarrying and manufacturing Red Granite and all kinds of stone and minerals in the county of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles, and any other property required for constructing, holding and operating roads, railroads and tramways for the transportation of Red granite and other substances and supplies to and from the quarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads, and tramways may be used, and of acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for the protection and safety of shipping, and constructing and holding dwellings, and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes or any of them, and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be sixty thousand dollars, in shares of not less than one hundred dollars, which shall be personal property, transferable and assignable as such by assignment recorded in the books of the Company, and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars by the issue of new shares, on a vote of a majority in interest of the stockholders; the Company may issue stock in payment for lands, mineral rights or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up stock, as if paid for in money; the Company may also issue bonds bearing interest in such form and for such amounts and payable at such times and places as the Directors from time to time may appoint and direct, and the same shall be signed by the President, and shall have the corporate seal attached or affixed thereto, provided that such bonds shall not exceed two thirds the amount of the paid up capital of said Company; and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The Office for conducting the general affairs f the Company shall be at Saint John, or such other place in New Brunswick, England or the United States, as may be deemed expedient by the company; the Board of Directors shall consist of not less than five or more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen and accept office in their stead; 7 any vacancy in the Board of Directors caused by death, resignation or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, either in the city of Saint John or in the Parish of Saint George, in the County of Charlotte, and an agent there for the transaction of business connected with the Company, service on whom of all processes, notices and other documents shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares, and whenever any call shall be made by the stockholders or Directors of the said Company it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John, requiring payment of the same within thirty days, and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale, and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder, and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser or purchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further, greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him, shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer to the extent of any amount remaining unpaid on such share or shares, provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company may be requisite for the laying, construction or erection of any road, railroad 8 or tramway, or of any building, wharf, dock or other place for storing or shipping the stone or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or rights of way can be made with the owner or owners thereof, the said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or rights of way; and such petition shall set forth by mete and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners and occupiers thereof, and any further particulars which the case may require; whereupon, if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint a time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners and occupiers of such lands, either if practicable by personal service, or if not, by publication thereof for at least two weeks in a newspaper published at the City of Saint John, and one published in the County of Charlotte, requiring them to attend at the time and place appointed to shew just cause why an order for such conveyance should not be made; and at such time and place the judge may either proceed at once to order the parties interested to make all the necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, of whom one by the respondents, and the third by the Judge, or if the respondents do not appear two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company, or of any discovery by them upon their own lands of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of such appraisers or any two of them shall be returned in writing and upon oath to such Judge as soon as may be; whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice either by their attorneys or as aforesaid, and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation, 9 and in case of rejecting the same shall proceed as before to the appointment of other appraisers, and so on as often as the case may happen; if the valuation be approved or modified, the Judge may make such order in the premises as to the payment of costs and awards, and the mode of conveyance of such lands or rights of way as he may deem expedient, and any conveyance made under such rder shall be registered in the County in which the premises conveyed shall be, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may, when required, make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County, for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters and shipping places for granite or other productions of the said Company, upon any land owned or lawfully held by the Company, or acquired under this Act, or upon the shores of the harbour, or other lands of the Crown above or below low water mark, licence therefor having been first duly applied for and obtained from the Governor General of Canada, or the

Royal Gazette - Jul. 1, 1874 CAP. XCIX. An Act to incorporate the Victoria Red Granite Company. Sec. Sec. 1. Company incorporated. 6. Liability of 2. Capital stock. Of stockholder 3. Office of Company for 7. When Company may general business, where kept; apply to Judge for number of Directors. Order to owner to 4. Company to have an office onvey lands, &c. at St. George. 8. Company may make 5. Calls, how levied and railway across collected. Highways, &c. 9. Property of Company exempt from taxation for three years. Passed 8th April, 1874 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Arthur Hill Gillmor, Senior, Francis Hibbard, M.P.P., Tobias S, Gillmor, Kinsman P. Gillmor, Eldorado Gillmor, Robert A. Stuart, James O'Brien, Thomas Moreland, Samuel Johnson, Charles McGee, Henry A. Smith, James E. Lynott, Edwin R. O'Brien, Daniel Gillmor, their associates, successors, and assigns, shall be and they are hereby erected into a body politic and corporate, by the name of ""The Victoria Red Granite Company of Saint George,"" and by for the purpose of quarrying and manufacturing red granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles, and any other property required for constructing, holding and operating roads, railroads, and tramways, for the transportation of red granite, and other substances and supplies, to and from the quarries and works, and using the same for the purpose aforesaid, and all other purposes for which roads, railroads and tramways may be used, and for acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks, and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for the protection and safety of shipping, and constructing and building dwellings, and other works and buildings, for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes, or any of them; and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be fifty thousand dollars, in shares of not less than one hundred dollars each, which shall be personal property, transferable and assignable as such by assignment recorded in the books of the Company; and the Company shall have power to increase their capital stock to any sum not exceeding five hundred thousand dollars, by the issue of new shares, on a vote of a majority in interest of the stockholders; the company may issue stock in payment of lands, mineral rights, or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered full paid up as if paid for in money; the Company may also issue bonds, bearing interest, in such form and for such amounts, and payable at such times and places as the Directors from time to time may appoint and direct, and the same shall be signed by the President, and shall have the corporate seal attached or affixed thereto, provided that such bonds shall not exceed two thirds of the amount of the paid up capital of the Company, and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The office for conducting the general affairs of the Company shall be at Saint George, or such other place as may be deemed expedient by the Company; the Board of Directors shall consist of not less than five nor more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the Company fail to elect Directors on the day appointed, those previously elected shall continue in office until successors are chosen, and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation, or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The Company shall keep an office in this Province, in the Parish of Saint George in the County of Charlotte, and an agent there for the transaction of business connected with the Company, service on whom of all processes, notices, and other documents, shall be deemed sufficient service upon the said Company. 5. The said Company shall have power to levy and collect calls upon the shares from time to time of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares; and whenever any call shall be made by the stockholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof in one or more newspapers printed in the City of Saint John or County of Charlotte, requiring payment of the same within thirty days; and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, he may either be sued for the same in any competent Court, or the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such call became due, shall be sold to the highest bidder; and after retaining the amount of such call, and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and and delivered to the purchaser or purchasers thereof. 6. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further greater or other sum than such as may remain unpaid on the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him shall by such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer, to the extent of any amount remaining unpaid on such share or shares, provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 7. Whenever, for the purposes of the said Company, lands or rights of way contiguous to the quarries or other property of the Company, may be requisite for the laying, constructing or erection of any road, railroad, or tramway, or of any building, wharf, dock, or other place for storing or shipping the stone, or other minerals dug, quarried or manufactured by the Company, and no agreement for the purchase of such lands or right of way can be made with the owner or owners thereof, the said Company or the Directors thereof may apply to a Judge of the Supreme Court by petition, with a correct plan of the premises in question thereto annexed, on oath, praying a conveyance of such lands or right of way; and such petition shall set forth by metes and bounds the nature, situation and quantity of the lands or rights of way required, the names of the owners or occupiers thereof; and any further particulars which the case may require; whereupon if the Judge be satisfied that such lands or rights of way, or any part thereof, are actually required for carrying out the purposes and operations of the said Company, he shall appoint a time and place for the consideration of such petition, and direct notice of the object of such application to be given to the owners or occupiers of such lands, either if practicable by personal service, or if not, by publication thereof for at least two weeks in a newspaper published at the City of Saint John, or one published in the County of Charlotte, requiring them to attend at the time and place appointed, to shew just cause why an order for such conveyance should not be made; and at such time and place the Judge may either proceed at once to order the parties interested to make all necessary conveyances upon such terms as he may see fit to order and direct, or if he deem it necessary, to order that the lands or rights of way so required be examined and surveyed by appraisers to be by him appointed, of whom one appraiser shall be named by the petitioners, one by the respondents, and a third by the Judge, or if the respondents do not appear, two of such appraisers shall be named by the Judge, due proof being furnished to him of the due service or publication of said notice; the appraisers so appointed shall forthwith proceed to examine and value the lands or rights of way so required, to ascertain the necessity for them, and the quantity of land required, and in their valuation they shall not take into account the enhanced value of any such lands and premises by reason of the operations of the said Company, or of any discovery by them upon their own lands, of minerals, ores or other metallic substances, or any further works or operations by them contemplated; and the valuation of such appraisers, or any two of them, shall be returned in writing and upon oath to such judge as soon as may be; whereupon the said Judge shall fix a time and place for hearing such award or valuation, of which all parties shall have due notice, either by their attorney or as aforesaid; and at the return of such notice, and upon hearing all parties interested, the said Judge shall have power to alter, modify, approve or reject such valuation; and in case of rejecting the same, shall proceed as before to the appointment of other appraisers, and so on as often as the the case may happen; if the valuation be approved or modified, the Judge may make such order in the premises, as to the payment of costs and awards, and the mode of conveyance of such lands or rights of way, as he may deem expedient, and any conveyance made under such order shall be registered in the County in which the premises conveyed shall be, and have the same operation and effect as if made by the owner or owners of the fee to the said Company. 8. The said Company may, when required, make or construct a railway or tramway over and across any roads in the line of the projected railroad or tramway, and over any brooks, streams or rivers on public lands, subject nevertheless to regulations to be made by the Court of Sessions or Municipal Corporation of the County for the protection and safety of the inhabitants and their property, and the preservation of public and private rights; and may build, erect and make harbours, piers, breakwaters, and shipping places for granite or other productions of the said Company, upon any land owned or lawfully held by the Company, or acquired under this Act, or upon the shores of the harbour or other lands of the Crown, above or below low water mark, license therefor having been first duly applied for and obtained from the

Royal Gazette - Jul. 8, 1874 CAP. CX. An Act in amendment of and in addition to an Act to incorporate the Hopewell Freestone and Mining Company. Sec. Sec. 1. Name of company changed. 4. Capital stock may 2. Additional power of Company. Be increased. 3. Certificates of shares, by 5. Annual meetings, whom signed. When and where held. Passed

8th April, 1874 Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That notwithstanding anything contained in an Act made and passed in the thirty sixth year of Her Majesty's Reign, intituled An Act to incorporate the Hopewell Freestone and Mining Company, the corporate name of ""The Hopewell Freestone and Mining company"" is hereby changed, and from and after the passing of this Act the corporate name of the said Company shall be ""The Hopewell Quarry Company,"" and all the provisions of the said recited Act shall apply to the said The Hopewell Quarry Company, except as herein altered or amended. 2. That in addition to the powers given to the said Company in and by the first Section of the said recited Act, the said Hopewell Quarry Company shall be and they are hereby empowered to purchase, hold and use all such vessels as may be necessary for the purpose of transporting the products of the operations of the said Company, and carrying the supplies and materials required for the efficient working of the said operations, and to sell, convey and dispose of this such vessels from time to time as they may see fit. 3. The certificates of shares in the said Company shall after the passing of this Act be in the same form as provided in the sixth Section of the said Act, except that the same shall be signed by the President and Treasurer of the said Company instead of by the President and Clerk or Secretary; provided that nothing in this Act shall affect any certificate of shares heretofore issued. 4. The stockholders of the said Company may at any general meeting to be called for that purpose, increase the capital stock thereof from time to time by such sum or sums as they may order and direct, such increase not to exceed two hundred thousand dollars, and may increase the number of shares accordingly. 5. Notwithstanding any law or custom to the contrary, the said Company may by their bye laws appoint the annual meeting of the shareholders, directed to be held in the said Act, to be holden at such time and in such place as shall be prescribed by such bye laws."

Royal Gazette - Aug. 4, 1875 Cap. ????. An Act to incorporate the Digdeguash Red Granite Company. Sec. Sec. 1. Company incorporated. 6. Company authorized to2. Capital stock. make railway or tramway, 3. Office for general damages to land taken, business, where established. how ascertained. 4. Calls on stock, how made. 7. Property of Company 5. Liability of stockholder for exempt from taxes for debts of Company. three years. Passed 10th April, 1875. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Levi W. Young, George S. Grimmer, Robert Ross, Thomas T. Odell, Harris H. Hatch, and their associates, successors, and assigns, are hereby constituted a body politic and corporate by the name of The Digdeguash Red Granite Company for the purpose and with the power of purchasing, holding, leasing and selling granted lands, mineral rights, and for quarrying and manufacturing, polishing, buying and selling Red and other Granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles and any other property required in about the purposes aforesaid, and in and about the transportation, by land or water, of such minerals, or of quarrying, polishing, storing, or shipping thereof, and with the further full power of doing all other things which the said Company may deem essential or conducive to or for any of the purposes aforesiad, and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province. 2. The capital stock of the Company shall be fifty thousand dollars, in shares of not less than one hundred dollars each, which shall be personal property, transferable and assignable in such by assignment recorded in the books of the Company; and the Company shall have power to increase their capital stock to a sum not exceeding five hundred thousand dollars by the issue of new shares, on a vote of a majority in interest of the stockholders; the Company may issue stock in payment for lands, mining or mineral rights or other property or purposes, on such terms as the Directors may deem best, and such stock shall be considered as fully paid up as if paid for in money; the Company may also issue bonds bearing interest, in such form and for such amounts, and payable at such times and places as the Directors from time to time may appoint and direct, and the same shall be signed by the President, and shall have the corporate seal of the Company attached or affixed thereto; provided that such bonds shall not exceed two thirds of the amount of the paid up capital of the Company, and the said bonds shall form a first charge on the lands, property, stock and franchises of the said Company. 3. The Office for conducting the general affairs of the Company shall be at Lower Digdeguash, or such other place in New Brunswick as may be deemed expedient by the Company, who shall have an agent at the said place for the transaction of business connected with the Company, service on whom of all processes, notices and other documents shall be deemed sufficient service upon the said Company; the Board of Directors shall consist of not less than five nor more than seven, as may be determined by the bye laws of the Company, and they shall be chosen annually; but should the company fail to elect Directors on the day appointed, those previously appointed shall continue in office until successors are chosen and accept office in their stead; any vacancy in the Board of Directors caused by death, resignation, or otherwise, may be filled for the residue of the term by appointment made by the remaining members of the Board. 4. The said Company shall have power to levy and collect calls upon the shares from time to time of such sums of money as may be deemed necessary for carrying on the business of the said Company, in all not exceeding the nominal value of the shares; and whenever any call shall be made by the stockholders or Directors of the said Company, it shall be the duty of the Treasurer to give notice thereof, in one or more newspapers printed in the City of Saint John or the County of Charlotte, requiring payment of the same within thirty days; and if any stockholder shall refuse or neglect to pay the amount of such call upon his shares at the time prescribed, the Treasurer may proceed to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale; and all shares upon which the call is not then paid, with interest from the time such shall become due, shall be sold to the highest bidder and after retaining the amount of such call and interest due on each share, and the expense of advertising and selling, the residue (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser or purchasers thereof. 5. No member or stockholder of the Company shall be liable in his person or separate estate for any debt or obligation of the Company, or for any further, greater or other sum than such as may remain unpaid in the shares taken or held by him, unless he shall have rendered himself so liable by becoming surety for any such debt or obligation; but no stockholder who may have transferred his interest in any share or shares taken or held by him, shall by any such transfer cease to be liable for or upon any debt, obligation or contract incurred or made prior to the date of such transfer, to the extent of any amount remaining unpaid on such share or shares; provided that any action or suit in respect of such liability shall be taken and commenced within six months from the date of such transfer. 6. The said Company may when required, make or construct a railway or tramway over and across any roads in the line of the projected railway or tramway, and over any brooks, streams or rivers on public lands, subject nevertheless, in case of private lands, to such damages to be paid by the said Company as may be awarded for the same, to be ascertained as provided in and by the seventh Section of thirty sixth Victoria, Chapter ninety three, which said section, for the purpose of ascertaining such damages and obtaining conveyance of such private lands, shall be and is hereby made a part of this Act; and subject also, in case of public lands, to such regulations by the Court of Sessions or Municipal Corporation of the County, for the protection and safety of the inhabitants and their property, and the preservation of public and private rights. 9. All property and shares of the said Company shall be exempt from taxation of any kind for the period of three

Company authorized calls on shares. to construct railways or tramways. 9. Property of Company exempt from taxes for three years. Passed 10th April, 1875. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Isaac W. Bradbury, John McIntosh, William H. Gray, Charles F. Clinch, James A. Moran, James O'Neill, and James E. Lynott, their associates, successors, and assigns, are hereby constituted a body politic and corporate by the name of The Utopia Red Granite Company of Saint George for the purpose and with the power of purchasing, holding, leasing and selling granted lands and mineral rights, and for quarrying and manufacturing, polishing, buying and selling Red Granite and all kinds of stone and minerals in the County of Charlotte, and purchasing, holding, using, selling and conveying real estate, machinery, vessels, vehicles and any other property required for constructing, holding and operating roads, railroads, and tramways, for the transportation of Red Granite and other substances and supplies to and from the quarries and works, and using the same for the purposes aforesaid, and all other purposes for which roads, railroads and tramways may be used; and of acquiring, purchasing, constructing, hiring or holding such wharves, water lots, docks, and piers, as may be deemed necessary or proper for the working of their quarries, the storing and shipment of stone and other substances, or for protection and safety of shipping, and constructing and holding dwellings and other works and buildings for the employees of the Company, and of doing all other things which the Company may deem essential or conducive to the foregoing purposes, or any of them; and the said Company shall have all other the powers, rights and privileges made incident to a Corporation by any Act of Assembly of this Province."

Daily Tribune - Mar. 13, 1875 Mr. McKay committed the bill to incorporate the Utopia Red Granite Company, St. George, Mr. Jones in the chair. A discussion came up on a section of the bill providing for exemption from taxation for three years. Hon. Mr. Stevenson referred to the length of time consumed in getting such companies into operation, and the fact that no profits could be realized for three years. The other companies in precisely similar positions are exempted and the people are willing that this company also should be so favored. A division being taken on the motion to adopt the exempting clause, it was agreed to on the following vote: Yeas. - King, Stevenson, McQueen, Crawford, Perley, Burns, Blanchard, Johnson, Smith, Flewelling, McLeod, McKay, Butler, Ryan, Elder, Rogers, Cotterell - 17. Nays. - Fraser, Kelly, Willis, Covert, Keans, Phillips, Austin, Robinson, Dow, Barker, Davidson, Humphrey, Pickard, Swim, Leighton - 15. The bill was

Royal Gazette - Apr. 1, 1885 Dominion of Canada } Province of New Brunswick} County of Charlotte} General Co-Partnership Certificate made and signed as required by the Consolidated Statutes, Chapter 97, Sections 15 and 16. We, the undersigned, have agreed to enter into, and have entered into a general Co-Partnership, and do hereby certify as required by the Consolidated Statutes, Chapter 97, Sections 15 and 16:-1. That the name, style and firm under which the said Co- Partnership is to be conducted is Milne, Coutts & Co. 2. That the general nature of the business intended to be transacted by the said Co-Partnership is the business of quarrying, getting out, cutting, manufacturing, polishing, and selling and dealing in granite and other stone, and buying all such materials, and stuff and commodities as may be necessary and incidental to such business and properly connected therewith, and running in connection therewith a general retail store on a cash basis at any time, when in the judgement of a majority of the said partners it is thought advisable. 3.

The rspective names and places of residence of the different partners are:- Alexander Gray Milne, of Saint George, in the County of Charlotte; his place of residence is Saint George, N.B. William Coutts, of Saint George aforesaid; his place of residence is Saint George, N.B. James Watt, of Saint George aforesaid; his place of residence is Saint George, N.B. Alexander Milne, of Saint George aforesaid; his place of residence is Saint George, N.B. Charles Johnson, Junior, of Saint George aforesaid; his place of residence is Saint George, N.B. John D. Chipman, of Saint Stephen, in the said County of Charlotte; his residence is Saint Stephen, N.B. Julius T. Whitlock, of Saint Stephen aforesaid; his place or residence is Saint Stephen, N.B. 4. That the principal place of business of the Co- Partnership is at Saint George aforesaid. 5. That the articles were this day entered into, made and concluded, and that the said Partnership begun as of the first day of January past, and is to continue and terminate on the first day of January, which will be in the year of our Lord one thousand eight hundred and ninety five, unless dissolved by operation of law, otherwise than by the death of any of the partners, or by mutual consent of all the partners. In witness whereof we the said partners have hereunto set our hands and seals this fifth day of March, in the year of our Lord one thousand eight hundred and eighty five. Alex. G. Milne, William Coutts, James Watt, Alex. Milne, Charles Johnson, John D. Chipman, Julius T. Whitlock. Signed by A.G. Milne, William Couuts,} James Watt, Alex. Milne, Charles } Johnson, Jr., John D. Chipman, and } Julius T. Whitlock, in my presence, } Samuel Johnson. -- Charlotte County: Be it remembered, that on this fifth day of March, A.D., 1885, before me, Samuel Johnson, Esquire, one of Her Majesty's Justices of the Peace an and for the County of Charlotte, personally appeared Alexander Gray Milne, William Coutts, James Watt, Alexander Milne, and Charles Johnson, Junior, five of the persons whose names are subscribed to the foregoing Certificate of General Co- Partnership, and each for himself acknowledged that he executed and signed the said Certificate for the purpose therein set forth. Also on the ninth day of March, A.D., 1885, personally appeared before me, John D. Chipman and Julius T. Whitlock, the two other persons whose names are subscribed to the said Certificate of General Co- Partnership, and each for himself acknowledged that he executed the said Certificate for the purpose therein set forth. Samuel Johnson, J.P. Filed in the Office of the Registrar of Deeds for Charlotte County, this 17th March, 1885. H.H. Hatch, Registrar of Deeds for Charlotte County."

Royal Gazette - Oct. 30, 1889 Notice. Notice is hereby given, of intention to apply by Petition under the provisions of The New Brunswick Joint Stock Companies' Letters Patent Act, for Letters Patent under the Great Seal of the Province of New Brunswick, incorporating the applicants and such other persons asmay become subscribers in the Company thereby created a body politic and corporate under the said Act.1. The proposed corporate name of the Company is The Welsford Red Granite Company. 2. The object for which incorporation is sought are - For the purpose of quarrying, polishing and selling of Red Granite; and also the acquiring, holding, selling and conveying of lands, and of rights and interests in lands within the Province of New Brunswick, for Mining and other purposes incidental to mining and quarrying, and the working of mines and quarries, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds; and all other purposes connected with the business of mining and quarrying. 3. The chief place of business of said Company shall be at Welsford, in the county of Queen's, New Brunswick. 4. The amount of the Capital Stock of said Company is to be Fifty thousand Dollars, divided into one thousand Shares, of Fifty Dollars each; of which two hundred shares, amounting to Ten thousand Dollars, have been actually subscribed. 5. The following are the names, addresses and callings of the several applicants, of whom the first five named are to be first or Provisional Directors of the Company. Brunswick Sancton, of the City of New York, banker; Arthur J. Trueman, of the City of Saint John, Barrister-at-Law; John A. Chesley, of the City of Saint John, manufacturer; Robert Wisely, of the City of Saint John, gentleman; John Connor, of the City of Saint John, manufacturer; John Kelly, of the City of Saint John, manufacturer; Isaac Holstein, of the City of New York, mineralogist; Levi H. Young, of the City of Saint John, manufacturer; W. Alonzow Chesley, of the City of Saint John, manufacturer; John J. Forrest, of the City of Saint John, Barrister-at-Law; Joseph W. Hazelhurst, of the City of Saint John, manufacturer. Dated this 15th day of October, A.D. 1889. Curry & Vincent, Sols. for Applicants."

Royal Gazette - Feb. 26, 1890 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, and Amending Acts, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twenty sixth day of February, A.D. 1890, incorporating Robert Wisely, of the City of Saint John, in the City and County of Saint John, in the Province of New Brunswick, Gentleman; John Connor, of the same place, manufacturer; John Kelly, of the same place, manufacturer; Levi H. Young, of the same place, manufacturer; W. Alonzo Chesley, of the same place, manufacturer; Arthur L. Trueman, of the same place, barrister-at-law; John A. Chesley, of the same place, manufacturer; Lemuel A. Curry, of the same place, barrister-at-law; and George R. Vincent, barrister-at- law; for the purpose of quarrying, polishing and selling of Red Granite; and also the acquiring, holding, selling and conveying of lands and of rights and interests in lands within the Province of New Brunswick, for Mining and other purposes incidental to mining and quarrying, and the working of Mines and Quarries, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds, and all other purposes connected with the business of mining and quarrying; by the name of The Welsford Red Granite Company, with a total capital of Fifty thousand dollars, divided into one thousand shares of Fifty dollars each. Dated at the Office of the Provincial Secretary, at Fredericton, the twenty sixth day of February, A.D. 1890. James Mitchell, Provincial Secretary."

N.B. Reporter - Jul. 1, 1874 Our Mineral Resources. - Speaking of the undeveloped resources of New Brunswick, a writer in the Colonial Farmer observes:- ""Dr. Rouse informed us that he had discovered a bed of coal not far distant from this place of thequality known as anthracite. Antimony is also found in large quantities. There are undeveloped as yet, large mines of tin and zinc, but its quarries of lime and marble, with various kinds of granite, will probably prove the greatest sources of wealth to the Province. We have been shown lately by James Rouse, M.D., (a scientific geologist, formerly a resident of the Southern States, but who has made his home for the last ten or twelve years principally in New Brunswick, and devotes all his spare moments outside of his profession todevelop the resources of the country,) some specimens of marbleized granite. It is beautifully variegated with a variety of rich and beautiful colors, viz: dark red, pale blue or water color, pale red, orange, black and white, so mixed and arranged as to form different shades and fantastic figures. This beautiful specimen of conglomerated rock contains five orders: crystal, quartz, feldspar, mica, agate, and silica, susceptible of receiving the highest polish. This quarry of rock is situated on the banks of the St. John river, about thirty five miles from this place, near the mouth of the Pokioc river, which here enters the St. John at what is called the Pokioc Eddy. The rock lies in sheets or layers extending down to the water's edge, gradually rising as we leave the river; one layer piled upon another. These layers vary in thickness from two to twelve feet. It is easily worked, splitting freely as the best of granite, and is much easier drilled than the common granite. Its breadth on the river is about forty rods, and extends back about one mile. Its main elevation above the river is about 180 ft. It has been examined by the best judges of granite in New York, Philadelphia and Boston, also by quarry men from the red granite quarries in Scotland, who have pronounced it the best quality in colored variegated granite in the world. It will undoubtedly be a great acquisition for ornamental and fancy work, as well as monuments, etc. We understand parties are now negotiating to commence operations. The work will employ a large number of hands, and make business up and down the river. There is a deep eddy at the base of the ledge which will receive the wash rocks; also a stream of water running over a portion of the ledge of sufficient quantity to be utilized in doing all the cutting and polishing. There is good approach by water to the quarry, and good water transit to the Bay of Fundy. It is rarely we find anything of that kind so convenient to water communication. Besides these quarries the Dr. has discovered at Canterbury, near the N.B. and Canada railroad, extensive lime quarries, which so far as have been worked, seem to be of the best quality. He has erected one kiln and is about to build more. For plastering or cement it is superior to most other kinds of lime, owing to its strength, durability and whiteness."

Daily Telegraph - Feb. 5, 1891 Thousands Can Get Work. - How Reciprocity Would Affect Three Big Industries. - Mr. F.T.C. Burpee Gives a Practical Expression of Opinion in Regard to the Possibilities and Probabilities of Red Granite - Another Lime Manufacturer Speaks Out - A Lumber Shipper Talks. - I am not anxious to have my name in the papers, said Mr. F.T.C. Burpee, yesterday, but I am willing to give you the information you seek in reference to the red granite industry, in which I am engaged. During the last summer, I have been thinking of moving all my machinery to the United States and finishing the stone there, instead of here. Quincy, near Boston, is the location I have had in view, though I have had inducements to go to towns in Maine. I already have some machinery at Quincy, for finishing work, and unless we can get reciprocity I will have to go there with the greater part of what is here, and perhaps the whole of it. What reasons have you for the contemplation of such a step? To avoid the great expense to which I am now put in getting the work finished there. The duty on rough stone, raw material, is 11 cents a foot, while that on finished work is 40 per cent ad valorum. Red granite is the favorite stone in the United States, but when we send it there to be finished, the men who have their own stone to sell make it difficult for us to compete with them. If we finish it here, and give employment to our workmen, we have to pay the 10 per cent tariff. The more work our men do, the more it costs us to get the stone into the United States. The better the finish the more duty we have to pay. This would be avoided if we had free trade, or if our works were there instead of here. Would you not have to pay higher wages there? Yes, and I always want to pay as high wages as the business will afford. I do not believe in grinding men down if it can be helped. I could afford to pay better wages, for I would have a larger market than I can have under the present state of things. How many men do you employ at your finishing works in Carleton, when business is fairly brisk? About 85, though there have been as many as 100 or so. Stonecutters get from $2 a day up, while ordinary laborers get from $1.50 a day up. I would like to have the rate not less than $1.50 and would be glad to employ more men. If we had no duty to pay on manufactured granite, our market would be all the United States. If we had reciprocity, I do not think there is any exaggeration in saying that this industry alone would employ thousands of men, where only a few hundred are engaged at the present time. I do not know how many might be employed, but I am not afraid to say there would be thousands. It would be quite within reason to say so. I would not think I would be doing any great thing if in the course of a year or two, under reciprocity, I myself employ 1,000 men. The manufacturers of granite would be one of the greatest industries in this country, if we could get building work into the United States free of duty. They have no stone that they like as well as ours and they want whole buildings of it. Is the United States your chief market now?' Yes; the greater part of what we make goes there, and we have a better profit on it than on that sent elsewhere. All that we send now is but a small proportion of the granite that is used there. They use native and some Scotch granite, none of the varieties of which are as good as that sent from New Brunswick. Labor is cheap in Scotland and freights are low, so that the Aberdeen stone has a good chance to compete with any other. But what about the markets for your stone in Canada, under protection? It does not amount to anything, as compared with the market in the United States. They have a wealth and population there. Besides, a good deal of Scotch granite is sent to Ontario. I am told by those who have looked into the matter that Aberdeen stone can be sent there - I think Kingston was the point in question - as cheap as we can send St. George stone from here. But in any case our market is the United States. You have said that reciprocity would lead to the employment of many more men in the manufacture of granite here. Would their wages be higher than they are now? I should think a better arrangement between the two countries would increase wages here, and it would cost less for people to live, when the duty on flour, pork, etc., makes living high. But it is contended that flour costs no more under a tariff than without one. Well, all I know is this. I buy my flour from a St. John man whom I consider as reasonable in his charges as any one. I went to him to buy some flour just before the protective tariff came in force. He could not tell me the price until the new duty was declared, and then 25 cents a barrel was added. It has never been taken off from that day to this. Then, there seems little doubt that, as regards the granite industry, reciprocity would be a good thing! It would. There is not a fair show with the present tariff. It is more than 25 years since operations were begun at St. George, but the granite industry is not increasing in this province, though the products of our works are in demand in the United States. England sends them more than we do - I should judge fully 10 times as much. The old country stone is good enough, but it is not as good as ours. Why, one man in New York imports more than we can deliver as things now are. The tariff does not give us a fair show at all, but its removal would be the making of an enormous business, while our investment does not begin to pay as it is now. It is a hard business to carry on, requiring as it does a large capital and the holding of a heavy stock all the time. Unless there is some change, I do not see any course but for me to remove my machinery to Quincy, as I have already said. Apart from your own business, what is the idea of the effect of reciprocity on industries in general. I believe it will be of benefit to all classes. Everyone must know what the effect of it would be on lumber, shipping and other industries. I should think the farmers would all be in favor of it, for, as things are now, they do not get as much as they should for what they raise, and have to pay more than they should for what they consume. However, I do not undertake to speak of the effect on any business but my own, and of that I think I have a good idea. Views of Another Lime Manufacturer. The tariff has killed St. John's lime business in its infancy - an infancy which gave promise of a rapid growth. The duty must come off, or St. John's kilns, which had begun to multiply rapidly before the passage of the McKinley bill, will not open with the coming spring. Read the facts. Mr. Charles Miller, the well known lime burner, was asked yesterday by a Telegraph reporter what effect reciprocity would have on the lime business. It would have a very good effect, indeed, said Mr. Miller. You see, we used to pay a duty of only three cents a barrel; now we pay from 12« to 13 cents. My kilns are at Robinson's Point, or Pokiok, and if I worked them to the full capacity I would turn out about 10,000 barrels, but I have room for a much larger business if I only had a market to sell in. That is what is cramping the lime business in St. John. The lime business has been dull of late? The McKinley bill cramped the business. There is not the slightest doubt that several new kilns would have been built last season if it had not been for the tariff talk, and finally the passage of the bill by the United States. It frightened people and the kilns were not built. What if the duty were taken off lime? There can be no doubt about the effect. There would be a great increase in business. There would be a boom even if the duty were made what it was before. That, of course, would be all very well, but there is no doubt that reciprocity is what we want. Did business decrease last year? The output last year was less than the year before, all things considered. For a few years past the trade developed rapidly. People were building new kilns and the business was doubling year by year on this account. Just lately trade has been dull in the United States, and on account of the McKinley bill a great deal less lime has been made this year than would have been turned out had there been no increased tariff. Were the kilns worked to their full capacity during the past season? No. If we had a free market, or even the old duty, we could have increased the output one-third with the present kilns. How much lime can St. John make at present? Well, one kiln should turn out 25,000 or 30,000 barrels in a season. We close down for two or three months in winter, and so our working season is about nine or 10 months. There are, in and about St. John, 24 or 25 kilns, and reckoning at 25,000 or 30,000 barrels each, the output would be something over 500,000 barrels. What proportion of this is shipped? I ship about two-thirds of mine, but some of the burners, the larger ones, send practically all their lime to the states. Is there plenty of material to develop the trade if the duty were taken off? There is no end to the rock. Of course you must understand that many of the more favorable sites are already occupied, but there is plenty of room yet. Do you think the trade would increase? I have no doubt that within two years from today the kilns would be doubled. The largest amount ever exported from St. John would soon be doubled if we had other business, it would take a little time to work up the trade. Of course, the coasting trade would be benefited? Seven-eighths of the lime goes by vessel. The fact is that, if we had an open market, we have the finest place in the world to make lime. There would be no trouble about it at all. What advantages have St. John burners over those in Rockland? Our rock is handier and our wood cheaper. Of course our freights are higher, but the other advantages more than counterbalance that. Our stock and labor is cheaper as a rule. If the duty were removed they couldn't compete with us. The duty, though, was put on to protect Knox county. Had it not been for that St. John would have been far ahead of its present position in the business. The fact is the business is only in its infancy. Mr. Stetson has only been here three or four years, and now he can probably make 200,000 barrels. But there is little or no money in the business at present, and the duty has a greater effect upon the burners who export their whole stock. About two thirds, or more, of the lime made here is exported. The domestic trade is well looked after now, the lime made by new kilns would all be exported. The fact of the matter is, the tariff is a great blow to the lime business in every way. How would reciprocity affect trade generally? I have no doubt it would greatly benefit these provinces. I don't know that I can say much more than that in regard to trade generally, but as regards the lime business I can speak without trouble. You can see what a big item this tariff is in our business. Taking the difference between the old duty of three cents and the new one of 13, we have a difference of 10 cents a barrel which means simply that we have to pay about $50,000 a year to get our lime into the market at all. This is the case now, when, as I have said, the trade is in its infancy in St. John. If we had unrestricted reciprocity more than $50,000 yearly would be saved and the capacity of the kilns would

St. Andrews Standard - Aug. 14, 1875 Village of St. George. - A St. George correspondent of the Calais Times gives a graphic account of what he terms the loveliest village in the Dominion, pointing out its great natural beauties, its hills and dales, its alluvial soil, its trade, its great natural resources - red granite, copper, lime, mineral springs, ... Six miles from St. George, on the St. Johnpost road, there are a number of springs known as the 'Mineral Springs' noted for there curative properties..... ... The most interesting industry in St. Georgeat present, is the Red Granite Works of the Bay of Fundy Company. As you may be aware, the manufacture of this valuable stone has hitherto been confined to Scotland which has supplied the world with it. The Bay of Fundy Co., are now about fairly started, and employ upwards of 100 hands, filling orders for different parts of the U.S. and Canada. The wide circuit from which the orders come, and the large business showered upon the Co., in this unprecedented dull year, goes to prove the demand to be extraordinary in good times."

St. Andrews Beacon - Jul. 27, 1911 Pushing Industries. - Mr. H.P. Timmerman, Industrial Commissioner of the C.P.R., was in St. Andrews on Thursday last and gave The Beacon a call. He said he expected Mr. Stinson, an old St. Andrews boy, whose firm has taken over the Plaster Rock quarries, to accompany him here, but at the last moment Mr. Stinson had to go elsewhere. He says the Stinson-Reeb Company have contracted with the Canada Cement Company to furnish 15,000 tons of plaster for cement purposes. They have also had the gypsum tested for the manufacture of calcined plaster - of which there are at least 30,000 tons used each year in Montreal alone - and the tests have proved very satisfactory. Mr. Timmerman went from here to St. George viaSt. Stephen to look over the granite situation."

S.J. Daily News - Oct. 1, 1875 M & M Exhibition. - Class X. - Economic Geology and Natural History. - In this department are several admirable collections, among them that of: The Spring Hill Mining Company ... Joseph Goodfellow, North Esk, Miramichi, exhibit four grindstones; also two blocks of freestone for building purposes. One of the grindstones is four feet six inches in diameter, and weighing about 1500 lbs., and suitable for ax factories. St. George Red Granite Company, exhibits two red granite pillars, which are models of beauty and finish. They are placed near the entrance to the Rink, where they escape the observation of many visitors. Thos. B. Goss, St. George, exhibits two very handsomely polished red granite balls, and a beautiful clock case of red granite, which is much admired. W.H. Allen exhibits samples of prepared emery in boxes and jars. The Dorchester Free Stone Company exhibits two handsome blocks from their quarries."

Eastport Sentenil - Jun. 15, 1887 A vessel load of free stone from Albert Co., N.B., and a load of granite from Vinalhaven arrived this week for building contractors."

S.J. Daily Sun - Nov. 2, 1888 Bathurst. - New Quarry and New Buildings. - (Cor. Newcastle Advocate). - Bathurst, Oct. 24. - ... Frank Scott, of Clifton, has made an important discovery of a quarry of superior building stone on the line of the Caraquet and Shippegan railway. The stone is dark red incolor, of good quality, and Mr. Scott states that it is there in unlimited quantities. In color it presents a great contrast to the building stone quarried at French Fort Cove, Newcastle, and would make a superior trimmingin buildings erected of the grey freestone or vice versa. A company is being formed for the purpose of working this quarry. ... The new R.C. church, the exterior of which is about completed, makes a handsome appearance. It is built of grey granite with trimmings of grey freestone from French Fort quarry, and with slate roof. The windows are being placed in position, after which work will be discontinued for the season. The interior will remain unfinished for the present. This fine building was erected under the superintendance of W. Lawlor of Chatham."

S.J. Daily Sun - Sep. 6, 1887 St. George. - A Never Ending Supply of Granite and Slate. - (St. Stephen Courier). - A massive block of granite has been taken out this season at Alexander Taylor's quarry, and is now on exhibition there. It is 60 feet long, 12 feet thick and nine feet wide.Marked improvement is noticed in St. George since a year ago. One citizen painted his house; then another did likewise, and still another, until the spirit of improvement became contagious, with the result that now many of the dilapidated buildings are painted and repaired, and the town has a tidy and decidedly progressive appearance. The future of St. George is built on a foundation of rock, and neither time nor tide, the fall or rise of stock, annexation or free trade, can hinder it from becoming a large and beautiful city. Firm as the eternal hills from whence its material is derived, the granite business of this town will continue to boom for hundreds of years to come, until the quiet hamlet will have emerged from comparative obscurity into a well populated and thriving community. The streets are now deserted in the day time, to be sure, but that only indicates that every man and boy is at work, and earned good wages, too. To learn the stone cutting trade a boy has to be an apprentice for three years, receiving for his labor the third year one dollar per day. After the trade is mastered a fair workman is insured steady employment the year round at $2.50 per day. Nearly every year now records the establishment in the business of a new firm. This year Collmer, Wallace & Co. have been initiated. They have commenced on a small scale, but expect to be able to enlarge their business year by year. Besides the never ending supply of red and gray granite that is here, we might also say that there is an inexhaustible supply of slate. This is situated on Col. Wetmore's and Mr. Johnson's estates, the vein extending from the southern boundary of the first name gentleman's land to the bed of the river. This slate will ultimately be a mine of wealth, as there is not a single desirable slate quarry in the maritime provinces, and the duty on slate is 30 per cent."

Eastport Sentenil - Dec. 15, 1875 A new Industry For Maine. - The Manufacture of Polished Granite in Calais. - Messrs. F.A. Pike and C.H.Newton, the proprietors of the extensive and successful Plaster and Calcining works at Red Beach in Calais, in the dull times which have depreciated the prices of their products, have turned their attention to a new industry. The success which has attended the manufacture of ground and calcined plaster under their management is largely due to the business capacity and inventive ingenuity of Mr. Newton, who has devised so many labor-saving machines for diminishing hand labour in the various processes of the manufacture, packing and loading of plaster, and in making casks, and has so methodically systemized and arranged the different departments of the work, that they have now an establishment where the cost of a product always marketable, has been brought to the minimum, and with which there can be no part of the United States a successful competition. Their main mill stands upon a stream, which they have expended over twenty thousand dollars in reinforcing by canals from other streams and from ponds, to give it an inexhaustible head of water, just where it falls into St. Andrews Bay. - the road between Eastport and Calais along the west bank of the St. Croix passing between their mills on the one side, and their store, storehouses and wharves upon the other. The vessels that bring the crude plaster almost thrust their bowsprits into the mills as their cargoes are discharged by machinery propelled by their main driving wheel. The same power is ingeniously applied to drawing the heavy rock to the upper story of the grinding works, where almost without hand labour it is crushed in a heavy squeezer, into lumps smaller than an egg, and dropped into iron cylinders where it is broken into fragments small as Indian corn to descend by its own weight into hoppers carrying it under rotatory stones that grind it to the fineness of flour. A large part falls into casks, shaken down and packed by machinery, for shipment for fertilization, and the choicest kinds go into the calcining kettles, to be dry-boiled, prepared, packed in air-tight barrels, and shipped to be used in building and in the arts. The general stagnation has affected the plaster business and the works have been running during the last season with few hands and on short time. Messrs. Pike and Newton are not men to succumb to hard times, but set to work to find something that would sell when the plaster buyers were backward. The red rock that crops out everywhere near the coast and whose debris gives the sand of the shore for miles the warm and picturesque color that has furnished the neighborhood with its name, is found to be red granite of a very fine texture, beautifully and uniformly mottled, and easily quarried and cut. The proprietors have prepared and polished specimens of this rock and sent them to New York, Boston and elsewhere for exhibition. Specimens will also be prepared and sent to the Centennial Exhibition at Philadelphia next summer. In the company's store at Red Beach polished shafts are exhibited along with specimens of Scotch granite, and of the red granite of St. George in the province of New Brunswick. In texture, richness of coloring, and lustre of polish, the Red Beach specimens are evidently superior to the products of both the foreign quarries. The rock is in inexhaustible supply, and by adding a little to their lands by purchase, Messrs. Pike and Newton have secured the whole of a hill running from the sea shore to the lakes a mile inland, which seems to be all of red granite to an unknown depth. It lies in sheets, easily quarried and cutting about as easily as the Hallowell granite. It is but a few rods down the hill from the quarry to the mill, where, after being hand hammered it is to be polished by machinery. The dam, bridge, and mill are already built, the latter only waiting for its machinery. After being hammered the stone is subjected to rubbers and is ground first with sand and water, and then with emery until the surface becomes vitrified and lustrous, with a polish that no exposure to the weather has yet been able to tarnish or discolor. The pillars and shafts are subjected to a rotary motion against the rubbers, but to polish flat surfaces, the stones are firmly bedded and the rubbers play back and forth over them. It takes about four days to complete the grinding and polishing of any surface. From the polishing mill to the wharf whence the stone can be shipped to Boston, New York, and other large cities, is less than a quarter of a mile. There is said to be an ample demand for the manufactured product in all parts of the country. The Scotch granite is shipped in large quantities and is sold at great prices. It is at present, very much in request for burial and other monuments. It is used in the exterior and interior structures of the most costly churches, banks and other public buildings, and is everywhere greatly admired and sought for, for its beauty and durability. If it can be produced in this country. at little more than the cost of labor, mainly automatic, expended upon it, it will come into use for many other purposes; for mantles, furniture, shop and bank counters, and many other articles now manufactured of marble. We understand that about $30,000 have been expended as a capital to start this new business, and that too at very great advantage. The lumber put into the mills, dams, and bridges, much of it cost but $5 per thousand, and the labor was done at the very lowest rates. There is every reason to believe that the enterprise will prove a profitable one to its projectors. One great advantage which the business has, as relates to the general prosperity, is the amount of labor it will employ. Although the polishing can be done by machinery there has been yet, no successful contrivance for saving slow hard labor in hammering stone, though even that may not be beyond the genius of Mr. Newton. It will take a large force of men to prepare the stones, to keep all the polishing works which are to be provided, in full operation, and coming in a time when the lumber business together with ship building and other manufacturing is almost suspended, this enterprise may be considered a providential relief to hundreds of people on the point of turning their backs forever, upon the homes of their childhood, in despair of being able to earn there, their livelihood. - Portland Advertiser."

Eastport Sentenil - Nov. 17, 1875 Red Beach. - Business is just snapping here now. The Plaster Manufactory is running on full time, and the Granite Co. are pushing their operations vigorously ahead. The large dam is nearly completed, Mr. S.G. Lowe the overseer being an adept at such heavy jobs, is making as strong a wooden dam as there is on the river. Mr. Rockwood's crew are well along with the Polishing Mill which is an immense wooden building constructed of extra heavy timber. A large crew is also at work on the Granite quarry, in fact no well man need be idle here now."

Eastport Sentenil - Nov. 11, 1885 Red Beach. - The Plaster Co. has just finished some extensive repairs on their plaster mill, and are now running night and day. They are now putting more heavy machinery in place in the Phosphate mill. Mr. G.G. McGlashen, superintendent of the Granite Works is confined to his house with lung trouble."

Eastport Sentenil - Apr. 21, 1886 Red Beach. - ...... The Plaster Co. has shipped this spring, fifteen thousand barrels and three thousand bags of plaster, also two hundred tons of phosphate. Their works are running night and day, to fill the large orders that still keep coming in. The Plaster Co. has added to their different industries, that of making marble dust for the manufacture of soda water. They have also got a large order for ground bone to fill this spring. The Red Granite Co. is hard at work on a fifteen thousand dollar job, for the Capitol grounds in Washington, D.C."

Eastport Sentinel - Sep. 16, 1891 The Red Beach Plaster Co. is doubling its capacity for making calcined plaster.The Maine Red Granite Co. have all the orders they can attend to; the Shattock Granite Co. is building a new cutting shed, polishing mill and engine house."

Codes: GYP / G3 / IDX_Names: Gypsum; Granite;

St. Croix Courier - Nov. 7, 1929 First Records of Red Beach District Date Back 300 Years. - Picture Shows Thriving Settlement As It Appeared Forty Years Ago When Plaster and Granite Mills Were In Operation. - Drawing Loaned and Sketch Prepared by B. Y.Curran of Calais. - Older readers of the Courier at home and abroad will find much to recall memories of former days in the following sketch of the early history of Red Beach prepared for this paper by Ben Y. Curran, of Calais, recognised as an authority on the history of this district: Red Beach in 1889. - by B.Y. Curran. The rusty rocks that cup the cove of Beaver Stream rim around a little island off the shore - the storied Isle St. Croix. The records of this region go back to times when the courtiers of Henry of Navarre floated the flag of France in the first settlement of Acadie to its destruction by the gentleman adventurers of Virginia under the pirate captain Argal. And to the later coming of the barons of New Scotland or Nova Scotia supplanted by the New England colonists and then the Stars and Stripes. The first record and perhaps the last of France is in the grant to Razilly, Grand Commander and Lord Lieutenant in Acadie, a cousin to Richelieu, of the territory of St. Croix from mouth to source and the adjacent country in a hundred mile strip. This in 1632. After the defeat of the New France project and the occupancy by the English, no reference comes to us until the Boundary Commission proceedings from 1794 to 1798. Following the adjudication of the commission. Ward Chipman, the British Agent, reported to the Governor of Nova Scotia that in the year 1799 certain inhabitants of the American shore nearby had occupied the island. From this time some settlement of the island and Red Beach is to be dated. Mingo Family From Nova Scotia. - In the early eighteen hundreds, a Swiss family named Mingo had emigrated to Nova Scotia and from there Michael Mingo came to Red Beach. During these early years tradition asserts a residence of the family on the Island. Descendants now live at Red Beach where their interests in the industries identified with this section retained them. Lumbering First Industry. - Undoubtedly the first of such employment for the original settlers was lumbering and to this the little stream had lent its aid long before the first attempt at a plaster mill. This came in 1837 when the Legislature of Maine created by Special Act the Calais Plaster Mill Company. This was succeeded in 1856 by the Red Beach Plaster Company, which was in 1865 authorized to utilize the Eastern Lake source of Beaver Stream making possible greater power for the plaster mill purposes and the increase of the business. Down to the year nineteen and ten the plant was successfully operated. After that more or less difficulties in the trade made business uncertain and several close-downs and resumptions of operations resulted. Plant Burned Three Years Ago. - On the thirtieth day of August, 1926, the plant was closed and it chanced that a steam roller was parked with banked fires close to the buildings at the pond. A high wind was blowing from the machine toward the buildings and in a few hours the structures all about were utterly destroyed by fire. What you will see today is a clean sweep of road and the wreck of rock and wharf foundations - the monuments to an industry once sustaining a thriving community around the little cove at Red Beach. PICTURE. - Lithograph of Plaster and Granite Mills from 1889. Key to Picture. - The group of buildings in the centre of this reproduction comprises the plaster mill, the calcining plant (with smokestack), and the stave mill and shed. The buildings on the wharves in front are (left) the stock and rock plaster shed, the store house, and the cooper shop, and (right) general store, plaster shed, and hoop shed. Just below the upper mill pond, on the road leading up from the right-hand wharf, is the granite polishing works, on the distant hillside above the pond, marked with the letter M. the quarry. On the upper side of the main street, to the left of the plaster mill, is shown the Union Congregational Church and on the lower side of the street just where the next road down the hill intersects is Red Beach House. Following up that road the first building on the left side is the public school (note the children playing outside) and next to the school the Red Beach Hall, which is still standing. Other landmarks here will be easily recognized by present day residents and others acquainted with this locality. The vessels at the wharves and the small steamer in the river give some idea of the water borne traffic that was at one time a feature of this whole district and a source of employment for a large number of residents. While the general appearance of Red Beach has changed since 1889 many of the old buildings shown here are still standing. Altho it has lost its industries in

S.J. Daily Telegraph - Jun. 3, 1873 Saint George and Its Resources. - ... Having some idle time on his hands, the writer determined to visit the now well known Red Granite region which commences at the Canal, as the stream from Lake Utopia emptying into the Magaguadavic is called. This is distant two miles from the village, thence this granite extends north about two miles, forming high hills on either side of the river. Two companies are at work quarrying among these ancient mountains, whose origin and constitution is so involved in the mist of ages. One company formed principally by St. John merchants, the other by New York capitalists. The New York Company have, as manager, a gentleman from Peterhead, one whose business has been for years the manufacture of Peterhead Granite. He is well adapted to the duties of his office, being eminently practical. The beauty of the St. George granite consists not only in its color, but in the regularity of the perfect transparent quartz crystals, thus giving brightness to the semi-opaque felspar which alone is colored red; there is in it but little mica or hornblende, either of which are incapable of receiving a polish. The New York Company contemplated erecting polishing works at St. George, and the Saint John company intend building a tramway from their quarry to the sea; a distance of little more than three miles. In so far as location is concerned either company seems to be equally well situated. Hearing that the same kind of stone had been found at Bocabec on the shore of Passamaquoddy Bay, and that there was a sample in St. Andrews, I examined a piece at Mr. Clark's hotel, but found it valueless. I have seen or heard of no similar stone ..?.. Elsewhere than at St. George. A very singular deposit of Silica, nearly pure,and in a very finely divided state, has been found a few miles below St. George. The sample shown to me was attached to a piece of sod, extending six or eight inches beneath it, and looks very much as if six or seven inches .?. Of green sward had been repeatedly dipped into flour, and which had adhered to it every time they came in contact. The peninsula between the Magaguadavic and L'Etang is intersected by various veins of copper, sometimes mixed with lead. There are also there veins of lead, in which I hear, is a proportion of silver. All these, however, at the surface appear small. At some future day when they have been explored to some depth, they may and probably will yield such returns as will materially add to the income of the country."

S.J. Daily Telegraph - Jun. 3, 1873 Saint George and Its Resources. - ... Having some idle time on his hands, the writer determined to visit the now well known Red Granite region which commences at the Canal, as the stream from Lake Utopia emptying into the Magaguadavic is called. This is distant two miles from the village, thence this granite extends north about two miles, forming high hills on either side of the river. Two companies are at work quarrying among these ancient mountains, whose origin and constitution is so involved in the mist of ages. One company formed principally by St. John merchants, the other by New York capitalists. The New York Company have, as manager, a gentleman from Peterhead, one whose business has been for years the manufacture of Peterhead Granite. He is well adapted to the duties of his

office, being eminently practical. The beauty of the St. George granite consists not only in its color, but in the regularity of the perfect transparent quartz crystals, thus giving brightness to the semi-opaque felspar which alone is colored red; there is in it but little mica or hornblende, either of which are incapable of receiving a polish. The New York Company contemplated erecting polishing works at St. George, and the Saint John company intend building a tramway from their quarry to the sea; a distance of little more than three miles. In so far as location is concerned either company seems to be equally well situated. Hearing that the same kind of stone had been found at Bocabec on the shore of Passamaquoddy Bay, and that there was a sample in St. Andrews, I examined a piece at Mr. Clark's hotel, but found it valueless. I have seen or heard of no similar stone ..?.. Elsewhere than at St. George. A very singular deposit of Silica, nearly pure,and in a very finely divided state, has been found a few miles below St. George. The sample shown to me was attached to a piece of sod, extending six or eight inches beneath it, and looks very much as if six or seven inches .?. Of green sward had been repeatedly dipped into flour, and which had adhered to it every time they came in contact. The peninsula between the Magaguadavic and L'Etang is intersected by various veins of copper, sometimes mixed with lead. There are also there veins of lead, in which I hear, is a proportion of silver. All these, however, at the surface appear small. At some future day when they have been explored to some depth, they may and probably will yield such returns as will materially add to the income of the country."

Daily Sun - Aug. 21, 1897 Granite and Graphite. - One Being Shipped to Aberdeen, the Other to London. - Aberdeen is a granite town, but it is importing that article from St. John. At the Pettingill wharf may be seen today seven carloads of Welsford granite, about 100 tons in all, to be shipped on the s.s. Damara of the Furness Line to London and thence to Aberdeen. Other shipments are to follow. The Damara, which is due here today, will also take to London 100 casks of graphite from the mine now being operated just above the suspension bridge, near this city. This is a first shipment, which will also be followed by others. The development of these two new items of trade illustrates the value of having direct steamer communication with ports on the other side."

St. Croix Courier - Apr. 30, 1874 and Eastport Sentinel - May 13, 1874 L' Etang Harbor.- ... Along the shores of the harbor are inexhaustible beds of Lime, portions of which will take a polish, and would make an excellent substitute for marble, and the Lime for other purposes is second to none. St. George, also the West Isles, adjoining, are rich in iron and copper. The red, or Scotch Granite formations - of world-wide reputation - are situated within six miles of L'Etang harbor and within three miles of the shipping port at the village of St. George. There are at present two companies operating in Granite, one an American and one a St. John Company, both of which have erected quite extensive polishing works, and are turning off work of a very satisfactory kind; but still, the present companies cannot supply the demand, and although the rock is being monopolized, still there is room, and inexhaustible quantities of it, which should be worked by capitalists; at least,

Daily Telegraph - May 1, 1891 Some Maine Industries. - The report of the Bureau of Industrial Statistics of the State of Maine furnishes food for thought to the people of New Brunswick. For instance there is the granite industry, which, in Maine employs 4,000 men directly, and gives employment to 500 more engaged in sailing vessels that are almost constantly employed in freighting the granite to different centers of trade. Those 4,500 men are the bread winners for nearly as many families, and it is safe to say that upwards of 20,000 people live by this one industry. What is also of consequence from our standpoint is that nearly all of the 44 granite operations employ more or less of Canadian labor. Some of them employ 10 or 12, and, as we learn from the report, which gives the nationality of the workmen in each concern, the Sullivan Quarry Company, out of a total of 155, has 27 Canadians in its employ. Why is it that in New Brunswick, with the best granite in the world, this industry is not a growing and a prosperous one! The province is close beside the state; we have equal advantages of water carriage, but our one large operator is removing his works across the border. The one only answer to the question is that Maine has the large market of the United States free to her granite while New Brunswick is shut up by tariff walls within such narrow limits that the business cannot be carried on at a profit. And so our strong young men cross the border in hundreds to quarry and dress the granite which Maine produces, leaving our own rich store of raw material undisturbed in its bed. What is true of granite is also in a largemeasure true of lime. No country in the world is better prepared in natural resources for a great lime industry than in New Brunswick. We have stores of limestone throughout the province and mountains of it lying alongside of navigable waters almost in the harbor of St. John. We have abundant fuel, and a large and profitable industry already developed, till the McKinley tariff destroyed the profits. While such is the condition on this side of the line, Knox county, Maine, employs 3,000 men in producing lime, and over 800 sea-faring men in its shipment. Some $200,000 a year is paid for kiln wood from the provinces, mainly from St. John river, which wood is carried directly past the immense and inexhaustible supplies of New Brunswick limestone. Knox county has the great free market of 60 millions from which St. John lime burners are almost shut out by a hostile tariff. There would be practically no limit to the expansion and development of the lime business in New Brunswick had we the market which reciprocity would give us."

S.J. Daily Sun - Mar. 21, 1893 S.J. exports. - By Sea per steamer New Brunswick, by C.E. Laechler ... 2 cs. granite .. Per steamer Heather Bell, for Boston, by Stetson, Cutler& Co. ... 1,272 bbls. lime ..."

St. Croix Courier - Oct. 30, 1952 Board of Trade at Waweig. - Granite Industry May be Revived at St. George. - Discussion ranging over a wide variety of topics formed the program at the fall meeting of the Charlotte Board of Trade, which has become a fixture of the harvest season at Waweig. In the absence of President H.W. Welch, Deer Island, Vice-President Boyd Merrill of St. Andrews presided... Granite Revival. - H.B. Robinson, St. Andrews, outlined plans to revive the granite industry in St. George if negotiations can be carried through successfully. An importer brought to Charlotte County to examine the black granite here pronounced it just as good as the Swedish product which commands a premium price, and is definitely interested in handling it. Mr. Robinson briefly sketched the history of this industry, which was founded by an artist who discovered the red granite and formed the New York & Bay of Fundy Red Granite Company, from which about six companies developed. None of the quarries ever went to any great depth, he said, and the history of granite is that the deeper you go the better it is. W.C. Hawker, St. George, quoted an experienced worker in granite as saying the St. George product is the finest he had ever handled. ..... May Be Developed. - Mr. Doyle expressed confidence that the deposits of red granite around St. George will be used and hinted at important developmentsbased on the large deposits of high-grade limestone at L'Etang."

Daily Telegraph - Apr. 17, 1871 New Granite and Sandstone Quarries. - An enormous mass of red granite, suitable for building purposes, has been discovered on the Magaguadavic village, two and a half miles from St. George. It rises to a considerable height, and extends for some distance. Large masses of it have been detached from its bed by the action of natural agencies, and the expense of quarrying is reduced to the least possible amount. It is owned by parties in this city. In Apple River, Cumberland County, N.S., a sandstone quarry is about to be opened by Messrs. Roberts Bros., of Boston, Mass. The sandstone is red, and of the very finest grade, such as is used for ornamental mouldings, trimmings, etc., and is said to exist in almost unlimited quantities in a very convenient position for shipping. Mr. Robert Dewhurst, who has had several years experience in the business in England is to superintend the operations, and is now in this city getting cranes and other machinery manufactured for working the quarry. He has contracted for framed houses for the accommodations of 100 men. These houses are to be taken to the scene of operations and erected in the form of barracks - in a continuous row. When the works are fairly open machinery and skilled workmen are to be procured from England for preparing the stone for market. The number of men to be employed in these works will be about 150, and a fine market will thus be established for the agricultural products of Salem, Advocate Harbor, and the surrounding country, which will have an influence in opening up and settling large tracts of fine farming lands, which are almost inaccessible at present on account of the absence of passable roads."

S.J. Daily Telegraph - Oct. 2, 1875 M & M Exhibition. - ...Dorchester Union Freestone Co., Westmorland County. A very fine block of freestone cut by this firm attracted much attention by the closeness of its grain. It is rather surprising that a greater display has not been made in this special article. If the quality of stone from this neighborhood is all of the same texture as the above sample, the enterprise should be a profitable one.The samples of red granite have already been

S.J. Daily Sun - Jan. 14, 1887 Mr. Stockton on Stone. - In his last letter to the St. John Globe, Mr. Stockton stated that the export of unwrought stone from New Brunswick was last year less than in 1881 or 1871. He added: The high duty on blasting materials, the duty on iron, and the fact that our coasters under protection cannot get a return cargo from the United States, have brought about the above result. Now, as a matter of fact, the returns for 1871 include dressed stone, grindstone, and unwrought stone, that is to say, stone of all sorts, and according to the trade and navigation tables for the year (sessional papers, vol. v., No.3, page 358), the total value was some $5,000 less than Mr. Stockton's figures. The total value of the same class of goods in 1881, instead of being $30,000 less than in 1871, was in reality $18,000 more than in that year. In 1885 the export of unwrought stone was, as Mr. Stockton says, only $22,551, but as he included all sorts of stone in his statement for 1871, he should do the same for last year and credit this industry with an additional $32,700. As to the price of materials used in quarrying, we have followed our usual custom and have learned the facts from a dealer in the articles in question. We find that blasting powder, which cost at wholesale in this city $2.75 to $3.00 per keg in 1878, is now sold at $2.50 to $2.75. Fuse, of which the price in 1878-79 was 90 cents per hundred feet, is now sold at 85 cents. Cheaper fuse has not changed in price. Good refined iron which was $2.25 per hundred weight is now $1.60. Firth's best cast steel, used for drills was 15 cents per pound and is now 13 1/2 cents. Steel striking hammers such as are used in the quarries were in 1878-9, 22 cents per pound and are now quoted at 15 cents. Shovels of the better class quoted at $10 to $12 per dozen in 1878-9 - are now sold for $7.50 to $9, and the cheaper grades, which cost $6.50 to $7.50 were now sold for $5.50 to $6. Picks costing $7 and $8 in 1878-9, may now be had for $5.50 to $6.50. The class of goods quoted are the same for both dates. Mr. Stockton must really pay a little more attention to the statements he makes, or the public will pay them none at all."

Weekly Record - Fri. Sep. 22, 1893 Charters letter #18 - including geological displays - building stone of Fish in Newcastle and granite from Epp, Dodd & Co. and Milne & Coutts, both of St. George."

S.J. Daily Sun - Apr. 11, 1881 The Mineral Wealth of Albert. - Hillsboro, April 4th, 1881. Mr. Editor:- I have noticed from time to time that reference has been made to the mines and minerals of Albert County. So the Frenchman said of London, it is a province covered and filled with mines and minerals; and - much has been said and written, perhaps the half hasnot yet been told. Beginning at the boundary line between Albert and St. John Counties, we find copper all along the bay shore as far east as Salmon River, where a company is about being formed by Messrs. Cleveland and Steadman, with a capital of $100,000. We wish the enterprise every success. Coming up to Harvey we find a valuable depositof the same mineral at New Horton. At Harvey Point wefind the famous freestone quarries of Messrs. Roberts & Stevens. From these quarries a large number of the stone buildings of Boston and New York have been built. Coming up to Hopewell are the famous stone quarries of Messrs. Hayden, employing a number of men. At or near the Hill Corner has been discovered of late, manganese said to beworth $130 per ton. The company is about commencing operations on a large scale. In Salem manganese has beendiscovered on the farm of Jeremiah Steeves, only awaiting further developments. The lime stone worked by Messrs. McHenry, as well as the plaster quarries of J.T.Tompkins, are considered inexhaustible. That yellow metalso much coveted called gold has been discovered at New Ireland. We learn that searching and exploring willcommence immediately. We are indeed sorry to say that thefamous Albert coal mine is about to close, the deposit of Albertite, worth $25 per ton, having about run out. During the twenty-two years it has been worked, about $4,000,000 worth of that wonderful coal has been raised. Yet it is the opinion of experienced miners that the Albert mine is only a branch of the grand trunk and that the grand trunk is in Baltimore, about four miles west of the Albert mine. Miners tell us that the course of the coal in the Albert Mines is east and west, and as the mountains of shale in Baltimore more correspond exactly with the shale at the Albert mines, and the course is directly west, it looks both reasonable and probable that the Albert coal, so called, exists in mammoth deposits in Baltimore; and, as further proof of coal in that place, small pieces of coal precisely like the Albertite coal can be picked up at any time in the small brooks and rivulets running through those shale regions, which, of course, have been washed out in times of heavy rains. And as those undeveloped coal fields, as we believe them to be, are only four miles from the Albert Railway, and a level grade to and from, the means of transportation would be both cheap and easy; and we believe that if a little capital now lying idle in England and other countries was expended in Baltimore, the remuneration might be counted by millions. Yours, A.B."

Daily Telegraph - Jun. 15, 1881 Economic Minerals of New Brunswick. - Although New Brunswick is inferior to Nova Scotia in minerals, it still is entitled to consideration in that respect, and it is not improbable that at some not distant day we shall see some new developments in connection with the mineral wealth of this Province. A few words now, (in answer to several correspondents) in regard to the useful minerals of New Brunswick which have been so far discovered. The coal areas of the Province are very extensive, and although the seams are thin, not more than 22 inches, and only worked at Grand Lake and one or twoother places, it is quite possible that they may have eventually be worked much more extensively. It is estimated the Newcastle coal basin alone contains upwards of 100,000,000 of tons, most of which could probably beobtained. When St. John becomes a great manufacturing city this coal will no doubt form an important factor in its prosperity. The Albertite has had a great history, but present appearances are unfavorable to that mining interest. There are several seams of anthracite in theDevonian strata at Point Lepreaux and also at Musquash. It has, however, not yet been determined whether these seams can be worked with profit, owing to the large amount of ash left after combustion. Copper ores have been found in many places inCharlotte, in Albert and elsewhere, but, so far, have not been worked with profit. Baryta, used for making, or rather for adulterating white lead, has been found at Frye's Island, Charlotte Co., where also galena and silver have been found. Minute quantities of gold have been found from time to time in several localities, but nothing has beendone in the way of mining. Argentiferous galena has been found in several localities. At Wannemake's, on Hammond River, the galena has been found to yield a fair proportion of silver. In 1878, on the west side ofMusquash harbor, yellow sulphuret of copper and galena were found in veins of white quartz, to the amount of $14 per ton, as was shown by actual assay. The hardness of the rock and the smallness of the vein are, however, against its profitable working. Considerable quantities of silver have been found in the same locality. Bituminous shales are found extensively inAlbert, Kings and Westmorland, capable of yielding from 65 to 90 gallons of crude oil to the ton, but they are of little value so long as petroleum is so abundant. Bog iron ores, believed to be of commercial value, have been found at Burton, in Sunbury, and also at Maryland in York. Large deposits of iron ore of very superiorquality are found at Jacksontown and other parts of Carleton County. Some of these samples have yielded as much as 48 per cent of iron. There seems to be no doubt that these mines will eventually be worked with profit. Black sand containing magnetic iron ore has been found at St. Martins, in the vicinity of St. John, and elsewhere. Antimony is found in great quantities in PrinceWilliam, York. These mines are worked with profit and the quality of antimony is excellent. It is largely used in making Babbit metal. Manganese is another profitable New Brunswick mineral. It is found at Markhamville, Kings County; in the County of St. John, on the South West Miramichi, and elsewhere. In addition to these minerals, there are manyothers more or less widely distributed. Clay fit for bricks and pottery is abundant. Granite in various colours is widely distributed in Charlotte and Queens, and red granite is largely exported to the United States and Upper Provinces. Graphite, or black lead, is foundnear St. John, and also in Queens county. Grindstones and freestones of the best quality abound, especially about the head of the Bay of Fundy. Gypsum is also abundant inAlbert and Westmorland. It also occurs in Kings and St. John Counties and on the Tobique. Kaolin fit for the manufacture of pottery is found in the granite districts of Charlotte. Limestone is abundant and is found of the best quality about St. John.Iron pyrites is found on the St. John and Miramichi. Saltsprings exist at Sussex and in the parish of Upham. There are other minerals of less value which might be named,but these we have mentioned are sufficient to show that the mineral wealth of the Province is by no means inconsiderable. A survey made with a view to practical economic results, rather than a mere scientific survey, might prove advantageous to the Province."

S.J. Daily Sun - Jan. 19, 1888 New Brunswick as a Mining Country. - New Brunswick has never much parade of its mineral wealth, but notwithstanding, the province derives substantial advantage from these possessions. The economic minerals now mined or quarried in the province include coal, gypsum, granite, manganese, lime, grindstones and building stone, antimony, besides some less important substances. None of these minerals is yet worked to any extent compared with the possibilities. The province has no department of mines and no official with authority to collect returns as they have in Nova Scotia. The nearest approach to official statistics are to be found in a report for the year 1886, prepared by Eugene Coste, the mining engineer of the Canadian geological survey. This valuable work is published by Dawson Bros., by authority of parliament. Mr. Coste has been at pains to collect returns from all provinces of their mineral produce and export. The author is not able to tell us much about the coal product of this province owing to the desultory character of mining in New Brunswick. We, or course, know that a considerable quantity is mined at Grand Lake for local consumption in the river districts, and that this coal is used on the New Brunswick railway. It is also sold at St. John. Grand Lake district will next year be put in communication by rail with the outside world, and in a short time will be connected with Montreal, and the coal consuming regions of the west. Then we shall know whether New Brunswick coal fields are rich as has been supposed. The province once exported $100,000 worth of albertite in a year. The census of 1881 credits the Grand Lake district with producing 6,221 tons. We imported in 1886 from Nova Scotia 197,028 tons which at the value given to other Nova Scotia exports would be worth at the place of shipment $375,600. We also imported from other countries 34,845 tons of anthracite, valued at $111,260, and 8,992 tons of bituminous, at a cost of $17,535. It will be seen that New Brunswick has a fine home market. The antimony produced in Canada, comes mostlyfrom Nova Scotia. In 1886, the export of this province was 20 tons valued at $800. It was produced at Lake George, York County. The Rawdon mine in Hants county, Nova Scotia, turned out over $30,000 worth. Of graphite Canada exported $3,586 worth in 1886, all from New Brunswick. The quantity of gypsum produced in Canada has not been ascertained. The exports of crude plaster are givenas 442,833 tons for the Dominion, and 23,498 for this province. The value of the New Brunswick product, nearly all of which goes from Albert county, is $10,559. The quarries on the Tobique river have great possibilities, but are not yet strong competitors with those of Albert county. The total product of the manganese mines in Canada in 1886 is said to have been 4,789 tons, worth$11,499. Of this New Brunswick furnished 4,545 tons, valued at $22,054. The customs statement of export gives a larger value, the foregoing being the estimated worth at the mine. The geological survey people claim to have pretty full returns of granite production in Canada. This gives the total quantity in the rough at 6,062 tons, worth $63,309. New Brunswick is credited with 2,552 tons, valued at $34,509. It is perhaps not very easy to fix the value of the rough stone, but the value of the red granite, as turned out of the polishing works, was in 1886, four times the amount given. Mr. Coste admits his returns of other building stones to be incomplete. He has heard from producers of $??? Of value and it appears that this represents from three to four fifths of total output. Three returns from New Brunswick give 2,728 tons, worth $24,970. His return of the produce of lime quarries as also admittedly incomplete. The total amount heard fromat the statistical office was valued at $283,756. New Brunswick's share being $58,120. New Brunswick is the only province which produces lime for export. Mr. Coste returns includes brick, concerning which he has fourteen reports from New Brunswick disclosing a product worth $30,908. Four quarries in Gloucester County report an output of grindstones to the value of $22, 495. From above returns it would appear that New Brunswick stands well, both in respect to variety and quality of mineral resources. Our coal supply is only beginning to be available. The red granite industry hasbeen doubling its product every three or four years. Lime quarries have been for the past four years doubling their operations every year. The plaster export of 1886 was 50 per cent larger than in the preceding year, and fifteen per cent in excess of any previous year. The construction of the Tobique railway to Plaster Rock will bring a new field into operation. New investments were made last year in manganese properties, and it is probable that the work now in operation will be extended. The exports in 1886 were only exceeded in value by that of 1885 and that of 1880, while that year's sales were probably in excess of any previous year. The total value of mineral export from New Brunswick to foreign countries in 1886 calendar year is given by the customs returns at $101,349. The actual amount of sales outside the province were, as

Chignecto Post - Apr. 14, 1881 Mining and quarrying will be prosecuted with increased vigor during the coming summer. Preparations are being made to work the rich vein of manganese discovered last summer at Hopewell Hill; operations ingold and silver mining will be commenced at New Ireland; and copper mining will be actively prosecuted at Alma.Coal mining will also receive some attention in the latter parish. The Albert Manufacturing Company, under the energetic management of Mr. J.T. Tompkins, will, of course, do its usual extensive work in the plasterbusiness, and Mr. McHenry's lime (which is an unusually good article) will probably find a more extensive market.In the freestone quarries, unusual activity prevails. The Bay of Fundy Company are giving employment to a large number of men and expect to do a good business. A short distance from them are the quarries of Messrs. Stevens, while not far from them are those on the lands of F.W. Watson, and for the working of which the International Company has just been organized by Boston capitalists. All these quarries will be busy hives this summer, and on Grindstone Island a large boarding house, for the accommodation of the quarrymen, is

S.J. Daily Sun - Jul. 20, 1886 Albert. - ... As soon as the loan of $15,000 effected by the Albert Railway Company is received the road will be put in a thorough state of repairs. There is now a heavy traffic in deals, wood and quarry stone over the road... The Snow stone quarry at Hopewell Hill is doing a thriving trade at present. It is expected that the Bay of Fundy Quarrying Company at Mary's Point will be re-opened at an early date. Capitalists from New York, who have invested largely in it, are expected here about the 1st of August. Another leading enterprise is the Freeze gold,silver and copper mine at New Ireland. The company put in a crusher recently and is doing a heavy business with very flattering prospects ahead. ... Among the flourishing industries of Hillsboro is that of the Albert Manufacturing Company, which controls a plaster quarry and factory, saw and planing mill, barrel factory and large provision store. The company employs about 100 men. C.J. Osman is the manager, an enterprising Englishman, who planted his stakes in the county about 15 years ago, and by capital and ability combined has made himself one of its foremost citizens."

St. Croix Courier - Nov. 4, 1884 and Daily Telegraph - Nov. 21, 1884 New Brunswick at the New Orleans Exposition.- It was expected that the collection of geological specimens from New Brunswick, in course of preparation by Mr. W.F. Ganong for the New Orleans Exposition, would be ready for shipment the latter part of last week, but a delay of a few days was occasioned by the non arrival of some promised specimens. The collection is now nearly completed and will be shipped in a day or two. As classified, it is a good representation of the economic minerals of New Brunswick. To Mr. Ganong, great credit is due for the labor and time he has expended in preparing the exhibit, as well as to his father, Mr. J.H. Ganong, who will meet the charges of shipment and other expenses incurred. Without their disinterested offering of labor, time and money, the Province would have been entirely unrepresented at what promises to be the greatest display of the kind on this continent during the century. As it is, New Brunswick will make a creditable exhibit in one department, and many, who are entirely ignorant of the Province, will thereby be rendered familiar with its name and one feature of its resources. We append a list of the contents of the cabinet to be forwarded by Mr. Ganong:- New Brunswick at the New Orleans Exposition.- ... Ornamental and Building Stones, &c. Granite:- Dark red, three specimens, polished, dressed and rough; Light red, one specimen, polished; Salmon, one specimen, polished and rough; Gray(Spoon Island), two specimens, polished, dressed and rough - all from the works of Milne, Coutts & Co., St. George. Light reddish grey, one specimen, from the works of H.D. Wallace & Co., St. George. Freestones:- Four specimens, squared and dressed for building; two specimens, dressed for grindstones - all from the quarries of Jos. Read & Co., Clifton, Gloucester County. Whetstone:- Fine-grained, one specimen from Grand Manan, the property of Capt. Pettes. Siliceous Earth:- Two specimens, pure; two specimens with oxide of iron; from Black's Harbor, Charlotte County. Diatomaceous Earth:- Grand Manan. Limestone:- Two specimens, hydraulic and pure, fromFrye's Island; one specimen from South Bay, the property of John Lowry.Slate:- Two specimens, from S. Johnson, St. George. Combustible Materials.-Bituminous coal:- One specimen from Grand Lake. Anthracite coal:- One specimen from Lepreaux. Albertite coal:- Two specimens from Albert County. St. Andrews Beacon - Dec. 26, 1912 A rumor is current in Sackville that the Canada Stone Co., Limited, Montreal, a concern capitalized under Dominion charter at $1,000,000, for the purpose of operating quarries throughout Canada, has taken over the Sackville Freestone Company, Ltd. It is further understood that the Canada Stone Co. will likely take over other quarries in the lower provinces and other parts of Canada.It now turns out that the 'mining engineers' who visited St. Stephen some time ago, ostensibly to work the nickel deposits in that vicinity, went there to lay a 'plant' for St. Stephen merchants who were suspected of smuggling. One of their earliest victims was the St. Stephen paper, which gave them a very nice write up, by this means lulling suspicion concerning them. They got very little for all their pains however. This is a pretty mean way for a government to seek to get information against their own friends."

St. Croix Courier - Apr. 7, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - COPPER. - The ores of copper found in New Brunswick include native copper, copper glance, chalcopyrite or copper pyrites, bornite or erubescite, cuprite and malachite. NATIVE COPPER has been reported as occurringsparingly in connection with the basalt traps which form the northern half of the Island of Grand Manan. It hasalso been observed at Clark Point on the Mascarene shore of Passamaquoddy bay, and it is stated to have been found in small quantities along the coast, near the head of the Bay of Fundy. Little that is definite, however, is known of either locality. COPPER GLANCE accompanies the native copper in the traps of Grand Manan, where it has been found in small quantities of Grand Manan, where it has been described by Prof. E.J. Chapman as being sufficiently abundant to give promise of profitable extraction. Little effort, however, has as yet been made in this direction. The same mineral, and in larger quantities, has been found associated with other copper ores at different localities along the coast of Charlotte county, and on the adjacent islands among which may be mentioned Crow Harbor Island, Simpson's and Adam's Islands. It is,however, a less abundant mineral than the species nextdescribed. COPPER PYRITES OR CHALCOPYRITE is the most widelydistributed as well as the most abundant of the copperores of New Brunswick, and has been observed at many localities. The larger number of these occur along the southern seaboard, where a band of copper-bearing rocks, believed to be of pre-Cambrian age, is found to extend, with some interruptions, along the greater part of its length. Others are found in the interior, more particularly in connection with the older schistose rocks or the intrusive masses by which these have been invaded. A detailed list of these localities so far as they occur in the southern part of the province, will be found in the Report of Progress of the Geological Survey for 1870- 71. In the northern part of the province, the most noticeable localities are Bull's Creek, in the vicinity of Woodstock and the Tattagouche River, near Bathurst. InWestmorland county, ores consisting in part of this species occur in connection with rocks of the carboniferous age, near the town of Dorchester. BORNITE OR ERUBESCITE, sometimes known as peacock ore, accompanies the other ores of copper, more particularly about Passamaquoddy bay and the head of the Bay of Fundy, sometimes occurring to the exclusion of other varieties. Where abundant, it constitutes a very valuable source of the metal, and the ore of some of the most promising mines yet opened has been chiefly of this species. NICKEL. - Considerable deposits of pyrrhotitehave for many years been known to occur in different parts of Charlotte county, usually in connection with copper pyrites, but until recently have been considered to be without value. Attention, however, having been redirected to them in consequence of the developments at Sudbury, in Ontario, these have also been found to be nickeliferous, and attempts are now made to test their value. The deposits appear to be large, but, as at Sudbury, the nickel contents vary considerably. A fair average sample of 75 lbs., analyzed under the direction of Dr. Hoffman, of the Dominion geological survey, yielded nickel, 4.718 per cent., the material very closely resembling, according to Dr. Hoffman, a large proportion of the ore at Sudbury, Ont. BUILDING STONES. - Very extensive and valuablebeds of granite, freestones, slate, marble, etc., existsin the province, and in the case of the first two have been largely quarried for exportation, but have not beenthought to require extended notice in the presentconnection. The same is true of another of the rocks or minerals, including limestone, clays, infusorial earths, bog-ores, salt, &c. These may be made the subject of a subsequent contribution. LIMONITE. - In addition to the limonite referred to above as associated with the hematites of Carletoncounty, this same mineral is found at various localities in the form of bog ore. The largest deposits are upon the banks of the St. John river at Burton, in Sunbury county, and considerable quantities of the ore were removed during the continuance of operations at Woodstock, for admixture with the hematites of that locality. Spathic iron is only known to occur in the form of small veins in certain parts of Queen's and Charlotte counties. At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

Codes 0087 / Z2 / L3 / IDX_Names: Dorchester Copper; Sandstone, Building Stone, Monument Stone, etc.; Beliveau Albertite and Oil / Gas;

Moncton Daily Times - Jul. 26, 1880 Shipment of Stone for Boston. - The schooner Stella R. cleared from the Stevens Quarries, Mary's Point, A. Co., on Saturday, with about 100 tons of building stone for Boston. S.J. Daily Sun - Jul. 28, 1880 Mining Notes. - American capitalists, under the energetic direction of Mr. Couch, of Newburyport, Mass., are about taking active steps to develop the copper mine at Woodville, near Dorchester. Should trial shafts prove the property to be as valuable as is anticipated, the original owners will doubtless make a handsome sale of the same. The escape of gas on the level and shafts of the Beliveau, Albert County, is something marvelous, having increased lately very rapidly. The level is now within ten or twelve feet of the supposed locality of the bore holes, and the growing conviction in the minds of those interested is that Albertite is close at hand. Should it prove so, it would be of immense value to that part of the country. The discovery of a valuable bed of copper was reported some time ago by parties on the Gulf Shore near Malagash, N.S. Sheriff McLean, of Amherst, N.S., is said to be personally interested in the same. Nova Scotia lead, Nova

Codes 0126 / Z2 / IDX_Names: Nigadoo; Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Nov. 5, 1881 Gloucester County. - .... And, then, there is the mineral wealth of the County. Attention has been drawn to the County recently by the discovery of a deposit of silver. Of the quality of the Nigadoo ore there can be no doubt; its richness has been attested by assays worked out both in England and the States. Some ofthe specimens which were tested, picked up at a venture and without the intention at the time of submitting them to chemical experts, revealed an extraordinary yield of the precious metals. On that point there is no room for controversy. The only matter in doubt is the extent of the deposit. That it is very large is the opinion of many familiar with the details, but this is a point which only a liberal development of the property can settle. The Nigadoo vein is owned by two companies - the Nigadoo company proper, and the Gloucester company. Some work has been done by both companies, and thus far everything is encouraging. The Gloucester company are so hopeful that they have refused to sell their stock, having adopted a resolution to lock it up for the present. The finding of valuable mineral in Gloucester, however, is not a thing of yesterday. The existence of large deposits of copper has long been known. The grindstones of Gloucester, too, have been famous for a generation. There are many other facts in connexion with the County's resources which might be stated did space permit. It is sufficient to say, in concluding, that few counties in Canada possess greater natural resources and advantages, and the present outlook points to a great development in those industries on which the prosperity of the

County rests."

Daily Telegraph - Jun. 30, 1876 Our Woods and Minerals at the Centennial. - The minerals of New Brunswick, which are treated in the second part of Messrs. Bailey and Jack's pamphlet, consist of iron, copper, manganese, antimony, gypsum, bituminous coal, bituminous shale, albertite, building stones and sandstones. Deposits of bog iron ore are found in several parts of New Brunswick, the best beds being above the rocks of the coal measures in Queen's, Sunbury and York. These measures sometimes cover considerable areas attaining a thickness of 4 or 5 feet, but no attempt has as yet been made to remove or smelt them. An analysis of some ore found in Sunbury yielded 47 per cent of metal. Of the red hematite of this Province, our authors say:-The iron ores of Woodstock were first discovered by the geological survey of the State of Maine, under Charles T. Jackson, as early as the year 1836, having been traced by him from the Aroostook region in the State above named northeastward to the St. John River, and more recently to the eastward of the latter in several bands for a distance of fifteen or twenty miles, or over a large part of the northern and northeastern portions of the County of Carleton. The principal locality from which the ore has been removed is in Jacksontown, about three and a half miles from Woodstock, and about two miles from the west bank of the St. John river. As seen at this point, the ore beds (portions of which are a true hematite, while others are a hydrous peroxide or limonite) are somewhat irregularly interstratified with a of clay slate, usually bright red or brownish red in the immediate proximity to the ore, but elsewhere of a pale grey color, and highly inclined. The width is from six inches to eight feet, the average thickness being about three and a half feet ....?.... their ....?.... variable. About 40,000 tons are said to have been smelted at the Woodstock works while in operation, the resulting metal being remarkable for its great hardness and strength, and admirably adapted for the manufacture of steel. It contains a considerable percentage of manganese. Copper ores exist in considerable quantities, the best being found in the rocks of the southern coast of the Province. The attempts so far made to work these ores have as yet met with but small success, although aspecimen from Salmon River is said to have yielded 62 per cent. of copper. It is to be hoped that the copper beds f this Province will eventually become profitable. With regard to the manganese beds found in this Province, our authors say:- Deposits of black oxide of Manganese consistingchiefly of pyrolusite but associated with more or less ofmanganite, are not of uncommon occurrence in connection with the rocks of the Lower Carboniferous formation, and have been mined to a greater or less extent at several points, such as Markhamville, Quaco and Shepody Mountain. At each of these localities the mineral is met with in connection with limestones lying at or near the base of the series, being distributed through the latter partly in the form of veins but chiefly in irregular masses or Pockets, some of which are of remarkable purity. The most important deposits which are being at present worked are those of Markhamville, under the direction of the Victoria Manganese Company. These were first opened in 1863, since which time the whole amount of ore removed has been about 6000 tons, the annual production varying from 500 to 1500 tons. Owing to the distance of the mines from railway transport, eleven miles, the ore is subject to a cartage of $3 per ton; but notwithstanding this drawback is profitably worked, the price at Sussex varying according to the quality, from $15 to $50 per ton. Manganese is also met with to a limited extent in rocks more ancient than those of a Lower Carboniferous age, near Bathurst, and in those of the Huronian system in King's County, and it is probably from these in part that the ores above described have been derived as secondary products. Another important metal is antimony, which is found at Prince William, and here again we cannot do better than to quote from the pamphlet:The occurrence of Stibnite, or Grey Sulphuret of Antimony, at Prince William, seems to have been known for a number of years, but attracted little attention until about the year 1862, when fresh discoveries indicated a considerable body of ore having been made, several companies were formed with a view to its development. Through the explorations of the latter the mineral was found to be more or less abundantly spread over an area of several square miles occurring chiefly in white quartz veins or veins of quartz and spar, intersecting hard clay slates and sandstones of undetermined age. These veins vary in thickness from a few inches to six feet, the ore being irregularly distributed through the quartz in strings or veinlets, sometimes attaining a thickness of twelve to fifteen inches. A large portion of the ore hitherto raised has been obtained within a short distance of the surface by means of trenches dug on the course of the lodes, but several shafts have also been sunk, attaining the depth of one hundred feet or more. In connection with these on the property of the Lake George Mining Company, somewhat extensive works have been erected, embracing an 80 horse-power engine, a 30 horsepower air compressor engine, a Burleigh steam drill, Blake's crusher, rollers, jiggers, etc., as well as furnaces for desulphurization and smelting. From these, when in full operation, 15 tons of metal were obtained about every six weeks; the charges (of 500 cwt.) yielding from 45 to 56 per cent. of reguins. The fluxes employed are charcoal, soda or salt cake and rosin. The value of the metal on the ground is 12 to 14 cents per pound. It is partly exported in cakes or ingots to the United States, being valued in Boston at $12.25 to $12.75, gold, per ton, and partly employed on the ground in the manufacture of Babbit metal (containing 15 to 20 per cent. of antimony with lead and tin, or in the better qualities with lead, copper and tin), valued at from 20 to 50 cents per pound.Gypsum or plaster is found in great abundance in this Province, as it is also in Nova Scotia. The largest deposits at present known are at Hillsboro', in Albert County, where the total head of rock is from 90 to 100 feet, about 70 of which is composed of soft plaster or true gypsum, which rests on beds of hard plaster of unknown depth. At Hillsboro', during the season of 1875, 129,000 tons of plaster were quarried, 5,500 tons of which were shipped in rock and 47,200 barrels ground and calcined. The uses of plaster are too well known to require any mention. The value of the deposits of plaster in this Province must increase year by year. Our authors do not give a very encouraging view of the coal mining prospects of this Province, and we quote their remarks in full: More than a third of the Province of NewBrunswick is occupied by rocks of the coal formation, which present the usual variety of conglomerates, sandstones and shales, met with in other coal regions, together with numerous and characteristic fossil remains. Seams of coal are also met with at various points, but so far as at present known, are all of inconsiderable thickness, only one, that of Grand Lake, attaining a thickness (22-26) sufficiently great to be capable of working. Being, however, usually nearly or quite horizontal, such beds as do occur cover considerable areas, and when sufficiently near the surface are readily removed. For the same reason but little information can be obtained from the surface as to the possible occurrence of thicker beds beneath, and it is necessary to resort to borings in order to prove the latter. The results so far obtained in this direction are certainly unfavorable to the existence of any such beds, or even to the probability of any great thickness to the coal formation as a whole in this region, but the latter being unconformable to the older beds upon which it rests, and these being highly disturbed, forming troughs and ridges beneath the carboniferous rocks, it is impossible that the latter may really at some point attain a much more considerable thickness and include workable beds of coal. The only locality in which mining operations for this mineral are at present conducted is in and about the Newcastle River and the shores of the Grand Lake, in Queen's county. The beds here having a thickness of about two feet, are usually met with within ten or fifteen feet of the surface, and have been removed at a great number of points over an area of over one hundred square miles, indicating a total productive capacity of about 154,948,147 tons. The coal is a true bituminous coal of the caking variety, and is employed both for household and blacksmith's use. The total annual production is at present about 3,000 chaldrons, which, delivered in the city of St. John, is sold, according to quality, from $4.50 to $8.00 per chaldron.Bituminous shales are found in considerable quantities in Albert County, and at one time an attempt was made to employ them largely in the manufacture of il, as much as 63 gallons to a ton being obtained, but this oil was unable to compete with the cheaper article from the wells. The same shales yield 7300 feet of gas per ton, and in 1865 some 2000 tons of shale was sent to the United States to be made into gas. With regard to Albertite, which is amongst the most remarkable of mineral products, our authors say:-This remarkable mineral, occurring in connection with the calcareo-bituminous shales or pyroschists above described, was first discovered by accident about the year 1850, and has been by some regarded as a true coal, by others as a variety of jet, and by others again as more nearly related to asphaltum. It resembles the latter closely in appearance, being very black, brittle and lustrous, with a broad conchoidal fracture, and like asphaltum is destitute of structure, but differs in fusibility and in its relation to various solvents. From the true coals it differs in being of one quality throughout, in containing no traces of vegetable tissues, and in its mode of occurrence, which is that of a vein and not that of a true bed. This vein occupies an irregular and nearly vertical fissure, has a varying thickness of from one inch to seventeen feet, and has been mined to a depth of 1,162 feet. The accompanying shales are in some portions abundantly filled with the remains of fossil fishes, (Paleoniscus) and it is not improbable that it was from these, in part at least, that the mineral was derived, existing perhaps at first in a fluid condition (in which state it has in some instances become the cementing material of conglomerate), and subsequently hardened into its present form. Vegetable remains are almost entirely wanting. Between 1863 and 1864, inclusive, 154,800 tons of albertite were shipped. It is capable of yielding 100 gallons of crude oil of 14,500 feet of gas per ton, and when employed with other coals it leaves as a residuum a valuable coke. About 120 men are employed at the Albert Mines.Among building stones our authors make mention of granite and syenite which form extensive beds, particularly in the county of Charlotte. Both yield good building materials, the red granite being capable of receiving a high polish, and it being possible to obtain blocks of it of any size up to 30 or 40 feet in length and 4 or 5 feet in thickness. The Bay of Fundy Red Granite Company vein gives employment to about 110 men.With regard to sandstones our authors say: This stone, commonly known in the United States as Nova Scotia stone, has been long known and highly prized, the Budreau Quarries having been first opened in the year 1856, since which time there has been shipped from that locality an annual amount of from 5,000 to 7,000 tons. The Caledonia Quarries were first opened in 1864, and now ship annually from 4,000 to 6,000 tons, while large quantities are also removed from the other localities mentioned above. The particular qualities for which these stones are prized are their colour, the facility with which they may be cut, dressed or ornamented, and their durability. The prevailing color in the Dorchester quarries is a yellowish or olive gray shading on the one hand ...?... a chocolate brown and on the other into a bluish grey, while at Mary's Point a portion of the rock is pale, purplish red,

S.J. Daily News - Oct. 14, 1864 Our Mineral Resources. - The development of the mineral resources of the Province is daily acquiring increased importance, not only in consequence of the gradual decline in the lumber trade which has so long been one of our most lucrative sources of profit, but because the attention of American and English capitalistsis being turned to our mineral lands to a greater degree than at any former period. This remark applies more particularly to the Americans, who are quietly securing the most valuable mining properties as yet opened out, and are anxious to extend their operations wherever a suitable and promising field for the investment of capital presents itself. The antimony mines of Prince William are in the hands of a Boston Company who will prosecute their development with energy and undoubted advantage. Parties from the same city are making careful enquiries respecting the range and probable extent of theiron bearing rocks of Woodstock with a view to share in the profits which those remarkable ores offer to enterprise and capital. Albert County itself bears witness to the singular advantages which the mining industry, properly directed, is capable of affording - its Albertite, Gypsum and building materials finding a greedy market in the United States, and the fortunate owners of the mining locations, well deserved profits for their investments. But we should like to see the people of the Province share, as they certainly ought to do, in the advantages presented by the mineral treasures of their own soil, and it was with much satisfaction that we noticed at the late exhibition at Fredericton a very marked increase in the representation of our mineral wealth. In describing the general features of the exhibition we glanced at the display exhibited by Professor Bailey, Mr. Matthew and Professor Hind, and we now propose to notice more at length the results of the explorations made during the past summer by the last named gentleman in the Northern part of the Province. Our readers are probably aware that Professor Hind has been engaged in ascertaining the probable area occupied by the already celebrated ""Quebec Group"" of Sir William Logan, the distinguished Canadian Geologist, which he discovered to exist on the Upsalquitch River in the county of Restigouche, in the early part of the summer. The ""Quebec Group"" is now known to be the great metalliferous formation of America, and it has long been recognized as such under different names, but without a suspicion of their relation to one another, by the American and Canadian Geologists. It was in 1860 that Sir William Logan first ascertained the true connection of the different metal bearing rocks of Canada and the United States, and because he satisfied himself that they constituted but one great metalliferous group and that this group was enormously developed in Lower Canada, and particularly near Quebec, he named it the ""Quebec Group,"" and as such it will very probably be recognized by the geologists of all the different States of the Union in which it is known to occur. As already stated, Professor Hind discovered in the early part of this summer that the ""Quebec Group"" comes to the surface on the Upsalquitch and the Nepisiguit Rivers, having there a breadth of about forty miles. He has subsequently ascertained that this important group stretches through the Province, and enters the State of Maine south of Woodstock, and extends a few miles north of that town - forming a belt across the Province not less than 30 miles broad. His collection of rock specimens with their associated minerals, at the late Exhibition, was chiefly from this group as it occurs in New Brunswick; and they were obtained from four lines of exploration which he has made across it. Among the minerals exhibited with the mother rock were copper bearing diorites, black magnesian slates which are supposed to be one seat of the gold not only of New Brunswick but of Nova Scotia and Canada. There were exhibited also what are called the ""Glauconite Slates"", an important member of the ""Quebec Group"", together with red slates and their associated iron ores, purple manganese slates, porphyries red and green, and gold obtained from the drift gravels and sands of the Nipisiguit, Upsalquitch, Tobique, Campbell river, Serpentine, &c. It results from a study of the mineral collection exhibited by Professor Hind that some idea can be obtained not only of the mineral resources of the localities which have been the scene of his operations, but also of the direction in which practical miners should expend their energies. It will be apparent to every one that the ores of metals exhibited by themselves, without relation to their geological range or distribution, cannot convey to a stranger, or to scientific men who may be consulted by capitalists, an adequate idea of the mineral wealth of a parish, county, or Province, because such ores may represent the richest portion of a mineral vein which would soon become exhausted if vigorously worked, as, unhappily, the dear bought experience of many in this Province is able to prove; but when metalliferous rocks extending over a hundred miles or more in one continuous belt are discovered and properly described, we feel satisfied that it requires time only to reveal the mineral treasures which experience and science assures us they contain. The map which illustrated the geology of the carboniferous area in the valley of the Tobique points out to any and every enquirer the place where to find his sandstones, his grits for millstones, his limestones, his gypsums, his firestones, housestones, argillites, &c., and a map of the ""Quebec Group"" of New Brunswick would point out the copper bearing rocks, the manganese and iron series, the lead and antimony series, and we hope in due time the rock in which the eager prospector may find his gold. We shall look for Professor Hind's report with much interest, and are glad to learn from himself that he intends to spend the remaining portion of the season in examining the geology of Albert, King's, Queen's, Charlotte and St. John Counties. We must not omit to notice the beautiful sea green and red argillites, the dolomitic limestone and the fine blue slates of the Upper Silurian rocks which lie to the North of the ""Quebec Group"" in this Province. Although they have not exhibited much metalliferous wealth, yet they are rich in valuable materials for construction and decorative purposes."

Miramichi Gleaner - Oct. 15, 1864 Provincial Exhibition. - We are indebted to the St. John Globe and Telegraph, for full particulars of the Provincial exhibition which was brought to a close on Saturday last... The display of the richness of our rocks and the deposits in the bowels of the earth, must ultimately prove of great service to our people. ... Minerals. - The Mineral Resources of the Province are well represented. Some very fine specimens of antimony are shown by the New Brunswick Antimony Company, and masses of Pig Iron with the ores yielding the metal are sent by Mr. Best, of the Woodstock Iron Company. Albertite, from the mines in Albert County, and coal from Grand Lake, are displayed in fine masses. Our townsman, Mr. Matthew, exhibited his beautiful collection of New Brunswick minerals, which has cost him many year's labour, and Professor Bailey's Cabinet attracts general and well deserved attention. Professor Hind displayed a large assortment of specimens of Minerals in the matrix or mother rock, and arranged in geological order. The plan adopted by Professor Hind is worthy of special notice, as it exhibited not only the mineral itself, but the rock in which it is found and its geological relation to the rocks. His explorations during the past summer was confined to the country northwest of a line between Fredericton and Bathurst, and consequently, only about one half of the province is represented by the collection exhibited. The carboniferous area in the valley of the Tobique, 26 miles broad, illustrated by a geological map, showing the relation of the gypsum series, the limestone and sandstone series in that valley, with specimens ofhonestones, millstone grits, sandstones for grindstonesand building purposes, ochres, refractory materials, polishing powder, &c. which abound in the Tobique country. Four sections stretching across the country, occupied in part by the great metalliferous belt of North America, called the ""Quebec Group"", are represented in detail. The most interesting rock specimens from these sections, which averaged forty miles in breadth, are Drift Gold, from no less than eight different localities, viz., the Nepisiguit, the Portage River, the Upsalquitch, the Little Southwest Miramichi, Campbell River, Serpentine River, and two from tributaries to the Tobique. I noticed also the copper-bearing Diorites of Campbell River and the Tobique; the Iron ores from Woodstock, the Becaguimec and Southwest Miramichi with their associated Red Slates and Limestones; the Porphyries of the Serpentine, the right hand branch of the Tobique and the Nepisiguit, some of them copper bearing. The beautiful red and green conglomerates from the Blue Mountain Range on the Tobique, were shown as materials suitable for ornamental and constructive purposes; the Jasper series of Campbell River and the red and sea-green argillites from near the mouth of the Tobique, were exhibited with the same object. The traps and fossiliferous limestones from Cap Bon Ami, near Dalhousie, with their associated honestones, also found a place in this collection, together with moulding sands from the St. John and Yellow Dolomites or Magnesian Limestones, galena from the Tobique and copper ores from the St. John. - The collection exhibited by Professor Hind derives value from its scientific arrangement. A study of the different sections showed where each species of rock with its characteristic mineral might be found throughout the country explored. An Upper Silurian Dolomite, for example, holding the chain coral in profusion, was shown to mark the limit northwards of the ""Quebec Group"" on the Upsalquitch and on the Tobique; the same rock probably stretching continuously from one point to the other; so also with the Red Slates, with which the Woodstock iron ores are associated; these were represented in the different sections, as appearing on the Southwest Miramichi, a few miles above Boiestown; on the Becaguimec and on the Upsalquitch and Nepisiguit, thus showing the extensive range of this important rock with its iron ores. The copper-bearing Diorites were also represented in three of the sections, and the purpic slates with their associated manganese ores were shown to stretch from the Tattigouche to the Upsalquitch and beyond. The advantages of a scientific arrangement in illustrating the mineral resources of the Province can not be over-estimated, for, however numerous and beautiful isolated mineral specimens may be, they do not afford the miner or capitalist the requisite information respecting their distribution and probable commercial value. The following is from the Telegraph, Oct. 10, Fredericton, Oct. 8. - ... Minerals. - For the best collection of New Brunswick minerals the first prize has been awarded to Professor Bailey whose cabinet is much admired by all, the specimens being so classified, arranged and labelled that even the unscientific observer may understand them. The Professor in his late tour through the Counties of King's, Queen's and Albert, has added a large number of new specimens to his collection, and his Cabinet embraces specimens from almost every locality in the Province. I noticed Iron Ores from Carleton, St. John, Charlotte, Victoria, Queen's and Gloucester; and lead ore, from nine different localities.There are specimens of Gold, too, but of course no discoveries have yet been made in sufficient quantities to be of any service ... To attempt a mere enumeration of the different mineral specimens would be a hopeless task, and indeed it is a matter of surprise to persons less enthusiastic than the Professor, that during his comparatively short residence in the Province has made so perfect a collection of its native minerals. Professor Bailey has taken the first prize for useful minerals of New Brunswick. The second premium for New Brunswick Minerals has been awarded to Mr. G.P. Matthew, whose collection is highly creditable. Mr. Matthews has taken a prize also for Combustible Minerals of N.B., the only collection exhibited."

S.J. Daily News - Oct. 14, 1867 At Exhibition: ... There are some fine specimens of the minerals of New Brunswick exhibited by Mr. Matthews. Mr. Fellows shows a collection taken from mines opened out by the late Mr. Simmons. Mr. C. Connell shows another collection that looks very well. There is iron ore from Woodstock, copper ore from Le Tete, manganese from Albert, petroleum from Westmorland, goldfrom Tobique and Beckaguimic, coal from Grand Lake, plaster stone from Hillsboro', building stone from St.Mary's quarries, Albert."

N.B. Courier - Sep. 27, 1851 We have been favored by the Directors of the Mechanics' Institute with the following Report, which we have much pleasure in publishing: Report on the Industrial Exhibition, Held at Saint John, On September 9th, (and following days,) 1851. To the New Brunswick Society for the Encouragement od Agriculture, Home Manufactures and Commerce throughout the Province. On the 11th of June last, W.J. Ritchie, M.P.P., the President of the St. John Mechanics Institute made application to the New Brunswick ... Class 1. Raw Materials: Sec. A. Minerals. The Exhibition was by no means complete in this department, although the Museum of the Institute, which was thrown open to the public, contains a great variety of the useful Minerals of the Province. We could wish to have seen at a glance, a series of the Provincial Rocks and Minerals of economic importance, and shall expect it at some future Exhibition. The Minerals exhibited on the present occasion were, many of them, of considerable interest. We may mention - A mass of native Black Lead, of which a large and valuable vein exists near Indian Town, and is now profitably mined by a Joint Stock

Company. Samples of prepared Black Lead, exhibited by the St. John Black Lead Mining Company: this article seems well adapted to supply all the wants of our Provincial housekeepers. Asphatum or Asphaltic Coal, (for there is adoubt as to its true nature,) is a valuable Mineral, mined by a private Company in the Parish of Hillsborough, Albert County, and is already largely in demand for the manufacture of Gas. Soft bitumen, or Naptha, from the Petitcodiac, where it issues from the earth in a liquid form, and afterwards hardens by exposure to air. Asphaltic Shale, from Albert and Westmorland Counties; this is an article, the use of which in making gas, waterproof cements, pavements, &c., is increasing every day. Mineral Paint (an earthy oxide of iron, orferruginous earth,) from Shediac; this substance occurs in various parts of the Province, and is yet destined to replace all the forms of ordinary paint as a covering for wood work, &c. exposed to risks by fire. This present sample was exhibited by the Messrs. Gilbert. Mineral Paint, (an earthy oxide of Manganese,) from Albert County; an article which may yet be brought into use. Black lead, we may observe, is considered to be a good kind of mineral, or fire-proof paint; and we would suggest to the St. John Black Lead Company, that they should make some experiments upon the subject. Alabaster, or White translucent Gypsum; this is another of the varied Mineral products of Albert County; we observe specimens of it now for the first time on public exhibition, with great satisfaction; there is a square block of it, a vase turned from it, by Mr. McCoach, and a head carved in alto-relievo, on the same material, by Mr. Foulis. Its admirable purity and general qualities are well seen in these specimens, but none of them exhibit the beautiful polish of which it is susceptible. There is also a magnificent group of Chrystals of Gypsum, from Kings County, but their economic value is small as compared with the massive form from Hillsborough. Lime. - There is a cask of beautiful white Limeexhibited. This is one of our staple productions, and the St. John Lime is unsurpassed for its purity and general fitness for the purposes of the builder. The Limestone contains less than two per cent. Of impurities.Salt, by Joe Brand, of Sussex Vale; this salt is of first rate quality for farmers' purposes, and we are much pleased to learn that its manufacture has been resumed at the springs, and that Mr. Brand is enabled to sell it as low as the imported salt.Honestones, from the Kennebeckasis; these seem to be of good quality, and work either with water or oil. They bite well, and will compete with the Honestones of Woodstock or Miramichi, which are now coming into repute. Lead Ore. - Of this there are samples from King'sand Charlotte Counties, and Iron Ore from one or two places; but no information is given as to the probable supply from the various localities. The samples of Iron and Steel, from Woodstock,seem to be of the very first quality; the Iron has been bent and twisted, when cold, in every direction, but without showing the least injury to the fibre. It would be hard to devise a more complete proof of the quality of the article. We understand that the manufacture of Woodstock Iron will now be carried on vigorously by a Sheffield firm, who have become aware of its admirable qualities and adaptation for the making of Steel. Pipe Clay. - This article is from Albert County, and is exhibited by Mr. Foulis. It has a very good color, and seems to be well adapted for the manufacture of Stoneware, &c. ..."

Codes 0275 / Z2 / IDX_Names: Woodstock Fe; Sandstone, Building Stone, Monument Stone, Loyalist - Oct. 1, 1847 Woodstock Iron Works. - It appears that the Charter granted at the last session of the Legislature, to a Company, for the purpose of working the Woodstock Iron Mines, has fallen into vigorous hands, who are determined to commence operations without delay, and upon an extensive scale. Mr. Stephens, (the younger) and a practical workman from England, are now at Woodstock, and from conversations with them we glean the following information. - It has been determined on that the buildings for rolling and smelting shall be constructedwith red sandstone, and the stone is already nearly all quarried, at the Red Rapids, on the Tobique, about 65 miles (by water) above Woodstock. No site has as yet been purchased for the works to be erected on. The mouth of the Meduxnakik (at Woodstock village) has been talked about, and also the mouth of Lane's Creek, where it falls into the St. John; about 2 1/2 miles above Woodstock village. -- The latter will probably be the site. Some of the owners of property at the Village appear anxious that the works shall be erected there, in the expectation, perhaps, that the value of property would be thereby enhanced. It is a mistaken notion. The noise of the works would be found extremely disagreeable, and the village would soon be covered with dust. Lane's Creek will be found quite near enough. If the Works shall be erected at Lane's Creek, it will be under the following advantages. Water power to a considerable extent will be secured to propel the machinery; the Works will be within 3, or 3 1/2 miles of the mine, from whence it is the Company's intention to construct a railway, the descent of which will be gentle the entire distance, so that the loaded cars will run down of themselves, and a horse will haul back several of them when emptied; and the Works being situated on the bank of the St. John, the iron can be put directly on board of boats, and floated down stream. In England, and other countries, where iron is found, it is generally embedded deep in the earth. - A shaft must first be sunk, at great expense, levels opened, and then ore is usually found in small branches. A powerful Steam Engine is then required (with a building to be erected for it) to pump the water out of the mine; pumps must be set, &c. - And after all this expense, the ore is obtained at vast labour, must be conveyed to the shaft, and then hauled up by machinery. But here the ore is to be found up to the very surface of the ground - and of an excellent quality, and yielding fifty three per cent of iron! -- and nothing more is necessary than to make an opening in the side of a hill, and load the cars from a supply apparently inexhaustible! Then the facility with which it can be conveyed to the bank of the river, (where the works will be erected) and the iron conveyed to market by water, is also very great. Contrast this with the vast expense attending the operation in England, and it will be seen at once that it will much more than compensate the stockholders for the difference in wages. Questioning the English operative the other day upon these points, (a man who has been engaged for many years in the iron works of England) he emphatically exclaimed that he did not think there was another such iron mine as this, and possessing equal facilities for being worked, in the known world. The working of this mine cannot fail to add much to the wealth and prosperity of the Province, and to the County of Carleton in particular. We wish the Company every success."

Morning News - Oct. 9, 1861 Provincial Exhibition. -Coldbrook Iron Works. - We must here notice the productions of the ""Coldbrook Iron Works"", which consisted of a sample of ""New Brunswick Magnetic Iron Ore,"" and nails manufactured from the same; White and Grey Scotch Pig Metal; Puddled and Scrap Balls; a Taper Bat, rolled for ship knees; Spike Rods; specimens of Cat Nails, Ship Spikes, &c., &c., all of which were briefly described in printed bills sent for distribution. The display was very creditable to the enterprise of the proprietor, Wm H. Scovil, Esq. Crandall's Grindstone Factory. - There were samples of good looking Grindstone, of a bluish cast, and excellent grit, from the Grindstone Factory of Mr. J.Crandall of Moncton, which is situated on the Petitcodiac River, about seven miles below Moncton, and is capable of turning out large quantities yearly for exportation to New York and Boston where it brings a remunerative price. This factory has been in operation for a length of time. A similar one has just been started by the Messrs. Seaman on the North Shore. The Minerals, Etc. - We have before noticed the extraordinary collections of mineral ores, stones, clays, fossils, &c., and it is only justice to several painstaking gentlemen of taste to give the names of those by whom they were exhibited. The largest and most varied collection was probably that arranged with the greatest neatness by William R. Payne of Portland. There were, we believe, in his several cases not less than four hundred specimens of all kinds of ores, marbles, slates, shales, &c., &c., and we were informed that the quantity exhibited was not a tithe of the whole number in the possession of that young gentleman, who has given his attention to the science for several years and has personally gathered the various specimens shewn by him, in all parts of the Province. Mr. George Matthew had two cases systematically arranged, containing many valuable mineral specimens. The brothers Matthews, we were informed, have also devoted considerable time and labor to the collecting of geological information. Mr. Matthews specimens were not entered in time to compete for the Prize or Diploma. Mr. Lunn, Civil Engineer, sent a very handsome case of beautiful specimens which attracted considerable attention. Mr. Robert Foulis' collection was an extraordinary one and would have shewn to more advantage had it been arranged with just a little more system. List of the Prizes. - The following is a list of the persons to whom Premiums were awarded by the Judges.- 6 Mineral Kingdom. Best collection of New Brunswick Minerals, William R. Payne, Portland; second best, Wm. Lunn, C.E., St. John. Best collection of mineral paints, Charles C. Barnes, Westmorland; second best, William R. Kent. Best collection building stone, Peter Cormack, St. John. Ores of Metals, Robert Foulis, St. John. Best collection Lime, Limestone, &c., Jas. Pearson, Kings Co.; second best, Benjamin Reynolds. Bricks, Tiles, &c., Thomas Davidson, Saint John. Pottery-ware, Warwick & Hayward, Saint John. Salt, J. Brand, Sussex. Best Grindstones, Sprague, Soule & Co., Gloucester; second best, Seaman Bros."

N.B. Courier - Oct. 7, 1837 LETTER IV. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: In endeavoring to discover the geological features of any country, and to obtain sufficient data whereby particular examinations are rendered less difficult, I have alwaysobserved that the sea coast, and the banks of the rivers wherever they occur, afford facilities not to be obtained through any other medium, where deep mines and quarries have not been opened. Convinced of these facts I have endeavored to lay before Your Excellency a few particulars relative to the Tantamarre, Memramcook, and Kennebecasis Rivers, and the characters of the formations through which they extend, so far as they were observed on my route. From the two former streams the River St. John is different in two important particulars; one in respect to its inestimable advantage to the country, and another in regard to the sources from which the diluvium on its banks has been derived. That part of the St. John which extends from above the falls into the interior of the country, receives no alluvial matter from the sea, as its navigable channel is elevated at least forty feet above the harbor at low water. The falls which might be considered by some an obstruction to navigation, absolutely extend it to a great distance. The impediments placed at the ""narrows"" and the sudden descent of the water at the falls preserve the level of the river above, which may now be compared to a lake. Were all the obstructions removed, and this majestic stream allowed to pass through a broad open mouth into the sea, dangerous rapids would be formed above, and its use as a common canal, and thoroughfare would be greatly diminished. It is certainly an admirable river where all the rapids are collected at its entrance - where they are locked up by the ocean twice every twenty four hours. The descent from the Meductic falls at Woodstock, (at least one hundred and thirty miles up river) is so gradual, and consequently the current of water so feeble, that long before the river can be emptied, the ""tidelock"" of the falls is closed, and a current throw back into the channel which seems to supply the waste that has taken place during the previous ebb. Instead of receiving constant supplies of sedimentary matter from the wasting rocks of the coast, during each tidal influx of the sea, the elevated situation of the river's bed and the barrier set up at its narrow mouth, prevent the admission of sand and mud, which on the banks of other rivers are so abundantly deposited. Nor do the border of this noble stream require it. Skirted with the detritus swept from the mountain's brow by falling showers, and clothed by the alluvium brought downward by each bubbling brook, a fertile deposit is formed on each of its banks, which are submersed beneath the waters of the vernal ad autumnal floods. About three miles from the Indian House, the limestone formed by the sides of the ""Narrows"", is met and overlaid by conglomerate, which is regularly stratified, and dips north-east. It evidently belongs to the formation of that rock so abundant along the Kennebecasis, being like it in every particular. The Nerepis river empties into the St. John ten miles above the Indian House - at its entrance a great change may be observed in the scenery. Instead of the bold rugged cliff of limestone and conglomerate the shore slopes gradually down to the main river, and cultivated fields decorate its border. Continuing their course in a south-west direction, the highlands already mentioned cross the St. John, and taking within their range the mountains of the Nerepis, they form a distinguishing feature of the Province. Beginning at their base, the great coal district of the country is spread out far and wide in a northerly direction, and its rocks are strongly contrasted with the oval summits of the granitic hills, and the grandeur of this primitive region into which the Nerepis extends. On the shores of Long Reach several beds of clay, sand, and gravel were observed, and to a stranger, the enormous rafts of floating timber, occupied by comfortable cabins, and whole families - the groups of children sporting on the buoyant pine - all moving slowly towards St. John, afford a truly interesting spectacle. Such is the scenery in a Province possessing four thousand miles of navigable lake and river, and such are some of the natural advantages the country enjoys. Advancing up the Long Reach the conglomerate and a coarse sandstone, may occasionally be seen forming bold eminences on the side of the river. At the ""head of the Reach"", there are two islands, apparently formed altogether of alluvial matter, from the particular direction of the current. A long arm of intervale extends along the west side of the river at a place called the ""Mistake"", where a deep creek has often been mistaken, even by good pilots for the main channel; hence this name has arisen. On this part of the St. John there are some beautiful views; at the head of the Reach the river becomes narrow, from this circumstance a blockhouse and battery were erected during the last war, on its eastern side. Not far from the lower end of Spoon Island there isa hill of granite, from which mill stones are quarried. But having passed rapidly up the stream in a steamboat, I am unacquainted with many of the interesting formations along its shores. There can be little doubt, however, that any who shall follow up those limited examinations, will reap a reward for their labour. It would be necessary to travel along both banks of this extensive river, in order to examine faithfully their structure, 3 and collect their minerals; and the time cannot be far distant when the Provincial Government will explore the hidden resources of the country and open up new channels of industry and wealth. A coarse sandstone apparently belonging to the lower strata of a coal basin, and approaching what is usually called the mill-stone grit, was observed at Gagetown, a delightful spot sixty miles from Saint John and thirty from Fredericton. I had not an opportunity to examine its extent, and the indications of coal appearing in that neighborhood. A remark has been made, and perhaps believed to be just by many, that after the timber of New Brunswick has been felled and transported, the resources of the country will be dried up, and consequently, the Province will fall even below the level of the other American colonies - but let any one make an excursion one hundred and fifty miles up the St. John, and that opinion will be discarded from the mind. From Long Reach to the Grand Falls, a distance approaching two hundred miles following the course of the river; there are many tracts of the most fertile soil, and almost every spot along the shores of this admirable stream is capable of cultivation. The vast quantity of intervale between Belleisle Bay and thirty miles above Fredericton is of itself, sufficient to enrich the central portion of the province. Already invested with chains of cultivated fields and rich meadows, occupied by the hardy sons of Loyalists, this useful river offers to its industrious and rapidly increasing population a fair compensation for their labor, and a home for their posterity. Nor is the scenery on the river less pleasing - during the summer months when the floods of spring have subsided, there are numerous landscapes along its embankments that will vie with the richest of other countries. The dark and winding river, shaded by the tops of lofty elms, or crested with the drooping willow - the distant village seen through the fringed opening of the forest - the unwieldy raft and smoking steamboat, make up that singular variety so pleasing to most travellers, and agreeable to the fixed inhabitant. The St. John, between the Falls and Fredericton will probably average a mile and a half in width, and when the number of smaller streams, lakes and creeks, all emptying into this common reservoir are viewed, the quantity of water it conveys cannot appear surprising; and that floods should occur during the heavy rains of autumn, and from the dissolution of the snow in spring are effects common to all rivers of the kind. But it must not be supposed that all the water rushing into this lake-like receptacle, is precipitated over the falls near the city of Saint John. Many from their own observation, have supposed that a subterraneous passage to the sea gives vent to a part of the water. That idea is certainly 4 erroneous. The quantity of water is reduced by evaporation alone - this during the summer months, and under particular conditions of the atmosphere, is quite sufficient to account for the supposed phenomenon. When so large an aqueous surface is exposed to the air during dry weather, the escape of vapor is very great, and it is certain that the river will rise when the atmosphere is dense, and the weather lowering, at times when there has been no previous rain. A circumstance readily explained by the atmosphere being in a condition more or less favorable for the conveyance of water in an teriform state. I have observed many small streams to become dry at their mouths in the summer season, while toward their sources they sent forward a much greater quantity of the evaporating fluid than could be absorbed by the earth. Of all the agents employed in modifying the earth's surface none of more active than water. Its effects are certain whether they are produced by the falling shower or the rushing of the mighty torrents. Particle after particle becoming loosened from the hardest rocks by its disintegrating influence, is swept from the summit of the mountains to form new deposits in the valleys. Even the largest rocks are torn from their native beds and transported by its force to great distances. The soil thus formed is always accumulated at the lowest levels, and distinctly points out the height to which water has risen. The matter collected by these means, whether it is large stones, sand, gravel or mud, is identical with the rocks from which it is derived, unless mixed with decayed vegetables or has undergone some change by chemical affinity. The large tracts of intervale on the St. John river, have thus been deposited from the debris of its surrounding hills, and each successive freshet brings down a new stratum of sediment that semi yearly renders the soil more fertile. The vast accumulation evidently belongs to two distinct and separate periods of time. The first or most ancient is limited in extent, and forms what is generally called the high intervale. It consists of different layers of rounded pebble, gravel, sand, and sometimes beds of clay. These, whenever they appear, occupy a higher level than the more recent alluvium and are seldom or never entirely inundated by the highest floods of the present period. This, the earliest of these collections is well displayed at Fredericton, and the town is built on one of the most beautiful situations. Opposite the Capital of New Brunswick, and near a bark camp village of its aboriginal inhabitants, there is a bed of good clay, and collections of fine sand, may be seen on the level land on the border of the river at other places. These deposits belong to those called by Mr. Lyell, Newer Pliocene, although I have not been able to discover in them any organic remains whereby their relative age might be determined. The other collection of alluvium is comparatively recent, 5 and has been formed by causes now in operation. In it I obtained two species Mtyila and other shells, all belonging to the kinds now living on the shores. This deposit forms almost all the intervale along the river and being placed in the lowest situation, ie. submerged during the floods of spring and autumn. It is more than probable that the site of the river and all its intervale was at one time a Lake, whose surplus waters made their exit into the sea by a passage remote from its present mouth. It was observed that the sediment collected on the borders of the channel increases more rapidly than near the upland. This arises from the particles of alluvium being thrown down in time of freshet before they reach the more remote places, and hence also the coarse materials by falling first, will be found upon the bank, and the finer particles only are conveyed to the lowest and most remote parts. Such is the case of the Mississippi, which has been represented ""as a river running on the top of a long hill or ridge, with an elevation of twenty four feet in its highest part, and a base three miles in average diameter. First, however, remarks that this picture is not very correct, for notwithstanding the comparative elevation of the banks, the deepest part of the river is uniformly lower than the lowest point of the alluvium."" About six miles from Fredericton on the opposite side of the river, and near the Nashwasis, there is a remarkable cliff, averaging one hundred and fifty feet high, and extending some distance along the east side of the Royal Road. This cliff is composed of trap rocks which have been thrust upwards, and now form a lofty dyke in the coal measures, that were found to reach even further westward than the mouth of the Keswick. The precipice presents a bold front, and by constantly crumbling down has formed of debris rudely piled along its base. The trap is of the compact, and amygdaloidal varieties; the latter often contains numerous hollow cavities, and is perfectly vesicular. In other instances these cavities are filled with calcareous spar, and in this respect is different from the amygdaloid of Nova Scotia, which most frequently contains Zeolites. Good specimens of magnetic iron ore were found at the foot ofthe precipice, and a considerable quantity of that mineral was observed among the fractured masses forming the slope. I had much pleasure in being accompanied to this interesting spot by the Hon. J.S. Saunders, and the Rev. Dr. Jacob, with some of the students of Kings College, and the effects produced among the sandstones by the heat that accompanied the elevation of these volcanic rocks, rendered the excursion very interesting to the highly respectable party. A coarse sandstone similar to that observed atGagetown occupies the highest grounds in the rear of 6 Fredericton, the beautiful site of King's College is on this formation, and its massive columns are fine specimens of a similar rock brought from the Nashwaak, a stream nearly opposite the town. Occasionally covered with conglomerate the same rock continues its course near the entrance of the river Keswick nine miles above the capital. At numerous places the strata are covered with large boulders formed of its broken layers, and beds of gravel, sand, and clay. The impressions of leaves and other vegetable remains appear frequently, but in general they are imperfect from being exposed to the vicissitudes of the weather. The St. John here becomes more rapid, and winds its way among a number of islands. These, in summer, are decorated with green meadows, and the drooping branches of lofty elms add much to the natural beauty of the country. About two miles from the entrance to the Keswick on the south side of the river, new red sandstone forms a kind of a belt, and may be seen on both sides of the main stream. At the place where it is crossed by the road, it is very red and contains marl with a considerable quantity of oxide of iron. A bed of limestone is embraced by it, and may be observed forming a small declevity near the turnpike. The limestone is also highly colored, and as far as it was observed contains but few organic remains. Whoever exposes this lime to calcination, will find its quality improve by taking it as far from the surface as possible - by opening a deep quarry, and rejecting such masses as are in contact with its red marly covering. Near this place, I discovered in a mass of greywacke the remains of a beautiful species of a fossil coraline. The branches of this plant are spread out in the hard rock, and yet retain their original beauty, appearing as natural as if they had only been compressed between the leaves of a book. A part of this fossil is in the valuable collection of the Hon. J.S. Saunders, a gentleman of science and to whom I am much indebted for aid in making examinations in this part of the country. Following the course of the road on the south side of the St. John River, and passing over new red sandstone to the distance of two miles, greywacke slate and slate, are the prevailing rock to within two miles of Capt. Cheyne's farm, twenty five miles from Fredericton. These rocks have nothing peculiar in their appearance, and although no good roofing slate was found, it is highly probable it may be discovered here by a proper examination of the schistose hills in the vicinity of the river. The strata are almost perpendicular, and high ridges with deep ravines, give the country a most uneven appearance, and the road a number of hills not to be forgotten by any who have passed over them. Large rolled masses of granite syenite and greywacke are much more common in this than in the eastern parts of the Province, 7 where the solid formations of these rocks are placed at a great distance from the newer deposits on which these boulders are found. If it be true that these detached masses have been swept from their former positions by currents of water, these currents must have acted with less force in the western district of New Brunswick, than in other parts of the world, where they have been exiled to great distances. The effects produced by the watery elements are not, however, less manifest, for the detritus of the neighboring hills is collected in the valleys and the rocks are covered with water now blocks broken from their own strata. At the mansion of the worthy veteran officer, the coarse sandstone was again seen. This rock greywacke, and granite were observed alternately along the road to the Pokiok, where the granite prevails, and extending along the river a number of miles occupies a considerable tract of country. There are many delightful spots on the border of the main river, where it flows from among the mountains of these primary and transition rocks. One of the most beautiful of these is at a place called the Barony, the country residence of the late Judge Saunders. Four miles from the Barony, and forty two from Fredericton, there is the most singular waterfall, called the Pokiock, which rolls over one of the granite ridges of the primary mountain chain previously mentioned. The Pockiok is a narrow chasm in the granite about twenty-five feet wide, seventy-five feet deep, and one-eighth of a mile in length. Into this narrow opening the river descending from its higher channel falls over a perpendicular mass of rock, and bounding from step to step - whirling in oblique cascades, reaches the Saint John. Covered with the transient foam the main stream glides peacefully along, being scarcely disturbed by the introduction of this its noisy tributary. At the head of these falls several mills have been erected by Messrs. Allan, of a respectable family, and the owners of this romantic estate. A bridge is thrown over the dark and narrow opening, where the overhanging trees seem endeavoring to conceal the frightful gap beneath. Upon examining the remarkable chasm, it was found that the hollows on one side are placed opposite the protruberances of the other in such a manner, as to leave no doubt that they were once of contact, and have been separated by an earthquake or some other disturbance, whereby the

S.J. Daily Sun - Oct. 7, 1880 Minerals No. 2. - Geological Sequence Collection of the N.H.S. - Passing around to the northern side of the table where the mineral exhibits are placed another upright case comes into view, containing a collection of New Brunswick minerals, the property of the Natural History Society. They are chiefly for the instruction of the student and geologist, and with this object are arranged in geological sequence; that is, the minerals of each of the rock formations which exist in the Province are grouped together and so arranged that they present to the eye the natural succession of the formations in time, the oldest, or Laurentian, which from its position is called the fundamental or formation gneiss in Scotland, being represented by a row of minerals on the lower shelf - minerals which have been found mostly in the neighborhood of St. John. On looking over them we observe that they are mostly minerals from the limestones of the Town of Portland, together with ornamental varieties of these limestones, and a few minerals and ores from the gneissic rocks. The second shelf contains the minerals of the Huronian, a formation which in other parts of America has proved to be rich in metalliferous deposits. One is not surprised, therefore, to see a preponderance of the ores of metals among the minerals on this shelf. There are here also specimens of the Indian pipe stone, and of barytes, a mineral used in the manufacture of paint. More than half of the minerals on this shelf are from the metalliferous belt of rocks extending from Mispeck to Upper Salmon River in Albert County. On the third shelf are shown minerals of Silurian formation. Here also there is a great preponderance of metallic ores, including iron, lead, antimony, manganese, copper and zinc. The ores of this formation are from various parts of the Province, including the coast of Charlotte County, York County and the neighborhood of Woodstock and Bathurst. The localities of antimony ore are in this formation, and it is the one in which gold has (so far) been found in this Province. The Devonian formation present but a meager display of minerals, rock crystal from Musquash and anthracite from Lepreaux being all that are shown from it. The next formation, however, abounds in handsome and valuable minerals. Such are the manganese ores, which, though occurring in the Silurian, are in far greater abundance and perfection in this. Agate, carnelian, and chalcedony, ornamental stones, are chiefly found in this formation (Lower Carboniferous) in New Brunswick. Gypsum, alabaster and albertite are also valuable minerals, and abundant in this formation. With the exception of coal the next formation(Coal Measures) does not show valuable minerals in any abundance except at Bathurst, where there is a considerable deposit of copper mixed with lignite or coal. This copper deposit is interesting as showing how organic matter (decaying plants, &c.) can seize upon metals in solution in water and produce ore bed; and it is also interesting as showing how the minerals of one formation may be derived from another, for the copper ore the Tetu-a-gouche (Bathurst) of the Silurian slates are considered to be the source of the copper in the coal measures near Bathurst. From the Triassic, which in New Brunswick is confined to the island of Grand Manan, only two minerals are shown, and they are of a kind quite abundant in the North Mountains of Nova Scotia. Lastly, on the top shelf are displayed the minerals which have been found in the recent deposits of New Brunswick, viz., the surfaces, clays, sand, etc. The ores shown in this group are due to chemical changes which have transferred them from older formations, as the Silurian and the coal measures to the surface bed. The most interesting mineral shown here is the selenite crystal of gypsum taken from a spring in Sussex, showing how the formation of mineral species in crystalline form is going on at present time. Altogether, this collection, though not very large, is sufficient to show the great range in time during which the minerals species of New Brunswick have been formed, and the preponderance of certain kinds (as the metallic ores) in some formations and scarcity in others. Other Collections of Minerals in The

Exhibition. - This case contains also a small collection of combustible minerals of New Brunswick, which is complete, however, in that it contains specimens from all the districts where combustible minerals in quantity sufficient to be economically available for fuel has beenfound. The collection contains coal from Grand Lake, anthracite from Lepreaux, bituminous shale from the Caledonia works in Albert, and other minerals of less importance. On the table beside the case containing theexhibit of the Natural History Society stands a flat case with the ores and products of the Revenue Silver Mining Company, whose mine is situated on Letete Peninsula in Charlotte Co. They exhibit a quantity of specimens of galena and zinc blende, which, by the analyses of Prof. Jno. Burwash, are shown to contain both silver and gold in quantities from $16 to $22 per ton, the gold appearing mostly in the blende-ore. This company show in their case a sample of the ore ground to a fine powder, and in the same dish a button of silver, produced by the reducing process which the powder undergoes, as a sample of the actual product of the mine. Next the box of silver ores is a handsome show case in which Mr. Wm. F. Best exhibits a tastefully arranged collection of Useful Minerals of New Brunswick, comprising such as are used for fuel for the production of metals, and various processes in the arts. Among these may be mentioned coal from Grand Lake, Albert Coal, from Hillsboro, Red Granite, from St. George, atnimony ore and metal, Pottery clay, Iron ore from Woodstock, Manganese from Sussex, Graphite from Portland, and Lime from various localities, with Red Ochre, Lead ore, etc. On the opposite side of the table is a case containing samples of silver ore from Yarmouth, N.S., sent by Mr. F. Killam and others by Mr. R. Sentall, fromKing's County, N.B. There are also turned and polished balls of red granite from the workshop of Mr. O'Neill, at St. George. In this case also Mr. Markham has placed his Electric Batteries to show the means by which that powerful and useful explosive dynamite, or giant powder, is operated in the modern methods of mining. Near by, on the table, stands a box of copper conducting wire, so that all the necessary apparatus, except the fuse, caps and the dynamite are present. Between the two stands Mr. Markham's case ofManganese ores, showing all the varieties worked at the mine, including Pyrolusite (the most valuable),manganite, a variety supposed to be braunite and an ore mixed with iron. Hematite iron ore encrusting the manganese, is also shown. These latter ores were formerly thrown away as waste products, but have now become valuable in connection with the modern processes used in the production of steel. Beside Mr. Markham's case is a box of silver-lead ore from Mr. Wanamake of St. Martin's. The crown ornament of the Mineral Department for beauty and elegance, is the display of Petroleum and its products from the wells of Ontario. Nothing could be more chaste and striking than the ornamental work in paraffine wax, exhibited under Mr. Bullock's charge, in a large show case in the middle of the table. The centre is occupied by a handsome pyramid in bleached wax and the ends by ornamental tablets of the same material. The rest of the case is filled by masses of wax and various ornamental objects made from it. On the table near by are samples of crude wax, and of the tar, gum and coke taken from the distilling retorts; and also of the oil in various conditions, from the crude oil as it flows from the wells, to the products prepared for lubricating purposes and for illumination. Scattered through the building are other exhibits which may be considered as belonging to the Department of Minerals, such as the trophy of the Spring Hill Mining Co.; the marble manufactures of Messrs. McNamee, the freestone of the Budres & Bay of Fundy Co.'s and of J.M.Steeves and Co., &c.

But most of those have been described elsewhere."

S.J. Daily News - Feb. 12, 1872 ....The all absorbing topic at present is the Albert County Railway. The people appear to be desirous to get the road and the work will probably be commenced at an early day. The friends of the road point to the splendid resources of the County, the Albert Free Stone Quarries at Mary's Point, owned by the Estate of the late C.D. Archibald, Esq., the Stone Quarries on Demoiselle Creek, belonging to Messrs. Deveber (?) & Son, and those leased by Messrs. Albert Steeves and Blight, of Hillsborough and others, the gypsum found in the locality, the deposits of manganese at Hopewell, Baysideand Harvey, the copper mines at Alma, the extensive lumber lands yet untouched by the axe of the lumberman, the great agricultural capabilities of the County and the magnificent harbor at Shepody, and ask why a county possessing such advantages should be shut out from every other part of the Province. When the County has railway communication, money will flow in and its resources will be successfully developed."

Daily News - Aug. 7, 1879 and Chignecto Post - Aug. 7, 1879 Albert Items. - The parish of Alma promises to be a busy place. It has long been known that rich deposits of copper existed in several places, and some of these were worked to advantage some time ago. A gentleman connected with the Newfoundland copper works has been here lately, leased the McKinley property, and proposes to put a large number of men to work at once. Another party are prospecting up the brook, and the outlook for Alma is quite cheery. Harvey has its mine of anthracite and stonequarries .... Mr. McHenry's patient efforts in the developmentof the resources of Albert is being rewarded, and the parish of Hillsboro rejoices in rich

Daily Telegraph - Aug. 7, 1880 Albert County. - ... Mineral Deposits. - Albert affords a fine field for the geological explorer, and the justly celebrated Hugh Miller would have found, here, many Schools and Schoolmasters to excite interest and stimulate his favorite study. Accepted theories might, however, be more disturbed than strengthened by a critical examination of the characteristics of this district. A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride - quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. The savants were evidently puzzled; but the jury said it was coal. A later conclusion, however, made it consolidated oil, and it is now known under the name of Albertite. Between costly litigation and unskilful management the net earnings were small till, in the person of John Byers, Esq., the company secured the services of one, who combined practical knowledge with executive ability. In one year about 15,000 tons were shipped, worth $15 per ton on the wharf. Latterly the export is less, as the drifts are at great depth, and the facilities for cheap working are becoming more impaired. It is hoped that further searches may restore confidence in the extent of this valuable article. Albertite is also found in minute quantities in Midland and other parts of Elgin and in Hillsborough, and it is known to exist in Hopewell in considerable quantities, by an old discovery; when its value was unknown, which late searches have failed to recover. The Princess Alexandra, East Albert and Prince of Wales companies, of which Mr. Blight is manager, have each expended large sums in freehold leases and prospecting work, but excepting the finding of comparatively narrow veins of Albertite nothing has resulted beyond the very useful employment of labor in the locality. In Rosevale and other districts are found large quantities of oil shale or bituminous rock, containing about 45 to 50 gallons of refined oil per ton, besides a residuum of pitch or asphaltum, making the whole volatile matter over 60 gallons to the ton. The oil is very pure and exceedingly valuable for illuminating purposes. Mineral oil exudes from the soil on McLatchey's farm in Hillsboro, and at Hopewell Hill, but the coming millionaire, who will first strike a flowing fountain, is not yet known, either to himself or others."

Daily Telegraph - Aug. 7, 1880 Albert County. - ... Mineral Deposits. - Albert affords a fine field for the geological explorer, and the justly celebrated Hugh Miller would have found, here, many Schools and Schoolmasters to excite interest and stimulate his favorite study. Accepted theories might, however, be more disturbed than strengthened by a critical examination of the characteristics of this district. A considerable belt of metalliferous rock,follows the higher ranges from Shepody Mountain, westward to St. John County, and contains more or less of gold, copper, tin, iron and telluride - quicksilver has lately been discovered, the locality known only to a few, andasbestos is reported near the western line, a short wayfrom the Bay shore. Alma is the parish richest in metals so far as known, and the copper beds there have exchanged owners at high rates, though little has yet been done in working. Pockets of manganese may be seen at Waterside and Germantown in Harvey and in Hopewell, where theMessrs. Steadman expended $60,000 in erecting works for manufacturing chemical products from local deposits. Lime rock is plentiful in Elgin, Harvey, Hillsborough and Hopewell, and in the last named parish, a company is engaged in its burning and preparation for market. Marble exists in several places, but has not yet attracted the attention of capitalists.Very fine freestone is found all along the shore of the bay and on the Petitcodiac. Two quarries at St. Mary's and one at Curryville on the railway line are being worked at present. Gypsum of the best grade outcrops in many places.The rock is being exported from Hopewell, about 3,000 tons being now ready for shipment; and in Hillsborough the Albert Manufacturing Co., at present managed by Joseph T. Tompkins, Esq., has, since 1854, carried on a large business. The proposed capital was œ50,000, and, in this case, the objects of the original charter have been exceptionally well carried out, though always laboring under the disadvantage of the high tariff of the United States. The company has continuously afforded local work for a number of men at all seasons, and has greatly promoted the carrying trade. Railways have been built; a superior factory has been erected to replace the one burned; and, with the necessary equipment of wharves, stores, warehouses, etc., the company has added much to the appearance of the village. The excavating, road making, trucking, cooperage work, grinding, calcining, barrelling, shipping, etc., have for a number of years secured for Hillsborough a hum of which few villages can boast. The recent increase of 7 « per cent duty on imported calcined plaster has, perhaps, enabled the company to place larger quantities in the Canadian markets, whatever may have been the counteracting influences of the tariff regarding it in other directions. The Hillsborough Plaster and Railroad Company of 1851 has not continuously operated. Other valuable gypsum properties are held by Sir A.J. Smith and others. Of these James Blight, Esq., is local agent, and this gentleman, in fact, did a great deal of initiatory work in developing the business. Coal in limited seams may be seen in everyparish, mostly cannel of inferior quality, but the most important carboniferous deposit, yet discovered, lies in the interior of Hillsborough. This has long been called Albertite, and was first noticed, accidentally, by the Messrs. Duffy in 1848, was obtained from the Crown in January, 1850, a mining licence over a mile square, and their rights were shortly purchased for œ3,000 by a company, of whom the late Edward Allison, Esq., was the chief promoter. A charter was granted in 1852, and the noted lawsuit ensued between Henry Gesner, Esq., a proprietor of the soil, vs. the Albertite Mining Co. Wilmot, J., the late Hon, J.M. Johnson and Hon. J.H. Gray, now a B.C. judge, were among the counsel employed. The trial lasted several weeks, and the twelve jurors, who were instructed to determine and report, what the substance was, must have found their first lessons in geology rather tedious while listening to words of learned length and thundering sound, employed in the testimony as given by several of the most celebrated scientific men of the Continent. The substance had the chemical properties of coal, but the geological formation differed from all recognized theories. It differed from the Trinidad asphaltum in luster and fracture. Morning Journal - Oct. 11, 1867 Exhibition. - Minerals. - Messrs. G. & B. Matthews, who have devoted particular attention to the Mineralogy of New Brunswick, Mr. Janion, who represents Messrs. Johnston & Co., of Liverpool, who are still carrying on their search for Copper at Letete, Charlotte County, Mr. W. Shea of Carleton County, Mr. J.J. Fellows, of Fellows & Co., Mr. E. Withers of Shediac, Mr. Scoullar, and Mr. Davidson are the principal exhibitors. Some of these collections are very similar to what they were when shown in former exhibitions, but the rich specimens of gold, obtained on the Becaguimec by Mr.Shea, the silver-bearing Antimony from York, the fine show of copper from Letete, the rich copper ore from Ellet River, the Manganese shown by Mr. Markham, the building stones from Albert (Mr. Stevens, exhibitor) and other places, the salt from Springhill, shown by Mr. Allison, form additions to our mineral collections which are of great interest, and which suggest that even in mining, New Brunswick may yet take a high place. A thorough Geological survey of the Province will shortly be made, on the part of the Dominion, and under the management of Sir William Logan, which will have the effect of doing much to determine what prospect there is that mining operations in this Province may be undertaken with scientific sanction."

Moncton Daily Transcript - Oct. 2, 1888 The mineral possibilities of New Brunswick are greatly underestimated; and the time is not far distant when, as a source of wealth, they will be energetically developed. The statistics of output of minerals last year, are imperfectly collected, and no adequate conception of the output is at hand. The statistics collected by Mr. Eugene Coste, of the geological survey, such as they are we give. He places the mineral output in New Brunswick last year at the following rates: - Quantity ValueGrindstones… 3,582 tons $38,938 Arsenic… 100 pounds 4 Coal… 10,040 tons 23,606 Copper… 2 tons 200 Graphite… 300 tons 2,400 Gypsum, crude… 29,102 tons 29,266 Manganese… 939 1/2 tons 21,260 Granite... 6,289 tons 15,125Building stone (3 returns)... 6,871 cubic yards 52,901Lime... 478,410 103,463Brick, thousand... 6,476 43,454 -- Total value... $330,667 The estimate is altogether too low. The output of grindstones and building stone are absurdly low. The output of granite is placed at $15,125, whereas $100,000 worth is known to have been shipped to the western provinces. The matter is an important one, and the bureau of statistics should make some effort to

Morning News - Oct. 2, 1861 Provincial Exhibition. - … at Sussex Vale … The Mineral Department was very complete, there were hundreds of specimens of all kinds of Minerals, unless silver be expected. A number of gentlemen in different parts of the Province sent extensive collections of Clays, Shales, Coals, and Ores of various descriptions; but as this is a very important feature in the Exhibition we intend to notice it more fully at an early day. At present, it is sufficient to say that nearly every portion of the Mineral Kingdom was represented. A noble block of Coal from the Albert MiningCompany, attracted great attention, and a keg of excellent butter salt from the Salt Spring in Sussex was much praised. There were samples of Grindstones and Building Stone from all parts of the Province, as well as Alum from the Chemical Works in

Morning News - Feb. 6, 1861 Albert County. - ... Mr. Duval was then introduced. His subject was ""Albert County - its Mountains, Mines, Minerals, Manufactures, Marshes and Mud."" ... Messrs. Steadman's Chemical Works at Hopewell were spoken of; these had not proved a paying speculation; the manufacture of Manganese was still continued, and he believes with profit. The Grindstone Manufactory of the same gentleman now in successful operation below the Bend, was noticed. Grindstones were made at various other places, and it was a beautiful sight to see the way these were manufactured."

Codes 0763 / 0425 / 0691 / HILL / Z2 / SPRI / IDX_Names: Jordan Mountain Manganese; Millstream Iron; Markhamville Manganese; Grey Brook Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Mineral Springs;

Weekly Record - Fri. Jun. 16, 1893 Charters letter #3 (extract below) .... The mineral displays from Ontario, Quebec and British Colombia are certainly fine and deserving of the highest praise. To the dismay and disgust of all Nova Scotians the mineral exhibit from that province is mean and unworthy: from New Brunswick nothing was expected, as the Local government did not take any active part, but in Nova Scotia it was understood the government had enteredinto the spirit of things vigorously and liberally and of all other objects the mines should have had a splendid showing. As it is, while quite a few minerals have been sent forward, nothing massive was forwarded to denote the vast coal, gypsum, iron and gold wealth of the province. It is much to be regretted so poor a showing has beenmade. From New Brunswick the Albert Manufacturing Co., have sent a tasty exhibit of ordinary and alabaster plaster, which causes much attention. The manganese ofMarkhamville and Jordan Mountain; the freestone from theMiramichi stone quarry near Newcastle; the magnetic iron,gold and silver and copper ores from Messrs. Payne &Ellis, of Bathurst, all have occasional inquirers. Smith's mineral water from Apohaqui is also here, but there is as yet no systematic showing of it. In a stone jug tightly sealed up, its virtues will probably never be known, unless John has some one to open it out to the admiring gaze of the public. I might say the shaft and bases representing the gold yield of Nova Scotia causes much comment. The statement thereon shows that up to 1893 the quartz crushed was 762,036 tons, and yielded in gold 551,000 ounces, or something over eleven millions in gold. To be more correct and account for stolen gold, and gold obtained on which the government never received any royalty, about one-third more should really be added to this total...."

St. Andrews Beacon - Mar. 13, 1890 Allusion was recently made to the discovery of valuable minerals on Mr. A.J. Seelye's property at St. George. This mineral property, a St. George correspondent informs us, is over a mile square. It abuts on the Magaguadavic river and basin, just below the village of St. George, close to Silver Island, which miners think is a dropper from the main lead, and as there is one well defined on Mr. Sellye's property at high water mark, where fine silver ore has been obtained on the surface, it points strongly to the existence of the main lead there. There is also a fine water-power at tidewater close to shipping, which could be used for crushing ore or for any other purpose. The silver lead runs close beside it. Trout abound in the stream and there is an abundance of game on the land. There are several leads on this property, says our correspondent. The sample of copper from the copper lead is pronounced fine byjudges. There is also a promising slate quarry in the near vicinity."

Codes AGGR / Z2 / IDX_Names: Sand, Gravel; Sandstone, Building Stone, Monument Stone, etc.;

Daily Telegraph - Feb. 11, 1881 The Portland Rock Cutting Case. - Mr. McGourty Heard From. - Sir: On Saturday, 29th of January, the Town of Portland commenced a private prosecution against the subscriber for quarrying stone off private property in the vicinity of Zion's church. Mr. Editor, I think the facts of the case may interest property owners and rate-payers of the Town of Portland and particularly of Ward Four. About the 20th of January I made arrangements with Mrs. Frost to cut some rock on her property, next Zion's Church, in Ward Four. It was necessary in carrying on my blasting openly to get permission to use the street. I got the usual verbal permission from two councillors and I will state, without fear of contradiction, that in six years that I have been working in Portland, on many of their streets, excavating, I never was asked for a written permit from a councillor, and did not know that it was necessary; but in this case a musty bye-law was unearthed, and I am hounded down by a councillor and rival contractor; one of them has brought me before a magistrate, and the other goes to Mrs. Frost and offers that lady $50 to break the bargain she had already made with me in reference to the cutting. Mrs. Frost could not be bought; and, of course, when they could not succeed, after stating that I could and would get permission from the town to improve the property in question, the case was taken to the public police court, where, of course, I was fined. Comment on the whole thing is unnecessary. However, if the intelligent representatives of the town stand that sort of business, I don't wonder at their having several lawsuits on hand. Of course we have appealed the matter. I remain, Sir, Yours, etc. John McGourty. St. John, Feb. 10, 1880."

N.B. Reporter - Nov. 11, 1896 Stone for the Streets. - Having decided to purchase a road making plant and stone crusher, a number of the City Council accompanied by Prof. Bailey and Roadmaster McKay drove up to Currie's Mountain on Saturday afternoon last, to ascertain if the stone there, which had been referred to at the Council meetings, wassuitable for road purposes. A report has been drawn up by Prof. Bailey going very minutely into the kinds of stone necessary for road making, and referring as follows to that at Currie's Mountain: Of the road-building materials to be obtained near Fredericton, the first to be here noticed is that which has so long been used, viz., the grey sandstone and grits of the coal measures. Though abundant in quantity, and obtainable at moderate cost, experience has abundantly demonstrated their unculability. Though composed of hard material, the rock is brittle and its cohesion small. If used at all, its cementing power would probably be somewhat augmented by the admixture of a small amount of lime and limestone rock. Secondly: a possible source of the road bed supply is that of the hard slates and sandstone or quartzes which border the St. John river on its western side from near Spring Hill, northward, and on the Keswick ridge. Apart from their remoteness, these rocks are not to be recommended, and for the same reason as before; they are both brittle and destitute of binding power. A third material available for roadmaking, is river gravel, and it may be obtained, and cheaply obtained, at the head of many of the islands in the St. John river. There are many who speak highly of the roads made of such gravel, but says Prof. Slater, the experience which has been gained in Massachusetts, is to the effect that, save under rarely occurring conditions, the use of gravel in the construction of roads, is not to be recommended, and this for the reason that the rate of wear of the material is in general so rapid, that the cost of repairs, when capitalized, make highways of this description more expensive than are those which are constructed of macadam. The last material to be noticed is also the best. This is the trap or volcanic rock of Currie's Mountain. This rock, if not identical with essentially the same as that which under the name of diabase, is found in many parts of New England and which is there extensively used for road making. Prof. Slater of Harvard, says of such rocks, Their fitness for road building has been very extremely tested and amply proved. Again he says, The ordinary dyke stones (diabases, etc.) of eastern Massachusetts are abundant and generally of an excellent quality. It is to be noted that these dykes appear to be much decayed on or near the surface. Rarely, however, does this decay extend to a considerable depth, so as to limit the value of the stone for road use. The relative power of wear of these rocks was found by careful testing, to vary from 15 as compared with granite 10 to 13, carboniferous grit 10, essentially the same as our sandstone, slate 8 1/2, limestone and marble 2 to 6."

IDX_Names: Sussex/ Plumwesweep Salt; Grey Brook Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Albert Mines; Oil and Gas - Kings Co.; Geology - General;

Morning News - Nov. 21, 1855 Geology of New Brunswick, &c. - At a recent meeting of the Boston Society of Natural History, held in this city, some interesting reports were submitted, a portion of which related to the Geology of this and the adjoining Province of Nova Scotia. Those who have an interest in the development of the mineral resources of the Provinces, will be gratified to see that we have within our borders a field for investigation, and whichit seems has attracted attention. From the Boston Traveller, which contains an account of the meeting referred to, we learn that a variety of mineral specimens were laid before the society, as the products of this Province. Among these were two very pretty fossil star fishes, which were presented by Robert Foulis, Esq., of this City, a corresponding member of the society. They were obtained from the postpliocene marls near the gas works, and in return the unanimous thanks of the Society were voted to Mr. Foulis for this and several other donations. During the past summer, Dr. C.T. Jackson was employed by C.D. Archibald, Esq., of London, to make Geological explorations in those provinces. In company with John L. Hayes, Esq., of Washington, the Doctor 8 commenced his search at St. John, and traced rock formations hence along the road leading to Petitcodiac. At the meeting referred to, Dr. Jackson gave a brief sketch of the Geology of New Brunswick and Nova Scotia, and described some of the species of rocks found in these Provinces. We condense his remarks. In St. John, he says, ""we found slates and metamorphic limestones, which, from the occurrence of them of a bed of hard sandstone containing a fossil tree, are regarded as belonging to the Devonian group. No molluscs, or indeed any fossils, are found in the limestone, which is made up of a mixture of the blue and grey varieties, highly metamorphosed by heat, and much disturbed in their stratification. Masses of Sienite, consisting of flesh-colored feldspar and hornblende, without much quartz, are observed at Indian Town, and are rocks of igneous origin. All along the Kennebecasis river, are observed red sandstones of the old red or Devonian group, and atSussex Vale we come to the celebrated salt springs, which rise from the saliferous sandstones, and produce by evaporation the finest and most agreeable table salt. In Hillsboro' we find the lower members of thecoal series, so remarkable for the abundance of fossil fishes of the genus Paleoniscus, and for that highly bituminous quality of coal which has been called Albertite. Hills of snow white gypsum, and some extensivebeds of Anhydrite, occur in Hillsboro', and in otherparts of Albert county. Naptha Springs also exist near the shores of the Petitcodiac river, and Petroleum floats on the surface of the waters that arise from them, and is deposited as a soft bitumen among the grass roots, and in the soil, it being left in its thickened and oxidized state by the water, as it periodically rises and falls with the seasons. On reaching the mouth of Chepody Bay we come to Mary's Point, and Grindstone Island, where beautiful buff-colored, and light red sandstones, of the Carboniferous Group, are quarried for building stones, and a blue variety of the same formation which is used for making grindstones is found. The Mary's Point quarries present a scene of activity, owing to the enterprise of Mr. Archibald, who has employed upwards of seventy-five quarrymen, under the directions of Mr. George Lang, in quarrying out the freestone for architectural uses. - Those sandstones are found to be of excellent quality for building purposes, and are now being largely imported into the United States under the Aegis of the reciprocity Treaty between the United States and Great Britain. Mr. Alger has demonstrated the durable nature of this sandstone, before this society, and our observations authorise us in confirming his opinion, that it withstands the action of the frost even in the climate of St. John. The largest amount of the stone is of a yellowish 9 tint, or buff-colored, but there are also beds of lightred, and grey-colored varieties. They belong to the true coal bearing strata, as is proved by the fossil plants clearly impacted between the beds of stone, and thin seams of bituminous coal, occasionally discovered in them. An outline of rock called the ""Squaw's Cap"" presents us with an abundance of fossil trees, and roots, with smooth and striated surfaces. Occasionally we find siliceous nodules in the blue sandstone, which are called ""bulls-eyes"". They injure the grindstones when they occur, and stones containing them are avoided. Grindstone Island is one mile long, and half a mile broad, and is estimated to contain about 140 acres of quarry stone. The average height of the island above highest tides is 60 feet. In obtaining slabs of the blue sandstone for making grindstones, the tides perform valuable services, for the quarryman has only to split out the rock at low water, and fasten it by chains to his flat boat and allow the rising tide to float it, so that he can transport the stone to high water mark, and leave it where he can work upon it at his leisure. The best grindstones are obtained from the strata which are submerged at every tide. The strata all dip down under the Bay of Fundy, at an angle of 38 degrees to the southward, and the trend of the strata is nearly east and west. The extensive quarries are supplied with heavy and massive cranes and a railway, for the removal of the stones to the wharf, where they are put on shipboard. On examining the ""posts"" of the quarry, we found that stones of from one foot to eight feet in thickness, and of any length and width, could be obtained, and that a supply of coloured stones could be procured in abundance. Most of the stones sent from Mary's Point are sold in New York, Philadelphia and Baltimore, no agency having yet been established in Boston. The exploring party next travelled around the head of Cumberland Bay, and reached the Cobequid Mountains, they found rocks of igneous origin, and colored slate, which lay under the grey sandstones of the coal formation. Mr. Dawson describes these slates as belonging to the Devonian order; contiguous to them are extensive deposits of ocherous oxide of iron, with different species of iron ore, and manganese carbonate of lime, known under the name of ""amberite"". Mr. Dawson has given as his opinion that the immense deposits of yellow oxide of iron have resulted from the decomposition of the carbonate of iron in the antherite. These are the Acadian Iron Mines of Londonderry, N.S. It is supposed that a subaqueous eruption has produced the pulverulent peroxide abounding in these mines. There are small veins, bunches and films of black oxide of manganese in these ores of 10 iron, and this renders them more particularly valuable in the production of steel, since it has been discovered that this ore contains 52 38-100 per cent of pure metallic iron, and if the manganese is all reduced and alloyed with the iron, it will amount to 1 53-100 of manganeseism, the proportion which will make the iron into the finest kind of steel. There is just one blast furnace now in operation at the Acadian mines, smelting these ores, and six Catelan forges are also employed. The iron produced is remarkable for toughness and strength - and is sold exclusively to steel makers in Sheffield, Eng. Since the immediate country around is hardwood forest land, an abundance of charcoal fuel can be obtained, and there will soon be other furnaces built near the mines. Having completed the survey of the numerous mines near the Acadian furnaces, the Doctor and his associates next proceeded to Windsor, thence to the Valley of the Annapolis to Nictaux, where they examined the inexhaustible beds of iron ore which are worked by Mr. Archibald, and have been named the Victoria Mines. Geological examinations of these ore beds were first made in the year 1827 by Mr. Francis Alger and Dr. Jackson. These beds are remarkable for having a great profusion of fossil shells, seeming to indicate that these ancient molluscs had a preference for an iron bed rather than one of clay. - The Report indicates that there are Orthocera and several others, as yet unknown or undescribed molluscs, in these ores, and it is difficult to determine their species. They all appear to belong to the Niagara and Clinton Groups of the New York system. One of the most curious phenomena presented at these mines is the magnetic state of some of the ores, while others not far removed are wholly devoid of magnetism. A great number of mines have been opened lately on these ores, and some new beds have been discovered since the original survey was made. There are two beds, which vary in thickness from 6 to 10 feet, and they have been traced 5 miles in length, and probably extend to Bear River. There are several distinct beds beneath the main ones - very compact and magnetic, others are softer and not magnetic ore. The last variety is seen in the red slates of Little River, and the others near Nictau River. It was found impossible to rely on the compass needle in surveying the magnetic ore beds, for the needle was static over them, and was attracted even when quite remote from the ore - the North point invariably pointing towards the iron ore. These mines may be considered to be inexhaustible, and the wood of the country around, though it may supply fuel for many years, is not adequate to smelt more than a small proportion of the ore in view. Hence it is advisable to export much of the ore to the United States, as well as to make charcoal iron for steel on the spot, for exportation to England. 11 This is being done under the new laws of reciprocity in trade with the British Colonies, which will allow of the exportation of Anthracite to Nova Scotia, free of duty; but the iron made in Nova Scotia cannot be brought to the United States without paying duties, and hence it will be sent to England. Anthracite will smelt the Nictau ores with great ease and iron made will be good but not so valuable as charcoal iron. The result of smelting of the ores proves that either white forge or grey foundry pig iron can be made equal in toughness to that from Russia and Sweden. It also makes fine cast steel, as has been proved by trials made of it in Sheffield, Eng. John L. Hayes, Esq., confirmed Dr. Jackson's statement with regard to Nova Scotia iron. He remarked also that iron, manufactured by means of charcoal, was the only iron used in the chain cables of the U.S. Navy. He thought the value of the charcoal iron over anthracite iron was

S.J. Daily Sun - Nov. 2, 1888 Bathurst. - New Quarry and New Buildings. - (Cor. Newcastle Advocate). - Bathurst, Oct. 24. - ... Frank Scott, of Clifton, has made an important discovery of a quarry of superior building stone on the line of the Caraquet and Shippegan railway. The stone is dark red incolor, of good quality, and Mr. Scott states that it is there in unlimited quantities. In color it presents a great contrast to the building stone quarried at French Fort Cove, Newcastle, and would make a superior trimmingin buildings erected of the grey freestone or vice versa. A company is being formed for the purpose of working this quarry. ... The new R.C. church, the exterior of which is about completed, makes a handsome appearance. It is built of grey granite with trimmings of grey freestone from French Fort quarry, and with slate roof. The windows are being placed in position, after which work will be discontinued for the season. The interior will remain unfinished for the present. This fine building was erected under the superintendance of W. Lawlor of Chatham."

S.J. Daily Sun - Sep. 6, 1887 St. George. - A Never Ending Supply of Granite and Slate. - (St. Stephen Courier). - A massive block of granite has been taken out this season at Alexander Taylor's quarry, and is now on exhibition there. It is 60 feet long, 12 feet thick and nine feet wide.Marked improvement is noticed in St. George since a year ago. One citizen painted his house; then another did likewise, and still another, until the spirit of improvement became contagious, with the result that now many of the dilapidated buildings are painted and repaired, and the town has a tidy and decidedly progressive appearance. The future of St. George is built on a foundation of rock, and neither time nor tide, the fall or rise of stock, annexation or free trade, can hinder it from becoming a large and beautiful city. Firm as the eternal hills from whence its material is derived, the granite business of this town will continue to boom for hundreds of years to come, until the quiet hamlet will have emerged from comparative obscurity into a well populated and thriving community. The streets are now deserted in the day time, to be sure, but that only indicates that every man and boy is at work, and earned good wages, too. To learn the stone cutting trade a boy has to be an apprentice for three years, receiving for his labor the third year one dollar per day. After the trade is mastered a fair workman is insured steady employment the year round at $2.50 per day. Nearly every year now records the establishment in the business of a new firm. This year Collmer, Wallace & Co. have been initiated. They have commenced on a small scale, but expect to be able to enlarge their business year by year. Besides the never ending supply of red and gray granite that is here, we might also say that there is an inexhaustible supply of slate. This is situated on Col. Wetmore's and Mr. Johnson's estates, the vein extending from the southern boundary of the first name gentleman's land to the bed of the river. This slate will ultimately be a mine of wealth, as there is not a single desirable slate quarry in the maritime provinces, and the duty on slate is 30 per cent."

Royal Gazette - Mar. 22, 1854 Cap. II An Act to incorporate The Albert Manufacturing Company Section. Section. 1. Company incorporated 5. President and officers; with general powers. Supplementary and general 2. Capital; power to powers. increase; votes; payment 6. Shares to be personal of stock. property and assignable. 3. First meeting to organize.7. Liability for debts. 4. Annual meeting for choice 8. Forfeiture of Act, how of Directors. incurred. 9. Right of Way, how obtained. Passed 20th March, 1854. Whereas the Township of Hillsborough, in the county of Albert, possess advantageous situations for the 2 building of Mills for manufacturing Lumber, Plaster andother articles, and for quarrying Plaster, Lime Stone,Marble and Free Stone, and for Mining purposes: And whereas in order to procure the requisite capital, it is desirable to incorporate into a body politic and corporate such persons as may be willing to advance fundsfor such undertaking; Be it therefore enacted by the Lieutenant Governor, Legislative Council and Assembly, as follows:- 1. That Calvin Tomkins, William H. Steeves, and Walter Tomkins, and their associates, successors and assigns, be and they are hereby erected into a Body Politic and Corporate, by the name of ""The Albert Manufacturing Company,"" and by that name shall have a common Seal, sue and be sued, plead and be impeded, answer and be answered unto, defend and be defended in all Courts and places whatever, and shall have power and authority to purchase, hold and enjoy lands, tenements and hereditaments, for them, and their successors and assigns, and all other powers and privileges now incident to a Corporation by Act of Assembly of this Province, for the purpose of building a Mill for manufacturing lumber, plaster and other articles, and trading in the said articles; quarrying plaster, lime stone, free stone, marble, and other building materials, and trading in the same, and conveying the same to market; opening and working mines, and transacting other business connected therewith; and constructing and making such rail roads or other description of roads as may be deemed necessary for the transportation of such articles from the quarries to the place of shipment; and also that they the said Company, or a majority of them, shall from time to time and at all times have full power and authority to constitute, ordain, make and establish such bye laws and ordinances as may be deemed necessary for the good rule and government of the said Corporation, provided that such bye laws and ordinances be not contradictory or repugnant to the laws and statutes of this Province, and those in force within the same. 2. The capital stock of said Corporation shall be fifty thousand pounds current money of the Province of New Brunswick, with liberty to increase the same to the sum of one hundred thousand pounds, to be divided into shares of twenty five pounds each, to be paid in at such times and installments as the business of the said Company shall require; and every person who shall be the holder of one or more shares, shall be entitled to vote either in person or by proxy, having one vote for each share as aforesaid; and it shall be lawful for said Corporation to take lands, quarries, buildings, wharves, machinery, mining rights or privileges, in the place of money, in payment of any instalment or instalments due on any stock subscribed therein, at such valuation as a majority of all the subscribers shall fix, said payment 3 to become void if satisfaction titles or conveyances to the Corporation be not made at such a period as said Corporation may by any bye laws or vote direct after its organization. 3. The first meeting of the said Corporation shall be held at Hillsborough, in the County of Albert be called by William H. Steeves, or in case of his death, neglect, or refusal, by any two of the said Company, by giving notice in one or more Papers printed in the City of Saint John, in this Province, at least thirty days previous to such meeting, in order to organize the said Company, and for the purpose of establishing bye laws, and choosing such number of Directors as by the said bye laws may be prescribed; which Directors so chosen shall continue in office until the first annual meeting, or until re-election, or others are chosen in their stead; and the members of the said Company, or shareholders present, or appearing by proxy, shall organize said Company, establish bye laws, and choose Directors of the said Company, by a majority of votes. 4. The shareholders shall meet annually at such time and place as may be appointed and regulated in and by the bye laws of said Company, at which meeting the shareholders present in person, or by proxy, may either continue in office the Directors before appointed, or any number of them, or may elect a new body of Directors to supply the place of those not continued in office; provided always, that the omission to meet shall work no forfeiture, but the shareholders may be afterwards called together for that purpose, by one or more of the Directors of the said Company for the time being, or by any three of the shareholders. 5. The Directors of the said Company, or a majority of them shall choose a President and such other officers as they may deem necessary, who shall hold their respective offices until others are chosen in their stead; and the Directors, or a majority of them, shall have full power and authority to manage the concerns of the said Corporation, subject to the bye laws thereof, and the regulations herein contained, may appoint and employ any agent or other persons by them deemed necessary, and may declare dividends of the profits according as the interests of the Company may admit or require; but no person shall be eligible as a Director unless such person is a stockholder, and over twenty one years of age; nor shall any sale or purchase of real estate be made by them, except by consent of two thirds of the stockholders, voting as provided in Section second. 6. The shares of capital stock in the said Corporation shall be deemed personal property, and each shareholder thereof shall be entitled to a certificate for the number of shares subscribed or held by him, which certificate shall be signed by the President and Clerk or 4 Secretary of the said Corporation and shall certify the property of such shareholder in the said shares; and the shares of the said Corporation shall be assignable in such manner and form as the bye laws may prescribe, and the assignee of any share or shares shall be a member and stockholder in the said Company; and whenever any shareholder shall assign or transfer all of his stock or shares in the said Corporation, he shall cease to be a member 7. The joint stock and property of the said Company shall alone be responsible for the debts and engagements of the same. 8. Provided always and be it enacted, that unless ten per cent. of the capital stock shall be paid in for the purposes of the Corporation, and a certificate of such payment, signed and verified on oath by the said Directors, or a majority of them, (which oath any Justice of the Peace is hereby authorized to administer), shall be filed in the Office of the Secretary of the Province before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years. 9. And whereas also it may be necessary for the said Corporation to obtain a right of way for a rail road or other road, over the lands of other persons, from their quarries to their wharves or place of shipment; Be it therefore enacted that in case where the Corporation cannot amicably agree with any person or persons as to the value of, or damage done to his or their lands, by the making of any rail road or other road by the said Corporation, from their said quarries to their wharves or place of shipment, then it shall and may be lawful for the said Corporation to obtain from two Justices of the Peace for the County where the said lands may lie, an appointment in writing under their hands, of disinterested freeholders of said County who shall under oath to be adminstered by either of such Justices, appraise the fair value of the land to be appropriated for said rail road or other road, or the damages thereof, to the said party or parties over whose land the same may pass; and upon the payment by the said Corporation of the amount of such value or damages to said party or parties, or upon a legal tender of the same by the Corporation or their Attorney for that purpose appointed, it shall and may be lawful for the said Corporation, by their servants, agents, or hired men, without further notice, to constuct such rail road or other road, and to pass and repass over the same at all times and with such things and in such manner as they may think fit; provided that if the owner or owners of any such land required for the for the purpose of such rail road or other road, be absent out of this Province, or cannot be found therein, or be incapacitated by reason of insanity, infancy, 5 coverture, or other disability, to receive said money or a tender thereof, then payment by the said Corporation of the amount appraised to such absent or incapacitated person may be made into the Court of

S.J. Daily Sun - May 10, 1886 Albert County (The Weekly Observer). - ... Albert County is rich in minerals which have not yet been properly developed. The coal, gypsum and freestone mines are about the only ones worked and these are imperfectly developed for want of sufficient capital.In 1881 the output of coal was 18,368 tons, of gypsum 435tons, of freestone 81,948 cubic feet. To persons withplenty of capital there are many excellent opportunities for profitable investment in stone quarries and other valuable minerals. A ready market for freestone is found in the United States, where it is worth at least $14 per ton. The estimated cost of quarrying and placing this stone on ship board is $4 per ton, so a healthy profit ought to remain after paying freight and other charges."

Morning Freeman - Apr. 14, 1860 ADVERTISEMENT: Valuable Farm for Sale. By Public Auction. Will be sold by W.D.W. Hubbard, Esq., on the Market Square, at 12 o'clock on Monday, the 16th day of April next, if not previously disposed of by private sale:- That valuable Farm, situate in the Parish of Simonds, on the Lower Loch Lomond Road, fronting on Latimore's Lake, 6 miles from the City, by the Hickey Road. This farm contains one hundred acres, more or less, 15 of which are cleared, and in a high state of cultivation, and cuts 10 tons of Hay. There are four acres prepared for Oats, and manure enough to plant two acres of potatoes. On that portion of the Farm not cleared, there is an inexhaustible quantity of Black Mud, which is very valuable for top dressing. Also a heavy growth of cedar, which is now very valuable for Railway and other purposes. There is also on the Farm a very valuable Freestone Quarry. Together with a new Frame Cottage, one story and a half high, the lower flat of which is thoroughly finished, with a frost-proof cellar underneath. Also a small Barn. This farm would be a most desirable place for a gentleman's country seat, being less than one hour's drive from the City, and having a front of forty rods on Latimore's Lake, the most beautiful Lake in the county, and full of fish of the best quality. For further particulars apply to W.D.W. Hubbard, Esq., or to John McElwain, Mar 31 On the premises."

Morning News - Apr. 19, 1850 ""Gold"" in New Brunswick. - A fact! We shall proveit. A specimen of sharpening stones, was forwarded to us a few days since, from the Miramichi, with a request that we would obtain a practical opinion as to its qualities. This stone abounds in immense quantities on the Tomoganops, a branch of the Northwest, so called, and is pronounced to be equal in every respect to the Turkey stone, for which our carpenters pay one dollar per pound. This stone possesses rather an advantage over the Turkey stone, as it can be used with water as well as oil. Persons are already actively engaged in Miramichi in cutting and dressing this stone. - The value of the export of sharpening stones from Turkey (said to be the best in the world) amounts to millions of dollars. Now only think of it. We have an inexhaustible quarry of stone, as good, in this Province, every pound of which will be worth a dollar, which is equal to gathering gold dust on the Sacramento. There is no ""hearsay"", or ""we understand"", about this. It is positive. The stone was sent to our office, and we immediately put it into the hands of several carpenters of experience and respectability, with a request that they would pronounce an impartial opinion; and they all agree that the stone is of the most superior description, equal to the article they pay a dollar a pound for. Here then is a mine of wealth itself. The riches of this province we believe to be equal to those of the most favored land on the face of the globe - not excepting California; but enterprise and capital are required to turn them to account. We further learn from Miramichi, by private letter, that there is asuperior description of clay in that section, fit for manufacturing delf, earthenware, and all articles of crockeryware; and if the Americans had such clay as this in their own country, they would manufacture crockeryware themselves, instead of importing it from England, for want of the raw material. This province also abounds extensively in the article of black lead, iron, lead, copper, coal, &c., &c. But, it is all useless to us. Now suppose this province were a state of the Union, and enterprise and capital could be infused among us, who can doubt but that this would be the very richest state on all the continent? But, our wealth is destined to remain in the bowels of the earth, until some great political convulsion overturns the present order of things - and when the landmark of prejudice, and of geographical nicety, shall disappear between the two people, we may expect to go on our way rejoicing, and reaping the rewards of plodding toil. We starve in the midst of plenty. We float upon a wreck, perishing of thirst - the ocean rolls around, but its waters cannot be converted into refreshing draughts, from want of the necessary apparatus to destroy its saline particles. How long must we continue so? - Heaven be merciful to a people whose land has been blessed with bounties in such rich abundance! Are we to toil on from day to day - men of intelligence - without making an effort to bring our country before the eye of the world? Thousands, nay millions of capital, are out at ragged interest in England and the United States, unrecuperative, unproductive; yet because our country is not known, scarcely beyond its own limits, the people are doomed to trudge along over mines of wealth, with poverty staring them in the teeth - bread scarcely to be had. We hope that some of our American contemporaries will take notice of the prominent points of the above article, that their readers may see what sort of a place ""down East"" is? Since writing the above, we are informed that a gentleman has arrived here from Miramichi, on his way to the United States, with a box of the stones before mentioned, to see what our neighbors think of them. Good luck attend him."

Codes L1 / Z2 / Stone, etc.; IDX_Names: Saint John Graphite; Sandstone, Building Stone, Monument

Morning News - Aug. 14, 1850 ""Gold"" in New Brunswick. - If this Province were thoroughly explored, it would be found that we possess as much real wealth, as is contained in the placers of the Sacramento; and our young men, instead of going abroad to gather gold, and risk their lives, would be induced to remain at home, where a better remuneration would reward their toils; and the day will shortly come when this will be the case, for our people are gradually becoming acquainted with some of the hidden treasures of our New Brunswick soil. A few months ago, we had the pleasing task of writing a short article upon the valuable sharpening stone recently discovered near Miramichi,which carpenters in St. John pronounced to be superior, and worth from 3 to 5s per pound. This morning we have a still more gratifying duty to perform. Within a mile and a half distance from this city, near the Falls, a discovery, consisting of black lead, was a short time since made, which bids fair to become a great and valuable staple article of export from this Province, equal to gold itself. A company, consisting of six spirited gentlemen, was at once organized - they leased the ground from the Government, consisting of a superfices of three miles in extent; and set men to work to dig. A specimen of this lead, got out yesterday, may be seen at our office - it is as pure as if it had been manufactured for use, whereas in England, from where we 5 obtain our black lead, the yield is only 70 per cent to the miners, the other 30 being of foreign substance. The supply near the Falls is inexhaustible. The surface of the earth for two miles is coated with it, and the deeper it is dug, the purer is the quality. Millions of tons of black lead, superior to any in the world, now lies at our feet for use and exportation; and our readers may have some idea of the value of the article when we inform them, that our merchants have been in the habit of importing black lead from England, and paying 38s per hundred weight for it. The article as it is dug, will command in the English market œ20 a ton - and a much higher price in the markets of the United States, where, we are informed, the duty is but nominal. The St. John Mining Company - the designation they are known by - have already shipped 44 cwt. of New Brunswick black lead to Liverpool - to New York 240 cwt. - and as much more to Boston. We are told that there is no black lead to be found in the United States - but that it is all imported; and we also learn that so scarce was the article in the market a short time since, that a large establishment in New York had to suspend operations until a supply arrived from England. Mr. Edwin Ketchum, one of the enterprising members of the company, informs us that in the vicinity of this black lead field, iron of the best description, equal to that of Woodstock, abounds. Now, only think of it. Nature has lavished riches upon this land in inexhaustible abundance, and yet it has slept within the bowels of the earth since the world began, without our people ever knowing, or apparently caring, what treasures they possessed. If the fence which separates this rich, yet poor, land from the great nation adjoining, were once broken down through means of an extended commerce and intercourse, New Brunswick would be found to surpass California for wealth, because our treasures are multifarious in their character. But until we have Free Trade, Railroads, or Annexation, our province will not be worth anything, comparatively speaking, to the present generation. It is positively a sin for man to be so indifferent to themselves, when God has done so much for them. Let us now, one and all, take hold of the great railroad as a preliminary step towards developing our valuable resources. Our friends will please call and examine the specimen at our office."

Daily Telegraph - Mar. 9, 1878 Limestone Deposit in Albert. - A correspondent of the Times says it is reported that a company is organized to manufacture lime on a large scale at Demoiselle Creek. This company have secured a limestone deposit from Beatty Steeves and James Nelson, and is now engaged in the necessary preparations, such as hauling free stone for building kilns, wood for fuel, etc. Lime made from this stone is said to be better and stronger than the Greenhead or any other lime made in the province. The rock is very easily quarried. If this deposit turns out to be as good as it is thought now to be, and considering that it is only a few hundred yards from the Albert Railway, it is no doubt very valuable. If half or even one quarter of the lime is manufactured that is talked of, say 40,000 bbls. per year, an extensive business will be done which must greatly benefit everybody in the locality. It is to be hoped that the most sanguine hopes of the promoters of the enterprise will be realized."

Moncton Daily Times - Feb. 18, 1878 Thomas McHenry, Esq., and Mr. John F. Milton are making preparations to burn lime on a large scale the coming season at Demoiselle Creek. As an experiment one kiln is now being burnt. They have secured a large deposit of limestone from Mr. Beatty Steeves. This new enterprise, together with Mr. Hayden's stone works, promises to make lively times on Demoiselle Creek."

Chignecto Post - Jun. 12, 1879 From Hillsboro'.- ... Two vessels have been loaded this week at this place for Boston with stone from the New Brunswick Freestone Company's quarries atCurryville. The Albert Brick, Lime and Cement Co. are carrying on quite an extensive business near Curryville Station. The lime manufactured by this Company is said to be of superior quality; considerable quantities of it has been sent already to different parts on the I.C.R. The Albert Manufacturing Co. are sending large quantities of their calcined and land plaster to different parts of Ontario and Quebec,

Chignecto Post - Apr. 15, 1880 and Moncton Daily Times - Apr. 16, 1880 Albert Co. - Business in Albert is at present booming. - McHenry lime kilns are in operation. - Work commenced on Monday at the Mary's Point quarry. - The Stevens quarry, at Harvey, has just commenced operations, with good prospects of a fine business. The stone is of a superior quality, and is a handsome brown stone. - Post."

Moncton Daily Times - May 4, 1880 Demoiselle. - Work at the Hopewell Freestone Quarry is now being vigorously pushed forward. A large number of men are engaged. Undoubtedly, there will be large shipments of stone from this quarry during the season. Very little is being done at the present at the Lime & Cement Co.'s works."

Codes P3 / Z2 / HILL / J8 / IDX_Names: Albert Lime, Phosphate and Brick Company; Sandstone, Building Stone, Monument Stone, etc.; Grey Brook Gypsum; Albert

Chignecto Post - Jan. 31, 1878 Mineral Development in Albert Co.- Perhaps no part of Canada displays a more varied and richer exposure of mineral ores and earths than the little county of Albert. Convulsions of nature in the earlier ages of the earth's history have tossed up the strata in every direction, placing within the reach of man the hidden treasures of the earth. Our readers are familiar with the almost fabulous wealth yielded by the bituminous deposit known as Albertite; with the Albert shales, which, though unproductive at present, will probably form a source ofwealth in the future; with the plaster quarries, which, developed by Messrs. Tompkins, is the leading industry inthe county; with the building stone, manganese and marls,which are all more or less a source of wealth. To these minerals, Albert seemed destined to have two more important additions made through the exertions of Thomas McHenry, Esq. The upheaval of Shepody Mountain has disclosed, according to geologists, the sub-carboniferous formation, the oldest of stratified rocks except the Devonian Series. During the ages when the sub-carboniferous rocks were in process of formation, the following substances were also formed in their order, viz: (1) lime, or carbonate; (2) gypsum, or sulphate; (3) gypsiferous sandstone, (4) salt; (5) bitumen, (6) bituminous shales, (7) Albertite. All these substances, except salt, have been found in the valley of Demoiselle Creek. Mr. McHenry secured some time since a limestone area on the line of railway two miles below the mines, which, from the fact of being thrown up in cliffs, seemed to offer superior facilities for quarrying. Mr. McHenry proposes to have kilns constructed, a grinding mill erected (for which purpose there is a fine water power) and the manufacture of this article on a large scale commenced early next season. Mr. McHenry also proposes to develop a large bedof clay that exists near the Albert Mines on the property of Hugh Steeves, Esq. No. 1 fine clay is imported from England. New Jersey furnishes an inferior article. It is used in fire-bricks, pottery pipes, etc., in making articles to withstand heat. The Albert fire clay has been tested at Brantford, Ont., by Devos at St. John and by potters in New York. Their report is highly encouraging. The position of these properties - their easy accessibility from all parts of the Maritime Provinces - the easy facilities for transportation by land or water - the cheapness with which they can be developed, owing to the abundance of wood and to water power, render them particularly valuable. These mineral resources will not only furnish a traffic for the railway, but will develop a wealth many times the entire cost of the railway. Such resources are a justification for the large expenditure of Government money for railway purposes."

Daily Times - Oct. 6, 1880 Exhibition. - The Geological Department. - On entering the main building the first branch of exhibits that meets the eye is that of mineral deposits found in New Brunswick. Some five glass cases are filled with this class of exhibits, and it is surprising to know what a large number of valuable mineral deposits this Province possesses. Prominent among the exhibits of this class areseveral blocks of Albertite, from the Albert Mines at Hillsboro, the great value of which may be readily seen on comparison with other species of coal. There is also apillar of polished shale, of a species resembling cannel, found at Caledonia, A.C. Besides these there may be seenspecimens of peat, St. John, granular anthracite, foundat Lepreaux Basin, Charlotte, all combustible materials, and silver and lead ores, the latter in many cases being labelled with paper, and a table given showing the relative quantities of valuable minerals to be abstracted from each. Following up the exhibits in this line, but to be found in other parts of the building, should be noticed two large blocks of Spring Hill coal, from the Spring Hill mines in Cumberland County, N.S., each block containing several square feet, and the exhibits of greyand brown freestone, quarried in Albert and Westmorland Counties. There are two separate exhibits of grey freestone and one of brown freestone. Messrs. J.M. Steeves & Co., Albert County, show four specimen blocks of grey stone quarried by them, and the Budro Company, operating at Dorchester, in Westmorland County, show a large block of grey freestone. A. Stevens & Co., whose quarry is situated at Mary's Point, Harvey, A.C., show three blocks of brown freestone, in an unpolished state, merely having the rough edges broken off."

Codes R4 / Z2 / J8 / IDX_Names: Curryville Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Albert Mines;

Daily Telegraph - Oct. 14, 1874 Albert County. - ... The masonry of the Culvert on Demoiselle Creek, which will be slightly altered in its course, is of the most substantial character, being comprised of large blocks of freestone from the quarry of the Hopewell Quarry Company in the vicinity, the smaller culverts we saw were constructed in like manner. Some of the masons have complained they had not received any pay for four months, and that they were neither able to get away nor pay their board. Plaster. - A short distance above the culvertover the Creek, and about half a mile from the post road, on the left, are enormous deposits of plaster which crops out in solid white cliffs of considerable height along the creek. Some of this plaster is said to be of very fine quality. A short branch line from the railroad will make it available. It is owned by various parties, some portion of the land belonging to the estate of the late Mr. Archibald and some to that of the estate of the late Mr. Howell. ... The hills on the right of this valley abound in free stone, the soil containing large quantities of red marl. Albert mines. - ... The entrance to the mines is up a pleasant ascending road and across a wooden bridge, leaving a row of houses on the right, succeeded by a large engine house and other buildings, above which rises the pit head frame of the new shaft which has lately been sunk at the eastern end of the vein. From this point the road takes a slight turn to the left, and on the summit of the hill, after passing the large general store of Messrs. Willett Bros., we get a view of the situation, which by no means presents the usual grimy appearance of a coal mining district. The place is, in fact, a sort of amphitheatre, hemmed in by wooded rising ground, and is intersected by a deep ravine, in which runs the tramway for the conveyance of the coal to Hillsboro'. On either side the road for a short distance beyond the store are miners houses, after which it runs along the ravine, which is bridged in several places, the most conspicuous object at its western extremity being a large group of irregular wood and stone buildings situated on the rising ground of its right bank, and surmounted by the covered top of a pithead frame and square brick chimney, which points out the principal shaft of the Albert mines. A lofty wooden bridge some sixty feet high runs out from the building, close to the coal shoots for loading the wagons over the track below, which at this point is a perfect net work of switches, for the purpose of depositing coal, a considerable quantity of which lies on the ground. This bridge is connected by an elbow with the opposite bank, where are the office, dwelling houses, stabling, and at a short distance under the hill, in a northwesterly direction, is the cookhouse. In connection with the principal shaft are the engine houses for hoisting and pumping, also a large joiner's and blacksmith's shop. A few hundred yards below this shaft is another dingy group of wooden buildings, also surmounted by the roof of a pit head frame, the smoke issuing beneath which denotes that it is now used as an open-cast shaft for the ventilation of the mine, though as there is still an engine house here, in case of emergency it could still be used for the purpose of hoisting. Almost opposite, across the ravine, and upon the rising ground of the opposite hill, is a very pretty church with a spire, standing out in relief against the autumn foliage of the woods. We have now given the principal features of the scene, and may fill in with miners houses, scattered on both sides of the ravine, vacant pieces of land covered with piles of cordwood, coal, or mining lumber, while here and there rusty iron ventilating shafts rise from the ground apparently without any object except the exhibition of their own ugliness. The Principal Shaft. - There is very little bustle to be seen above ground about the Albert Mines during the working hours, which are only eight, one shift working from 7 a.m. till 3 p.m., and the other from 3 p.m. till 11 p.m. A man or two may be seen standing near a building, but considering there are eighty men employed, one might almost suppose that the coal was extracted by machinery. Crossing the bridge to the principal shaft, we find a comfortable coal fire burning in a movable grate, beneath a spacious chimney. A man stands with his back to the fire, composedly watching the gliding of the wire ""tows"" or cables in and out of the neatly constructed wooden bins, which seems to indulge in the peculiarity of having no bottoms. By and bye a bell vibrates in the engine room at some distance, the ""tows"" slacken their speed, a length or iron chain makes its appearance, and then a square box of coal, which the man pulls on to the bank, wheels a short distance, runs up and attaches an empty one to the tow, which at a given signal rises in the other division. Now a gong, connected by a wire rope with the bottom of the pit, strikes a certain number of blows, indicating what the ascent tow is to be loaded with, long or short timber, tools, slabs, etc., and so on. The shaft is rectangular in form, divided into three compartments, only two of which are visible, the other being in the engine house under the pumping engine, and devoted to the purpose of draining the mine, being furnished with five force pumps at regular intervals, each forcing the water into a cistern above from which it is taken by its successor, the weight of the pump shafts being counteracted by ballast boxes. In the rear of the shaft an old man sits cleaning safety lamps, of which he seems blessed with a never ending supply, and beyond are the drums, on which the flat, oily wire tows are incessantly wound and unwound. Separated by a glass partition is the engine room, where a hundred horse power high pressure horizontal engine incessantly pants and wheezes, sending a ponderous iron bound wooden connecting rod through the wall

to
the crank on the drums outside. The engineer stands at an iron frame with the reversing gear before him, his left hand on the ""cut-off"" and his feet on the brake, a weight ascending and descending in a slot showing the progress of the tows up and down the shaft. It is very easy in case of accident to stop a descent of the mine, but one instance occurred here 10 years ago, of a man being killed by being hoisted and jammed against the pulley. In the engine room is also a small donkey engine, used for turning a large lathe. In another building on the second story, at the end of a large room, is placed, on a raised platform, the pumping engine, known as a ""Bull engine"" from the name of the inventor. This engine is 400 horsepower, and probably the largest in the Dominion. The cylinder, which alone can be seen, is enclosed in a white hooped casing of brick, and the piston acts vertically directly on the pump shaft, which works the whole five pumps, covering a distance of 1,200 feet, the shaft itself being 1,162 feet deep. The valve gear works in an upright iron frame on the floor below, and is not operated by the engine, but by water, in connection with the pumps by an arrangement known as the ""cataract motion"" by which all jar is prevented. The action of this monarch of the mine is peculiar; after a certain interval of rest he seems to be suddenly seized with spasms, and his valves rattle and jerk, in an alarming manner, until he again sinks into lethargy. The diameter of the cylinder is 62 inches, with a ten feet stroke, raising 50 gallons at each stroke, and in case of necessity, at the rate of 10 strokes per minute, 500 gallons could be raised in that time. Less pumping is requisite in dry weather than wet, the water being principally from the surface, but in case of repairs there is sufficient lodgment room below to drain the mine in ordinary cases. The Principle shaft is about 17 ft by 5 ft. The shaft below, now used as an up-cast shaft, is situated on lower ground, and is 982 feet deep. The third shaft, about a quarter of a mile lower down to the east, is in process of being sunk, and has got down to a depth of 600 feet. Here, as we have already stated, a new engine house has been erected, spacious buildings also covering the pit head, and a large horse gin adjoining. The engine room is very spacious and furnished with a handsome pair of horizontal 40 horsepower engines, the connecting rods of which turn a cogged wheel working into a larger wheel fixed on the axis which carries the drums. The engines are by Messrs. Fleming & Sons, of St. John; the arrangement is compact and ample, being completely under the eye of the engineer, standing in the centre, besides being easily accessible. The boilers are on the basement story, though at present there is only one in place. The shaft here was sunk for the purpose of striking the eastern end of the vein, which was lost for some years by a ""fault"", and was, in fact, only recovered about a couple of months ago, though the works at the shaft were commenced last fall. Near this shaft a wooden air shaft has been constructed some 65 feet high for the purpose of ventilation. It is shortly intended to explore on the west, the workings hitherto being principally between the principal shaft and the new one, a distance of about a quarter of a mile. In this space there have been about 14 levels run though three are only used now. Although the course of the vein is easterly and westerly, it varies considerably from right to left, sometimes coinciding with the strata and sometimes not. Occasionally something like crude petroleum is found on the rocks, and possibly this may be the origin of albertite. Markets. - The market for the albertite is principally in Boston, where it is sold to the gas companies, and was also formerly sold to the Kerosene Works. It is worth about $23 per ton. It is very light, always breaks with a fine polished surface, and has the appearance of jet without its toughness and solidity. Miscellaneous. - The present resident manager of the mine is Mr. Blackar. There is a graded school here, with about 75 pupils, the teacher of the superior department being Mr. J.W. Bishop, the other being presided over by Miss Milton. The mines are also visited by Dr. Lewis once a week. The Union Church, though small, has a very agreeable interior, the walls being oil painted in stone work. At one end there is a gallery for the choir, and it is neatly pewed and painted throughout. The company some time ago offered to furnish a reading room for the use of the miners, but somehow or other the idea does not seem to have been fallen in with, although, perhaps in connection with a ""smoking room"" (an institution we have seen under the roofs of very select and ambitious literary clubs) the advantages of the reading room might come to be appreciated. The company have hitherto been very fortunate. For though there have been some serious fires in the mine, the loss of life from accident since the opening of the mines has been limited to three or four men. This probably arises from the extra care which is requisite in working the mine on account of the gaseous nature of the Albertite, nothing but

Weekly Observer - Apr. 7, 1840 ADVERTISEMENT: Stone For Building Purposes. The subscriber having for some time past furnished the United States markets from his extensive Quarries at Mary's Point, Westmorland with Freestone of a superior quality, intimates to the inhabitants of Saint John and its vicinity, that he is ready to take Contracts for the delivery of any quantity of Grey, Blue, Red, and Chocolate colored freestone, of all dimensions, for building or other purposes. Also a superior quality of Grindstones, either for hand, steam or water power. A.W. Andres. Mary's Point, Westmorland, April 4, 1840. – As to the quality and value of the articles for the purposes above described, the public are referred to the following gentlemen, and the annexed Certificates. Ratchford & Brothers, Simeon Lugrin, J. & J.G. Woodward, E..?.. L. Thorne I certify that I have examined the Quarries of Freestone at Grindstone Point, or Mary's Point, in the County of Westmorland owned by Mr. A.W. Andres, and found the Rock to be of excellent quality, and when taken from proper situations is capable of resisting the action of Frost, Heat and other atmospheric changes - [see Gesner's 2d Report of the Geology of New Brunswick, pp. 24-29]. St. Jihn, April 2, 1840. A. Gesner. – I do certify that I have purchased and used a number of cargoes of Free Stone from Mr. A.W. Andre's Quarry at Mary's Point, and have found it to be of a superior quality, not subject to decomposition or decay, as most of the Freestone found in this country is. It is a fine grained, close, compact stone, is well calculated to resist the action of Water, Frost, Heat and other atmospheric changes as any other rock or stone used for building. Robert Barbour. Master Builder and Stone Cutter. St. John, 3d April, 1840. – I certify that I have examined the Freestone from Mr. A.W. Andre's Quarries at Mary's Point, and do fully concur with Mr. Robert Barbour, in his opinion of said stone, as expressed in the aforegoing certificate. William Mitchell. St. John, 3d April, 1840. Architect."

Newbrunswicker - May 17, 1851 A shocking accident occurred to Mr. Fitzgerald, stone cutter, on Saturday last, on the grounds of the Rural Cemetery. While he was engaged in erecting amonument, a heavy piece of granite fell upon him, crushing him under its weight, and breaking one of his arms, a leg, and injuring his breast in a most serious manner. He now lies in a most critical state, and having a numerous family depending upon him for support, his case demands the sympathies of the benevolent."

Weekly Observer - May 20, 1851 Dreadful Accident. - A dreadful accident happened out at the Cemetery on Saturday last Mr. Fitzgerald, stone cutter, Dock Street, was in the act, assisted by several of his men, of hoisting a large block of stone, weighing (as we are informed) upwards of a ton, in an elevation above his head, when suddenly the tackle broke, and the stone fell upon him, crushing one arm, and leg, and his breast, in a most shocking manner. The stone was so heavy that it occupied the persons present some minutes before they were able to remove it from the body where it had lodged. Mr. F. was brought into town, and now lies in a very precarious state. He has a large family dependent upon him for support; and God grant that they may not want friends in this, the hour of their need and mourning. - News. We are requested to state that Mr. Fitzgerald's stone cutting business is still going on in Dock Street - the serious accident which occurred to him a short time 9 since, will not interfere at all with the progress of his works, as competent persons are in charge. News."

Morning News - Aug. 25, 1852 ADVERTISEMENT:Labourers Wanted. - About a dozen steady labourers may obtain permanent employment at good wages in a Stone Quarry, on application to: aug. 25 Jardine & Co."

Morning News - Aug. 25, 1852 Freestone Quarry. - Mr. Archibald (our New Brunswick enterprizing Railway friend) has struck a new light in ""Albert"". Owning a piece of land in that fine county, and having his suspicions aroused, he brought out with him from England, two engineers (or miners) to examine its geological character. The result is, free stone, sand and yellow stone of a superior description, have been discovered in immense quantities. Upwards of fifty men will be required to work these quarries. Twelve men are wanted immediately, as will be seen by Mr. Jardine's advertisement. Mr. Archibald is an ornament to the Bluenose character."

Weekly Observer - Jun. 22, 1852 We learn that Mr. Archibald, after a visit of inspection to his Mines in the Cobequid Mountains, and Freestone Quarries in Albert County, went yesterday morning with a party of mining engineers, by whom he was accompanied, to commence an Iron Work in Annapolis County. About twenty stone cutters, from Scotland, went up last week to the Quarries in Albert County, where freestone, of a quality rarely equalled, is now being got out in large quantities. Mr. Archibald, in thus assisting to develope our resources, as well as in the efficient aid he has given late Railway negotiations deserved the thanks of every true hearted Colonist. - Courier."

Morning News - Apr. 8, 1853 and Miramichi Gleaner - Apr. 18, 1853 The Albert Stone Quarries. - We learn that a gentleman arrived in town yesterday morning via the United States, directly from Messrs. Jackson and Archibald, on business in connection with the Stone quarries in Albert county. Mr. Lang, the Agent of the same company, has just returned from the United States, where he had been on a visit and has brought with him from New York, Philadelphia, and other places, as many orders for New Brunswick Free Stone as can possibly be supplied this summer. Upwards of 400 men will be required to get out the stone, which is said to be superior to anything of the kind in America. A Marble quarry, near Windsor, is also to be worked, by the same company. The article is pronounced to be of a superior description. Who says that these Provinces do not contain as much gold as Australia?"

Morning News - Jul. 1, 1853 A fatal accident happened at the Shediac Grindstone quarries on Saturday, the 25th ult., by means of a bank of earth falling upon Patrick McEwin, one of the workmen, causing his instantaneous death. The deceased was late of P.E. Island. An inquest was immediately held before Henry Livingstone, Esq., Coroner. The evidence wholly exonerated Mr. Caleb Green, the foreman, from wanting proper care and caution in conducting the works, and the Jury, on view of the body and premises, returned a verdict of - ""Accidental Death."""

Miramichi Gleaner - Jun. 13, 1853 Grindstone Quarries. - The importation of grindstone from the provinces of New Brunswick and Nova Scotia is becoming every year more extensive. Messrs. Read and Seaman, shipped twenty-six cargoes to the States during the past summer, and their orders will probably exceed that quantity during the present season. They supply dealers in New York and other cities, and sell by the cargo to many of the heaviest manufacturers in different States of the Union. Indeed the quality of their stone is becoming so well known that orders are received from and cargoes forwarded to Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Maryland and Virginia. - Their principal quarries are at Ragged Reef, Cumberland Co., Nova Scotia, but they have also, stone quarries on the Petitcodiac river and North Joggins, New Brunswick; and they are now opening a quarry at Bay de Chaleur, N.B. All those quarries differ in the quality of the stone, thus enabling the Company to supply at all times the quality and size of of grindstone that are required for the different kinds of manufactories in which they are used. They give employment to some two or three hundred men; and with the aid of approved machinery are enabled to produce a superior article at a moderate 6 cost. They have a finished establishment 50 E.R.R. Wharf, Boston under the firm of J. Read & Co. One of the partners resides in Boston and the other in the provinces. Messrs. Read & Seaman buy largely in our American markets, to supply their stores of which they have one or two at each establishment and they are a good illustration of what we might expect under the working of a liberal system or reciprocity between the United States and the Colonies. - Boston International Journal."

Royal Gazette - May 4, 1853 Passed May 3, 1853: An Act relating to the escheating of Mining Licences or Leases, and also of Mill Reserves and recovery of Crown Debts. An Act to amend an Act to incorporate the Shediac Grindstone Manufacturing and Mining Company."

Morning News - Dec. 13, 1854 and Carleton Sentinel - Dec. 30, New Brunswick Stone. - The new City Hall to be erected in the Park, New York, is to be composed of New Brunswick Stone, the same, perhaps, as that used in the store of Messrs. Doherty & McTavish, King Street. In this report to the Common Council of New York (which appears in the New York Herald) Mr. Cairne, the builder, remarks - ""The stone is from the Province of New Brunswick, where it is now extensively quarried. It works with remarkable freedom, and is capable of receiving the most elaborate carving. A specimen of it can be seen at the City Hall."" Think of that, Bluenose! Talk of having nothing to send away but ships and timber! Why the very stones are becoming merchantable articles. Not only so but this is such a precious stone that it is deemed worthy of bring used for the construction of a Palace to stand in the heart of the London of America!"

Morning News - May 8, 1854 It will be seen by advertisement that the Albert Quarries are now in active operation. They have been taken hold of by wealthy parties in London, and are under the superintendance of Mr. George Laing. A great number of men will be employed in getting out the stone."

Morning News - May 8, 1854 ADVERTISEMENT: To Builders and Others. --The Albert Freestone Quarry Association are now
prepared to make contracts for the delivery of Stone. All applications for Stone, and other communications on the business of these Quarries, must be addressed to the undersigned, who are the sole Agents for the Association in America.
George Greig & Co. 32 Long Wharf, Boston"

N.B. Courier - Mar. 1, 1856 Mining and Quarrying Intelligence. - We are informed that Charles D. Archibald, Esq., and the other proprietors of the Londonderry Iron Mines have sold that valuable property to an English Company for the sum of $40,000. Mr. Archibald is about opening up, on a large scale, a new and extensive stone quarry on the Petitcodiac River, in Westmorland County, N.B. - Halifax Chronicle"

Royal Gazette - Jul. 1, 1857 Notice. -The undermentioned persons (Non-resident and Females) owing property in the Parish of Harvey, Albert County, who are by Law required to pay Road-taxes in said Parish, are hereby notified to pay the amount annexed to their names respectively, with the cost of this advertisement, to either of the subscribers, within three months form this date:-Geo. Lang, (Manager, Albert Freestone Quarries) .. £3 0 0 3 ..."

N.B. Courier - Apr. 24, 1858 New Brunswick Freestone. - We are glad to see that the fame of this product of our Province is fast rising in the metropolis of the neighboring Union. A letter from S.R. Dinsmore, Secretary to the Albert Freestone Co., New York, to the Editor of the Journal of the Franklin Institute, Philadelphia, contains some interesting information on this point. Mr. Dinsmore says:- ""Sir:- I observe that in your present month's number you have inserted Mr. Hatfield's table showing the relative strength of various building materials in use in this country. When that table was prepared, Mr. Hatfield had not tested the Albert Freestone, from Mary's Point, New Brunswick; but he has done so, with the same machine, and the result of a series of experiments places the Albert Freestone far at the head of all other. ""The accompanying circular will show that this stone possesses a resisting strength of 6632 lbs. to the square inch."" Extract from the circular:-""Mr. R.G. Hatfield, the eminent architect, who has devoted much time and attention to testing various building materials, has made careful experiments with the Albert Freestone. March 3rd, 1858, the average of three tests gave .....7637 lbs. per inch March 6th, "" "" four tests (the stone fresh as it comes from the quarry) ....5548 "" "" "" March 8th, "" ""three tests,6712 "" "" "" ——19897 Average of the series ... 6632 "" The resisting strength of the best Belleville, New Jersey, freestone, the strongest of the samples previously experimented on by Mr. Hatfield, was only 3522 lbs. to the square inch, or little more than one half the strength of the Albert stone."

N.B. Reporter - Aug. 6, 1858 Freestone of Extraordinary Strength. - On the 21st inst., at the Smithsonian Institution at Washington, Professor Henry tested the strength of the Albert freestone, which comes from Mary's Point, New Brunswick. After adjusting the machine, a cube of the russet variety of the stone was first subjected to the crushing force, and found to withstand 9,250 lbs. to the square inch. Professor Henry stated that this was the strongest freestone (or sandstone) that had ever come under his observation. It is thought that this must be the strongest freestone in the world. Can any of our scientific readers inform us of any test which has demonstrated a stronger freestone on either continent. - N.Y.

Morning News - May 14, 1858 ADVERTISEMENT: Grindstones! Grindstones! The subscriber respectfully informs his friends and the public that he has been appointed Agent for the sale of the celebrated Memramcook Cove Grindstones, - which have been long very favorably known in the chief markets of the United States, and are now introduced by him for sale here. A few samples are received and may be examined in Store. Orders received and promptly executed at lowest current rates by David Main May 15. 5 Johnston's Wharf"

Sackville Borderer - Aug. 18, 1865 A free stone quarry has been opened on the Westcock Road, not very distant from St. Ann's Church. 2 From 12 to 15 men are at work there."

Daily Telegraph - Jan. 6, 1866 The Grindstone factories in New Bandon, Gloucester County, are thus referred to by a correspondent of the Woodstock Sentinel: - ""Here I was conducted by a kind friend through the grindstone manufactories - the most extensive perhaps in North America. The principal proprietors are the Messrs. Reid and Seaman; but the business is conducted chiefly by their very efficient and exceedingly generous agents, Messrs. Logan and Lowe. Grindstones of all dimensions, from 12 inches to 18 feet in circumference, are manufactured here, and with such apparent ease and rapidity, as to astonish one unaccustomed to the business. They have likewise performed much more delicate turning in stone work than the most minute grindstones, for I was informed that an Episcopal Clergyman had a christening bowl turned in one of these large rough-looking lathes. However, as business generally in these parts of the province, had suffered such extreme reverses during the present season, I was a little anxious to know the effect produced upon this establishment, and was inquisitive enough to ask those who knew; and to my great amusement I received the following very significant and laughable reply, which some of your readers will relish as well as I did at the time:- 'As long as Yankees make knives, grindstones will be in demand' - taking me for a Yankee, you know. Well, I thought with such a basis as that we would never hear of the New Brunswick Grindstone Factory proving a failure."

S.J. Morning Freeman - Jan. 11, 1866 The brigt. ""Alice Gray,"" which sailed from Budroe's quarries, Dorchester, for Baltimore, with a load of stone, about five months ago, has not since been heard of. It is supposed she must have foundered with all on board. She was about 250 tons burthen, and a crew of six men, besides the captain. - Borderer."

S.J. Daily Globe - Sep. 17, 1866 Building Stone. - Messrs. McKay and Rennison areengaged opening up the fine stone quarry on Mr. Rennison's land, on Demoiselle Creek. Though the present season's operations are chiefly intended to clear the way for more extensive and profitable work next year, yet they have already a considerable quantity of stone ready for shipment. There is no better stone in the county than that on the creek, and no better in the world than Albert can produce. We hope that Messrs. McKay and Rennison will reap a golden harvest from their Freestone operations, that others may be induced to follow their example. The stone business promises well for another season, when it may be expected that a good business will again be done at those quarries where work was necessarily suspended in consequence of the American war and from other causes. Morning Journal - Oct. 21, 1867 Fine Building Stone. - Messrs. L.H. Deveber & Sons have on their counter a few specimens of Albert Freestone, for building of most excellent quality. It is very light in colour, free from iron stains and is said to keep its appearance well. It was obtained from Milton's quarry, situate about 7 miles from Hillsborough, and nearly on the boundary between that parish and Hopewell. The quarry is of great extent and only requires the application of capital to make it a source of wealth to the owner and the country and the means of affording additional employment in that

S.J. Daily News - Mar. 25, 1868 BUILDING STONE QUARRIES IN ALBERT COUNTY.- The Hillsboro Advocate gives currency to a report that St. John capital will be employed in working one of the quarries of building stone on DeMoiselle Creek, during the coming summer. The demand for building stone in the States is said to be such as to promise a remunerative business in spite of the tax, 60 cts per ton, to which foreign stone is subjected by the American tariff. It is greatly to be hoped that the prospects are as good as represented and that the numerous quarries of building stone in Albert County will be worked extensively the ensuing season. The quarries on Demoiselle Creek, at Hopewell Cape, the Albert quarries and the Stevens quarries if extensively worked will give employment to a very large number of labourers, and greatly stimulate and improve every branch of business."

Sep. 4, 1868 - Copied from: History of Sackville - by W.C. Milner, 1934, p. 76 A copy of the Borderer of 4th September, 1868, contains... A.J. Smith, later Sir Albert, advertises his office as the office of the Union Freestone Company, shipping building stone from Budroes. ..."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Daily Telegraph - Apr. 17, 1869 Our Marble and Stone Cutters - Home Manufacture and Industry. - The other day one of our Locals who had occasion to visit the mammoth stabling establishment of Chris. Roberston, Esq., King Square, on taking his departure had his attention suddenly arrested by the magnificent display of marble works exhibited in the adjoining place of business, owned and occupied by J. & R. Milligan. The attraction was too much for his powers of resistance; he therefore entered, and on enquiry found to his astonishment the following results. As a preface to that which is to come, we may state that the Messrs. Milligan are in every respect what could be expected of men placed in their business position. By our last remark we mean, or rather imply, affability, courtesy, shrewdness, industry and a wide open weather eye. At the present time they have some rather heavy jobs on hand, and employ steadily twelve workmen. One of these is a monument ordered by A. Gibson, Esq., of Nashwaak, which is to be of Gothic design, and will cost about $2000. They have also arranged with the Messrs. Vaughan of this city for the erection of a monument which, when finished, will cost over $4,000; also one for Bermuda, the design of which came from England. In addition to these they have at present a large number of smaller orders on hand from Fredericton and other quarters, which range in price from $100 upwards. In speaking of Mr. Gibson's monument we may state that it will consist of ten pieces, the heaviest of which, even when finished will weigh over three tons. All of these works are to be composed of the finest Italian marble. From the establishment of the Messrs. M. the Local next popped into that of Mr. Osgood when he was again astonished to find such a large display of all kinds of marble work. Mr O. like the former, manufactures all descriptions of marble work and, at the present time, has on hand finished work to the value of not less than $1,800, which is to go up the river as soon as King Ice will permit. He has also as much more prepared for Nova Scotia. In this place twelve hands are steadily employed on work which amounts in the aggregate to a large sum. From the latter place of business he next proceeded to that of Mr. McGrath, marble worker, in Waterloo street, where he found three hands steadily employed, and was informed that the usual amount of work done reached somewhere to the vicinity of eight thousand dollars. The next place he visited was the Stone Cutting Yard of Mr. Tay, Duke street, where he hoped to find some additional specimens of New Brunswick skill in the ""marble hearted"" way. It turned out otherwise, however, as Mr. T. during the past winter has been so busily engaged conducting, under the supervision of Mr. Crosby, the erection of the ""Wiggins Male Orphan Institute"", that he has not had leisure to attend to the other branches of his profession. During all the past winter not fewer than twenty two men have been steadily employed on this building, which is situated in St. James st. - cost of erection between thirty and forty thousand dollars; it is expected to be completed about next fall. Wishing to have his information on this walk of energy and industry as complete as possible, our Reporter next directed his steps towards the Railway bridge for the purpose of visiting the stone cutting premises of Mr. P. Cormack. Mr. C. is naturally rather a modest man and has an aversion to his name being held up before the public; at length, however, he succeeded in learning that the above named gentleman has at present in his employment nine hands, all of whom ae busily engaged in preparing the granite material of which the ""Wiggins Vault"" is to be constructed in the Rural Cemetery. The stones are nearly all prepared, and it is thought that in the course of the next week all hands will be engaged in erecting them over the last resting place of him whose memory they

Daily Telegraph - Oct. 11, 1869 Saxby gale ... The Rockland Quarries. - A letter from the quarries states that the gale swept the valley of the Memramcook, carrying away all the fences, barns, hay, and a great number of cattle from Dorchester to the Rockland side... It is reported that all the wharves on the Memramcook and Petitcodiac are carried away except Messrs. Smith & McKelvie's and the Budro Quarry wharf..."

Chignecto Post - Oct. 13, 1870 Dorchester Stone Quarries.- Budroe's Quarry is about a mile from the Petitcodiac river, with which it is connected by a tram-way. It is owned and worked by a company in New York, where a ready sale is found for all the stone quarried. About 100 men find employment here. Five to 6,000 tons per season are shipped. The stone realizes from $10 to $12 per ton, for building purposes. But few imperfections are found in the structure of the stone, but a bluish streak runs through a large percentage of it and depreciates its value. The Caledonian Quarries, owned by Messrs. Smith and McKelvie, formerly merchants in this place, are situated on the Memramcook River. The stone is of a beautiful olive color, and many of the finest buildings in New York and other American cities, have a frontage with stone from these Quarries, or are ornamented with it. As at Budroe's, the hauling is done with cattle. Imperfections, or ""Bulls eyes"", as they are called, are met with in this stone and of course affects its value. The stone, however, has hitherto been worked at or near surface, and as the quarrying proceeds downward, these imperfections become less. The proprietors hope to get rid of them entirely. About 70 men are employed, and about 5,000 tons will be shipped this season to New York. The proprietors are gradually extending their operations and making improvements. They have opened two pits this season. Both are promising. Those gentlemen deserve praise for the enterprise they have displayed in embarking in a speculation so hazardous as quarrying stone, and it has only been perseverance which has enabled them to surmount difficulties of no ordinary nature as year after year they develope the work. The only other Stone Quarry in these Lower Provinces is one at Wallace, N.S., worked by Thomas Battie, Esq. Two thousand tons will probably cover the annual shipments. He finds a market chiefly in Halifax, N.S. Stone pays a duty of 20 per cent. on the cost in the States. For years protectionists have been endeavoring to shut out ""Nova Scotia Stone"" as it is called. The exhorbitancy of their demands has always defeated the object aimed at. At the last session of Congress, however, they moderated their demands and succeeded in getting a duty of $1.50 per ton imposed. This law comes into force next year, but it is believed will not seriously interfere with the operations here. 5 Free trade or Reciprocity would at once give a ""valuable impulse"" to this branch of native industry, and make our stone quarries worth something large in the market. This industry is already important. It employs labor and vessels. It gives a home market, and stimulates trade. It is every day assuming greater proportions. The formation of the Isthmus of Chignecto is chiefly sandstone, and it is believed a fair percentage could be utilized for building purposes. Local disturbances and heavy soil covering will not render impracticable the working of a considerable surface. May we not then have in our stone the elements of a future of wealth and prosperity, not to be measured by the extent of present operations."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Daily Telegraph - Oct. 14, 1870 Stone Quarries. - The Post states that at the Budro Quarry, Rockland, 100 men are employed and 6,000 tons will be shipped this season, to the States, where the stone is in good demand. At the Caledonia Quarries 70 men are employed and 5000 tons will be shipped. Many of the finest buildings in New York are faced with the ""Caledonia"" stone, which is getting more valuable, as the quarrying proceeds downward. The only other large freestone quarry in the Lower Provinces is at Wallace, N.S., worked by Mr. Thomas Battie, who finds in Halifax, chiefly, a market for his annual product of, say, 2,000 tons."

Daily Telegraph - Apr. 17, 1871 ADVERTISEMENT: Tay's Stone Works, 50 Duke Street, St. John. N.B., Monuments to Marble, Freestone and Granite, And all kinds of Stone Cutting! Done at the shortest notice and on reasonable terms. Orders from the Country punctually attended to. W. Tay."

Union Advocate - Jun. 9, 1871 Grindstones shipped from Bathurst by Read, Stevenson & Co."

S.J. Daily News - Jun. 24, 1871 Stone Quarries. - The Moncton ""Times"" learns that the Stevens Quarries on Mary's Point, formerly worked by the Albert Free Stone Company and lying near the Stevens Quarries, have been obtained by a Company who propose to carry on operations at both places."

Daily Tribune - Apr. 13, 1872 The Quarrymen Resuming Operations. - Parties in the Freestone Quarries at the head of the Bay have been in Town this week, seeking shipping by which to forward their stone to the United States market. At one of the Rockland Quarries, that known as the ""Budrot"" Quarry, owned in the States, a quantity of stone which was taken out last Fall, and lay out during the winter, is now ready for shipment, the river being sufficiently free from ice to admit of small craft reaching the shipping wharf. By the time the Petitcodiac and Memramcook Rivers are thoroughly free, operations in these quarries will be resumed on as large a scale as in any previous year. During the winter, both in the ""Budrot"" and the ""Caledonia"" Quarries (the latter owned by Smith and McKelvie) the winter employment of a considerable force of laborers has been expended in ""stripping"" the loose earth, rubbish, and broken stone from above the beds of valuable building stone intended to be removed. The quantities of this worthless material requiring to be disposed of before the fine stone can be worked to advantage, is something enormous. When, however, the beds are finally reached, and a force of 30 to 50 men get fairly to work quarrying, it does not take a great while to remove thousands of dollars worth of good material, the value of single blocks frequently ranging from $30 to $60, the ordinary shipping sizes, however, averaging $8 to $12, as these are most easily handled and attended with but slight risk. To witness the process of cutting, craning, dressing, and shipping building stone, will repay the time spent in visiting a well managed Quarry. The two quarries here referred to, at Rockland, employ nearly 200 men when in full operation; and as they pay wages all in cash, they are instrumental in distributing a large amount of ready money annually among the people of the neighborhood and the French of Memramcook and Dover, who flock into the place for the summer months. Doubtless, $5,000 per month is thus distributed. They also give employment to a large number of vessels, the freights alone to Boston and New York probably reaching $22,000 a year. Most of the vessels chartered belong up the Bay, although they are frequently engaged in St. John. The demand for the Rockland stone, - which is of a fine olive color and greatly admired in the better classes of buildings, - never falls off. This year it is 13 greater than ever, and at an advance over last year's prices, which were somewhat better than the figure obtainable in 1870. The cost of production this year, however, will be something greater than last, as wages are likely to be higher. The proprietors of the Caledonia Quarries last year opened a new quarry, which gives promise of being even better than the old. The supply, both for the American Company and the ""Caledonia"", will probably last for a century to come. There is, in fact, ""a mountain of stone"" here, the ""Caledonia"" being located on the east side of the hill and the ""Budrot"" on the west side."

Chignecto Post - Apr. 25, 1872 Grindstone operations have commenced at Rockport and other quarries."

Daily Tribune - Jul. 2, 1872 Rockland Quarries are carrying on a brisk business. The demand for their building stone in the States is greater than ever. The ""Budrot"" Quarries, owned by Americans, is a large affair. It is probably one of the best paying properties on the Continent. The ""Caledonia"" (Smith and McKelvie's) is turning out admirably. The new quarry opened last fall is even better than the old. Both the ""olive"" and the ""blue"" stone found here sells to advantage in the States. Over a thousand tons were shipped from this quarry the past two months, and the year's shipments will probably be the heaviest and the most remunerative of any in its history."

Daily Tribune - Jul. 9, 1872 Rockland, July 6. Mr. Editor: ... I know that both the Caledonia and Union Quarry people send much of their mail matter to Memramcook and Dorchester, and this has been represented to the Hon. Mr. McMillan. I do not think that we are entitled to some consideration and should not be obliged to do our own mail service when the amount of revenue collected on goods consumed at the two Quarries and my yard amounts to thousands of dollars yearly, and the matter of two or three hundred dollars would make it all right. I understood Mr. McMillan some time since to say we should have a daily mail for summer and tri-weekly in winter, and I offered to do the work (or have it done) for two-thirds what it will cost, for the purpose of getting it established, but have not heard from him since. I am yours, R.H. Chapman."

S.J. Daily Telegraph - Oct. 4, 1872 Westmorland.- The Budrot quarry has shipped 4000 tons of stone this season and expects to ship 2000 tons more. The Caledonia Quarry has shipped 3000 tons and intend to send off from 1000 to 2000

Morning Freeman - Apr. 3, 1873 ADVERTISEMENT: Marble, Freestone and Granite Works, 56 Duke street, St. John, N.B. -- The subscriber having purchased the leases of the premises lately occupied by the deceased William Tay, together with the large stock of Monuments, Tombstones, &c., on hand, is now prepared to fill all orders in this line entrusted to him with promptness, and on terms as reasonable as in any establishment of the kind in the Dominion. All kinds of Granite and Freestone Cutting attended to with dispatch. Michael Madigan."

S.J. Daily Telegraph - Aug. 16, 1873 Westmorland. - Stone. - The Union Freestone Company of Dorchester (Budroes) shipped a few days ago a stone 17x 4'11x4, making 23 1/2 tons. They also shipped another one of about 21 tons and nearly the same dimensions."

Union Advocate - Aug. 20, 1873 Reference to place: Bordeaux Quarry, Campbellton..."

Daily Telegraph - Aug. 30, 1873 Stone. - Messrs. A. Seaman & Co. will ship, this season, from their new works, at Lower Cove, about 100 tons of scythe and kitchen stone besides hand stone, all of which are sawed by steam power from the blocks of stone."

Daily Telegraph - Jan. 17, 1873 Stone Quarries at Curryville. - Mr. Jos. H. Hayden and three other Boston gentlemen having purchased a stone property at Curryville, A.C., intend to apply to the Legislature for an Act of Incorporation. They commenced operations last season, and shipped a considerable quantity of building stone to the States. A contract has been given to local parties for clearing the top earth and rubbish during the winter, and next season probably a hundred men will be engaged quarrying the stone. The quarries are situated on Demoiselle Creek, below the Albert Mines, and about two miles from the shipping point at the mouth where the owners have a good harbour with bold water. - Times."

S.J. Daily Telegraph - Jan. 18, 1873 Westmorland. - A new stone quarry, suitable for building purposes, is about to be opened next spring at Wood Point, by Messrs. A. Seaman & Co. A new wharf is being built for the company."

Colonial Farmer - Jan. 27, 1873 Some Boston gentlemen have purchased a stone property at Curryville, Albert County, and intend applying for an act of incorporation. They will probably employ one hundred men at the quarry next summer."

Morning Freeman - Mar. 27, 1873 We learn from the Gleaner that a man names Cairns was a few days ago killed at Caird's Quarry, Bartibogue, by the falling in of an embankment which he was assisting to excavate."

N.B. Reporter - May 7, 1873 ADVERTISEMENT: St. John Marble Works. South Side of King's Square. -- The subscribers beg leave to inform the inhabitants of the River St. John districts, that they execute all works in stone and marble with the greatest promptitude and elegance. They have on hand a very large selection of the finest materials in the above departments, and can confidently appeal to their work, now well known throughout the Province as a fitting recommendation. They manufacture Monuments, Head Stones, Tablets, Table Tops, Vaults, Founts and Mantle pieces, with every other species of ornamental and plain cut stone, to order, and have those articles always on hand for sale. Their agents in Fredericton and Woodstock are - for Fredericton, Mr. George Hatt, - for Woodstock, Mr. James Jordan. James Millegan Robert Millegan P.S. - They have also two hundred tons of inland freestone, free from salt water, for building purposes.Caps and Sills for Doors & Windows always on hand. St. John, Oct. 31, 1862 J. & R.M."

Daily Telegraph - Sep. 26, 1873 Freestone Quarrying. - The Hopewell (Albert Co.) Freestone and Mining Company commenced quarrying last season. They have taken out and shipped some 2,000 tons. The stone possesses a bright handsome colour and is firm and strong, apparently very suitable for building purposes. The new Franklin building, 100 feet face, at Boston, now being erected for Rand & Avery and Jas, R. Osgood, publishers, is being faced with this stone, and is said to make a fine appearance. The company have already erected four houses, a store, a wharf and made two miles of road to their place of shipment. They look forward to connecting at no distant day their quarry and wharf by railway. The company is composed of Geo. K. Snow, of Snow's Pathfinder Railway Guide, Joseph Hayden and other Boston

Daily Telegraph - Apr. 30, 1874 ADVERTISEMENT: Sale of Freestone Quarries in Nova Scotia... Seaman..."

S.J. Daily Telegraph - Jul. 3, 1874 ADVERTISEMENT: Albert Railway. Wanted Masons, Stone Cutters, Quarrymen, Laborers, and 30 Good Teams To haul Stone for the Petitcodiac Bridge, and for bridges and culverts on the lower twelve miles of the road. The highest wages will be paid. Apply to James McDonald Contractor Salisbury, N.B."

Daily Tribune - Mar. 28, 1874 Grind Stones. - C.H. Fairweather, Esq., stated at the Board of Trade yesterday that members of the Dominion Board of Trade had stated in Ottawa that there was not a grindstone quarry in the Lower Provinces. He had informed them differently, but had not statistics to produce. From Minudie in Cumberland County the exports last year were: Grindstones, 1,590 tons ... $22,260 ""Ritchie"", 8,500 ... 1,500 Scythe stones, 2,600 boxes ... 3,300 –Total $26,610"

S.J. Daily Telegraph - Oct. 26, 1874 Quarry at Point Brule. - A gentleman in Saint John, who has had experience in the business, has leased for five years, a piece of ground at Cape Brule, below Point DuChene, where he intends to open a quarry for grindstones, and also for building stones to be shipped to the United States. It will probably be operated by a company with a capital of $20,000 or thereabouts. The opening of quarries in the Gulf is an additional argument for the immediate construction of the Baie Verte Canal."

Daily Telegraph - Apr. 19, 1875 Nova Scotia Equity Court. - Edward Vernon vs. Rufus Seaman. - For the past fortnight examinations in this case have been going on at the Court House under an order by the Judge in Equity before W.M. Fullerton, Esq., as a Commissioner. The plaintiff is seeking to have the defendant removed from his Office as trustee under the will of the late Amos Seaman, and also charges the defendant with mismanagement and waste of property. The defendant, while willing to be removed from his office as trustee, denies the other charges, and it is for thepurpose of having the depositions of the parties and witnesses on both sides taken that this protracted investigation has been going on. D.S. Kerr, of St. John, N.B., has been attending on behalf of plaintiff, and Charles Townsend, Esq., on behalf of the

S.J. Daily News - Jan. 2, 1875 Sale of Lands. - A correspondent of the Moncton Times writes: - Mr. Hayden, manager of the works of the Hopewell Quarry Company, at Demoiselle Creek, has purchased of James Rogers, Esq., Hopewell Hill, and Samuel Calhoun, Riverside, lands on the Shepody River, near the terminus of the Albert Railway, upon which he is about to erect a wharf and other conveniences for shipping the stone obtained at the quarries of the Company."

S.J. Daily News - Jul. 23, 1875 Miramichi Freestone. - A cargo of 125 tons of Miramichi freestone was sold by auction from the schooner Modoc, at Montreal on Monday afternoon."

S.J. Daily News - Jul. 23, 1875 Albert County Circuit Court. - ...Copp et al vs. Read et al the first case on the new docket has been tried. The Post says: The circumstances of the case were as follows: In the winter of 1873, the brig Ottawa, belonging to Read, Stevenson & Co., broke her moorings at Rockport and went adrift. The Plaintiffs having got ahead of some other crews, the Defendants had been on the lookout for her, boarded her and sailed her ashore at Herring Cove, where the company offered them $1000 for their services. This was refused, they claiming as high as $6000. They then took her to St. John, where $1,500 was tendered them as remuneration. This was also refused and the vessel placed in the hands of the wreck commissioners. She remained where she was until some time in April, when the Defendants not being able to gain her in any other way, and being in want of the cargo of grindstones with which to fill orders, employed a steam tug and took her away. This was an action of assumpsit brought by the rescuers to recover salvage to the amount of $2,000. On motion for a non-suit which was made on several grounds, His Honor expressed the opinion that the action was not maintainable. However, to save the trouble of a new trial in case the non-suit should be set aside, the Counsel agreed for the Plaintiffs of $1,250. Charles Duff, Q.C., for Plaintiffs; C.W. Weldon, Q.C., for Defendants."

S.J. Daily News - Jul. 28, 1875 Another Stone Yard. - Mr. George Harding, of Long Reach, K.C., and a Mr. Scott, of the United States, have gone into the manufacture of grindstones, monuments, etc., at 59 Charlotte Street, and are prepared to do a larger business in that line."

Daily Telegraph - Jul. 23, 1875 Stone from Miramichi. - The Montreal Witness says: The schooner Modoc is in port, having on board a cargo of 125 tons of free stone, brought from Miramichi. This stone resembles the Ohio sandstone in appearance, being of a light greyish color. It is in large blocks from 4 to 6 feet in length, by about 2 broad, and the same in thickness; and will be sold this afternoon by auction on board the vessel."

S.J. Daily News - Nov. 3, 1875 Westmorland. - ... There are two marble works in Dorchester, principally employed on the excellent freestone found in this part of New Brunswick..."

S.J. Daily News - Apr. 21, 1876 Chignecto Items. - From the Sackville Post:-.... The stone trade this summer promises to be unusually dull. The Dorchester Companies are preparing to ship very much less than even last year. In Cumberland, Messrs. eaman & Co. find no encouragement to put grindstone in the American markets. The Port Philip Quarries will not be worked this season. Mr. J.C. Ayer will do nothing in Wallace, nor will Mr. Thomas Beatty do anything with his quarries. Stone dealers say that at no time for many years has the demand for stone been duller in the United States."

S.J. Daily Telegraph - Jan. 11, 1876 The Caledonia Quarry so well known to many of your readers is now, it is rumored, under the management of Messrs. McKelvie and Drysdale. Mr. Smith, one of the former managers, having dropped his connection with the same."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Daily Telegraph - Jun. 28, 1876 ADVERTISEMENT: Slate. -- Not withstanding the duty of 17 1/3 per cent. imposed on Roofing Slate, the undersigned are authorized to sell the well known Slate from the Bangor and Piscataquis Quarries at as low rates as any offered in the market. The superior quality of the Slate is well known to our customers and others who have used it. For further information apply to Leonard & Wetmore, Agents."

Daily Telegraph - Jun. 28, 1876 ADVERTISEMENT: Rockland Roofing Slate. --This celebrated Canadian Roofing Material is now forsale, and being of equal quality with the best in the market, and less in price, should be patronized by all Canadians. Samples can be seen and prices obtained, at W.H. Olive's, Prince William street, St. John"

Daily Telegraph - May 18, 1876 Rockland. - ... The Caledonia Olive Freestone quarries under the able and judicious management of T.M. McKelvey, Esq., are situated about a mile from the ship yard. A fine specimen of this beautiful stone may be seen in the elegant and substantial edifice recently erected by John G. Smith, Esq., who was formerly manager of the quarries. ..."

Chignecto Post - Nov. 16, 1876 Work is still progressing in the penetentiary quarries. Wages are said to be quite low, not withstanding this fact, quarrymen are coming in from all quarters asking for employment."

Daily Telegraph - Oct. 5, 1876 The Rockland Slate Co. have only been doing business in the provinces for the past three months, during which time they have sold a large quantity of roofing slate. They have also gone into the manufacture of slate for mantels, which is likely to become a large business in the Dominion through their agent, W.H. Olive. They are increasing their business very rapidly, and have driven out of the markets almost entirely all other slate that was formerly sold here. We call attention in the advertisements in this morning's paper."

Chignecto Post - Sep. 28, 1876 Wharf at Hardledge.- During the summer, Messrs. Read, Stevenson & Co., have built a wharf there for making grindstones upon. A donkey engine is to be placed upon it to run two lathes. On one corner is a large crane for raising the stones from the quarry. The wharf is about 100 feet long by 37 broad and 14 high. It is solidly built and will be a means of developing this industry."

Moncton Times - Aug. 13, 1877 ... On Saturday a stone-laden vessel left the Caledonia Company's wharf for New York. About six or seven cargoes of stone have been shipped by this company the present season, principally to the States. The stone of this and the Boudrot quarry (Dobson's) will be in great demand in St. John when the erection of the better class of buildings commences. The Boudrot is still supplying stone for the State House at Albany, N.Y., a building which is costing some millions more than the original estimate. ...Mr. John G. Smith is developing his freestone quarry. He has made a road from the quarry to and over his marsh to the bank of the Memramcook, and is now engaged in building his

Daily Telegraph - Aug. 15, 1877 Dorchester Union Free Stone Quarries. --The Dorchester Quarries (also called Budreau Quarries) are the Largest Free Stone Quarries in the Maritime Provinces, and have the best facilities for quarrying and shipping large sized stone. They have had twenty years continuous patronage from the best stone cutters in New York city and vicinity, Philadelphia, Baltimore, Washington and Saint John, and have supplied more stone annually than any other quarries in the Province. They have supplied the largest block of Free Stone ever delivered in the United States; and several of the largest blocks in the Province can now be seen at the quarries. Three quarters of the free stone used in St. John for the best public and private buildings of the city, including Market House, Maritime Block, New Post Office, and many others was supplied from these quarries. The quality is the best in the Province. We are prepared to furnish stone of any size required, of the best quality, and at short notice. Prices Reasonable. William Dobson, Manager. Dorchester, N.B."

McKelvie has sent three cargoes to St. John; and the Dorchester Union Freestone Company three."

Chignecto Post - Dec. 6, 1877 Stone from the Union Free Stone Company is used for finishing the interior of the Capitol at Albany, a work which has cost already $8,000,000 and is still incomplete. The Capitol is of the same design as the Parliament Building, Ottawa, and will be the grandest structure on the Continent when completed."

Chignecto Post - Dec. 6, 1877 The Boudreau's Quarry is now loading a small schooner for St. John, which will complete the season's shipments. About 5,200 tons were shipped this season, of which 1000 went to St. John. Fifty men will be employed during the winter to prepare for next season's work. The prospects of the building stone business are rather brighter than for some time past."

Morning Freeman - Dec. 7, 1877 Westmorland Items. - Stone from the Union Free Stone Company's quarries is being used for finishing the interior of the Capitol at Albany, N.Y. The Boudreau's quarry supplied St. John with a thousand tons of stone this season. Fifty men will be employed during the winter to prepare for next season's work."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Daily Telegraph - Dec. 8, 1877 Building Stone to St. John. - About 100 tons of building stone have been brought to St. John this season, from the Boudreau's Quarry. The Key Stone Quarry, Rockland is now shipping its first cargo to the city."

Chignecto Post, Page 3 - Thursday, January 4, 1877 HERE AND HEREABOUTS - The Union Freestone Company of Dorchester shipped 3,500 tons last season, an increase of 500 tons over the previous year. This company has now 40 men at work, preparatory to next season's work. The markets in United States look more promising next season than for some time past."

Daily Telegraph - Jul. 24, 1877 ADVERTISEMENT: Caledonia Freestone Quarry. --The finest olive Freestone in the Dominion; chosen above all others for the front of New Post Office, for its color and texture; received the Highest Praise at the Philadelphia Exposition; and has been used in many of the leading Public and Private buildings in Boston, New York and Philadelphia. One Thousand Tons, now ready, for sale low, and shipment by Thomas McKelvie, Agent, Rockland, near Dorchester."

Canadian Illustrated News - Jun. 9, 1877 Campbellton. - by R. Chalmers. - .... The geological character of the hills in the neighborhood of Campbellton is trap, felsite and sandstone, the latter being the newest of the series, and occupying a trough, or basin in the river valley extending from Dalhousie to the head of the tide, six miles above Campbellton. Sandstone of an excellent quality for building purposes has been found at Bourdon, where a quarry was opened during the construction of the Intercolonial Railway, and large quantities of this stone excavated and used for building bridges, culverts, &c...Mr. Chalmers, schoolmaster at Campbellton ... is an enthusiastic mineralogist and botanist."

Chignecto Post - Jun. 21, 1877 Dorchester Items.- ... The Penitentiary site has a busy look; the masses of stone on the ground being cut and faced by stone cutters, the moving cranes beside the rising walls, the brick making and lime burning, all lend it a lively and bustling aspect. The front of the building - 130 ft. long - has its foundation walls completed. The rear foundation - 250 ft. long - is nearly completed, the work of putting on cut stone having been commenced. Messrs. McDonald & Co. have about 7,000 tons of stone on the ground. They have opened, for the purpose of testing, a quarry on the ridge in the rear of the site. Should they succeed they will be unusually fortunate in having the prime requisites for building, viz; brick, lime and stone on the property."

Chignecto Post - Oct. 18, 1877 The Stone Quarry belonging to Messrs. Snowdon, Wood Point, has been leased to Mr. Roberts, of Boston, who intends working it on a large scale next summer."

Daily Telegraph - Apr. 29, 1878 Cheap Building Stone. - James Milligan has at the Marble Works of the firm, specimens of a free-stone which could be supplied cheaply for building purposes. He had occasion to certify to its quality some years ago, and he finds the stone has turned out well. We need hardly add that Mr. Milligan is a thorough judge in such matters."

S.J. Daily Sun - Dec. 5, 1878 The Gale at Harvey. - ...One of the cranes at Mary's Point stone quarry was torn from its moorings and washed away, and over forty tons of stone washed out..."

Daily Times - Dec. 6, 1878 Severe Gale at Harvey. - ...One of the cranes at Mary's Point stone quarry was torn from its moorings and washed away, and over forty tons of stone washed out. A fence was torn down and several chimnies demolished. An express wagon at Mary's Point was lifted bodily and carries over one hundred feet."

Daily Telegraph - Feb. 10, 1878 Albert Co. - Harvey Bank. - Shepody River ... Near its mouth is the fine freestone quarry owned by Messrs. Roberts, which is said to yield as good stone for building purposes as any other quarry in New Brunswick, and what renders it of more value is, it is easy access and near a good shipping point."

Chignecto Post - Jan. 24, 1878 Dorchester.- J. McG. McDonald & Co., have openeda new quarry at Woodville, nearly six miles from the Penitentiary, at Porcupine Brooks, where they have forty men at work. There are about forty men also working at the Penitentiary during the winter. The Dorchester quarries having turned out only surface ones, the balance of the stone required will be obtained from Memramcook and Woodville, necessitating a long additional haul. When Dorchester was first selected as the site for the edifice, it was believed that all the stone could be obtained within half a mile of the

Chignecto Post - Jan. 24, 1878 Elgin.- A new quarry is being opened at Melton's, Demoiselle Creek, A.C., on the line of the Railway, by J. McDonald & Co., who intend to ship stone next season from Shepody to St. John."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Jul. 2, 1878 The stone quarries at Mary's Point, known as the Bay of Fundy quarries, are turning out a large quantity of both olive and brown stone of a very superior description, which finds a ready market in the cities of Boston, New York and Baltimore. A number of wealthy capitalists of New York are now interested, and a large force is employed; and payments being made promptly every month, the operations here are a great benefit to the community. W.J. Roberts, Esq., has now a few men at work at the Stevens quarry, near the Bay of Fundy. The stone here is very superior and the prospect good for an extensive quarry."

Chignecto Post - Jul. 4, 1878 Wood Point Quarries.- The Nellie Clark, Clark, master, arrived off the quarry on Wednesday night after a passage of 48 hours from Boston. She has loaded with 250 tons of stone for New York. Stone from this quarry is going into a handsome building now being erected at the corner of Charlotte and Princess St., St. John, by C.G. Berrymore, hardware merchant."

Daily Telegraph - Jun. 3, 1878 ADVERTISEMENT: Bay of Fundy Quarries, Mary's Point, N.B. -- Brown and Olive Freestone. -- E.D. Barnes, Gen'l Manager. 170 Broadway, New York. -- These quarries produce both colors, viz., Brown and Olive, of a fine close grain, remarkably uniform in color; celebrated for its strength and durability, retaining in the most beautiful Carvings the lines of its finest cutting. It is unaffected by the atmospheric changes of extreme climates. Buildings of this stone now standing over twenty-five years show no signs of decay, and retain their freshness and beauty. It has been extensively used in the United States, where it is well known and appreciated for its Superior Qualities. Some of the finest specimens of architecture in Boston, New York, Philadelphia, Baltimore and many other places, are constructed of stone from these quarries. For beauty, Strength, Durability and Uniformity of color the stone from these quarries stands unrivalled. The following test was made by the late Professor Henry of the Smithsonian Institute, Washington, D.C.:- After adjusting the machine a cube of the Brown Stone was first subjected to the crushing force, and withstood 9,250 lbs to the inch. Two cubes of the Olive Stone were then tested, each of which sustained the same pressure of 9,250 lbs. to the inch. Prof. Henry stated that this was the strongest freestone or sandstone that had ever come under his observation. No. 12 Pemberton Square, Boston,} May 6th, 1878 } Having assisted at the test made by Professor Henry, as above, I certify to the same as being correct. Alexander L. Hayes. With our superior advantages for quarrying and shipping, we are now prepared to furnish stone in quantities to suit. Applications for samples, prices or circulars may be addressed to E.D. Barnes, General Manager, 170 Broadway, New York, or to A.J. Roberts, Superintendent at the Quarries, Harvey, A.C."

Morning Freeman - Jun. 5, 1878 Stone Quarries. - A correspondent of the Moncton Times says that the Bay of Fundy quarries are now turning out both olive and brown stone of a very superior description, which finds a ready market in Boston, New York and Baltimore. Some New York capitalists are interested in the quarry."

Daily Telegraph - Jun. 10, 1878 The Domville Building. - The Messrs. Wand, of Montreal, who came highly recommended as contractors, have received from Mr. Domville the contract for the erection of his fine building on the corner of Prince

William and King streets. The architects are Messrs. Hopkins & Wiley, of Montreal and St. John, and the plans"

Chignecto Post - Jun. 27, 1878 The Wood Point Freestone Company has purchased the farm and dwelling house of Alex. O'Brien, Esq. The Company will have a hoisting engine there in a few days, and intend doing a large business this season; they propose lifting 100 tons of building stone per week."

S.J. Daily News - Mar. 16, 1878 Port Philip Quarries. - The Port Philip Freestone Company have secured the contract for the stone required to build the Bank of New Brunswick and St. Andrew's church, in St. John, N.B. This is a large contract involving thousands of dollars, the greater part of which must be spent in the country. They will begin in a short time to open the quarries and place the machinery required to carry on the work. From 60 to 80 men will likely be required during the summer. Much credit is due to David Douglas, who was mainly instrumental in securing a number of formidable competitors. - Amherst Sentinel."

Chignecto Post - Mar. 21, 1878 The Wood Point Quarries are to be worked extensively this season, by Mr. Walter J. Roberts, who proposes having a hundred men quarrying in the spring. The facilities for shipping stone at this place are perhaps unsurpassed anywhere."

Moncton Daily Times - Mar. 21, 1878 Port Philip Quarries. - The Port Philip Freestone Company have secured the contract for the stone required to build the Bank of New Brunswick and St. Andrew's Church, in St. John, N.B. This is a large contract involving thousands of dollars, the greater part of which must be spent in a short time to open the quarries and place the machinery required to carry the work. From 60 to 80 men will likely be required during the summer. Much credit is due to David Douglas, who was mainly instrumental in securing the contract, against a number of formidable operators. -

Morning Freeman - Mar. 22, 1878 A New Quarry. - Mr. W.J. Roberts, of the firm of Roberts Brothers, the well-known Boston publishers, has leased land belonging to Mr. Amos Seaman, at Wood Point, and has commenced quarrying for freestone. The surface indications are very promising and Mr. Roberts is confident of the results. Operations were commenced on Monday morning and eight men are now employed. - Borderer."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Morning Freeman - May 3, 1878 Westmorland. - The Robert's Quarry, at Wood Point, is getting out a lot of fine stone. Mr. G.R. Parrott, the Manager, has a cargo ready for shipment to Boston. The wharf has been extended out already 50 feet. The facilities for shipment are most excellent."

Daily Telegraph - May 10, 1878 Albert Co. - The Quarries at Mary's Point are full of activity, about 75 men are employed, and a stone of superior quality is being got out."

Daily Telegraph - May 31, 1878 Westmorland Quarries. - The Union Freestone Quarry, Dorchester, has contracts this season to deliver 4,500 tons in New York. Mr. John G. Smith, proprietor of the Keystone Quarry, Dorchester, shipped 155 tons of stone to St. John on Friday, per schooner, A.G. Watson. The Caledonia Quarry has already, this season, shipped three small cargoes."

Chignecto Post - Nov. 21, 1878 The Wood Point Quarries have recommenced shipments of stone. The schr. Dora is now loading for Boston. The stone is likely to become a favorite one owing to its fine grey color. A large new hotel in a fashionable quarter of Boston is being erected with it. The probabilities are that operations on an extensive scale will be carried on next summer."

Chignecto Post - Oct. 3, 1878 The grindstone business at Rockport has been fairly active this season at very small prices. Messrs. Read, Stevenson & Co. have shipped eight cargoes to Boston and New Haven. Two schooners are now loading and two or three more cargoes will follow later in the season. Messrs. A. Seaman & Co., Lower Cove, N.S., have shipped about five cargoes."

Morning Freeman - Oct. 5, 1878 The grindstone business at Rockport has been fairly active this season at very small prices. Messrs. Read, Stevenson & Co. have shipped eight cargoes to Boston and New Haven. Two schooners are now loading and two or three cargoes will follow later in the season. Messrs. A. Seaman & Co., Lower Cove, N.S., have shipped about five cargoes. - Post"

S.J. Daily Telegraph - Dec. 4, 1979 Grindstones for Boston. - Four car loads of grindstones, which were brought down from the north by the Intercolonial Railway, are being conveyed to Carleton for shipment by the St. John & Maine Railway to Boston. This is one of the largest lots that was ever sent to the United States in one shipment."

S.J. Globe - Dec. 5, 1879 Large Shipments of Grindstones. - For the last few years a large number of teams have been engaged hauling grindstones from the ICR freight depot to the St. John & Maine depot. The stones, which were quarried out at Newcastle, are being forwarded by Messrs. C. McLauchlan & Sons to the United States. Previously they were shipped by schooner from the Railway Wharf, York Point, but an extra inducement is now being offered by the St. John & Maine. Messrs. McLauchlan have accepted their terms of freight. The shipment will be composed of fourteen cars, containing 140 tons of stones. It will be made up to-morrow night."

S.J. Daily Sun - Dec. 10, 1879 Harvey. - The quarries of Mary's Point, and the new quarry of Alfred Stevens, though not presenting the activity of the summer season, afford employment to a number of men who are busily engaged in preparing for extensive operations during the ensuing summer. A new quarry is being opened on the farm of Guildford Smith, Esq., which promises to be equal to any of the others in this stone-bearing region."

Moncton Daily Times - Feb. 11, 1879 Hopewell. - The prospect for a profitable business at the Bay of Fundy Quarries the coming season is excellent. A large quantity of stone is uncovered and the prospect of a good demand in New York, Boston and Baltimore was never better. We understand the Managers in New York and Boston will be here in a few days."

Chignecto Post - Jan. 2, 1879 The Wood Point Quarries closed for the season on Monday, when the hands were paid off and discharged. Messrs. L. Tower and A. Snowdon have worked it very successfully this fall, and the proprietors of it propose to carry on extensive operations next season, as the stone takes well in the Boston and New York markets."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Jan. 2, 1879 Beliveau Items.- The stone business at Beliveauhas been quite successfully prosecuted the past year. A correspondent writes on 27th. ult.- The Union Free Stone Co., finished shipping stone yesterday, having shipped 7,000 tons of stone during the season of 1878, of which about 4,500 tons was exported to the United States, and about 800 tons shipped to St. John, the balance to Moncton for railway bridges and gas house foundations, &c. This is the largest shipment made by any Quarry in the Maritime Provinces for the year just closing, and I may safely say as large as any of them have ever shipped in one year. This Quarry has shipped more a few years ago. About on hundred men were employed during the summer and about forty-five men and ten horses are now employed uncovering the rocks for next year. The present owners, a New York Co., have been carrying on the business for over fifteen years and have never once failed to make their payments here promptly. They have ensued the reputation of being the most prompt in their payments of any Quarry in the Province. Many other firms in the same business are very different from them in this respect as several instances testify. Simon White, one of the men employed in the Quarry, while working on the bank of the Quarry this morning accidentally fell over. The bank is about twenty feet high in this place. Doctor Chandler who was in attendance, to-day pronounces the bones of the leg badly shattered and broken in two or three places, but not any internal or serious injuries sustained. ... The Caledonia Quarry is employing a fair gang of men preparing for next season's operations."

S.J. Daily Sun - Jan. 3, 1879 The Boudreau Quarry. - The Union Free Stone Co. finished shipping stone for this season yesterday, having shipped over 7,000 tons of stone during the season of 1878, of which about 4,500 tons was exported to the United States and about 800 tons shipped to St. John, the balance to Moncton for railway bridges and gas house foundations, &c. This is the largest shipment made by any quarry in the Maritime Provinces for the year just closing, and I may safely say as large as any of them have ever shipped in one year. This quarry has shipped more a few years ago. About one hundred men were employed during the summer, and about forty-five men and ten horses are now employed uncovering the rocks for next year. The Wood Point Quarries closed for the season on Monday, when the hands were paid off and discharged. Messrs. L. Tower and A. Snowdon have worked it very successfully this fall, and the proprietors of it propose to carry on extensive operations next season, as the stone takes well in the Boston and New York markets."

Weekly Freeman - Jan. 4, 1879 Accident at Dorchester. - On Friday, Simeon White, while working at the Boudreau quarry at Dorchester, fell a distance of 20 feet, striking on his hands and feet, and breaking one of his legs. The surgeon who attended him says the bone is badly shattered."

Daily Telegraph - Jan. 7, 1879 Albert County. - ... The Quarries. - While looking over the quarries incident which happened some 30 years ago were recalled, when C.D. Archibald, of London, was the then prominent actor. From 100 to 150 men were then employed quarrying and preparing the large blocks of stone for the markets of the Province and the United States. We had only a short time to look over the Point and its surroundings. After a casual observation, we inferred that there must have been large quantities of stone excavated. It will not take many more years at this rate to carry off the entire southern portion of the Point. Taking our leave of the Point, we proceeded towards the mainland... Harvey Corner. - ... turning our face northward, on our left hand, stands the palatial residence of Gideon Vernon, Esq., who tired of the active duties of life, has retired to this cosy village, to spend his remaining days in the enjoyment of the delicious temperature and intellectual society of this highly favored spot. ..."

Morning Freeman - Jan. 11, 1879 Westmorland Stone Quarries. - The Union Free Stone Co. finished shipping stone for this season yesterday, having shipped over 7,000 tons of stone during the season of 1878, of which about 4,500 tons was exported to the United States and about 800 tons shipped to St. John, the balance to Moncton for railway bridges and gas house foundations, &c. This is the largest shipment made by any quarry in the Maritime Provinces for the year just closing, and I may safely say as large as any of them have ever shipped in one year. This quarry has shipped more a few years ago. About one hundred men were employed during the summer, and about forty-five men and ten horses are now employed uncovering the rocks for next year. The Wood Point Quarries closed for the season on Monday, when the hands were paid off and discharged. Messrs. L. Tower and A. Snowdon have worked it very successfully this fall, and the proprietors of it propose to carry on extensive operations next season, as the stone takes well in the Boston and New York

Moncton Daily Times - Jan. 16, 1879 The Bay of Fundy Quarries, in Albert County, have stopped their quarrying operations for the season. They have taken out a large quantity of stone the past summer, and have now about 400 tons for shipment early in the spring. They have a considerable force at work preparing for next summer's operations, and their prospect for a large and lucrative business next year was never better. This stone finds a ready market in Boston, New York, and elsewhere, and is a large item in the exports of Harvey. The quality is very superior."

Moncton Daily Times - Jan. 17, 1879 Dorchester exports for year ending Dec. 31, 1878, includes: Building stone ...

Chignecto Post - Jul. 3, 1879 A new quarry is being opened by Alfred Stevens, Esq., Harvey."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Jul. 10, 1879 Rockport.- Stone business is quite brisk here this summer considering the hard times, although prices are lower than last year. Messrs. Read, Stevenson & Co., give employment to about as many as usual. Peter Hagan, Esq., has opened a building stone quarry at Cape Maringuin, which gives employment to quite a number of men. The stone is first class, olive color.- Messrs. B. & J. Lockhart and Rufus C. Ward have a contract to get flagging for the St. John and Fredericton post offices. The flagging used in building the Penitentiary at Dorchester was taken from this quarry, which is considered the best in the Dominion..."

Daily Telegraph - Jul. 12, 1879 The Stone Trade at Rockport. - Stone business is quite brisk at Rockport this summer considering the hard times, although prices are lower than last year. Messrs. Read, Stevenson & Co., give employment to about as many men as usual. Peter Hagan, Esq., has opened a building stone quarry at Caper Maringuin, which gives employment to quite a number of men. The stone is first-class, olive color. Messrs. B. & J. Lockhart and Rufus C. Ward have a contract to get flagging for the St. John and Fredericton Post Offices. The flagging used in building the Penitentiary at Dorchester was taken from this quarry, which is considered the best in the Dominion. - Sackville Post."

Chignecto Post - Jun. 19, 1879 and Moncton Daily Times - Jun. 20, 1879 The stone business at Dorchester is dull. The Union Freestone Company have only half the usual number of men at work, viz: fifty. They have shipped two cargoes to N.Y. and one to St. John. The Caledonia Company have 80 men to work and have shipped a number of cargoes to St. John for local consumption. The Keystone Quarry has shipped nothing as yet. The Mary's Point Quarry, in Albert County, is not yet in operation this season owing to want of demand in Boston. The Wood Point Quarry, at Sackville, is not opened yet, and the prospects are that little will be done this season. General business has revived in New York to such an extent as to lead to the hope there will be brisker building operations this winter and next spring, and stone operators are looking

S.J. Daily Sun - Jun. 27, 1879 Harvey, June 24 - Alfred Stevens, who has been developing his stone quarry on the Bay Shore, is now getting out stone of superior quality, which promises to rival in excellence and beauty that from Mary's Point, of which it is doubtless a continuation."

Moncton Daily Times - May 17, 1879 Dorchester. - E.A. Charters, Esq., has the contract for the new stone tower at Memramcook Chapel. The contract sum is about $7000. Shipments of coal at Dorchester are very slack this season so

S.J. Daily Sun - Nov. 15, 1879 The Stevens Quarry. - The first lot of free stone shipped from the Stevens Quarry at Mary's Point, Harvey, Albert Co., to Boston, to test the market, has been disposed of at a good figure, being greatly admired for building purposes by contractors who have in view the erection of some fine residences on Commonwealth Avenue. The stone is of a beautiful and uniform color, contains no iron, is said to stand fire as well as brick, takes a high polish and is pronounced by cutters to work well. The prospect for opening up a large trade with Boston is highly flattering."

Chignecto Post - Oct. 2, 1879 Wood Point Items.- About fifteen men are employed at the quarries here."

S.J. Daily News - Oct. 27, 1879 Albert. - Alfred Stevens, Esq., of Harvey, has shipped a load of building stone to the

United States. As the stone is a very superior article and there is an unlimited supply at his quarries, we hope for his own and the community's sake it will prove a paying speculation."

S.J. Daily Sun - Oct. 27, 1879 Albert. - A load of very excellent building stone- the famous brown stone, has just been shipped from Harvey to the United States by Alfred Stevens, Esq., from his new quarry. We hope the thing will pay, as it will be a great benefit to the community if a profitable trade can be worked up."

Daily Telegraph - Sep. 9, 1879 Quarries. - The quarries of Read, Stevenson & Co., and Lombard & Co., have been vigorously carried on during the summer. The breakwater has proved of immense service in loading, and the great number of boats, large and small, that seek it for shelter during storms, proves the wisdom of its building. A small light house on its western end is badly wanted as it is impossible to make it in a dark night, it being completely overshadowed by the high bank. An immense quantity of stone, many of the pieces 7 feet in diameter and 14 inches in thickness, is now piled on the breakwater awaiting shipment. The quantity of stone turned out this summer has been much greater than for some years

Chignecto Post - Apr. 1, 1880 Dorchester Quarries.- Schooner Vesta is loading the first cargo of stone from here this season for New York."

Moncton Daily Times - Apr. 7, 1880 Stone-cutters for Ohio. - Mr. Dominique Legere, of Rockland, accompanied by 41 stone masons, all of Westmorland County, left recently to work in stone quarries in Lorain County, Ohio, U.S. Mr. Legere was accompanied by his family. He is to have charge of a gang of men."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Weekly Freeman - Apr. 10, 1880 Stonemasons Leaving. - Forty-one stone masons of Westmorland Co., recently left to work, in stone quarries, at Lorain Co., United States."

S.J. Daily Sun - Apr. 20, 1880 Harvey. - At the well known quarries of Mary's and Wood's Points, the Bay of Fundy Quarrying Co. are preparing for an unusually large season's work. Already nearly a hundred men are at work clearing off, erecting cranes and derricks and building a water-tight embankment, that they may operate below the tide. They are also engaged in building a fine new store. We understand that they have already secured some large contracts for the coming season, and have advertised for 100 additional men. The Stevens Quarries at Mary's Point (mainland), opened last year by Alfred Stevens & Co., will give employment to quite a number of men. The work of preparation has been steadily going on through the winter, and the working force is now being largely increased. Their wharf has been extended and will afford excellent facilities for shipping directly from the quarry. The first cargo shipped last fall has been used in the construction of a fine building in Commonwealth Avenue, Boston. The fine brown stone from these quarries is greatly admired for its bright, attractive and uniform color and fine texture. The supply is apparently inexhaustible, and as the firm has received unsolicited orders for the first shipments, they have been encouraged to add largely to their plant and machinery, and are expecting to do a large business this coming season."

Moncton Daily Times - Apr. 30, 1880 Albert Co. - A correspondent writing from Harvey on the 27th inst. Says: Schr. Riverside, Captain Miles Brewster, sailed from Mary's Point today for Boston with a load of building stone."

Moncton Daily Times - Aug. 9, 1880 Brown Stone. - The attention of builders is directed to the samples of brown stone from the Stevens quarries lying on Dunlop's Wharf. Contracts for any desired quantity of this stone will be taken. Apply to H.T. Stevens, Moncton, Aug. 9."

Chignecto Post - Aug. 12, 1880 Albert County.-... Mary's Point ... is a rocky peninsula reached by a road over the sandy shore. For forty or fifty years different parties have been digging for money at this place, some with good and some with indifferent success. The money in this instance is in red freestone, of which there is a vast deposit on the shores of this part of the Bay of Fundy. The quarries have had many owners, since the first stone was removed, and it is now in the hands of the Bay of Fundy Company, the office of which is in Boston. Mr. A.J. Roberts is the resident manager at this place. Both red and grey (or olive) freestone are quarried and between four and five thousand tons are annually shipped to the United States, chiefly to Boston and New York. In the latter place it brings about $14 a ton (or fourteen cubic feet) with freight and duty paid. The duty is $1.50 a ton, the same as is imposed on American stone coming into Canada. Had the Baie Verte Canal been built, our New Brunswick freestone could find a ready sale in the Upper Provinces, where Connecticut stone is now used, but as it now is, the latter, even with the duty, can be carried there and sold at a lower price. Some 72 men are now employed at Mary's Point, or rather they ought to be employed, for on the day of our visit they were on strike, and were amusing themselves by fiddling, playing ball, and otherwise enjoying the genial August sunshine. I was accompanied by Sheriff Wells whom some of them viewed with an air of some suspicion until satisfied that he was not specially there on the Queen's business. They were very orderly for men on strike, and had done nothing worse than compel the minority to knock off, and causing the carpenter and blacksmith to vacate their respective scenes of labor. They will doubtless be all at work ere this reaches you. A quarry is one of the things on which much money is required to be spent in order to develop its resources and work to good advantage. Here, for instance, is a water-tight bulkhead, just erected, which represents about $3,000, but it will pay for itself by keeping out the tide and allowing a fine body of stone to be worked. Machinery, too, costs money, and the labor of getting out marketable blocks from the place of their concealment is something more than the work of a passing hour. Mary's Point ... derives the name from Mary Gouche ... who owned the place and lived on it, before New Brunswick existed in history... two centuries ago... Grindstone Island rises out of the bay a mile or so to the westward of the Point. It takes its name from the industry which is still followed upon it...The Stevens quarry is situated in the Cove to the south of the Point, and has only been opened during the past season. About five cargoes have been shipped up to the present time, and another will soon be ready. The owners are Messrs. H.T. and Alfred Stevens. Some 23 men are employed. Other deposits of freestone are found in this vicinity, and the Deery and Watson quarries exist in name, but have not been worked......."

Chignecto Post - Aug. 26, 1880 A strike of quarrymen took place at the Wood Point Quarries on the 18th. Some of the men resumed work on Monday."

Chignecto Post - Dec. 2, 1880 Shipments of stone from Boudreau Quarries, Dorchester, (including two vessels now loading) for 1880 are as follows: to New York, 2,550; Fredericton and St. John, 1,550 tons - total 4,100 tons. Also about 1,100 tons of refuse stone were supplied for the Sugar Refinery and local sales."

Moncton Daily Times - Dec. 17, 1880 Harvey. - From every appearance some of our schooners will continue running for some time yet. The Messrs. Roberts expect to ship two more cargoes of stone before the year closes. The stone is ready, awaiting vessels now on their way to the quarries."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Dec. 27, 1880 Albert, Harvey. - The brig has just got loaded atthe quarries. We understand that two of her crew deserted, on account of the vessel leaking, caused by her being driven ashore a few days ago. The Captain will go to St. John and overhaul before proceeding on the voyage to New York. This will probably be the last shipment by the Roberts this season."

Moncton Daily Times - Feb. 26, 1880 The Mary's Point Stone Quarry. - The number of men employed at the Stevens Quarry at Mary's Point, Harvey, A.C., will shortly be increased. The quantity and quality of the stone that has been turned out is very satisfactory. The season's operations will be commenced probably by the last of next week, and active work is expected by the 1st of April. The proprietors hope to make a shipment to Boston by the first week in May."

Moncton Daily Times - Jan. 8, 1880 Albert County. - In the adjoining parish of Harvey, business appears to be improving. The Bay of Fundy Quarrying Company at Mary's Point are about starting again and there is no doubt but these quarries will be worked quite extensively the coming season. The work of preparing for next year's business at the Stevens quarries, also at Mary's Point, which have been opened quite recently by Mr. Alfred Stevens, is steadily progressing, and as the stone is said to be greatly admired and the first cargo shipped sold readily at a good price, no doubt a good business can be done the coming season. There is said to be an abundance of stone and the very best facilities for quarrying and

S.J. Daily Sun - Jan. 10, 1880 The Bay of Fundy Quarrying company, at Mary's Point, Albert Co., are about starting again. The quarries will be worked quite extensively the coming season. The work of preparing for next year's business at the Stevens Quarries, also at Mary's Point, by Mr. Alfred Stevens, is steadily progressing, and as the stone is said to be greatly admired and the first cargo shipped sold readily at a good price, no doubt a good business can be done the coming season. There is said to be an abundance of the stone and the very best facilities for quarrying and shipping. - C.F. Dow, Esq., is getting on rapidly with the new ship, and giving employment to quite a number of men."

Moncton Daily Times - Jan. 31, 1880 Albert Co. - The Bay of Fundy Freestone Co., talk of building a large store, at Mary's Point."

Chignecto Post - Jul. 1, 1880 The Caledonia Quarries, Dorchester, have shipped 8 cargoes of building stone to the United States this year."

S.J. Daily Sun - Jul. 13, 1880 Albert. - ....The stone quarries are in full blast, and are giving employment to a large number of our people."

Moncton Daily Times - Jul. 23, 1880 Albert County. - The A.R.R. - The extension of this line to Mary's Point is likely soon to be carried on. The Bay of Fundy Freestone Quarry Co. guarantee the shipment of 5,000 tons of stone over the line each year for Montreal, should the company agree to build......"

Moncton Daily Times - Jul. 23, 1880 Rockport - Times are quite brisk here; the men are all busy at grindstone work. The prospects are somewhat better than last year. Peter Hagan is working his quarry at the Cape; he has built a wharf and quarried about 50 tons of stone for the Boston market."

Chignecto Post - Jun. 10, 1880 The Wood Point Quarries are in vigorous operations, Messrs. Roberts having about 60 men at work. The wharf has been extended this year some 60 feet further out, and a new wharf commenced, two hundred yards distant, where a new opening in the rock has been commenced. The stone has about 20 feet of coverage, 8 of it being unmerchantable stone. Below this, 15 feet of good rock is being quarried. The situation of the quarry is admirable for disposing of the refuse surface at the least possible expense. A steam pump for expelling water from the quarry will soon be put in place. Mr. C.C. Campbell is the storekeeper and manager; the engineer is Mr. John G. Gallagher, and the quarry foreman is Mr. W. McCully."

S.J. Daily Sun - Jun. 15, 1880 Harvey. - ...The quarries and shipyards are alive with the Hum of activity... A. Stevens &c., have a large quantity of unusually fine stone, awaiting shipment. They are pushing matters, employing about 40 men, and expect to do a large business having shipped already a large quantity of stone."

Moncton Daily Times - Jun. 25, 1880 Albert Co. - Shipment of Stone. - The Elysia A., Anderson, cleared yesterday for Boston with a load of stone from the Stevens Quarry."

Chignecto Post - Mar. 4, 1880 The Mary's Point Stone Quarry.- The number of men employed at the Steven's Quarry at Mary's Point, Harvey, A.C., will shortly be increased."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Mar. 11, 1880 Albert Co. - The Bay of Fundy Quarrying Company, whose quarries are at Mary's Point and Wood Point, are actively at work preparing for the season's work. They are now erecting a new store. The quarries at Mary's Point is a busy place just now. Some sixty men are now employed, and the number will probably be doubled as soon as the quarrying season commences, which will be about the 1st of April. Large quantities of stone is uncovered, and they will no doubt be able to ship a much larger quantity than heretofore. The work at the Stevens quarries, also at Mary's Point (on the main land) is being pushed forward, and it is expected quarrying will be commenced at this place immediately. There is said to be a good market in the U.S. for building stone and it is hoped that a good business will

Moncton Daily Times - Mar. 15, 1880 Harvey. - Work is being resumed vigorously at Turner's shipyard at Mary's Point and the Stevens stone quarries."

Chignecto Post - Mar. 18, 1880 and Moncton Daily Times - Mar. 19, 1880 The stone business at Hard Ledge promises to bevery brisk this season. Messrs. Read, Stevenson & Co., erected a wharf at this place last fall, and propose putting up an engine for hoisting purposes in the spring."

Moncton Daily Times - Mar. 29, 1880 More Men Wanted. - The superintendent of the Bay of Fundy Quarrying Company, advertises in to-day's Times for one hundred men to work at their freestone quarries, Mary's Point, Albert Co., and Wood Point, Westmorland County."

Moncton Daily Times - Mar. 30, 1880 ADVERTISEMENT: Notice. Wanted One Hundred Quarrymen, by the Bay of Fundy Quarrying Company at their Freestone Quarries, Mary's Point, A. Co., and Wood Point, W. Co., N.B. Good wages paid. Very healthy locations - cool in summer. Address A.J. Roberts, Supt. Mary's Point, A. C., N.B. N.B. - Now ready for men. mch 29-w2mdtts2w"

S.J. Daily Sun - May 1, 1880 H.T. Stevens, the editor of the Moncton Times, has entered into a co-partnership with A. Stevens, Esq., of Harvey, to carry on the quarrying and general business."

S.J. Daily Sun - May 4, 1880 Albert. - ..... The stone quarries at Harvey and Demoiselle Creek offer remunerative employment to many, while....."

Chignecto Post - May 6, 1880 The Wood Point Quarries are in full blast, alarge gang of quarrymen being at work under the superintendency of Mr. C.E. Campbell. The stone has obtained quite a reputation in the Boston market, and several contracts for its supply have been made. About a hundred tons per week will it is expected be got out the beginning of the

Chignecto Post - May 6, 1880 Grindstone business at Rockport has started again- Messrs. Read, Stevenson & Co., having about 20 men at work."

S.J. Daily Sun - May 7, 1880 Woodpoint Quarry. - This quarry is now open for the summer. Mr. C.E. Campbell, of Boston, who has charge, expects to turn out about one hundred tons of stone per week. There are about 50 men employed. The first shipment will be made in about a fortnight. - Transcript"

S.J. Daily Sun - May 7, 1880 Grindstone business at Rockport has started again- Messrs. Read, Stevenson & Co. having about 20 men at work. - Post"

Moncton Daily Times - May 26, 1880 Shipment of Stone. - Messrs. A. Stevens & Co. made their first shipment of building stone for the season on Monday last. It goes to Boston in the Flora McLeod. The stone from the Steven's quarries is much wanted in Boston, and as the proprietors are working them vigorously, this industry promises to be a flourishing one and most useful to the locality where situated."

S.J. Daily News - May 29, 1880 Albert. - The stone quarries at the Bank and Mary's Point are giving employment to a large number of men, and there is the prospect of a prosperous business being carried on at these places."

Chignecto Post - Nov. 4, 1880 Messrs. Roberts intend removing their steamcranes and other machinery at Wood Point Quarries to their Kennetcook Quarries, N.S., and erecting in their stead a travelling steam crane or gantry. The cost will be about $4,000. They intend cutting their stone, as much as possible, with a channelling machine, which will cut out probably 75 tons per day. During the past season, Messrs. Roberts have expended some $32,000 at Wood Point and Mary's Point. They propose to erect a new store at Wood Point. They have recently completed a store at Mary's Point, and propose to construct within a few months twenty-five cottages for workmen and a manager's residence of stone, and a profitable investment as merchantable stone exists in abundance."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Nov. 4, 1880 Alex. Rogers, Esq., M.P., and others have leased Grindstone Island for the purpose of carrying on the stone business there."

S.J. Daily Sun - Nov. 5, 1880 and Daily News - Nov. 5, 1880 and Daily Sun - Nov. 5, 1880 Killed at Wood Point Quarries. - Yesterday morning, at 9.30, William Ward was working under the bank in a stooping position in the Wood Point Quarries, when a large stone above him gave way and fell on his back, crushing him to the ground. Two men working near him at the time ran to his assistance and removed the stone which weighed about 400 lbs. He was taken to Mr. Stephen Clarke's residence, and the doctor sent for. He lived about four hours after, being in a semi-conscious state most of the time. He was a widower and leaves a family of young children. He was about 45 years old, and was the only support of his mother. A good deal of sympathy is felt for the family, who at one blow have been deprived of a son and a father. - Post"

S.J. Daily Sun - Nov. 8, 1880 The Gilbert Family Monument. - (Correspondence Moncton Times). - Dorchester, Nov. 5. - The handsome and massive monument of the Gilbert family was set up in the Dorchester rural cemetery yesterday by the Messrs. McGrath Brothers, of the Dorchester Marble Works. The monument is nine feet from the base to summit, weighs about seven tons, and is of freestone from the quarry of the Dorchester Freestone Company. The three divisions of the pedestal are proportioned as follows: The base five feet square and eighteen inches thick; the dado or die three feet six inches square and three feet high; and the cornice, octagonal in form, to match the base of the capital which it supports. The design of the capital is entirely new in monumental work, and is taken from the well-known allegorical picture called Rock of Ages, representing a female figure drawing herself from the waves and clinging to a massive ceam-cleft cross of rock. This, the crowning part of the monument, is about five feet high, and the cross is apparently seamed and riven as if from the incessant action of the waves, which appear in relief at the foot of the cross. The traverse section of the cross bears the inscription 'Rock of Ages cleft for me', etc. The faithfulness of the outlines and proportions of the figure clinging to the cross is remarkably alike in showing the skill of those who executed it as in proving the extent to which Dorchester freestone may be used in those finer lines of work hitherto confined to marble and granite. The figure is somewhat larger than half life size, and the agonizing form clearly expressed by the artist's chisel stands out in bold relief. The deep mouldings of the capital and the heavy panelling of the dado relieve the massiveness of the work and make its proportions more graceful. Three panels of the dado contain the inscriptions, the fourth being left vacant for future requirements. The inscriptions on th front, right, and left faces, beginning with the one on the front, are as follows:- (Front) Sacred to the Memory of Humphrey Gilbert, Esquire, A descendant from the Gilbert family of Devonshire, England, who colonized in America under Patent from the Crown in the reign of Queen Elizabeth; born at Berkeley, county of Bristol, old colony of Massachusetts, on the 25th day of September, 1775. After the signing of Independence by England to her American subjects, he was brought by his grandfather, Colonel Thomas Gilbert, with his family (being adherents to the Crown) in the ship Spencer to Parr Town, now the city of St. John, N.B., where they landed in the spring of 1783. On the 12th day of February, 1807, at Dorchester, New Brunswick, he was married to Sarah, only child of Lieut. Robert Keech, where he resided until his death on the 20th day of July, 1838, aged 63, leaving a widow, six sons and two daughters. The one on the right face:- Sacred to the memory of Thomas Gilbert, Esquire, First Sheriff of Albert County, N.B. Born at Dorchester, N.B., February 25th, 1808; died at Hopewell, A.C., March 8th, 1862; aged 54 years. Robert K. Gilbert, Esquire, Barrister-at-law and M.P.P. for Westmorland County. Born at Dorchester, N.B., March 3rd, 1809; died Nov. 14th, 1857; aged 48 years. Bradford Gilbert, Esquire, Born at Dorchester, April 7th, 1812; died at Dorchester, N.B., April 10th, 1879; aged 67 years. Elizabeth Ann Gilbert, Born at Dorchester, Sept. 13th, 1824; died at Dorchester Nov. 18th, 1864, aged 40 years. The left inscription thus:- Sacred to the memory of Lieutenant Robert Keech, a British Loyalist, born at North Castel, New York, Nov. 12th, 1759, who after England ceding to her subjects in America their independence, left New York with his wife and only child, and landed at Fort Cumberland, County of Westmorland, on the 5th day of August, 1783, and took up his residence in Dorchester, where he died on the 2nd day of October, 1842, aged 83 years. In memory of his wife Kezia, who was born at Dutchess County, New York, July 8th, 1762 and died at Dorchester, on the 21st day of January, 1849, aged 87. In memory of their only child Sarah, who was born at Westchester, New York, on the 5th day of April, 1783, and on the 12th day of February, 1807, at Dorchester, was married to Humphrey Gilbert, Esquire. Died on the 31st of May, 1863, aged 80. The present surviving members of the old Gilbert family have been instrumental in erecting the monument as well as in selecting the design, the Police Magistrate of St. John taking an active interest in the work. The carrying out of the proportions, and all the finer work, chiselling, etc., was done by Messrs. James and John McGrath, of Dorchester."

Fredericton Capital - Nov. 11, 1880 A 50 ton load of freestone for the New Parliament Building, which started from Dorchester, by schooner a week ago last Wednesday, is daily expected. The vessel carrying it will have aboard the four freestone pillars for the portico now being erected. Workmen at the building have been idle a week by the schooner's delay. Only 20 tons of stone are required to complete the building, and the remainder will be offered by the contractor at a

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Daily News - Nov. 12, 1880 Mining Notes. - A few weeks ago a Boston Mining Co., sent a couple of experts Messrs. Joseph W. Colman and Charles H. Stewart, to Harvey, Albert Co., for the purpose of examining freestone deposits on the land of F.W. Watson, with a view to examining into the size and quality of the rock and the facilities for transportation. They reported its quantity as inexhaustible and its general dip 45ø pitch east and west. The sheets vary in thickness from a few inches to several feet, which break handsome and true, leaving little work to be done before shipping. Its proximity to the Bay of Fundy makes abundant facilities for shipping. The deposit is elevated seventy feet above high water level, and has good and sufficient natural drainage. The committee examined the property with great care, making many blasts and excavations and pronounce the samples which they secured very creditable as to the general character of this kind of stone. The stone is free from iron or objectionable streaks, undefaceable by climate or sudden change of temperature. To utilize the deposit, a tramway of three-eighths of a mile will have to be built at a cost of say $1,000 per rod. When this is completed vessels loading will have a good berth of soft mud in a creek, which makes up through the marsh, and will be protected by reefs extending out far beyond. The depth of water is about 17 or 18 feet, and a vessel loading can go out in any high water, or twice in twenty four hours, when at all other points above the creek it cannot go then unless with the assistance of a very high tide. It is probable that a systematic attempt to work the mines will be made next spring."

Moncton Daily Times - Nov. 19, 1880 Stone for Boston. - The schooner Minnie E. sailed from Lockport last week. She was loaded with spindle stone by the Messrs. Tower and Maxwell. The cargo was consigned to Messrs. Lumbard, of Boston. After discharging, the Minnie E. will take a general cargo for this port. - Transcript."

S.J. Daily Sun - Nov. 20, 1880 Six hundred tons of Budrot stone for the new Centenary Church will arrive to-day, and the work of stone cutting will be continued this winter. No artificial stone will be used in the new building."

Moncton Daily Times - Oct. 2, 1880 Albert County News. - (Maple Leaf). - The Two Island Stone Quarry. - F.W. Watson, Esq., who has recently returned from a two months visit to the United States, is looking hale and healthy. While in Boston, Mr. Watson made arrangements with parties to take hold of his Stone Quarry, on the Two Island place, near Harvey Corner. He expects one of those interested here this week to operate."

S.J. Daily Sun - Oct. 22, 1880 Albert. - Stone Quarries. - F.W. Watson, Esq., has a number of hands employed at his new quarries, Harvey. He has already discovered an immense reef of very fine stone. In every respect the indications are most flattering. Capitalists from Boston are expected in a few days, who no doubt will be only too glad to take hold of the works in good shape. Mr. Watson is to be congratulated on his almost certain success."

Moncton Daily Times - Oct. 22, 1880 Albert County. - New Quarries. - F.W. Watson has a number of hands employed at his new quarries at Harvey. He has already discovered an immense reef of very fine stone. In every respect the indications are most flattering. Capitalists from Boston are expected in a few days to take hold of the works in good shape. Mr. Watson is to be congratulated on his almost certain success."

Moncton Daily Times - Sep. 17, 1880 Albert County News. - (Hopewell Maple Leaf). -Harvey Items. - ... Two vessels were loading stone last week at the Stevens quarry."

Chignecto Post - Sep. 30, 1880 S. J. Exhibition.... From SE: Bay of Fundy Quarrying Co. of Harvey - freestone Budro Freestone Co., Dorchester - freestone."

Chignecto Post - Apr. 7, 1881 The Wood Point Quarries recommenced the season's work with 20 men. Messrs. Roberts are negotiating in New York for a propeller, to carry cargoes by steam from Wood Point and Mary's Point, to Boston, New York and other U.S. ports."

Chignecto Post - Apr. 21, 1881 The new freestone quarry at Harvey is on the lands of F.W. Watson, not Webster, as stated last week."

Daily Telegraph - Apr. 23, 1881 Sackville Transcript. - The grindstone business has commenced at Rockport. The prospects for this trade are better than for years past. Mr. Peter Hagan who has an olive stone quarry at Rockport, expects to open a brown stone quarry soon. He will then be in a position to supply builders. ... Mr. Peter Hagan has already shipped three loads of building stone this season. The first cargo was taken by the schooner Minnie E. to St. John, on March 18th. This is an unusually early shipment for this section. The second shipment was by the schr. Mary C. to Boston, on the 29th March. The third shipment was to St. John, on the 1st of April, by the schr. Minnie E. The stone for St. John is to be used in Methodist Centenary Church, now building."

Chignecto Post - Apr. 28, 1881 Messrs. Watson, Fay, and Curter, shareholders in the new International Freestone Co., recently formed in Boston, and to which reference has already been made, have called the first meeting of the company for the purpose of organization. It will be held at Harvey, on the 11th of May."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Globe - Aug. 4, 1881 Accident in a Quarry. - A frightful accident occurred on Monday afternoon at the Bay of Fundy quarries, at Mary's Point. A man named Alex. McKay, who was assisting to blow rock, was standing near a shot which had failed to explode when it unexpectedly exploded, cutting and mangling his throat and head in a fearful manner, and causing death."

Moncton Daily Times - Aug. 6, 1881 Harvey, Aug. 4. - A sad accident occurred last Monday at the Quarries, Mary's Point, resulting in the death of a man named Kay from Cape Breton. He was crushed by a falling stone, loosened by a blast, and only lived a few hours after the accident. His remains were forwarded per rail yesterday to Cape Breton."

Chignecto Post - Aug. 11, 1881 Our Stone Mines.- Their Extent and Value.-Geologic History.- The Hagan Quarry.- The Grindstone Workers.- The Cole Property.- The Wood Point Quarries.- Our Markets, &c.- Our country is so rich in precious metals, with its mines of gold and coal in Nova Scotia, creating an Eldorado of wealth, and with its antimony, manganese and silver mines, in this province, big with promise, that less pretentious minerals remain, if not known, at least unappreciated and unsought. Few of the people, even on the spot, understand the real value of the immense formation of grits and freestones existing in the lower part of the parish, forming miles of reefs, on which the tides ebb and flow, and miles of cliffs and sea walls against which the storms have beaten for ages. Were it possible, it would be interesting to trace the gradual development of these immense deposits of sandstone - miles in depth - from the time when a lonely sea swept the whole vast region from the Laurentian Hills in Quebec to the Cobequid Mountains, until that time when the inevitable Yankee came with his gantry and steam saws to utilize our natural store-houses of builder's materials. While the north side of the Cumberland Basin is not favored with the Joggins coal seams - in many respects the most remarkable in existence - still it is satisfactory to know that our sandstones bear to those measures a sort of paternal relationship. They were the ancestor - the preceding deposit to the coal. The sandstone seams of stone in the estuary of the River Hebert and at Lower Cove, form the bed of the coal measures seen along the coast, while the sandstones at Cape Meranguin across the Bay being of the same age, probably formed on the north side of the Basin or trough of that ancient lagoon in which coal plants grew, such as the long cylindrical Calamite or the immense creeping root Stigmariae. The sandstone beds were deposited in shallow seas or swampy flats, the matter being derived from ridges and rocks produced by volcanic or fire agencies, and also probably from new formations, now probably beneath the ocean. Imagine a wise shallow sea filled with sand banks, like the estuary of the Mississippi and with low islands bordered by tropical Ferns! The immense depth of these deposits of sandstone, argue the existence of rivers bearing down from large continental regions great quantities of sediment. Many peculiar conditions were required to produce grindstone. The grains of sand must have come from some triturating source making them of uniform texture; they must be cemented to give a certain cohesion; a too hard or too soft a stone is useless. So many conditions must have united to produce building stone of such desirable texture, strength, durability and shade, as are found in the olive and brown stones of Sackville. The grindstone on what are known as the Joggin water lots have been worked for probably eighty years. The grindstone reefs that formerly ridged the shores have been blasted and quarried so continuously season after season, that but little is now left of them in sight but masses of rubbish and refuse. Consequently the stone cutters are beginning to abandon this somewhat predatory style of work and start regular quarries above the tide- way. By the old system, stones at low water would be attached to boats and floated up on the rise of the tide to the scabbling ground. By the new system, more labor is required to remove the soil and upper surface - ten or twenty feet thick - and more machinery and capital generally are employed, but when skilfully used, the profits are probably as large in proportion, and assuredly more certain than in any other branch of mining industry. At Cape Meranguin, the Quarry opened three or four years ago by Mr. Peter Hagan, and are as yet only partially developed shews even now, two very handsome faces of freestone. One is shaded brown and the other olive. These have a southerly dip of nearly 45ø. Mr. Hagan tackled these rocks single handed, without any adequate capital or backing of any kind and it must be admitted exhibited a grit and energy, for which Bluenoses are seldom credited. Mr. Hagan has shipped eight schooner loads this season and has four more ready. He has been employing some 17 men. He has built wharves, erected cranes, removed a large quantity of superincumbent dirt and is each season opening wider and improving the value of his property. Further east, up shore, Mr. James Stevenson, of Read, Stevenson & Co., is carrying on the grindstone business. He employs gangs of men to work the stone in the tide-way in Slack's, Desk's and other coves. Mr. Stevenson has probably three cargoes of grindstone now ready for shipment at these Coves and across the Bay. Farther up the shore is the property of Rufus Cole, Esq., which is entirely undeveloped, but is prospectively one of the finest in the country, and only for the abundance of stone in the neighborhood would long ago have been sapped and mined. This property presents on the Bay side a long stretch of unbroken and undisturbed cliff, shewing handsome red sandstones, admirably adapted for building purposes, extensive beds of flagging stone, and a soft polishing grit for marble. The latter has been tested in the United States and quantities of it sold. Some hundreds of tons of flagging are now been quarried in the tideway for the Penitentiary. Some day, a speculative Yankee will come along and gobble up, this property. Proceeding up the Bay, the next are the Wood Point Quarries. The stone formation exists on the lands of C.C. Barnes, Esq., and on the adjoining Atkinson farm. We understand a company has been organized in Boston to develop the latter property. Next, it is the valuable workings of the Bay of Fundy Quarrying Company, who have spent many thousand dollars the past two years in building wharves, clearing the surface, securing machinery, steam engines, &c. The stone here lies nearly flat - having a slight dip only to the south. Few locations are more admirably adapted for quarrying and shipping. Some two thousand tons have been shipped this season. Fifty tons are now quarried daily, with a prospective increase in a few weeks to a hundred tons daily. Fifty men are employed. The production of these quarries would be immensely stimulated had we better markets. The duty of $1.50 per ton imposed by the United States, is almost prohibitory, and is, in fact, so, unless the stone is quarried under exceptionally favorable circumstances. The Upper Canadian cities are supplied from Ohio and New York, the freights shutting us out of their markets. The Baie Verte canal would have remedied this disadvantage to some extent, had it been constructed. True, we have water carriage to the Atlantic cities, against rail from Ohio, but the reduction in carrying rates by rail has been so great of late years, that the difference has been equalized. The Bay of Fundy stone possesses a reputation as a good working stone, and will, therefore, always be a favorite in the building trade, and will always command a market when its shades of color in fashion. Strange to say they are not always the tone. No taste changes more quickly - not even a ladies' bonnet - than the shades of color demanded in the mansions and palaces of the great men of the new world."

Moncton Daily Times - Aug. 24, 1881 A sandstone quarry has been opened at the Baie des Chaleurs, N.B., by Mr. McArthur of Ottawa. Seven two hundred ton vessels have been loaded and sent to Montreal from the quarry this season with sandstone. Two vessels are now loading for the fall trade."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
St. Croix Courier - Aug. 25, 1881 A sandstone quarry has been opened at Baie desChaleurs, N.B. Seven two hundred ton vessels have been loaded and sent to Montreal this season with grindstones from it. It is stated that the quality of the stones is far superior to those from Ohio."

Chignecto Post - Dec. 8, 1881 Notwithstanding the statement in the papers that the Bay of Fundy Quarrying Company's stores are closed, the one at Mary's Point is still doing active business. It will be a bad job if this quarry should be closed."

Chignecto Post - Dec. 8, 1881 Bay of Fundy Quarrying Co.- The Wood Point Quarry paid off a number of quarrymen last week, who left the work. Stripping the rock for next season's operations has commenced. The statement made that the

Company's store had closed is inaccurate. The prospects of the Company are we learn not likely to be affected by Mr. Banyon's connection with the National Bank."

S.J. Daily Sun - Dec. 9, 1881 Grindstone shipments. - Today the St. John and Maine railway will send out fifty tons of grindstones for the States. They were being loaded on the cars yesterday."

S.J. Daily Sun - Dec. 10, 1881 Bay of Fundy Quarrying Co. - The Wood Point Quarry paid off a number of quarrymen last week, who left the work. Stripping, the rock for next season's operations has been commenced. The statement made that the Company's store has closed is inaccurate. The prospects of the Company are, we learn, not likely to be affected by Mr. Banyon's connection with the National Bank.- Post"

S.J. Daily Sun - Dec. 12, 1881 The Pacific Bank. - In another column we publish a letter from Mr. Roberts in reference to the position of the Bay of Fundy Quarrying Co., owning stone quarries at Wood Point, Mary's Point and Harvey (A.C.) in this Province. Mr. Roberts gives us to understand that the Pacific Bank will resume operations in a few days and that on the Bank's resumption the affairs of the Bay of Fundy Quarrying Company will be satisfactorily arranged. The numerous parties in New Brunswick who are interested in the Company's extensive operations will be pleased to have this assurance. Since Mr. Roberts' letter was mailed to the Sun, the Bank matters have made satisfactory progress towards a settlement. Boston advices of the 9th inst. say:- A long consultation was had to-day between the Directors of the Central and Pacific National Banks and Mr. Weeks, at which an arrangement was drawn up and signed which, with the assent of Comptroller Knox, will insure a speedy resumption of the Pacific Bank. The Pacific Bank owes the Central National $875,400, the security held by the latter having a face value of $250,000. In the agreement the Central has adjusted this debt by allowing the Pacific Bank a year in which to pay $500,000. They have returned the Pacific $125,000 of the $250,000 collateral and the balance of $315,000 Mr. Weeks agrees to pay in six months, he depositing first class security. Weeks further agrees to cancel to-morrow $560,000 of the indebtedness of the Pacific Bank by the return of certificates of deposit or bank checks, and the bank gives him a time extension on the rest of the amount due from him, $474,600. The Directors having raised the million necessary from them have decided on the basis of this arrangement to resume immediately upon the receipt of the Comptroller's consent, which in view of the above facts is considered a mere matter of form. This is good news for those whose business arrangements have been seriously interfered with by the Bank's temporary suspension. The operations of the Bay of Fundy Quarrying Co. are of great importance to the localities in Westmorland and Albert at which they are conducted, and we believe we may safely congratulate the localities and all interested parties on the prospect of an early discharge of the Company's liabilities in this Province."

S.J. Daily Sun - Dec. 12, 1881 Bay of Fundy Quarrying Co.. - Boston, Dec. 8,1881. - To the Editor of the Daily Sun:- Allow me, through the valuable columns of your paper, a few words in reference to the Bay of Fundy Quarrying Co. It was organized under the laws of the State of New York. Its head office is at 181 Broadway, New York, and branch office in Boston. Its officers and stockholders are New York and Boston gentlemen, mostly men of considerable wealth, and the Company owns large and valuable properties entirely free from incumbrances, and is abundantly able to pay all its debts. But owing to the temporary suspension of the Pacific Bank of Boston, whose President was also President of the Company, through whose Bank the Company transacted all its financial business, acceptances of the Company due in New York on the day of the Bank suspended were protested and returned, as the Company's checks issued on the Pacific Bank for the payment of these acceptances were not presented until the news of the suspension had reached New York, and so were refused as payments. This suspension locked up the resources of the Company, and until it is decided just what course the Bank will pursue the Company's paper will not be paid. But as soon as a decision is reached by the Bank the Company will then proceed to take up all its overdue paper and meet all its obligations promptly. But owing to complications it cannot consistently resume payment until it is known what course the bank will pursue. At the same time, whatever the result of the Bank trouble may be it will not affect the standing or involve in any way the Bay of Fundy Quarrying Co., as its resources are ample to carry it through any emergency. All the Company desires is the confidence of its creditors for a short time, to enable them to set their house in order, which from present prospects will be but a few days at most. There is no doubt here but the Bank will reorganize under strong and efficient management. I trust this statement will set at rest many false reports that have crept into some of your local papers, and especially the article in the St. John Globe of Nov. 30th, which contains but very little truth, from whatever source the enterprising editor obtained his information. Yours most respectfully, Walter J. Roberts, Manager, B.F.Q. Co."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Dec. 15, 1881 Bay of Fundy Quarrying Co.- Walter J. Roberts, Esq., manager writes from New York under date of December 9th, writes us in reference to the numerous mis- statements appearing in the papers with respect to the difficulties of the Company, which arise entirely out of the suspension of the Pacific Bank. The Company's cheques were out to meet drafts due at New York banks. The Bank unexpectedly suspended and cheques on it were of course refused payment. Until the Bank decides its own future course of action, the Company is at a standstill. Fortunately the Bank is in a position by which it is expected it will be able to decide almost immediately whether it will go into liquidation or re-organize and go on. Hardly any doubt is expressed it will take the latter course. As soon as it takes either course the Company will be in a position to act. It is satisfactory to learn from Mr. Roberts that the total indebtedness is less than $13,000. Their properties, valued at $250,000, are wholly unincumbered, so the prospect of any body meeting any loss seems infinitismal. It is very important to the Provinces that the splendid quarries owned by this enterprising Company

Moncton Daily Times - Dec. 16, 1881 The Bay of Fundy Quarrying Co. - A letter has been received from Mr. Walter J. Roberts, manager of the Company's quarries in New Brunswick, in which he writes that the prospects for an early settlement of the company's affairs are growing brighter daily. At a meeting of the Company in New York, Roswell R. Fitch, Esq., was elected President instead of Mr. Benyon, resigned, and the report of the Secretary shows the Company has some $300,000 assets and only $16,000 liabilities, three-fourths of the latter being in New Brunswick and the remainder mostly at the Company's quarries at Springfield, Mass. The Company have assurances of a very large business for 1882, and will carry forward their projects to meet the large and increasing demand for their stone. Mr. Roberts expects to

S.J. Daily Sun - Feb. 3, 1881 About 200 tons of stone have recently been got out of the quarry on Mr. David Connell's farm near this city, and have been placed on the Haymarket Square. Twenty men in the Corporation employ are engaged at this place yesterday in breaking the stone for placing on the streets."

S.J. Daily Sun - Jul. 23, 1881 A Freestone Quarry, it is expected, will be opened shortly on Mr. W.K. Reynold's property at Lepreaux. The stone, which was highly commended several years ago by Prof. Bailey, is of a rich brown color. The facilities for shipment either by rail or water are very convenient."

Weekly Freeman - Jul. 23, 1881 A new stone quarry has been opened near Hillsboro, Albert Co."

Chignecto Post - Jun. 2, 1881 It is expected that the International Freestone Co. will commence work at the Watson quarry, Harvey, next week."

S.J. Daily Sun - Jun. 11, 1881 The steamer Florida, 514 tons, has sailed from Boston for Harvey, A.C., having been chartered by the Bay of Fundy Quarrying Co. to load stone at that port."

Daily Telegraph - Jun. 14, 1881 Newcastle, June 13. - On Saturday afternoon John Sullivan, foreman in Mr. Jos. Goodfellow's grindstone quarries, Northwest Branch of the Miramichi River, was drowned. ..."

Daily Telegraph - Jun. 21, 1881 New Quarry. - Alex Rogers, M.P., has opened a stone quarry on Grindstone Island, which promises to furnish stone of excellent quality. Quite a number of men are employed."

Chignecto Post - Jun. 30, 1881 Hopewell Cape.- I have heard it stated that a fine quantity of building stone has been found in abundance near Hillsboro'. R.R. Snow is interested in the working of it."

Daily Telegraph - Mar. 16, 1881 Rock Quarrying For Street Purposes. - Mr. T. Cusack has four or five men quarrying the rock in the rear of the Portland police station facing the Black Spring Road. Crevices have formed in the rock along the brow, rendering it very easy for the workmen to remove the stone. A considerable portion seems very loose and apt to slide down at any time. Teams are hauling the material to the Intercolonial railway station where a number of street labourers are breaking it in lumps to macadamize the city streets. Mr. John McGourty has a small force of men likewise

Chignecto Post - Mar. 24, 1881 Dorchester.- The Dorchester Union Free Stone Co.made their first shipment of building stone for the season of 1881 on St. Patrick's Day, March 17th per schooner Hettie Parks, to St. John. This is earlier than

Chignecto Post - Mar. 24, 1881 Stone business.- The schooner Minnie, McHaffy,master, loaded with building stones at Hagan's quarry, Rockport, for St. John, on Saturday - the first of the season. The schr. Mary C.' Stewart, master, is to go on to load in a few days. The prospect of business there this season appears to be good."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Mar. 25, 1881 Active preparations are being made by the Bay of Fundy Freestone Company under the management of Mr. A.J. Roberts, for carrying on stone quarrying on a more extensive scale than heretofore. The Transcript says: It is said that a fine line of steamers are to ply between Harvey's Point and New York to carry the stone."

S.J. Daily Telegraph - Mar. 25, 1881 New Stone Manufacturing Process. - Mr. H.J. McGrath, of Dorchester, who recently discovered a process by which monuments, tablets, etc., could be manufactured at half the present cost, has received letters of patent from Ottawa and Washington. A number of capitalists at Fredericton have resolved to get up a prospectus, with the view of establishing a joint-stock company for manufacturing in that city. - Borderer."

S.J. Daily Telegraph - May 2, 1881 Quarrying. - Work at Hayden's (now Snow's) quarry, Curryville has fairly begun for the season and a brisk business is being done. A cargo of the stone is being shipped at Gray's Island, Hillsboro, to which it is brought by rail."

Chignecto Post - May 5, 1881 Bay of Fundy Quarrying Co.- New Steam Drills.-Steam Gantry's.- Steam Vessels.- A Revolution in the Stone Business.- A new departure has been made in the stone business of this Bay by this Company. Instead of operating by old methods of hand labor, they are at a very heavy expense introducing steam power in cutting stone, moving it in the quarry and carrying it to market. By employing steam power, they expect to lessen the expense per ton, while they can increase the production indefinitely, and in both ways increase their profits. This week the Company will have three steam drills working at their Wood Point Quarry and three at Mary's Point. They have eight more drills in process of construction by Messrs. James Harris & Co., St. John. They are now having made a steam travelling crane or gantry at Wood Point, which will be completed in two months. This is a species of elevated railway and is designed for the purpose of picking up stone at any portion of the quarry and removing to another portion. The Company have purchased the Capt. Milner place and the Charles Outhouse place at Wood Point. They have made an addition to the Snowdon house, previously bought, which is to used as a boarding house. At Mary's Point, the operations of the Company are extensive and vigorous. During the past season, they have made four large openings in the reef on both the olive and brown stone portions. They have built a new store, erected five new houses and intend to erect fifteen more. They will have gantrys over each opening. They are now having built a locomotive car with derrick or turntable to turn over stone for the scabblers. They intend also to erect a mill 150x60 to contain 14 gangs of saws and a number of rubbing beds - all driven by steam. This is for the purpose of manufacturing stone ready to go into buildings, the Company intending to supply house builders in the Northern Cities direct from the quarry with sawed and dimension stone. They are intimately connected with a house building association in New York that requires this year many thousand tons. They hope to ship 25,000 tons at least this year. To get this stone to market they have purchased the steamship Florida (514 tons, built of oak) at a cost of $22,000. She is expected here this week for the first cargo for New York. They expect to save a dollar a ton in freights stone. Should their production warrant it, one or more steamers additional will be purchased and put on the route. The Company has in course of construction, at St. Martin's, by Messrs. Delong Bros., a steamer of 150 tons to be launched next August. She is to cost $11,000. She will be used as a tug and freight boat, lighter, collier, &c. It is satisfactory to know that all the various kinds of machinery required - drills, engines, locomotives, &c., &c. are being manufactured in the Province - at the extensive machine shop of Jas. Harris & Co., St. John. The Company, as may be surmised from this brief epitome of their undertakings, has solid men at their back who pay cash as they go. The amount of money they are expending in the development of their fine properties at Wood Point and Mary's Point is very large. They are already affording employment to a small army of workmen, which will be largely increased as soon as their mill and gantrys are fully established. The attractive shades of the rock, its superior texture, and the inexhaustible reefs in which it is formed, combine to guarantee success and profit to those engaged in this extensive enterprise. We wish the promoters of it every success and may more of such men find it to their interest to seek out our dormant resources for purposes of

Chignecto Post - May 5, 1881 The freestone business is likely to be lively this summer. The Bay of Fundy Company expect to ship about 25,000 tons from Wood Point and Mary's Point. Two cargoes have already been sent from the latter place, the second being 150 tons for Boston shipped this week by the schooner Meta, Capt. Edgett. The Company have 130 men at work at the Point, and have expended about $40,000 in improvements since last fall."

S.J. Daily Sun - May 6, 1881 Mary's Point Quarries are being worked by 120 menat present and more are required. We are told that the company have expended $40,000 at the Point since last fall. This company have done a large amount of business, and circulated a deal of money, since taking charge of this excellent quarry. It is calculated that the shipments of stone from this and Wood Point quarry this season will amount to 60,000 tons.- Maple Leaf"

Daily News - May 7, 1881 Mary's Point Quarries are being worked by one hundred and thirty men at present, and more are required. The company have expended $40,000 at the Point since last fall. This company have done a large amount of business, and circulated a deal of money, since taking charge of this excellent quarry. It is calculated that the shipments of stone from this and Wood Point quarry this season will amount to 60,000 tons."

Daily Telegraph - May 16, 1881 Saint John Post Office. - ... The three street fronts on Prince William, Princess and Water streets are faced with the olive tint freestones from the Caledonia quarry near Dorchester. The work below Prince William street being quarry faced and the rest of the stone work rubbed. ..."

Chignecto Post - May 19, 1881 The International Freestone Company held its organization meeting at Harvey on Wednesday of last week. This Company, as already stated, is chiefly composed of Boston men and will work on the lands of F.W. Watson. Operations will be commenced the first week of June."

Eastport Sentinel - May 25, 1881 Sch. Sammy Ford, of Lubec, for New York, with freestone, was run into at St. John, N.B., May 10, by a ferry steamer, damaging the sch's cutwater and causing her to spring a leak. The steamer was also

Chignecto Post - Nov. 3, 1881 The Dorchester Union Freestone Company had a prosperous year. All the stone quarried during the season will be shipped, making in all 5,000 tons, a decided increase over any previous year. This company employs from 75-80 men. It has the reputation of being one of the most solid and respectable in business, meeting its engagements with the regularity of clockwork."

S.J. Daily Telegraph - Nov. 5, 1881 Amherst. - New Freestone Quarry. - Messrs. J.S. Hickman, Thomas R. Smith and Burton Seaman have opened a new and promising freestone quarry not far from Bay Verte."

S.J. Globe - Nov. 21, 1881 and Moncton Daily Times - Nov. 22, 1881The Bay of Fundy Quarrying Company. - The suspension of the Pacific National Bank of Boston, will, it is feared, embarrass the above company, whose freestone quarries at Wood Point and Harvey, Albert Co., afford employment to a large number of men. Mr. Abner J. Benyon, who was president of the Bank, was also a leading stockholder in the quarrying company, and all the momentary business of the company was transacted through the bank."

S.J. Daily Sun - Nov. 23, 1881 and S.J. Daily Telegraph - Nov. 24, 1881The Bay of Fundy Quarrying Company. - A telegram from Mr. Walter J. Roberts of Boston, manager of the Bay of Fundy Quarrying Co., to a firm in this city, states that: The temporary suspension of the Pacific National Bank, Boston, will not involve the Bay of Fundy Quarrying Co., and all their engagements will be promptly honored."

Chignecto Post - Nov. 24, 1881 The Bay of Fundy Quarrying Company.- The suspension of the Pacific National Bank of Boston, will, it is feared, embarrass the above Company. Mr. Abner J. Benyon, who was president of the bank, was also a leading stockholder in the quarrying company, and all the monetary business of the Company was transacted through the bank.- Ex. It has been ascertained that the failure will not affect the Quarrying Co."

S.J. Daily Sun - Nov. 24, 1881 Gloucester County. - ... At Clifton the grindstone region is reached. There are large deposits of excellent stone, and a good many people are employed in quarrying it and preparing it for shipment. Messrs. Jos. Read & Co. and Mr. Francis Scott are largely engaged in the grindstone business, manufacturing and exporting the stones. The shipments are made from Clifton breakwater, a work which was partly constructed by the Dominion Government and partly by Messrs. Read & Co. The stones are sent to the American market, and also to the Upper Provinces. The superior grit (no political allusion intended) of these grindstones has caused an enquiry for them for manufacturing purposes, and they are largely in use in the factories of Montreal and Oshawa. The quarries are on the bay shore, and the stone is got out very conveniently. There are Episcopal and Roman Catholic churches for the people

S.J. Globe - Nov. 29, 1881 and Moncton Daily Times - Nov. 30, 1881 Suspended. - The Bay of Fundy Quarrying Company, having quarries in Albert Co., N.B., and head offices on Devonshire street, Boston, have suspended. The Company is composed of Boston people, and its suspension is due to the failure of the Pacific National Bank. Mr. A.L. Bunyon, President of the Bank, is also President of the Company, and Mr. Fowle, a Director of the bank, is Treasurer of the Company. Mr. Walter J. Roberts, who has had an extended experience in quarrying in Albert, is manager, and says everything will be all right in the course of time. Meanwhile the Company's notes are going to protest. The quarries are three in number - one each at Mary's Point, Wood Point and Hopewell, and they are valuable properties. As to the Bank the Boston Post says: Col. Needham, the national bank examiner, completed his investigation of the affairs of the Pacific bank and submitted a statement of its financial condition to the directors and to Comptroller Knox at Washington. The result is that the institution must go into the hands of a receiver. A private despatch from Comptroller Knox states that he

Chignecto Post - Oct. 6, 1881 Albert Railway.- A new siding is being put in atCurryville, some 350 yards long, to the New Brunswick Freestone Company's Quarry. This quarry has just been opened, and two cargoes of stone are ready for shipment from Hillsboro' as soon as the branch is completed. The stone is a rich brown color, now in demand in fashionable quarters in American cities. The Company expects to carry on extensive operations next summer."

S.J. Daily Sun - Oct. 7, 1881 ...Schr. G.F. Hatheway sank.... Loaded with stone from Harvey ... to New York..."

S.J. Daily Sun - Oct. 11, 1881 Albert County Sketches. - The Freestone Quarries of Mary's Point - The Fashionable Color - The Squaw's Cap. - The freestone deposits of the County are among its most productive resources. Their superior quality, for building purposes, was recognized many years ago, and United States capital has been long engaged in their development. Many of the finest buildings of Boston and New York are faced with brown stone from the quarries of this County, and it still commands a higher price in the United States than native freestone. It is found in reefs on the seashore and in the hills in the interior. Splendid deposits have been repeatedly exposed by the removal of the surface earth for other purposes, the complaining brooks that make the meadows green have worn deep ruts into them before reaching the plain, and exploring for the precious metals have often resulted in their discovery. Try to buy or lease a lot of land in this County and the owner will begin to smell freestone or minerals in a moment. People buy wild lands and hold them, year after year, hoping that somebody will discover a possible quarry or mine upon them. Young men who want to marry and settle down as farmers complain that it is difficult to buy land, so strong is the mania for retaining it on the part of its owners. One old gentleman recently died in abject poverty, without the ordinary comforts of humble life, who held fifteen hundred acres of land. He was, like many others, a land miser. On the way from Harvey to Mary's Point, by way of the bay shore road, the visitor sees a quarry opening on the hillside, a few rods distant. This is at Two Island Creek, at the mouth of which there is shelter and anchorage for vessels. The quarry belongs to the recently organized International Stone Co., of which Mr. F.W. Watson is the Manager. Mr. Watson discovered the deposit, or purchased it from the discoverer, and organized the company for its development. The hill was formerly a reef, and the land is low and level from its foot to the bay. It has been traced 137 rods in length and 1,400 feet in width, the Manager says, and the stone found to be everywhere of uniform quality and color, a lavender brown, closely resembling the Connecticut stone, but not laminated, and therefore being much more durable. It is of fine grain, soft but tough, and can be readily carved. The excavation already made is 80 feet in length and 28 feet wide, with an average depth of eight feet. The solid stone is found at a depth of only nine feet. The footings appear very regular, and all the indications are good. This quality of stone is said to be worth $16 per ton in Boston and New York. There are only a few men at work now, and no stone has been got ready for market, but if the capitalists of the company, after examination of the quarry, are satisfied with the character of the deposit, a hundred men will be put on and facilities for shipment constructed at once. A railway 119 rods long will connect the quarry with the wharf near the mouth of the creek. Mary's Point is the scene of the extensive operations of the Bay View Quarrying Co., of which Mr. Austin J. Roberts is Manager. The coast is bold and the land thickly wooded. Mary, whose name the promontory bears, has long since passed to the land of shades, and the story of her lonely life in what was a desolate region then has been forgotten. Poor old girl, she may be a pillar of brown stone now, in a Boston porch! These quarries were opened in 1845 by Mr. Andrews, subsequently passed into the hands of Mr. C.D. Archibald, and in 1870 became the property of the Bay View Quarrying Co. This point has been an island in its time, but is now joined to the mainland now by a sand bar. The precipitous coast is one immense reef of freestone, and quarrying has been begun at the places offering the best facilities for shipment. The whole island is believed to be underlaid with this stone, and an outcrop of the reef has been discovered in its centre, which is to be exposed this winter by removal of the overlying soil and loose stones. The company had 162 men employed this summer, but this number was reduced to 128 in haying time. The shipment this year will reach 10,000 tons, but the contemplated increase of facilities will enable the company to increase this to 50,000 tons annually. A travelling crane is to be put up at the Southeast quarry. A plank bulkhead has been placed in the excavation here, to keep the water out which penetrates the sea-wall, and it does the work effectually. Other quarries have been opened at Barn Cove and Indian Point. The stone lies in thick benches, and is readily split off with wedges into nearly square or oblong masses of different sizes, from one and a half to ten tons in weight. It consists of light, dark, reddish and lavender brown, salmon and olive. The lavender brown, which the new Barn Cove quarry is chiefly producing, is in the greatest demand at present, and enough of it cannot be got out to meet the inquiry. This quarry is at present working on an order for 3,000 tons, for Sloan's new carpet warehouse, Broadway, New York. The stone for the walls is eighteen inches thick. Two schooners, the R.H. Moran and Maggie Willett, were loading there last week for Boston. Only surface quarrying has been done so far, and the deposit is thought to be practically inexhaustible. The Manager says Prof. Bailey calculates the thickness of the reef at 160 feet, and considers it to be underlaid with coal. At the end of the reef, at low tide, coal has been dug out of the rock. The same company has another brownstone quarry at Wood Point, where 110 men are employed. It shipped 6,000 tons this season. The principal markets for the stone are New York, Boston, Montreal, Halifax and St. John. The stone used in our Masonic Hall, Odd Fellow's Hall, Queen's Square Church, St. Andrew's Church and Furlong's new building was supplied by the company. The stone is liver rock, so hard that it will not crumble away when carved into mouldings and light designs. The Connecticut stone has had to be carefully laid upon the bed, or the water will get in and cause it to fall off in flakes, while the very soft stone washes away with the rain. If the New Brunswick stone were not far ahead of that which is found in the United States, says Mr. Roberts, who is as well versed in stone as the Metropolitan in the Book of Job, it would not be in demand in Boston or New York, because the Massachusetts stone is cheaper than ours. Mr. Roberts thanks the National Policy for the duty of $1 a ton that has been put upon American stone, and says he pays twenty per cent. higher wages than in 1878. At the Southeast quarry there is a remarkable bit of rock, called the Squaw's Cap. Its walls, on all sides, are so nearly perpendicular that it does not seem to be practicable to climb them, and its height is about equal to that of the average forest tree. It is a striking object, as seen either from the land or water, and one longs to fasten a flag to the solitary tree, devoid of foliage, that crowns its summit, reminding one of a broken and canvas-stripped mast in a stranded wreck. Petrified trees are traced by the curious and

Chignecto Post - Oct. 13, 1881 Another Quarry.- A month or so ago the POST called attention to the splendid facilities for the quarrying and shipping of building and other stone possessed at Peck's Point, Rockport. The advertising of that locality has already borne fruit. Messrs. Roberts are now engaged in opening a building stone quarry there."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Oct. 27, 1881 Correction.- The quarry property at Rockport, leased by Messrs. Roberts, fronts on Wilbur's Cove, and is not at Peck's Point as stated in a recent number of the POST. The new quarry is on the property of Mr. Albert Ward, adjoining the valuable stone deposits at Peck's Point, owned by Rufus Cole, Esq. The new quarry is a very promising one. This locality will, no doubt, in the near future be the site of extensive quarry enterprises, as the quality of the stone, ease with which it can be cut, facilities for shipment and many other advantages it possesses will commend

Chignecto Post - Oct. 27, 1881 New Store.- The Bay of Fundy Quarrying Company are erecting a store at Wood Point 30x50 and three flats with a stone flagged cellar and ell 25x25. The second story of main building is divided into two tenements. The third flat of store and second ell, will be used for furniture. The work is being executed in a handsome manner by Mr. John E. Estabrooks."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Oct. 27, 1881 Mary's Point Quarries.- The Archibald Quarry.- Five New Quarries.- Immense Beds of Solid Freestone.- Colors and Texture.- Modern Improvements.- The Locomotive Crane and Steam Gantry.- Other Quarrying Properties.- Very few people have any idea of the extent of the operations that are being carried on in these quarries,which large as they are, are all preliminary to operations on almost a colossal scale that are mapped out by the Bay of Fundy Quarrying Company that own them. Mary's Point is situated in the estuary of the Shepody River. Its rocky cliffs stand watch and ward on one side, while the wooded heights of Grindstone Island loom up on the other side. The north-eastern side terminates in a winding shore and beaches looking down upon long ranges of ragged reefs that bare themselves at low water. In the distance can be seen the church spires of Hopewell Hill and the half circle of country extending to Harvey in one direction and to the Cape in the other. The other side of Mary's Point Island shews the Nova Scotia coast, Cape Meranguin, and the shores up to the Memramcook. A few miles off, puffing around the edge of Shepody Mountain, can be seen the trains of the Albert Railway. Thus it will be seen, that Mary's Point, tho' out of the world, occupies a central and commanding position for business. Its value as a deposit of reefs of stone, was recognized over forty years ago. In November, 1840, Alva W, Andrews shipped the first cargo, to Portland, U.S. The stone were used as the bases of monuments. The property then attracted the notice of the late Chas. D. Archibald, one of the most remarkable speculators this country ever produced. He, associated with others, opened a quarry and worked it for some 19 years. He spent here some $200,000 in developing it, doing a vast amount of rough surface quarrying work, of which the present owners will surely reap the benefit to a large extent. He shipped a large quantity of stone quarried mostly near the surface, thus leaving the finer and more valuable stone to be taken out by the present operators. The deeper the quarrying the more uniform and larger the beds are found to be. An abandoned working with a broken chimney where his steam mill was placed and where a few rusted pieces of machinery remain as mementos of his activity and foresight. In 1870, Messrs. Roberts Brothers took a lease of 6 years of the property from Archibald and have operated it ever since either for themselves or for the Bay of Fundy Quarrying Co., who are the present owners. The island appears to be a solid formation of sandstone in a remarkably undisturbed condition. These layers or beds of sandstone have a uniform dip south of 45ø. Their strike easterly is towards Cape Meranguin, and westerly to Harvey, where attempts have been made by Messrs. Watson, Stevens and others to open quarries, but whether these reefs extend to the mainland have not yet been proved. The stone is of such a character as to possess a recognized value and a steady demand in the United States markets. It is fine, close grained and remarkably durable, while it is in some respects more difficult to work than some other stones. Stone cutters call it plucky. But it is universally liked by them for its reliability in working and its retaining its fine sharp lines in carving. It possesses the quality of durability beyond most other freestones. Ornamental designs made of it thirty-five years ago are seen to-day on buildings in Boston, and Central Park, N.Y., and other cities, as fresh and clean as if done yesterday. The colors are also an advantage. Brown stone, olive stone, blue stone, grey and salmon stone beds enable the Company always to suit the market. At present the fashion of the day demands brown and red stone. The latter the Company get from some of their other quarrying properties. There is but little mingling of different colors in the same bed, that so often ruins quarry speculations. On the contrary, the uniformity of color in each bed is very striking. These distinct and different shades give the architect fine scope for his ingenuity in designing. And the monument he builds of this stone, whether over the resting place of the departed, some palace on 5th Avenue or princely mercantile edifice, will speak for ages his praise. The Comp'y have no less than five quarries here in successful and presumably profitable operation. No.1, or South East Quarry is immediately west from where Archibald first worked. The face of the rock, sloping 45ø some 175 feet, has been stripped off a distance of 200 feet or more at high water mark. To keep the tide out, they have constructed an abutment or coffer dam, some 250 feet long. A series of steam cranes - 7 in number are ranged along the length of the abutment, and worked by an engine of 35 horsepower, by means of shafting some 200 feet long connected with each crane by a crab. This arrangement is very convenient and economical, stone being lifted to the rail track, either for scabbling or to be thrown on the outside of the abutment, or taken to the wharves for shipment. This system, complete as it seems, is only preliminary to a still more extensive and perfect mode of operating. They intend erecting a seawall 200 feet further out and extending 900 feet, making in all 1,150 feet of sea wall. To build this wall and for other purposes the Company has now completed and ready for shipment from the works of Jas. Harris & Co., St. John, a locomotive steam crane, the only machine of this description ever built in the Dominion. The area reclaimed they will work by a travelling crane or steam gantry, which has the advantage over the ordinary crane of picking up a stone anywhere and placing it anywhere else within its circumference. The iron work for this gantry is already completed and on the ground. The quarry has a wharf extending out some distance with rail track, cranes, &c. The N.W. end of the quarry is worked by a powerful steam crane run by a 25 horsepower engine. The stone here is a fine brown stone. A large gang of men are here at work. The back to this quarry presents a fine appearance by another formation of stone apparently in thick even beds rising fully 125 feet and extending either way far beyond the present opening or quarry. It is supposed the stone can be quarried to a depth of at least 250 feet. To compute the quantity of stone here uncovered would be almost impossible. No. 2, the S.W. or Salmon stone quarry is an opening about 600x100 feet. The stone is of a pinkish or salmon color, very uniform and free from imperfection. The beds too, are thick and extensive, like the last described quarry. From this quarry many thousands of tons of stone have been shipped to Boston, and it has been the leading brownstone in the Boston market since the present proprietors commenced their operations. Owing to the scarcity of help the Co. have been unable of late to work this quarry. But the labor saving machinery they intend to employ here, will enable them to do so next year. No. 3, Holmes Quarry is on the northeast side, and has been recently opened. It is on the Ha Ha Bay across which it looks at Harvey. This place has a wharf and cranes. But here also the Co. expect before another spring, to have a powerful gantry, spanning 125 feet. This reef or bed is 250 feet wide and extends 1/3 of a mile across the property. The stone shews itself at the surface in solid beds admirably adapted for working. It is thought by the superintendent and others that this will prove the finest, most easily worked and extensive quarry at Mary's Point. The stone is of a very fine quality, closely resembling in color the celebrated brown stone known as Belleville, but superior in quality, and can be worked for one half the cost of the Belleville stone. No. 4, N.E. Quarry, called Barn Cove, has also just been opened and is supplied with a wharf, steam cranes, &c. The stone has the uniform dip and strike. A very large surface has been stripped shewing solid beds of brown stone. About 1,500 to 2,000 tons has been shipped to New York the present season and there met with much favor, the orders for it exceeding the supply by 2,500 tons. It is believed that this quarry is the other end of the reef named for Holmes quarry, the stone in each being exactly the same. Sloam's new carpet warehouse, 380 feet frontage, 8 storeys high, cor, Broadway and 19th, is being built of this stone. No. 5, N.N.E. or Indian Point Quarry. About 2,800 tons have been shipped. The stone is of a beautiful olive shade and is a good working stone with a color very uniform and free from imperfection. The formation is quite regular and a portion of the seams flake off into flagging stone, varying in thickness from 4 inches to 18 inches. A large proportion of the stone used in the new Tremont Bank building, Boston, was taken from this quarry. Here the Company has quite an extensive wharf and large opening which has not been worked this year owing to the scarcity of help. But here they will also apply machinery and work the coming year. The Company intend to erect gantrys in the S.W., N.E., and other quarries, and as soon as possible place them in all their quarries, so as to enable them to supply the demand for its stone. During the past year or two the Company have made many improvements in their property. They have re-built several old houses and built six new ones. They have finished a new store. They have just finished a boarding house for 30 men, and are building one 80 feet front, with wings, &c., to accommodate 150 men. They intend to build a church and school. Mary's Point not only is a fine quarrying property but with ordinary labor could be made one if not the most productive upland farms in Albert County. It is a delightful place, finely located, amidst some of the richest scenery ever beheld, and to wander through its pleasant groves is a treat that but few have had the good fortune to experience. During the past year the Company has shipped from here 6,000 tons of stone. They have kept employed from 100 to 170 men. The resident manager is Mr. Austin J. Roberts. The foreman of the S.W. Quarry is Mr. Robert Douglas; N.E. Quarry, Mr. Geo. Delesdornier; Mr. J.J. Gallagher is chief engineer. He has seven assistants. The boss carpenter is Mr. D.L. McDonald. The monthly pay ranges from $2,800 to $5,000. Since the present proprietors became connected with this work, they have spent over $200,000. These quarries have yielded since re-opened by them about 50,000 tons of stone, and from all appearance this is but the commencement of the splendid results the future seems destined to give. The members of the Co. well deserve all that is here promised, for their energy and perseverance, and for the very large amounts expended and as they are mostly wealthy no means will be lacking to secure all the promised success. The Company own extensive operations at Wood Point and also leases upon large tracts of land there, where they have also spent $75,000 in opening up what promises to be one of the finest and most extensive quarries on this Continent. Their works here, like their other undertakings, are on a grand scale, but even this is to be greatly augmented before the coming spring. The opening here forming one quarry 500x150 ft. One powerful engine runs four steam cranes and a very fine steam pump, just imported from Boston. The Company has blacksmith shops, machine and tool shops, carpenter shop, engine houses and coal sheds, and a large water tank. They are about completing one of the largest wharves in the Province, having a sea face of 1,600 feet, which when finished will enable them to load the largest vessel at the lowest tides. In addition to the large gantry that will cover the quarry before spring, they intend to erect a steam stone saw mill, the machinery for which is on the ground and ready to be placed as soon as the building is ready. They are also building a steam lumber mill, the foundation of which is now in and machinery is all ready for shipment from the works of Jas. Harris & Co., also a fine 80 H.P. and 90 H.P. boiler. This mill will be on the property recently acquired from Alex. O'Brien and next adjoining the Company's quarry. Here also on this property the Company have opened a quarry, the stone being of brick red in color. But the beds are thin. Samples sent to New York were much admired. A more extensive opening will at an early day be made here. A wharf also has here been built 100x40, which will be extended 200 feet more and used as a lumber wharf. A store 30x50 and a flour store attached 25x25 is nearly finished. The latter is erected upon the highest land at Wood Point and commands an extensive marine view. The Company lately acquired this latter property from Capt. Milner; upon which is also a fine house, barn and other buildings; during part of the summer it has been occupied by the manager of the Co. and his family. The Co. also have an extensive building for boarding house for the men, capable of accommodating 150 men. They also intend to erect a number of cottages during the present season for the workmen. The Company's foreign offices are in Boston and New York. The Boston office, 131 Devonshire St., is in charge of our esteemed friend Francis Rodman, Esq., and Henry F. Milton, Esq. Mr. E.M. Fowle, its Treasurer, and W.J. Roberts, its Manager, make there headquarters there. The selling agent is H.A. Roberts. The New York office, 181 Broadway, is in charge of the Sub-Manager, Mr. R.R. Fitch and Mr. Geo. Guild and Mr. Henry Palmieri is selling agent. Many fine buildings in New York and Boston are now in course of construction, of stone supplied by this Company. In addition to these fine quarrying properties the Co. own leases of a fine quarrying property on the Kennetcook River, N.S., and also a property at Peck's Cove, Rockport, which they intend opening up for a supply of red stone. The Co. also own an extensive property at Springfield, Mass., which they have largely developed the present year at a cost of some 8 to 10 M. dollars. This quarry it is believed will make a fine record for the Co., and it is admirably located midway between

Moncton Daily Times - Sep. 2, 1881 and S.J. Daily Sun - Sep. 5, 1881 Albert county News. - (from our own correspondent). - Harvey, Aug. 31 - International Freestone Company. - This is the name of a company recently organized in Boston for the purpose of working the brown freestone which abounds on the property of F.W. Watson, Esq. There is now a good demand for freestone of this color. Mr. Watson returned from Boston n Saturday, and commenced operations with a number of men. It is said that this stone is of a very superior quality, and a rich, brown color, and much admired by builders in the U.S. There appears to be an abundance of stone, and the company being composed of wealthy men, no doubt will push business and employ a large number of men. At Mary's Point the Bay of Fundy Quarry Co. are pushing business in fine style. They have already shipped about 3,000 tons this season, and are employing 120 men."

Moncton Daily Times - Sep. 12, 1881 and S.J. Daily Sun - Sep. 13, 1881 The Building Stone Quarries of Harvey, Albert Co. - A correspondent writes from Harvey, under date of September 10: Mr. Sears, of Boston, arrived today, for the purpose of examining the quarries of the 'International Freestone Co.', which are sitting on land of F.W. Watson, Esq. We understand that Mr. Sears was very much pleased with the company's property, there being an inexhaustible quantity of stone of a rich, brown color, free of spot or other imperfections, and in great demand just now in the United States. Mr. Sears also visited the quarries of A. Stevens & Co., adjoining. No doubt in the near future a large business will be done in the Parish of Harvey. We hear the new Company will push business, and hope to be able soon to place their stone in the

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Sep. 16, 1881 A column of the last issue of the Island News is devoted to a history and description of the Whetstone Quarry at North Head, Grand Manan, which has lately been leased by an American gentleman for a period of ninety- nine years. For many years past, American fishermen and inhabitants of the Island have used stones from the quarry for the purpose of sharpening tools; but no one seemed to have any idea of its value until recently, when specimens of the rock were taken to Boston, and found to be of the finest quality."

S.J. Daily Sun - Sep. 22, 1881 Albert. - The new stone quarry on Mr. Watson's farm is developing finely, and will doubtless, soon afford employment to a large number of workmen."

Chignecto Post - Sep. 29, 1881 A sandstone quarry has been opened at Baie desChaleurs, N.B. Several vessels have been loaded and sent to Montreal this season with grindstones from it. It is stated that the quality of the stones is far superior to those from Ohio."

Moncton Daily Times - Apr. 4, 1882 Albert News Items. - (Maple Leaf). - B. of F.Quarry Co. - We are pleased to be able to state that this company has reorganized. Some of the solid men of Boston and New York have taken stock and intend doing a rushing business this summer. Last week a civil engineer from N.Y. surveyed a reef of brownstone, discovered on Mary's Point, which is 3,000 ft long, 300 ft wide, has already been worked 40 ft deep and is allowed to be twice that depth. It is estimated that this reef will give an average yield of 24,000 tons per year, for a century."

S.J. Daily Sun - Apr. 14, 1882 Albert County Industries. - ... We have good authority for our estimate that there will be spent in the following enterprises:- Bay of Fundy Quarry ... $20,000 International Quarry ... 20,000 ... Bay of Fundy Quarrying Company. - We are pleased to be able to state that this Company has re-organized. Some of the solid men of Boston and New York have taken stock and intend doing a rushing business this summer. Further particulars will be given next week. Last week a civil engineer from New York surveyed a reef of brown stone, discovered at Mary's Point, which is 3,000 ft. long, 800 ft. wide, has already been worked 40 ft. deep, and is allowed to be twice the depth. It is estimated that this reef will give an average yield of 24, 000 tons per year for a century."

Chignecto Post - Apr. 27, 1882 ...The Jennie has arrived to load with building stone from Caledonia Quarries..."

Chignecto Post - Apr. 27, 1882 The stone business at Budroes has opened and the outlook is promising. The schr. Vesta, the first vessel of the season has loaded for N.Y. with 170 tons."

Chignecto Post - Apr. 27, 1882 Recommencing.- The Bay of Fundy Quarrying Company are engaging men preparatory to recommencing operations next month at Wood Point."

S.J. Daily Sun - Apr. 27, 1882 Westmorland. - Quarrymen and laborers are wanted at the Port Philip stone quarry."

Daily Times - Aug. 3, 1882 Valuable Real Estate. - The subscriber offers for sale the following properties at Harvey, Albert Co.: The premises at Harvey Corner, formerly occupied by A. Stevens, as a dwelling house and store, with an acre of choice land. This is one of the finest and best located properties in Harvey, having convenient buildings, abundance of pure spring water, and all conveniences suitable for a first class hotel or any business. There is connected with the premises a five ton platform scale. Also five acres of land on the road to Waterside, pleasantly situated, which can be divided into building lots. Also four acres excellent dyke marsh on the Bank dyke, which cuts seven tons superior English hay. Also a saw-mill in good order, at Brookville, with 200 acres of well timbered land. This mill is centrally located in the midst of large tracts of well timbered lands. There is good water power and a steady demand at home and abroad for its products. Also the whole or part of the property at Mary's Point, known as the Stevens Quarries. The stone from this quarry is much admired for its beautiful color, strength and durability. This stone has been used for the construction of some fine residences in the U.S. where it will always find a ready market. All or any of the properties will be sold on the most liberal terms. Apply immediately to H.T. Stevens, Moncton, N.B."

Moncton Daily Times - Aug. 3, 1882 Sale of Valuable Properties. - Attention is directed to the advertisement of properties for sale by H.T. Stevens, which appears in another column. The properties include store and dwelling at Harvey Corner; land suitable for building lots, and marsh, at Waterside; Saw mill and timber land at Brookville, and whole or part of property known as Steven's quarries, at Mary's Point. Particulars to be had at this office."

Chignecto Post - Aug. 17, 1882 An American schooner, the Fannie Ford. Is now loading with stone at the Boudreau quarries for New York."

Chignecto Post - Aug. 17, 1882 Mr. P. Hagan, of Rockport, is opening a quarry of red stone at Springfield, Mass., for Messrs. Jas. Stevenson and others, of Boston. The business manager is Mr. John Henry, late of Rockland, Dorchester."

Moncton Daily Times - Aug. 18, 1882 Mr. P. Hagan, of Rockport, is opening a quarry of red stone at Springfield, Mass., for Messrs. Jas. Stephenson and others, of Boston. The business manager is Mr. John Henry, late of Rockland, Dorchester."

Chignecto Post - Dec. 28, 1882 A sheriff's sale of property belonging to the plant of the Bay of Fundy Quarrying Company took place at Mary's Point on Thursday last, to satisfy judgement obtained by creditors. The property comprised a quantity of stores, live stock, carts, some stationary and one traction engine, 85 tons rails, &c., &c. Messrs. G.A. Stockton, G.S. Turner, Jas. Harris & Co., and others were the purchasers of the goods, which realized upwards of $4,000. The sale was adjourned in the afternoon till a future date which was not announced."

S.J. Daily Sun - Jul. 22, 1882 and Moncton Daily Times - Jul. 22, 1882The Rockport Freestone Company have 40 men at work at Wood Point clearing off the soil on their property situate directly west from the Bay of Fundy Quarry. The same Company have 40 men at work at their Quarry on Mr. Albert Ward's farm, on the Rockport shore. The latter quarry was opened last fall and is making a very satisfactory showing. The company's manager is Mr. Foster Pickard, C.E."

Chignecto Post - Jun. 8, 1882 New Quarry.- Mr. Foster Pickard, representingN.Y. parties, has been here this week arranging to open a quarry in land purchased by W.J. Roberts, Esq., from A. O'Brien, immediately west of the Bay of Fundy quarry, Wood Point and in the same reef. Operations will be commenced next week. The company is considered strong, and seemed impressed with the great value of the Wood Point stone. Hopes are entertained that the Bay of Fundy Quarrying Co. will resume in July."

Chignecto Post - May 4, 1882 Rockport.- Stone business bids fair to be as brisk here as usual this summer, but owing to the cold backward spring the men have not fairly got to work. Walter J. Roberts, Esq., has several men employed building a wharf, the talk is he expects to carry on his quarry quite extensively. Peter Hagan, Esq., has already shipped one cargo of stone to St. John from his quarry at Cape Maringouin. It is reported that William Dobson, Esq., manager of the Budro quarry, intends opening a quarry here."

Chignecto Post - May 4, 1882 Work has recommenced at the Wood Point Quarry."

Moncton Daily Times - May 9, 1882 A Big Lot of Grindstones. - Mr. Job McFarlane's scow, Royal Harry, Captain Simon Govang, brought up a big cargo of grindstones yesterday. They were from Mr. Miles Steeves' Quarry, some seven miles down the river on the Dover shore, and estimated to amount to 30 tons, or between 900 and 1200 stones. They were consigned to Mr. F.W. Sumner, hardware merchant."

Moncton Daily Times - May 12, 1882 Albert Co. Fifty men came to work at the Mary's Point Quarry last Tuesday, and the manager received orders to push the work as fast as possible. - R.R. Fitch, Esq., N.Y., President of the Quarries, will be here about the 15th inst., with a large cash capital, and will make arrangements for doing more work there than has ever been done in the past."

Chignecto Post - May 18, 1882 Bay of Fundy Quarrying Co.- The personal property at Wood Point was sold by Sheriff Chapman, on Tuesday and Wednesday. The sale realized $4,700, the purchasers being principally New York and St. John people."

S.J. Daily Sun - May 18, 1882 Mary's Point stone quarries, Albert Co. - These quarries are passing into the hands of a new company. The President and general manager will be R.R. Fitch, Esq., of New York. The National Pacific Bank of Boston will have a large interest in the quarries."

Chignecto Post - May 18, 1882 New Quarry.- The Union Freestone Company of New York have a gang of men opening a brown stone quarry on the farm of R. Cole, Esq., Rockport. The quarry is at the surface very promising."

Moncton Daily Times - May 19, 1882 Westmorland News. - The Union Freestone Company of New York have a gang of men opening a brown stone quarry on the farm of R. Cole, Esq., Rockport. The quarry is at the surface very promising. The personal property at Wood Point, Bay of Fundy Quarrying Co. was sold by Sheriff Chapman, on Tuesday and Wednesday. The sale realized $4,700, the purchasers being principally New York and St. John people."

Moncton Daily Times - May 26, 1882 Returning Quarrymen. - Twelve former residents of Memramcook, who had been working in the stone quarries in Ohio, came up last night by 11:10 train from St. John. They went on to Memramcook this morning. This party will be followed by 80 more."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Weekly Freeman - May 27, 1882 Mr. R.E. Chambers, New Glasgow, fell from a derrick in a stone quarry a few days ago, a distance of twenty feet, and broke two of his fingers, besides severely bruising his head."

Weekly Transcript - Nov. 8, 1882 Dorchester. - There was sold here to-day by public sale four horses belonging to the Caledonia quarry, which has ceased business."

Chignecto Post - Nov. 9, 1882 Rockport.- Schr. Clara is loading with grindstone for Atlantic Stone Co., Boston. The schr. Minnie E.. is loading at the Cape by Peter Hagan, Esq., with building stone for St. John. This closes the stone operations for the season."

Moncton Daily Times - Nov. 17, 1882 Albert. - The sheriff announces, by posters, the sale of the property of the Bay of Fundy Quarrying Co., which will take place at Mary's Point next Thursday, 23rd inst."

S.J. Daily News - Nov. 22, 1882 Bay of Fundy Quarrying Company. - W.M. McFarlane,Esq., a New York lawyer, has been visiting Albert County with a view of settling the affairs of the Bay of Fundy Quarrying Company, which are in a very complicated state. The sale of the personal property of the company is advertised for next Thursday, under

Chignecto Post - Nov. 23, 1882 The Bay of Fundy Quarrying Co.'s property, at Mary's Point, A.C. is sold out periodically by that attentive auctioneer, the Sheriff. The regular sale occurs again to-day."

Weekly Transcript - Nov. 27, 1882 Albert Co. - The property of the Bay of Fundy Quarrying Co., at St. Mary's Point, is to be sold on Thursday next."

Chignecto Post - Oct. 5, 1882 Bay of Fundy Quarrying Co. appear to be involved in law in the United States. Mr. W.J. Roberts, the late manager, has taken proceedings against the president and others for fraud, and obtained injunction against the president of the Company and the Pacific Bank of Boston, restraining them from disposing of any of the property and also sued for an account of their proceedings."

S.J. Globe - Oct. 6, 1882 Work at the Caledonia Quarries, at Rockland, has ceased, owing, it is said, to an inability to find a market for their building stone in the United States. This is very much to be regretted, as many men are thereby thrown out of employment. Messrs. David & Charles Robinson, who were the head quarrymen, have gone to Springfield, Mass., to work in quarries there. The schr. Jennie has been engaged carrying stone all summer from these quarries there. The company are now unable to supply a cargo, and the schooner is at present lying idle, the owners experiencing difficulty in finding a cargo. - Moncton Transcript."

Moncton Daily Times - Oct. 11, 1882 Work on the Caledonia quarries, Rockland, has ceased owing to lack of foreign

N.B. Reporter - Oct. 11, 1882 Another schooner load of nice looking Dorchester freestone has been received for the Baptist church."

Chignecto Post - Oct. 19, 1882 The Caledonia Quarry (olive stone), Dorchester, has suspended work for the present, owing to the state of the market."

Fredericton Capital - Oct. 21, 1882 Quarrying and Carting.- Mr. James Dunlop, teamster, is doing quite a business this summer in quarrying stone for foundation purposes; and besides this, he has a number of dump carts, which he hires to parties building or excavating. He can attend to all the orders given him, and his charges are not exhorbitant."

Moncton Daily Times - Oct. 28, 1882 Big Stones. - The flat bottomed yacht Royal Harrie, Captain Simon Govang, arrived yesterday at McFarlane's landing, below the public wharf, loaded with eight pieces of stone from Dobson's quarries. The weight of the eight pieces is 40 tons. Mr. Charles Jones is employed, with three spans of horses, hauling the stones to the Cotton Factory, where they will be used as bedding for the engine."

Chignecto Post - Sep. 7, 1882 The schooner Vesta, Capt. E.C. Palmer, sailed from Dorchester on Saturday last, loaded with building stone for New York... collided at sea ..."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Sep. 14, 1882 and S.J. Globe - Sep. 16, 1882 Quarrying Failures.- This has been a season of failures for free-stone quarrying for any other kinds of stone than the red color that now monopolizes the markets for fashionable building stone. The operations at Mary's Point have finally closed. At Wood Point, one quarry owned by the same company work has not been resumed this year at all; wages are due for last year, and the plant and machinery have been sold by the Sheriff and shipped away. This is the more to be regretted, as large sums have been spent in developing it, and it is now a valuable property. The adjoining property owned by the Rockport Freestone Co., opened this season has been nipped in the bud by untimely frosts in the shape of creditors, who were relentless when they found there was nothing wherewith to satisfy them. A quarry on the Ward place, Rockport, owned by the same Company, suspended at the same time. The Wallace, N.S. quarries have also suffered... The Port Philip quarry .... The sooner it is recognized that quarrying requires ready capital and that wild-cat operations carried on at the expense of scabblers, stone cutters and laborers, will

Chignecto Post - Sep. 14, 1882 The stone quarries at Mary's Point, Rockport, and Wood Point, have been closed for some weeks. Mr. Peter Hagan has resumed work at Rockport. He shipped a cargo, ex. Minnie E. on Saturday for St. John."

S.J. Daily Sun - Sep. 15, 1882 Industrial Notes. - Harrison's Stone Dressing Works. - Few of our citizen's are aware of the extent of the business being done by Mr. John Harrison in stone cutting and dressing at his mill on Brittain Street. Although he has had a stone-yard for the past five years, it was not until last May that he put up the mill. So far only one gang of saws has been run, but he has found sufficient encouragement in the work already procured and in the prospects for the future, to induce him to enlarge his works considerably; and for that purpose has purchased the machinery of the Roberts mill in Sackville, recently sold there, which he contemplates setting up as soon as it can be brought down to the city. In this mill large blocks of freestone, some of them weighing as much as four tons, are sawn into slabs or squares, in sizes required, by gang saws. After being sawn out, the pieces are put upon a large rubbing wheel to be smoothed. This wheel is made of iron three inches thick and weighs six tons. It lies in a horizontal position. As it revolves, sand is spread upon it and a small stream of water plays on it, so that the stone being placed upon it and held there, is smoothed or faced by the rubbing with sand. The works are run by a 40 horsepower steam engine with a 12 foot driving wheel. A very large quantity of water being daily required, a large well has been dug and a reservoir set over it to supply the mill. Under ground extensive pits capable of holding a cargo of sand and pits for fuel have been built. The free stone used is brought from Westmorland County; but most now in stock came from Grindstone Island. Twenty-four men are now employed at the mill, sixteen of whom are stone cutters, as the moulding of the stone has to be done by hand. Mr. Harrison has a yard on Charlotte street where he employs about twelve more stone cutters. He has some large contracts on hand at present, the principal local ones being for the new I.C. Railway freight sheds and the Marine Hospital."

Chignecto Post - Sep. 28, 1882 A new quarry has been opened at Wood Point. It called the Sackville Free Stone Quarry. It is located on the Stephen Barnes place, west of the other quarries. A wharf 100 feet long has been built. The soil has been cleared off an area 50 feet square. The owner is Mr. Austin J. Roberts, who expects to ship a cargo this fall. The manager is Mr. Chas. Campbell."

Chignecto Post - Apr. 12, 1883 Quarrying on the Trueman place is going on briskly for the Music Hall and College."

Fredericton Capital - Aug. 7, 1883 A New Stone Quarry.- A crew of men are now at work opening up a new building stone quarry on the Hanwell Road, about two and a half miles above the city, and located near the junction of the Rainsford Farm with the main Hanwell Road. The product is a greyish purple free stone, and very well adapted for building purposes. Samples of the stone from this quarry may be seen in the pillars and verandah of the old Officer's Barracks in this city. At one time this quarry was quite extensively worked, but of late years has been allowed to fall into disuse. An effort is now being made to re-open this quarry, and, if successful, our builders will have a convenient and advantageous place at which to obtain building and foundation stone."

Chignecto Post - Aug. 30, 1883 The real estate of the Rockport Venice Freestone Co. was sold at auction on 25th inst., by the Sheriff to S. Clarke, Esq., for $50."

Chignecto Post - Dec. 13, 1883 Dorchester.- The schr. C.U. Chandler is loading at Budro quarries for New York."

Chignecto Post - Feb. 15, 1883 and Moncton Daily Times - Feb. 17, 1883 At the Boudreau Quarry, Rockland, 35 men are at work, clearing off for the spring's work. This company has on hand 700 tons of stone."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S. J. Daily Sun - Jan. 31, 1883 Albert County Notes. - ... At the southeast of the peninsula is a smaller peninsula, stretching out into the bay called Mary's Point, often improperly called St. Mary's Point. It was named after an old Frenchwoman who lived there, but who had anything but a saintly reputation. Stone quarries have been worked on Mary's Point for a number of years and immense quantities of building stone have been shipped from here to the great cities of the U.S. The works are at present abandoned, the company having got into difficulties and litigation. On the southern side of the peninsula are immense deposits of the finest freestone, only awaiting capital for development. A well managed brown stone quarry is one of the most profitable investments this Province affords. Stone can be quarried and shipped for $4.00; duties, freight and commission not more than $4.00 more. There is unlimited demand for it at from $14 to $20 in

Moncton Daily Times - Jul. 6, 1883 The freestone quarry lately opened on Mr. D. Rogers property at Memel promises to yield stone of a fine quality in abundance. Men are busy clearing off surfaces and erecting a blacksmith shop and an engine house. Two cranes were put up last week. Mr. Snow, of the Demoiselle Creek quarry, superintends the work."

Chignecto Post - Jul. 26, 1883 and S.J. Daily News - Jul. 27, 1883 The stone quarry now being opened near Hopewell Hill, A. Co., is showing well both for quantity and quality."

Moncton Daily Times - Jun. 8, 1883 The Mary's Point Quarry was finally closed out by Sheriff's sale last week. The estate was bid in by the creditors and Messrs. Harrison and Peters, of St. John, purchased the greater portion of the working plant and about 1,000 tons of stone (brown and olive). The sales have realized about $10,000."

S.J. Globe - Jun. 8, 1883 At the sale of the Bay of Fundy Quarrying Co.'s effects last week two protests were entered, one by W.A. Trueman for Mr. Joseph Neslon Dery, who claims that he possesses the original deed of the property and will take legal steps to gain possession. The second one was made by James A. MacLane on behalf of the Receiver, protesting against the sale of the plant and real estate. Referring to title, the sheriff said he would take no risk; it was his duty to sell only. Bidding commenced at 50 cents and the property was sold for $1,000 to R.V. Barbour, St. John, for other parties. The plant realized about $4,000. It is the opinion of many that the trouble about this truly valuable piece of property has only commenced. The lawyers may yet own it. - Albert Maple Leaf."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Jun. 9, 1883 Marble Polishing. - Messrs. Harrison, Peters & Co.'s Stone Works. - Having in view the large building operations that are being carried out in the city at this season of the year. a Sun reporter, a few days ago, called at Messrs. Harrison, Peters & Co.'s stone yard in Brittain street, to ascertain from them what work they had in hand and what were the prospects for the coming season. The reporter had the pleasure of an interview with two members of the firm, who were only too willing to give him every information sought for. Since Mr. Edwin Peters has joined the firm they have largely extended their business operations and at the present time are making still further arrangements for an increase in an important direction, that of the importation and dressing of marble. They have been enabled to do this in consequence of the abolishing of duty on marble in blocks. Their hope is that they will be able to polish marble ornaments and slabs so cheaply that they will completely drive the United States manufacturers out of the market, so far as this Province and the surrounding districts are concerned. They have at the present time a large quantity of marble in block, on its way from Italy to this port, which will arrive very shortly and when it does they will commence operations in that particular class of business in a very extensive manner. As far as the exportation of marble to this port is concerned, there is, however, a difficulty which will have to be obviated - it is that there is not at any wharf here any appliance which will haul up a large block of marble from the hold of a vessel to the landing stage. So as to overcome this impediment Messrs. Harrison, Peters & Co. are prepared, at their own expense to erect on any wharf belonging to either the Government or the Corporation, a crane capable of lifting 20 tons, and in consideration of their being allowed to do so, to permit the Government or the Corporation to have the free use of the same. The stone works of the firm are already well adapted for the proposed extension of their trade and will require very few additions. The stone cutting is done by steam, the motive power being supplied by an engine of fifty horse power, which by a driving wheel 10 feet in diameter, operates upon the main shaft which runs through the principal workshop. In this workshop are five gang and two single saws, all used for stone cutting. The block of stone or marble is laid on a bed on the floor of the building, the saws are fixed in a frame just over the block, and the end of the frame is attached to the main shaft by a crank. The same motion of the main shaft that works the saws also operates upon a water sprinkler which is attached to the top of the frame, and likewise by means of a cog-wheel gradually depresses the saws until they have completely cut through the block of stone or marble. A block of stone or marble 10 feet long, 6 feet wide and seven feet deep cane be cut into a very large number of slabs under one of these frames, as it is possible to place the saws within a distance of half an inch from each other. There is another workshop on the eastern side of the block, and on the second floor there is fixed a 12 ft. polishing table, made of cast iron and 12 tons in weight. This table is capable of polishing 500 surface feet of stone a day and it is worked by means of a counter shaft from the engine. The firm are at the present time placing in position another polishing table of the same size, so as to meet the increased demand. For the purpose of elevating large blocks of stone to the upper floors, they have constructed a large traveller in the stone yard, capable of bearing 20 tons, the span is 43 feet and it is 30 feet high. The works of the firm now extend to the back of the buildings and front on St. James, as well as Brittain street. They have also a large stone yard on the corner of Main and Charlotte streets. Mr. Harrison is well known in the trade and to the public, he having supplied the stone for the new Parliament buildings at Fredericton, Centenary Church, Marine Hospital, Lunatic Asylum, Sussex Post Office and numerous other important public buildings. At the present time the firm have contracts on hand to the amount of over $40,000 amongst them being the cutting of stone for the W.C.T.U. memorial fountain, Presbyterian church, Fredericton, Carleton P.O., Ald. Grant's new residence on Germain street, Mr. Hamm's new stable, Ruel's building on Germain street, and repairs to the Catholic Cathedral. Their arrangements are so perfect and the cost of cutting the stone so small, that they will be prepared to supply brown stone at a price that will enable it to be used for the fronts of residences, and will not cost more than pressed bricks. Immediately the arrangements are completed they will

Chignecto Post - Jun. 14, 1883 Rockport.- Mr. Peter Hagan is erecting a large boarding house at his quarry."

Chignecto Post - Jun. 14, 1883 and Moncton Daily Times - Jun. 15, 1883 Rockport. - Stone business is opening briskly at Rockport, Joseph Read & Co. are getting out 1,000 tons of grindstone, besides a large quantity of building and other stone. Mr. Hagan has contracted for 600 tons of flagging and 500 tons of building stone for the Dorchester Penitentiary Wing."

Moncton Daily Times - May 3, 1883 ADVERTISEMENT: Dorchester Union Freestone Comp'y. He had cleared the table, washed the dishes, and fixed up things for the morning, took a fit of coughing and expired almost immediately. Cause, heart disease."

Daily Telegraph - Nov. 3, 1884 Norman Morrison, of Turtle Creek, left a sample of red freestone at this office last Saturday which he says was taken from one of two quarries near a brook at Nixon Settlement, and which he and Thomas Mitton have leased for a number of years. He adds that the quarries are one and a quarter miles from the Albert Railroad, and that there are 100 acres, with sufficient land for dumping and scabbling grounds."

Moncton Daily Times - Nov. 21, 1884 Albert Co.- While making excavations at the Memelred freestone quarry last Thursday, Beatty Melton received a severe scalp wound, about four inches long by falling stones and earth."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Oct. 17, 1884 Albert Co. - Robert Mulligan, of Harvey Corner, while quarrying stone on his property last Saturday struck a large seam of fine clay and good indications ofcoal. Those interested in mining should go to Harvey and have a look at the prospect."

Chignecto Post - Oct. 23, 1884 Rockport.- Capt. A.D. Cole is loading the schr.Jennie with grindstone for J.B. Read & Co. Mr. Peter Hagan, who commenced reopening the Western Quarry a month ago is pleased with the outlook of it."

Moncton Daily Times - Oct. 24, 1884 Albert County. - ... R.K. Snow has opened up a new quarry, farther down the brook on the David Rogers property, and has taken out over 100 tons of very fine red freestone. Thomas Fuller, government architect in Ottawa and a Mr. Billings visited the quarries at Memel last Saturday. It is said that there is a fine chance to open up a quarry of the same kind of stone on the property of Judson Peck, near the quarries now open."

Moncton Daily Transcript - Oct. 31, 1884 Albert Co. News. - The Memel red freestone quarries managed by B.K. Snow, have turned out about 2,000 tons for shipment this season. Work in the quarries has been shut down for the winter, but two gangs of men will probably work till spring, clearing off at both quarries. The intention is to put 150 men at work next season and build a tramway to a new spile wharf at the Hill landing. This stone has been proved to be the finest in the provinces and is likely to prove highly remunerative to the county and the New Brunswick Freestone Company."

Moncton Daily Times - Sep. 19, 1884 Memel quarry turned out 140 tons of beautiful red building stone as the result of 5 1/2 days work lastweek. Some of the blocks were very large. Schr. Berma, Dixon, sailed yesterday for Grindstone Island to load stone for Alex. Rogers, Esq."

Daily Telegraph - Apr. 17, 1885 The Stone Cutter's Society have resolved that the wages during the summer shall be $3.50 per day, the same as last year."

Moncton Daily Times - Apr. 24, 1885 The schr. Alaska, at Rockport, was dug off the bank on Saturday and left for Boudreau to load stone for New York."

Moncton Daily Times - Apr. 27, 1885 Albert Co. - Work has commenced at the NBF Co.'squarry. Mr. Fred Snow, cashier, arrived on Wednesday last. About 150 men will be employed during the season."

Moncton Daily Times - Aug. 1, 1885 The Stone Industry. - The freestone quarries near Taylor's Village, in Westmorland Co., are not doing much just now. The Caledonia has not been worked for several years, and the liquidators are now looking for a purchaser. The Dorchester Company's operations are still carried on under the superintendence of Mr. Wm. Dobson, but there are now only about twenty men at work and they are not doing full time. The business depression in the States, and the consequent dullness in building operations, have lessened the demand for the stone, hence the little work now

S.J. Daily Sun - Aug. 13, 1885 Bathurst. - New Industry. - In noticing the freestone which is being used in the construction of the new public buildings here, and which is at present being quarried at Grand Ance in this county, your correspondent thought it would not be amiss to make enquiries concerning its quality and quantity. I have elicited from parties whose experience of judges of this particular subject, that so far as the quality is concerned, the stone is head and shoulders over the Miramichi stone, which has been exported as far west as the city of Ottawa, and in fact the Miramichi stone cannot at all compare with it. Our stone is of a rich olive color and is easily worked. The stone cutters on the new buildings whose judgement ought to be worth a great deal, inform me that it is the best stone they have ever seen. They say also that it is better and far more easily worked than that procured in St. John and elsewhere. As to quantity, it is said that it is almost inexhaustible, as it extends from Salmon Beach, a distance of about twelve miles from Bathurst, all along to Grand Anse, for a distance of twenty miles. Now, considering that this stone is immediately on the line of the Caraquet Railway, which is fast nearing completion, the prospects are that a very large traffic will be done in this material, and a large market for it will be found in Western Canada; not only there, however, but in the Lower Provinces. All that is necessary is the completion of the Caraquet Railway, which we can safely say will be open for traffic next season. Persons of enterprise and capital would do well to give this matter their attention, because not only would there be beneficial results to this county, but these persons would individually reap a good harvest."

Daily Telegraph - Aug. 28, 1885 (Maple Leaf.) - Our contemporary says that it is rumored that the Mary's Point quarries will again come into the hands of Messrs. Roberts, who will prosecute the work on an extensive scale."

Chignecto Post - Dec. 10, 1885 and Moncton Daily Times - Dec. 11, 1885 Boudreau Quarries shipped 484 tons of buildingstone to New York last week."

Daily Telegraph - Dec. 11, 1885 The Boudreau quarries at Dorchester shipped 484 tons of building stone to New York last week."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Daily Telegraph - Feb. 12, 1885 Two Men Injured by the Explosion of a Grindstone. - An accident which is fortunately of rare occurrence happened between 10 and 11 o'clock yesterday morning, at Campbell's edge tool works, Smythe street. A large grindstone, which weighed about 2,500 pounds and had only been put into place the preceding day, exploded suddenly. The stone was making about 300 revolutions a minute when it exploded and the pieces, some of them of great weight, were hurled in every direction. One large piece, about 500 pounds in weight, was projected with such force that it broke a large rafter and went through the roof, lodging outside. Another piece of equal weight was sent through a wooden partition with the force of a cannon ball; other smaller pieces were scattered in every direction, and the noise made by the breaking of the stone and the crashing of timbers alarmed the workmen about the building. Richard Rackley, a young married man who resides on Mecklenberg street, was working at the stone when it broke. After the accident he walked a short distance from the stone and then fell. It was seen that he was badly injured and he was taken to the office and Dr. James Christie and Dr. Gaynor called. No outward signs of injury, save a few bruises, were found, but the doctors thought that he must have sustained internal injuries and ordered his removal to his home. A young lad named Timothy Breen was struck on the head with a small piece of stone and received a severe gash on the head."

S.J. Daily Sun - Jan. 6, 1885 Where Grindstones Come From. - Mr. H.A. Morrell, in a recent contribution to the Dexter, Me., Gazette, says in relation to grindstones:- The grindstones makers of Nova Scotia live principally along the shore of the Bay of Fundy, and when the tide has receded and the reefs are left bare, they go down on the reefs with their tools and blast out the rocks in as large pieces as may be. They then cut square holes in opposite corners of the stone, smallest at the top, and put in Louis bolt, with chains attached. These chains are set up on bars so that as soon as the tide rises enough to cover the rocks a large boat called the joggin boat is floated over the rock, and the two chains brought up on each side of the boat are fastened to a stout pole which lies across the boat and projects over the sides a foot or two. The tide, rising rapidly, straightens the chains and lifts the rock from its bed, and the boat with its heavy burden - sometimes ten tons - is floated towards the shore, and when the tide attains its full height and the boat is as near the shore as practicable, the stone is cut away by a few vigorous strokes of the axe on the middle of the pole, and the liberated boat jumps nearly out of the water. As soon as the tide recedes far enough to lay the rock bare, the men go to work with their tools and work them off into the shape we see them here in our large factories, and the smaller pieces are roughly scabbed off into the semblance of a small grindstone and then are taken to the building where they are turned in lathes by steam power, and assume the finished appearance of the grindstones we see any day about us."

S.J. Daily Sun - Jul. 2, 1885 ADVERTISEMENT: Free Stone Quarry and Plant at Rockland, N.B. For Sale at Auction. -- The undersigned Liquidator will offer for sale by public auction under authority of Court, at the time and place mentioned below, the following assets of the Caledonia Freestone Quarry Company limited, in liquidation namely:- 1. The leasehold for 999 years of the quarry property, comprising about 230 acres, situate near Rockland, N.B., on the Dorchester River, including roadways, two wharves and other improvements. 2. Three acres of land held in freehold, adjoining the quarry property, with the dwellings, barns and sheds thereon erected. 3. The quarry plant, tools and machinery, including one 12 ton steam crane, by Butters Bros., Glasgow, two horse power cranes, three hand derricks, blacksmith's tools, carts, wagons and other quarry appliances. 4. Stone on hand, amounting to about 7000 tons. This quarry produces a light olive-colored sandstone, is well developed, and has good facilities for shipping, the distance from quarry to wharf being about one mile, all on a down grade. Large quantities of this stone have been used in the construction of first-class buildings in Boston, New York and Philadelphia; also in St. John, N.B., where it has been used for the new Custom House, Post Office, Maritime Bank, and many other buildings. The plant, tools and machinery will be sold in lots to suit purchasers, and the inventory thereof may be seen, and full information obtained on application to Mr. T.M. Mackelvie at Rockland, N.B., or to the liquidator. The sale will take place on the quarry premises at Rockland, N.B., on Wednesday, the twenty-ninth of July, 1885, at two o'clock in the afternoon. 13 Hospital St., Montreal} John Fair, Jr., June 15, 1885 } Liquidator."

Chignecto Post - Jul. 2, 1885 The Snow Quarries.- The new quarries on the Albert Railway are turning out stone very fast and of excellent quality. About 75 men are now employed which will be increased as soon as the road and wharf are

S.J. Daily Sun - Jul. 2, 1885 A fine freestone quarry and plant at Rockport will be offered for sale at auction, on the 29th inst. Full information can be had from T.M. Mackelvie at Rockland. See advertisement."

Daily Transcript - Jul. 9, 1885 (Maple Leaf, July 9). - The Hattie C., Stewart master, which sailed from Boston last Friday, arrived at Hillsboro last Saturday evening, having made one of the quickest known trips up the bay. She will be loaded with about 260 tons of red freestone, from the Memel quarry, for Boston."

S.J. Daily Globe - Jul. 30, 1885 and Moncton Daily Times - Jul. 31, 1885 Freestone Quarries are not in demand. Some St.John men went to Rockland, Westmorland Co., yesterday, to attend the sale of the Caledonia Freestone Quarry, the company being in liquidation. Nobody would buy the quarry, and there was no anxiety to purchase the machinery. Only

Chignecto Post - Jul. 30, 1885 Rockport.- Mr. Wm. Seaman has a few men working at grindstones on the shore; otherwise the business is dead."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Weekly Transcript - Jun. 24, 1885 Returned Quarrymen. - Several men who went from Memramcook early in the spring to work in East Long Meadows stone quarries, Ohio, returned last week, satisfied that there are worse places than Boudreau's Village. The quarrying business is exceptionally dull, and several others who went from Memramcook, would like to return - if they could."

Moncton Daily Times - Jun. 26, 1885 The Memel Quarry. - (From the Albert Maple Leaf). - Last Tuesday afternoon we visited one of the most important enterprises in this county - the Memel Red Freestone quarry, situated a short distance back of Hopewell Hill and managed by R.K. Snow. There has been a vast improvement since our visit to this quarry last fall. The quarry has been extended and now covers a large surface, having four openings all in working order and furnishing stone all of one quality and shade. It furnishes employment to a large number of men in the various branches of the work, who have the advantage of every facility for getting out and handling the stone quickly. There are two powerful hoisting engines, besides quick-working winches, derricks and cranes. In all the openings here are exposed some very large faces of stone, some now exposed being as large as 60x30 feet. Blocks of any size can be made. This is the only real freestone quarry in the provinces, and present appearances indicate that the supply is unlimited. During its three years' operation, the demand has always been in excess of the supply, and orders could not be filled as fast as received. When such a beautiful stone as this can be had within the Dominion, it seems wrong that the people of the upper provinces should send to the United States for stone of poorer and more common quality. There have been many handsome residences, erected in the most fashionable parts of Boston, which were built of stone from the Memel quarry, and wherever contractors handle this stone they speak in the highest terms of it. The N.B. Freestone Co., which owns this valuable quarry, in consequence of the increased demand for the stone, is negotiating for the building of a large wharf on Shepody river, to facilitate shipments, where vessels of any size can be readily loaded. Such an enterprise as this is deserving of the warmest assistance from the people in this county, as its benefits are felt directly or indirectly by all. Already, this season, the manager has made cash payments to the employees to the amount of $4,800, and expends about $2,000 monthly. We wish the company success and hope that encouragement will not alone come from the people who receive the direct benefits of this healthy and well managed enterprise, but desire to make known outside of this country the truth worth of this, but a single one of the valuable quarries and mines that are scattered throughout the length and breadth of Albert County."

Moncton Daily Transcript - Mar. 2, 1885 Upper Dorchester .... Beaumont-Gould Settlement -building stone quarry of Messrs. Dupee brothers .."

Chignecto Post - Mar. 5, 1885 Sale of Wood Point Quarry.- The property of the Bay of Fundy Quarrying Co. at Wood Point has been sold to the Atlantic Stone Co. of Boston. The price is said to be $6,000."

Moncton Daily Transcript - Mar. 23, 1885 Thomas Gallagher, former engineer for Bay of Fundy Quarrying Co. at Mary's Point, injured."

Chignecto Post - May 14, 1885 Stone trade.- The Union Freestone Company, of New York, is commencing shipments for the season both at Boudreau and Wallace quarries. The schr. Robbie Godfrey is loading at the latter place for New York.- Mr. J. Read, of the Atlantic Stone Co., of Boston, arrived here this morning to commence operating the Wood Point quarries.- The demand for our building stone has not much improved in the Atlantic cities since last season."

Weekly Transcript - Nov. 11, 1885 Stone from the Memel quarry was hauled to the newwharf at Hopewell Hill last week, where the schooner Alaska, Bishop, was loaded. Captain Bishop says it is the best wharf he ever laid a vessel beside. The schooner Hattie C. Stewart, is being loaded at Hillsboro with stone from the above quarry."

Moncton Daily Transcript - Nov. 13, 1885 Albert County Maple Leaf - We are informed the R.K. Snow, manager of the N.B. Freestone quarries, made a present of stone steps, for the new church at Riverside."

Moncton Daily Times - Nov. 14, 1885 Albert Co. Court. - Milton vs. N.B. Freestone Co., was next called but on application of Mr. W.W. Wells, the trial was postponed until next June court, on ground of absence of material witness. Mr. C.A. Peck opposed the application."

Weekly Transcript - Nov. 18, 1885 Albert Co. - We are informed that R.K. Snow, manager of the N.B. Freestone quarries, made a present of stone steps, for the new church at Riverside."

S.J. Daily Globe - Sep. 3, 1885 Large stone - The N.B. Freestone quarry at Memel is turning out some very large stone. During the past week the men cut one block of 70 tons measurement, and also cut and moved from the blocks two other stones of 30 and 25 tons measurement. - Maple Leaf."

Chignecto Post - Sep. 24, 1885 The manager of the Wood Point Quarries has received very encouraging reports from the cargo of stone recently shipped to Baltimore."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Chignecto Post - Apr. 1, 1886 The Budrot Stone Company are preparing for a good season's work. The prospects looking much better than it has for years."

Moncton Daily Times - Apr. 8, 1886 ADVERTISEMENT:Grindstone Property and Farm for Sale. The following properties are offered at private sale, viz. 3/4 interest in all those leasehold lands and premises situate in the Parish of Dorchester, in the county of Westmorland, and Province of New Brunswick, at or near the junction of the Dover and Dorchester roads, on the east bank of the Petitcodiac River. The leasehold premises consist of about 200 acres, and the Leases give full right to quarry Grindstone or other stones from the premises for 999 years from 1853. Also that lot of leasehold land and premises adjoining the above mentioned premises containing about 200 acres. Also a freehold mill site on the Thaddy Govang property, (so called) and being within the leasehold premises above described. The grindstones on above property are said to be of a superior quality; the range of stone extends through all the leasehold and freehold premises. The freehold premises are well adapted for farming. The whole property is about six miles from the thriving town of Moncton, which forms a distributing point for the three Maritime provinces. For terms of sale and other particulars, apply to Borden & Atkinson Solicitors for C.W. Archibald, Esq. Moncton, April 3rd, 1886"

Chignecto Post - Jun. 17, 1886 Wood Point.- The derrick at the Quarry was upset last week while hoisting a heavy stone, through the engineer continuing to hoist after the stone had reached the top."

Moncton Daily Times - Jun. 28, 1886 Bay View Quarries. - The Albert County Observer is pleased to learn that the prospect of Mary's Point quarries being reopened at an early date and vigorously worked is flattering. It understands a new company has been formed with ample means and that they intend to push on work vigorously. There is no doubt but the stone in this valuable quarry equals any other to be found in the province, and that the supply is practically inexhaustible. The situation of the quarries right at an excellent harbor, is an advantage that few quarries possess. Men have been at work for the past few days getting things in readiness that have got out of place by disuse. Some American gentlemen connected with the new firm are expected to visit the quarries next week. We are also informed that a satisfactory settlement of all the old difficulties is already made or about to be made, and that the business will start with a clean sheet.

Moncton Daily Transcript - Mar. 29, 1886 Dorchester. - Mr. H.R. Emmerson has received word from Boston parties interested with him in the Wood Point Building stone quarries, that operations will be commenced at the quarries shortly, on a much larger scale than last season, and that the outlook for the sale of their stone is promising. The schr. Edmund is now at the loading grounds and will at once take in a cargo for New York. Contracts have been entered into for large quantities

Weekly Transcript - Mar. 31, 1886 Albert Co. - A stone quarry is being opened by William Dobson of Rockland, on the farm of William Lutz at Turtle Creek in this county."

Moncton Daily Transcript - May 13, 1886 and Daily Telegraph - May 14, 1886 The Memel red freestone quarries were opened about three weeks ago and about 30 are at work. R.K. Snow, manager, arrived from Chelsea, Mass., last Thursday."

Moncton Daily Transcript - May 20, 1886 Albert Maple Leaf - The quarry on Grindstone Island, owned by Alex Rogers, Esq., of Hopewell Hill, is being actively worked this season."

Chignecto Post - Nov. 4, 1886 and S. J. Globe - Nov. 5, 1886 The Union Freestone Co. has shipped this year 1,400 tons of stone only. The last shipment per schr. Vrail of 302 tons, cleared on 26th ult., for Philadelphia."

Chignecto Post - Nov. 11, 1886 Wood Point.- Messrs. J.B. Read & Co., have sold all the stone they have quarried this season to parties in the States. They loaded a large schooner for Philadelphia this week and expect another vessel to load

Chignecto Post - Nov. 18, 1886 Bayfield.- The new quarry at John Lane's, near Bayfield, has been stripped and a short siding of the N.B. & P.G. Railway has been constructed. Where trial blasts have been made the stone appears to be poorer quality than the surface boulders with which many parts of the country are so plentifully covered. Many people here are disappointed that the Government have decided to use the stone from the quarry."

Moncton Daily Transcript - Oct. 14, 1886 and Weekly Transcript - Oct. 20, 1886 The Memel freestone quarries were shut down last Saturday, but several men will work at clearing for some time yet. The company intends working the Curryville quarry next season, as well as the Memel red quarry."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Transcript - Sep. 30, 1886 and Daily Times - Sep. 30, 1886 Maple Leaf - To show what has been and can bedone on the Memel red freestone quarry, we may say that on Tuesday, Sept 21, a block of stone was wedged off that measured 32 feet long, 12 feet wide and 4 feet thick. It contained 1,600 cubic feet or 114 tons measurement. The block has been cut into smaller dimensions of from 4 to 8 tons. Larger blocks than the above can be taken from the Memel quarry, which furnishes a beautiful and fashionable red freestone."

Moncton Daily Transcript, Page 3 - Thursday, April 7, 1887 ALBERT COUNTY NEWS - Maple Leaf - April 7 - The schooner Ethel B., Irving, arrived at Hopewell Hill wharf last Thursday to load stone from the Memel quarry for Boston."

Moncton Daily Times - Apr. 12, 1887 Albert Co. (Hopewell). - The Snow stone quarry atthe hill will not be opened till late this season and not as largely as last year, owing, it is said, to the retaliation bill. We, however, venture the opinion that Uncle Sam will think twice before he substitutes might for right."

Chignecto Post - Apr. 14, 1887 The Stone Trade Report.- The prospect of the building stones trade in the United States are better than last year. The strikes in the builders trades in New York and Boston last year left a large percentage of buildings incomplete, which will go forward this year. In addition there will be the usual operations this year, the favorable business conditions naturally leading capitalists to make investments. The Wallace Greystone Quarry ... Dobson Quarry... The Budro quarry at Dorchester will ship probably 1800 tons to New York. The Atlantic Stone Company has resumed work at Wood Point and as the stone promises well, will probably make a number of shipments. The New York quarry at the same place has a large gang employed clearing surface, preparatory to commencing to quarry."

Chignecto Post - Aug. 18, 1887 and S.J. Daily Sun - Aug. 19, 1887 Mr. Roberts, manager of the New York Freestone Quarrying Co. at Wood Point, is loading the schr. Clifton, Capt. McLean, with stone for St. John. Mr. Roberts is employing thirty hands in his quarry at present, and is getting out a large quantity of stone of excellent quality. A large gang is also employed in the works of the Atlantic Stone Co., under the management of J.B. Read."

S.J. Globe - Aug. 24, 1887 and Daily Telegraph - Aug. 25, 1887 Killed in the Quarry. - Mr. John Ryan, of Bartibogue, was crushed to death Monday afternoon in the French Fort Quarry by a heavy stone falling upon him. Mr. Ryan was at work picking out stone when a large one became loosened above him and, rolling down, struck him upon the legs, crushing them badly. He died a few moments afterward. - Advocate."

Chignecto Post - Jul. 28, 1887 Schr. Spring bird, Capt. Cameron, sailed from Rockland quarries with stone for Eastport."

Chignecto Post - Jun. 2, 1887 Rockport.- Messrs. Seaman & Delesdernier have a gang of men quarrying stone for the St. John market. Mr. J.B. Read is talking of opening a quarry at Hard Ledge."

Moncton Daily Times - Jun. 3, 1887 Stone Quarries at Rockport. - Messrs. Seaman & Delesdernier have a gang of men quarrying stone for the St. John market. Mr. J.B. Read is talking of opening at Hard Ledge."

Moncton Daily Transcript - Jun. 14, 1887 NEW QUARRY. - A new quarry of building stone has been discovered at Shediac

River. The stone will probably be used in the construction of the new R.C. church. The stone is an excellent quality and will probably be a boon to the Buctouche Railway hear which it is situated."

Chignecto Post - Mar. 10, 1887 New York Freestone Company is the name of a newlyorganized corporation to work the stone reef on the Stephen Barnes farm at Wood Point. Mr. Austin Roberts is manager. Preliminary work has been commenced. Stone of excellent quality and of a handsome red exists in the vicinity of the proposed workings."

Chignecto Post - May 5, 1887 Wood Point.- The Atlantic Stone Company have quite a number of men at work now, an American schooner is now taking in a load of stone at their wharf for the U.S. market. Mr. Roberts, of the New York Free Stone Companyis pushing forward work with the usual commendable Yankee push. Already a dwelling house for his men 54 by 25 is rapidly approaching completion, to be ready for occupation by the end of the present month. A blacksmith shop fully equipped is already turning out work. Cranes for hoisting have been erected and the engine just arrived is being got into position. Already some 25 or 30 men have found employment here and a number more will be employed as soon as the Company are fully equipped for work."

Moncton Daily Transcript - May 7, 1887 The New York Free Stone Company is pushing operations at Wood Point. Cranes for hoisting have been erected and the engine just arrived is being got into position. Already some 25 or 30 men have found employment here and a number more will be employed as soon as the Company are fully equipped for work."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Nov. 2, 1887 The last load of freestone from Miramichi quarries for the Fredericton Bridge went over the N. & W.R. last Saturday. For nearly two months from five to fifteen carloads have been sent over this line daily. The quarry at Indiantown has closed up."

Moncton Daily Transcript - Nov. 4, 1887 McSweeney's Quarries. - A Visit to the Grey Sandstone Quarries Near Moncton. - The stone quarries most accessible to Moncton at present, are those owned by Messrs. McSweeney Bros., a short distance this side of McLean's Station, on the line of the Buctouche and Moncton railway. The railway runs right along the edge of the quarry, which increases its value on account of enormously decreasing the cost of transporting the stone. The quarries are located immediately on the right bank of the Shediac river. A Transcript representative went out on the Buctouche train yesterday and stopped over to have a look at the quarries, which presented a busy scene. Messrs. Edward and John McSweeney, it will be remembered, presented to the St. Bernard's church all the stone the latter would require for the new edifice on Botsford St., the church to pay for the quarrying and transportation. This handsome gift was naturally readily availed of, and the contractor for the church, Mr. Angus LeBlanc, has been quarrying since the first of June last. It has proved to be very productive, and the further back the quarrying is carried the more superior the stone becomes. Very large blocks are taken out and the grit of the stone is so hard that it is suitable for grindstones. About nine men are working at present in the quarries, but at one time the number was as high as 17 or 18. The ease and productiveness with which this stone can be obtained from the works are shown by the fact that, in the short period named, over 200 cars of stone have been taken out, and about as many more will be required for the church. The product of this quarry is a grey sandstone, which readily receives a high degree of polish and dresses well. There is no reason why the quarry should not prove to be a valuable property, as the quality of the stone, the fact that the railway runs along side the edge of the quarry, and that the stone can be lifted in one hoisting from the quarry to the cars, makes it cheaply worked. As soon as the St. Bernard's church is completed, Messrs. McSweeney will take steps to operate the property upon a large scale."

S.J. Daily Sun - Nov. 4, 1887 The freestone shipments from the Miramichi, says the Chatham World, have been something enormous this year. Some Hamilton, Ontario, men who require a large amount of stone, have been examining the Miramichi quarries."

N.B. Reporter - Nov. 5, 1887 More Stone. - Two woodboat loads of stone for the bridge arrived last Thursday from Spoon Island escorted by the Florenceville. The piers when they are completed will be about 10 feet higher than the bank of the

Daily Times - Oct. 14, 1887 The Wood Point Quarries. - A Good Summer's Work, With Prospect of a Large Extension Next Season. - The N.Y. Freestone Quarrying Co., which has been operating at Wood Point this season, was organized last February, and is composed entirely of New York capitalists. The officers are S.T. Parsons, president; H.E. Parson, Treasurer; Austin J. Roberts, manager and A.T. Parsons, accountant. The company immediately acquired forty acres of land at Wood Point and made their first clearing in March, another having been made in August. They employ forty hands, and although the work this season has been to a large extent preparatory, yet four cargoes, averaging over 200 tons each, have already been shipped and it is probable that two more cargoes of about the same size will follow before the close of navigation. Besides clearing the rock and taking out the quantity of stone indicated, the company have built a dock extending about 150 feet from the shore, in which large vessels can be afloat at all times - ...?... ..?... They have also built up a piece of land containing about an acre, on the beach, for a quarry yard. In addition to the forty acres owned by the company, they have leased an adjoining lot, which they are at present working. They have three steam cranes, of the latest and most approved design, which are operated by an engine of 10 h.p., and they have also two hand cranes. A boarding house with accommodation for fifty men has been erected. The stone that has been quarried this summer is of excellent quality, and the supply is practically unlimited. It finds a ready sale in New York at remunerative rates and is considered superior to the Connecticut brownstone. The company are now prepared to do an extensive business next season and will probably employ at least 100 hands. - Post."

Weekly Transcript - Oct. 19, 1887 Dorchester. - Schr. Arabella, Buck master, arrived in Philadelphia on Friday last from the Woodpoint quarries."

Moncton Daily Transcript - Oct. 31, 1887 The last load of freestone from Miramichi Quarries for the Fredericton bridge went over the N & WR last Saturday. For nearly two months from five to fifteen carloads have been sent over this line daily."

Moncton Daily Transcript - Sep. 1, 1887 A large quantity of superior freestone is being landed at Gibson from the Miramichi Quarries via the Northern & Western. The greater portion of the blocks are three feet and over in thickness and of the very finest quality."

Moncton Daily Transcript - Sep. 5, 1887 The Hard Ledge Quarries - Where the French GetWhet Stones. - ... Dorchester ... Across the river, Rockland Heights nicely wooded, with the abandoned Caledonia Quarries distinctly visible lent character to the background. ... The Hard Ledge Quarries (south of Dorchester) are located at the foot of the cliff, and at high water are flooded. The tide is fortunately out at the moment of our call, and we see the men at work. These quarries have been at work for at least fifty years and it is only now that they have passed under new management that improved methods likely to increase their output have been adopted. The old plan was to cut out a stone during low tide, and fasten it to the keel of a large boat, which floated the mass at high tide to whatever point was desired. Ten tons of stone are not infrequently lifted in this manner, and the very morning of our visit a stone weighing two tons had been easily moved in this primitive mode. The secret of the facility with which heavy weights are thus lifted by boats apparently unequal to the task, lies in the fact that stones are lifted with comparative ease underwater which it would be impossible to handle out of water without cranes of great lifting power. The present company have erected a crane, and are putting in lathes for turning grindstones, to do a class of work hitherto done by hand. The quarries give employment to about ten hands - seven in the main quarry and three in the smaller. Captain Elias B. Tower directs the work. The stones are cut out by wedges, because blasting destroys the stone. The best quality is found deep down, and this consequently, as the quarries are flooded at high tide, makes the work of cutting out slower than is desirable. To obviate this difficulty, it is proposed to erect a dam so that the work can be carried on at all states of the tide. The grindstones made here are from three to seven feet in diameter and from three to thirteen inches in thickness. These are the largest sized stones for which there is any demand, and they are mainly taken, so far as this quarry is concerned by the Collins factory, Collinsville, Connecticut, where the large sizes are used for grinding axes, and the smaller sizes for smaller edge tools. The life of a grindstone at one of these huge factories lasts from two weeks to four months, depending mainly upon the class of grinding. A few paces along the beach is a smaller quarry worked by the same firm in which spindle stones are prepared. These stones go to Boston, and are mostly consumed in Massachusetts. The French have come annually to these quarries since the early settlement, for their whet stones. Near by where the cliff has been denuded, is a splendid example of the anti-clinal. By walking around this basin, one may see illustrations of the earth's strata for miles down, which here stand almost perpendicular through pressure from the Atlantic ocean side in geologic ages. At this point, traces of iron stone, also of lignite, crop out; and the residents say the lignite makes fair fuel, but evidence was not strong on this point. These features helped to make the visit to the quarries interesting. They already give employment to many hands, and are likely to increase their capacity. They are now owned by Messrs. Joseph Read and Henry C. Read, who are also interested in quarries on the Miramichi River, at Stonehaven, Gloucester Co., at Pictou, at Rockport, and in the Wood Point quarries, Westmorland County. This firm was established fifty years ago by the father of the present members, and they have a branch house in Boston. In another letter I shall describe some other points of interest visited. H."

S.J. Daily Sun - Sep. 8, 1887 Sackville. - Bedford Read, proprietor of the Bay of Fundy quarry, has an order from the Fredericton railway bridge contractors for 1,000 tons of stone, to be delivered by woodboats and schooners."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Transcript - Sep. 9, 1887 Description of the Brown Stone Quarries at Wood Point. - What Commercial Union Would do for the Quarry Industry. - Dorchester, Sept. 9. - [Special]. - In my last letter I described the quarries at Hard Ledge, and the magnificent view therefrom obtained. ... Leaving the Hard Ledge Quarries, we drove in a direct line across the isthmus towards the Chignecto side. ... Away to the right is Joggins, and the cliff there furnishes another striking illustration of what geologists call the anticlinal. ... Leaving the bay the road takes a turn inland ... Finally the bay again is reached ... until Woodpoint appears. The principal attraction here are the extensive brown stone quarries. There are two quarries being worked at the present time. One by a local firm and the other by a New York company. The quarries are located at the water's edge but are not affected by the tides as are those at Hard Ledge. The quarry about which I was enabled to gather the most information was what is known as the Woodpoint Brown Stone Quarry, and it is located on the left hand of the private road which leads to the wharf. The other quarry is to the right. The Woodpoint Brown Stone Quarry Company is composed among other gentlemen of Messrs. Stephen Clark; Joseph B. Read, of Westmorland Co.; Walter Wood, of New York; and A. Seaman & Co., of Cumberland County. The quarries are well equipped with machinery driven by steam power, and twenty two men are at present employed. Mr. Joseph B. Read is general manager; Mr. Clark is usually on the ground and Mr. Julian Landry is foreman. Blasting is resorted to for getting out the stone at times, but not generally, as it is too destructive of the stone. The stones are generally broken out by wedges. The stone produced at this quarry is cut into square shaped blocks, transported on a tram to the wharf and there loaded in vessels for American ports. The stone is of a rich chocolate color and is singularly free from defects. None but the best of stones are sent away, as the company is determined to maintain a high standard of excellence for its products. The visitor is impressed with the size of the blocks. Square shaped stones weighing three tons are common, while a number weigh no less than six tons, and even six and a half and seven tons. New York does not take much of this stone, but Boston and Philadelphia are liberal purchasers. There is only one quarry, that of Middletown, Conn., whose stone at all compares in reputation with that of of this place, and the demand is consequently increasing. There is also a small local demand, and Mr. Josiah Wood has ordered stones for the erection of a new fence around his residence at Sackville. The supply of stone here is inexhaustible and the rock stretches away up the hill and crops out again at a considerable distance away. This shows that so far as this particular quarry is concerned there is little surface earth to be removed before the paying product is reached. The reduction in the cost of working the quarry which this circumstance means will be readily recognized. One fact impressed me much, and a fact too which has an important political bearing. I learned that much of the quarry stone was exported to the United States, and that the American duty on this stone was one dollar per ton, which would be almost prohibitory, were it not for the stone's superior quality helping to make it command a high price. A natural enquiry was, what effect of commercial union would be on this industry, and I was surprised at the warmth with which the idea was endorsed. What effect would commercial union, repeated Mr. Stephen Clark, have upon this industry. Why it would be the making of it. To-day, as you have been shown, we export by water large quantities of stone to Boston, Philadelphia, and New York, and a considerable quantity to Chicago by rail, and the only block in the way of our expanding indefinitely that export trade is the duty of one dollar per ton imposed on the stone. Give us Commercial Union with the United States, which are our great customers, and inside of a year we will have one thousand hands employed in these quarries, where we have now only twenty-two. One thousand hands mean a population of four thousand souls added to those already living within a short distance of the quarries. These people would be consumers of the products of our farmers, and they would get locally increased prices for all their dairy and small produce. It would give them a home market and pour wealth into their pockets. What is true of this quarry is true of others. Commercial union would be the greatest boon ever conferred upon our industry. I am for that policy first, last and all the time. Leaving the Quarries. On leaving these quarries we took a brief glance at the second quarry which is being worked by a New York Company, under the local management of Mr. Austin Roberts. The quarry lies only a few feet apart from the Woodpoint company's, and a large number of men employed. There is heavier cutting of earth, however, required to get at the paying rock below, but this cutting has already been done for a considerable distance, and the paying rock should now be rapidly got out. This company are opening another quarry a

Chignecto Post - Sep. 22, 1887 Diking a Quarry.- Mr. J.B. Read has a gang of about twenty men engaged in diking his grindstone quarry at Hard Ledge. The work is in charge of Mr. Robert Lowerison. The dike at its outer angle will be about twenty feet in height, and when completed will permit quarrying operations to be carried on at all times of tide, besides preventing the deposits of mud which have been such a hindrance to the work."

Chignecto Post - Apr. 26, 1888 Atlantic Brown Stone Company.- The Royal Gazette contains a notice of application for the incorporation of the Atlantic Brown Stone Company for the purpose of carrying on the quarrying business, at Wood Point, formerly conducted by Mr. J.B. Read. The amount of the capital stock of the company actually subscribed is $24,000, in shares of $100 each, and the names of applicants for incorporation are:- Joseph B. Read, of Sackville, merchant, Henry C. Read, of Stonehaven, Gloucester County, merchant, Henry R. Emmerson, of Dorchester, barrister, Stephen Clark, of Sackville, merchant, Walter R. Wood, of New York, stone merchant, John Lord, of New York, stone merchant, Rufus Seaman, of Minudie, farmer, George Hibbard, of Lower Cove, merchant, Amos Seaman, of Boston, merchant, Joseph B. Read, Henry C. Read, and Henry R. Emmerson are to be the first or Provisional Directors of the company. The Atlantic Brown Stone Quarry has been very successful under the efficient management of Mr. J.B. Read and the property is now in a fair way to be largely developed. The company own a valuable area, the stone being of excellent quality and easily quarried. The full development of the quarry will be of great importance to the surrounding country, and it is hoped that the enterprise of the company will meet an ample reward."

S.J. Daily Sun - Aug. 17, 1888 A large number of men are at work at Cape Tormentine and at the Coburg Road quarry, in connection with the breakwater works."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Moncton Daily Times - Feb. 21, 1888 Failure in the stone trade - Walter J. Roberts,stone dealer, 43 Broadway, New York, has gone into receiver's hands. Liabilities unknown. He claimed to own $250,000 worth of land on Staten Island and quarries

at Port Jervis, N.Y., Springfield, Mass., and Mary's Point, N.B."

Moncton Daily Times - Jul. 6, 1888 Albert Co. - The new schooner Demoiselle has sailed for Wood Point to load stone for Philadelphia, $3.50 per ton."

Moncton Daily Times - Jul. 18, 1888 Point Du Chene. - A very fine stone quarry has been opened up on Mr. W. B. White's farm, near here. The stone is pronounced of unusual good quality and Mr. Gaudet, the contractor, is using it extensively in Shediac and Moncton."

Chignecto Post - Jun. 14, 1888 Mr. S.T. Parson, President of the N.Y. Freestone Quarrying Co., is in town this week. He is much pleased with the progress that has been made at the quarries since his former visit, and he thinks the prospects of the company very encouraging."

Chignecto Post - Jun. 28, 1888 New Quarry.- Mr. Edward Murphy, contractor for Cape Tormentine Wharf, is opening a quarry about two miles this side of Baie Verte, which he believes will furnish an abundance of stone suitable for building the pier. The quarry is about 1500 feet from the N.B. & P.E. Ry., and a branch line to the quarry has been graded and is ready for the rails. A boarding house, a blacksmith shop and an office have been erected near the works and a gang of men is engaged stripping off the surface earth and making preparations for removing the stone. It is to be hoped that the new quarry will realize the anticipations concerning it, as it will remove the chief obstacle to the construction of the pier."

S.J. Globe - Mar. 20, 1888 Stone Cutters. - Mr. Wm. Kane of Kane & Co., marble and stone cutters, had been in business for fifteen years. It had increased a little in that time. Did not do much granite cutting. Granite was cut principally for grave yard purposes. Marble was got principally through Boston. Italian and Vermont marble was used, the latter principally, as it stood the weather better. The men got about $2.50. Usually employed a couple of boys, who remained till their time was up, and sometimes after that. They were paid $1.50 a week at first, and 50 cents increase until the fourth year when they got $1 advance. His present hands had been with him five years and upwards. None of them owned property. Polishers earned $1 a day the year around."

Chignecto Post - Mar. 22, 1888 The New York Freestone Quarrying Co. are making preparations for extensive operations during the coming season. The stone on hand has been placed on the wharf, ready for shipment, and large quantities of wood, for dunnage, have been hauled to the grounds, ready for use. A large stock of timber for wharves and other purposes has also been got out, and the work of removing the bank has been pushed vigorously. According to present indications, Wood Point will present a scene of unexampled activity during the coming summer."

Moncton Daily Times - Mar. 23, 1888 Stone Quarrying. - The New York Freestone Quarrying Co., are making preparations for extensive operations at Wood Point during the coming season. According to present indications, Wood Point will present a scene of unexampled activity during the coming summer. - Post."

Moncton Daily Transcript - Mar. 24, 1888 The New York Freestone Quarrying Co. are making preparations for extensive operations at Wood Point during the coming season. The stone on hand has been placed on the wharf, ready for shipment, and large quantities of wood, for dunnage, have been hauled to the ground, ready for use. A large stock of timber for wharves and other purposes has also been got out, and the work of removing the bank has been pushed vigorously -

Chignecto Post - May 3, 1888 The New York Freestone Quarrying Co. are erecting a large crane at the Landing to be used in hoisting stone from scows to cars on the I.C.R. Branch."

Daily Times - May 11, 1888 The N.Y. Freestone Quarrying Co., has loaded one vessel this week, and two other schooners are waiting for cargoes."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Royal Gazette - May 16, 1888 Notice of Granting Letters Patent. Public Notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twelth day of May, A.D. 1888, incorporating Joseph B. Read, Merchant; Stephen Clark, Merchant, of Sackville, in the county of Westmorland; Henry C. Read, of Stonehaven, in the county of Gloucester, Merchant; Henry R. Emmerson, of Dorchester, in the County of Westmorland, in the Province of New Brunswick; Rufus Seaman, of Minudie, Farmer; George Hibbard, or Lower Cove, Merchant; in the Province of Nova Scotia; Walter R. Wood, Merchant; and John Lord, Merchant, of New York; and Amos Seaman, Merchant, of Boston, in the United States of America; for the purpose of quarrying, working, manufacture, sale, shipping, and exporting of Building and other

Stone, at Wood Point, in the Parish of Sackville, and County of Westmorland, and at other places in the Province of New Brunswick and elsewhere; the purchasing, and working of quarries of building stone, grindstone, &c.; the building and purchasing of railways, tramways, wharves, derricks, and machinery, and the doing of all other things requisite for or incident to carrying on the business of quarrying and shipping stones in the Province of New Brunswick and elsewhere, by the name of Atlantic Brown Stone Company, with a total capital of Twenty four thousand dollars to be divided into two hundred and forty shares of one hundred dollars each. Dated at the Office of the Provincial Secretary, at Fredericton, this Twelfth day of May, A.D. 1888 David McLellan, Provincial Secretary."

S.J. Globe - May 17, 1888 The Atlantic Brown Stone Company. - Notice is given that Letters Patent have been issued incorporating Joseph B. Reed and Stephen Clark, of Sackville, Henry C. Reed, of Stonehaven, Gloucester, Henry R. Emmerson, of Dorchester, barrister, Rufus Seaman, of Minudie, N.S., George Hibbard, of Lower Cove, N.S., Walter R. Wood, and John Lord, of New York, and Amos Seaman, of Boston, for the purpose of working quarries at Wood Point, by the name of Atlantic Brown Stone Company, with a total capital of twenty-four thousand dollars to be divided into two hundred and forty shares of one hundred dollars each."

Daily Times - May 18, 1888 The Atlantic Brown Stone Company. - Notice is given that Letters Patent have been issued incorporating Joseph B. Reed and Stephen Clark, of Sackville, Henry C. Reed, of Stonehaven, Gloucester, Henry R. Emmerson, of Dorchester, barrister, Rufus Seaman, of Minudie, N.S., George Hibbard, of Lower Cove, N.S., Walter E. Wood, and John Lord, of New York, and Amos Seaman, of Boston, for the purpose of working quarries at Wood Point, by the name of Atlantic Brown Stone Company, with a total capital of twenty four thousand dollars to be divided into two hundred and forty shares of one hundred dollars each."

Chignecto Post - May 24, 1888 The N.Y. Freestone Quarrying Co., are about shipping a quantity of stone by rail to Chicago. It will be brought to the landing by scows."

S.J. Daily Sun - May 26, 1888 The Wood Point (Westmorland) Freestone Quarry company, have already sent away three cargoes of stone from their quarry and have a large three-masted schooner now about loaded for the American market. Simeon Outhouse is engaged in his usual business of shipping piling, and will ship some 13 cargoes this season."

Moncton Daily Transcript - May 28, 1888 Mr. John Flood, of St. John, has been awarded the contract for the erection of the new departmental building on Parliament square, Fredericton. The contract price is about $26,000. Work will be commenced immediately. The building will be mainly of stone, with brick partitions, mansard slate, and gravel roof. The date assigned for completing the work is 1st. May, 1889. Native stone will be used for the body of the work, and obtained from quarries within two miles of the site. The olive freestone for trimmings will be brought from Westmorland."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - May 28, 1888 House of Commons. - New Brunswick Stone. - ... Budget debate ... Hansard May 15th - Building on Wellington street ... $100,000 - Sir Richard Cartwright - Where does the Hon. gentleman get the stone from for that building? Sir Hector Langevin - It was obtained from New Brunswick. Mr. Mitchell - And it is a very good selection too. It comes from the town in which I was born, and it is the best stone on the continent. I am giving it free advertisement now. Sir Richard Cartwright - I believe the stone is very good, so far as I am to judge, but it is a long distance to bring stone from. Mr. Mitchell - It is no further than I came myself. Sir Richard Cartwright - The Hon. Gentleman can move himself, which is more than these ponderous masses can do. I should like to know the cost of transport of this stone from Miramichi here. Sir Hector Langevin - We asked for tenders for this stone, and we took the lowest tender. Mr. Jones (halifax) - Who is the contractor? Sir Hector Langevin - Mr. Charlebois. Sir Richard Cartwright - A particular friend of the minister of finance, I believe. Sir Hector Langevin - The contractor was bound to furnish the stone according to a sample which was exhibited for that purpose. The chief engineer had to have the quarries examined in order to see whether there was enough stone in a quarry for that building to prevent the risk of the stone coming to an end in that quarry, and thus, perhaps, having two different colors of stone in the building. Finally this stone was found to be suitable and good stone, and those who understand these matters - of course I am only a layman in matters of this kind - All say that the stone which has been selected is a very good one, and the Hon. gentleman must see from the appearance of the building that it is a very good one. Mr. Weldon (St. John) - Was not the original advertisement for stone which was to come from the county of Albert? Mr. Cockburn - So favorable has been the impression created by the appearance of this stone that a deputation came from the rising city of Hamilton to inspect it and see if it would not be best for them to use in building their court house, and the result was that they decided to import that stone all the way to Hamilton for the purpose of erecting their court house. Mr. Brown - My Hon. friend is wrong in one point. It was not the court house, but the city of Hamilton is putting up a new city hall at a cost of $10,000, and after examining ten or fifteen specimens of stone from all parts of the Dominion, the experts decided that this was the best stone that could be obtained, and consequently we are putting up our building from that stone. Mr. Jones (Halifax) - What did the government charge the contractor for bringing that stone over the Intercolonial railway? Sir Hector Langevin - I cannot state the amount. It was paid by the contractor. Mr. Jones (Halifax) - But it was paid to the government. Sir Hector Langevin - It was paid to the railway department. Mr.

Jones (Halifax) - Was it a special rate that was made? Sir Hector Langevin - I think so. I will enquire about it. Sir Richard Cartwright - It certainly appears to me that this amount of $707,000 is an enormous sum to pay for that building, and it seems clear that a very large extra cost was incurred by the contractors having to bring that stone up here from Miramichi. I should have thought that there were other qualities of stone which could have been found and could have been laid down very much cheaper, though, of course, there may be qualities in this stone which might pay for the difference in the cost of transport. I should like the minister to find out what was paid to the government for bringing this stone up here. Mr. Mitchell - I feel it due to my county to give the Hon. gentleman the information for which he asks. They did not select the stone in that county until they had failed in obtaining it in the province of Quebec and also in Albert county, and until they found that there was not enough in any part of the county of the same quality with which to complete that building. They had therefore to fall back upon this county, and I want again to advertise the stone which is to be found there which, like the member for the county, is of very good quality. An Hon. member - Very gritty. Mr. Mitchell - Not so gritty as you are, but a little inclined that way. There is enough stone there to build every public and private edifice in the Dominion of Canada. Mr. Cook - They have very good stone in the county of Peel. In the city of Toronto they are using the stone from that county in their public buildings, and I think it quite equal to the stone from the province of New Brunswick. Mr. Brown - Nothing like it. Mr. Cook - I should like to hear from the member for Peel on this question."

Moncton Daily Times - Nov. 30, 1888 Albert Co. - It looks as if the Mary's Point quarries might be sold for default in payment of taxes."

Chignecto Post - Oct. 4, 1888 Dr. Parson, President of the N.Y. Freestone Quarrying Co., is in town."

Moncton Daily Transcript - Oct. 4, 1888 J.M. Steeves has resumed work at the Curryville freestone quarries and has over a dozen men at work.- Maple Leaf."

Moncton Daily Transcript - Oct. 15, 1888 THE MCSWEENEY QUARRY.- The stone quarry of Messrs. McSweeney Bros. at Cape Breton station, on the Buctouche railway, from which the stone for the new St. Bernard's church has been procured, has been opened out this summer along the entire length of the siding, a distance of several hundred yards. The excellent character of the stone is still maintained and the supply is of great extent. Stone for the new church is still being got out and work will not be suspended for the winter until about the first of December."

Moncton Daily Times - Oct. 19, 1888 Sackville. - The New York Freestone Quarrying Co.have shipped about 50 carloads of stone to Chicago and will forward more before the season closes."

S.J. Globe - Oct. 30, 1888 and Moncton Daily Times - Oct. 30, 1888 Fatal Fall from a Derrick. - A Mr. Cameron from Ontario, employed by the contractor for the Cape Tormentine breakwater, as superintendent of the stone quarry, which is located near Port Elgin, went up on a derrick to unfasten some of the rigging, when it tipped, carrying him over to the ground a distance of 30 feet. He died in a few hours from injuries received. He leaves a wife and family in Ontario and the body will be sent home for interment."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Transcript - Sep. 10, 1888 New Brunswick brown stone trimmings will be used on Toronto's new city hall and court house which is to cost $1,500,000."

Moncton Daily Transcript - Sep. 15, 1888 OPENING UP A STONE QUARRY.- Mr. David Bourque, of Buctouche, on whose farm a fine quarry of freestone is situated, has brought a number of samples to Moncton and proposes, should sufficient orders be procured, to employ a number of men and conduct operations on an enlarged scale. The stone is said to be of excellent quality, having been used for a number of years in Buctouche and vicinity, but the lack of transportation facilities which has hitherto existed has prevented its use elsewhere. Besides its value as a building stone, it takes a good polish and has been used for tombstones and monuments."

Chignecto Post - Apr. 4, 1889 Quarries are preparing for summer work, men are continually arriving and taking quarters. This business too promises to be more than usually active during the ensuing summer."

S.J. Evening Gazette - Apr. 26, 1889 Hagan & Seaman have eight or ten men employed at Rockport, Cumberland Co., getting out building stone and sockets for St. John market."

Daily Times - Aug. 10, 1889 The Stone Trade. - 20 to 30 men are at work at the new quarries near Cocagne, on the B. & M. Railway, and quite a quantity of stone has already been got out for the new round house, etc., at Moncton, for the construction of which Messrs. Rhodes, Curry & Co. have the contract. It is reported there is legal trouble between Messrs. Bourque and Gaudet about the ownership of the quarries. Stone for Fort Lawrence terminus of ship railway is being quarried at Messrs. A. Seaman & Co.'s works, Lower Cove, 4,000 tons are required. The New York freestone quarrying company at Wood Point, in this county, are shipping stone to go into the new masonic temple at Buffalo. Their rail shipments to Chicago the last two months amounted to 15 car loads. The shipments of building stone from Sackville in the last fiscal year amounted to 2,840 tons of a value of $14,592."

S.J. Globe - Aug. 13, 1889 Reciprocity and The Stone Trade. - Moncton Transcript: A few days ago business called your correspondent to Rockport, the lower part of Sackville parish. It being nearly twenty years since the last time he visited that place, he naturally expected considerable improvement since then, but failed to notice any very marked change, and indeed there did not seem to be as much thrift and general prosperity as there was during the times of the Reciprocity Treaty, and in conversation while there he was told it was more difficult now to pay five or six dollars for a barrel of flour than it was then to pay eight or ten dollars, and if Commercial Union or Reciprocity was had with the United States the stone trade would again boom not only there, but largely increase at Wood Point, where they are now working under the disadvantage of two dollars per ton duty. Free trade with the States would largely increase the business and general prosperity of those places, giving employment to men at home instead of having to seek it in the neighboring republic, and giving at the same time an impetus to the coasting trade."

Moncton Daily Times - Jul. 5, 1889 New Quarry. - Messrs. David and P. Bourque have lately opened a stone quarry at Notre Dame, Dundas, Kent, and are now prepared to supply at low figures those in need of that article. The stone is said to be of excellent quality and can be used for building purposes, gravestones or grindstones. The quarry is a short distance from the Buctouche railway. A siding now being built from the works to connect with this line will be opened on Saturday. Contractor Day will use this stone for the Price building, now being built by him."

Chignecto Post - Jul. 18, 1889 Wood Point.- The N.Y. Freestone Quarrying Co., have about 500 tons of stone ready for shipment, and two vessels are daily expected to load for New York. Mr. John Lynch, a member of the Company, was here last week looking at the works, and appeared to be much pleased with what he saw."

Moncton Daily Times - Jul. 19, 1889 The N.Y. Freestone Quarrying Co., at Wood Point, West. county, have about 500 tons of stone ready for shipment, and two vessels are daily expected to load for New York."

Moncton Daily Transcript - Jul. 31, 1889 THE STONE BUSINESS.- The business of scowing stone to Moncton from quarries down river has assumed large proportions. Harbor Master Cook expresses the opinion that the Town Council should provide some better facilities for landing the stone than are afforded by the natural bank of the river. Improved facilities would benefit alike the town itself, which brings up large quantities of stone for the streets, as well as the different builders in town, who are getting stone for foundations. As many as three or four large scows may be seen discharging stone at the same time at the old shipyard at the foot of Mechanic Street."

Moncton Daily Transcript - Jun. 3, 1889 THE SCOWING BUSINESS.- Mr. Scott, of Stoney Creek, is having a bed for scows dug near the old shipyard and will engage in scowing stone to Moncton. Several parties down the river have also been scowing stone to Moncton this spring. Mr. G.O. Dunham who brings the stone from Hopewell Cape, and Mr. B. McFarlane, from Dover. Mr. M. Forbes' scow has brought down several cargoes of sleepers from Turtle Creek for the Summer Co., to be loaded in schooners at the Moncton wharf."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Saint John Evening Gazette - Mar. 7, 1889 The stone cutters society decided that their wages should be $3 a day till June 1st. and $3.50 a day from June 1st. till Sept. 15th."

Daily Times - Mar. 22, 1889 It is said that the freestone quarries at Hopewell Hill will be reopened this season. Two gentlemen from Boston have been in Harvey for a few days, making a further examination of the Watson stone quarries, and it is believed they left favorably impressed with quality and quantity, not only of the Watson quarry, but others in that vicinity as well. Should their report be as favorable as is anticipated by those who interviewed these men on the subject, a wealthy company will commence operations early this spring."

Daily Times - May 10, 1889 The Albert Maple Leaf admits that its personal attack upon the editor of The Times re the stone quarry business was intended as revenge for a slur on Mr. Wood. The Maple Leaf evidently refers to the item in The Times of some months ago, which simply stated the fact that Mr. Wood, who was in Moncton at the time, read an address to a lady who had just come victorious out of a law suit arising from the administration of the Scott Act. The item in question was published as an item of news, and whether or no participation in an anti-Scott jubilation was up to Mr. Woods' home standard of morality. The Times was not to blame."

Daily Telegraph - May 17, 1889 Stone Quarrying. - The N.Y. Freestone Quarrying company will, in a few days, commence stripping some property owned by them at Wood Point, Westmorland county. The company have got out 400 tons of stone from the old quarry this spring."

Moncton Daily Times - May 17, 1889 Albert Co. - Operations in the Watson freestone quarry will be commenced this week by a Boston company."

Moncton Daily Transcript - May 17, 1889 NY Freestone Quarrying Co. will next commence stripping an area on the property owned by them at Wood Point. They still have 40 acres unstripped."

Chignecto Post - May 16, 1889 N.Y. Freestone Quarrying Co. will next week commence stripping an area on the property owned by them at Wood Point. They have already got out 400 tons of good stone this spring from the old quarry. The report that the quarry is to be closed is unfounded. It probably had its origin in the fact that a quantity of inferior stone has been found in the old workings, but there is no probability that the work will be abandoned while the company have forty acres of rock unstripped. Dr. Parson, president of the Company, is here at present."

Chignecto Post - May 23, 1889 Albert.- Thos. Dobson, of Budreau, and Job McFarlane of Dover, Westmorland Co., are busily engaged in opening up what they hope to be a valuable stone quarry at Dover. Mr. Dobson has an extensive practical knowledge of stone quarries, having been engaged for many years in the well known stone quarry at Budreau."

Moncton Daily Transcript - May 25, 1889 NEW STONE QUARRY.- Thos. Dobson, of Budreau, and Job McFarlane, of Dover, Westmorland Co., are busily engaged in opening up what they hope to be a valuable stone quarry at Dover."

Chignecto Post Nov. 7, 1889 The stone quarries at Wood Point have closed for the season. The last shipments will take place in a few days."

Moncton Daily Times - Nov. 9, 1889 The stone quarries at Wood Point have closed for the season. The last shipment will take place in a few days."

S.J. Daily Sun - Nov. 12, 1889 Westmorland. - The stone quarries at Wood Point have closed for the season. The last shipments will take place in a few days."

Chignecto Post Nov. 14, 1889 and Daily Times - Nov. 15, 1889 Wood Point.- The New York Freestone Quarrying Co.have closed their season's work, having shipped about 2,700 tons this season, and they have on hand a large quantity of broken stone suitable for underpinning and rough work. The Company have employed from 50 to 60 men this season, but considerable time was spent in working the old quarry when the stone was of inferior quality. A new quarry has, however, been opened which promises to give excellent returns, and a considerable quantity of the best stone ever raised at Wood Point has already been taken from it. There is an unlimited demand in the west for stone of this quality, and it is expected that the output at Wood Point next season will be much larger than in any previous year."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Nov. 15, 1889 Westmorland. - The New York Freestone Quarrying Co. have closed their season's work, having shipped their last cargo of building stone last week. They have shipped about 2,700 tons this season, and they have on hand a large quantity of broken stone suitable for underpinning and rough work. The company have employed from 50 to 60 men this season. A new quarry has been opened which promises to give excellent returns, and a considerable quantity of the best stone ever raised at Wood Point have already been taken from it. There is an unlimited demand in the west for stone of this quality, and it is expected that the output at Wood Point next season will be much

S.J. Daily Sun - Nov. 15, 1889 Westmorland. - Mr. Murphy is pushing the work vigorously on Cape Tormentine Pier, and the stone embankment now extends about 1,200 feet from the shore. When the embankment has been carried out about 100 feet further the crib work will be commenced, for which a gang of men has been employed for some time in framing the timbers. The new quarry at Coburg road is turning out well and some excellent stone is being taken out. The total number of men employed on the work is upward of 60."

Chignecto Post - Oct. 24, 1889 and Daily Times - Oct. 25, 1889 Stone shipments.- During the past week sixteen carloads of stone, aggregating about 200 tons, have been brought over the N.B. & P.E.I. R., to be forwarded per I.C.R. to Montreal. This stone is quarried at Northport, N.S., and brought by barge to Port Elgin. Another cargo of about 200 tons will be shipped to Montreal this fall."

Chignecto Post - Sep. 5, 1889 The New York Freestone Quarry Co. have a cargo of stone ready for shipment at their new quarry. A new steam drill has been in operation at the works for the last few days and gives good satisfaction. The company expect to load two vessels at an early date."

Daily Times - Sep. 13, 1889 A Boom in the Stone Trade. - The Sackville Post says: There is quite a boom in the quarrying business at Wallace this season, and the output of stone promises to be much larger than in any previous year. The old quarries are in full blast, and a new quarry has been opened by a New York Company. The Dorchester Union Freestone Co. employs about 24 men and has already shipped 4,000 tons of stone this season. The Stevenson quarry employs 30 men and has shipped about 600 tons. The same quantity has been shipped from the Battye Quarry, which employs about 40. The new quarry which has been opened up the river, beyond the Battye Quarry, gives employment to about 40 men. This season the greater part of the stone quarried has been shipped to Cape Breton, where it is used in the construction of the Grand Narrows bridge, and the remainder finds a ready market in the United States."

S.J. Evening Gazette - Sep. 21, 1889 A Quarrel About a Quarry. - William Dobson, of Wallace, Cumberland, is alleged to have made some derogatory remarks regarding the quality of a quarry owned by Brenton and Adams, which is said to have injured the sale of the stone. Hence Brenton and Adams have entered an action for $20,000 damages."

Moncton Daily Transcript - Apr. 17, 1890 Dorchester.- Mr. Jas. Reid is quarrying stone for the new jail on property belonging to Mr. J.W.Y. Smith."

S.J. Evening Gazette - Aug. 13, 1890 James Brown, employed in Seaman & Co.'s quarry at Little River, fell on Saturday, from the wharf into the quarry, a distance of 20 feet, and received injuries which, it is feared, will prove fatal."

S.J. Daily Sun - Aug. 23, 1890 The New York Freestone Quarrying Co. has shipped 13 cars of stone from Sackville to Toronto this week. In a few days a steam engine will be placed on the wharf at Sackville to load the stone on cars."

S.J. Daily Sun - Aug. 29, 1890 and Moncton Daily Transcript - Aug. 29, 1890 Four cars of stone were shipped Wednesday from Sackville to Toronto, by the New York Freestone Quarrying Co."

Daily Times - Feb. 18, 1889 and S.J. Daily Sun - Feb. 19, 1890 Building Stone. - (Moncton Times) - Some goodspecimens of olive building stone are on exhibition at Steven's block, next to coffee rooms. They are from Kent Quarry, on the Cocagne River, opened last fall by Edgar S. Stevens, of Moncton, and from which 500 tons were quarried. This stone is pronounced by competent judges to be of superior quality, being entirely free from iron, slate or pebbles and of uniform color. Mr. Stevens intends commencing operations as early as possible in the spring. This is an inexhaustible quarry and easy of access, and will be a great benefit to Moncton and vicinity, and good building stone has only been obtainable at

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Moncton Daily Transcript - Jul. 12, 1890 The Wood Point Quarries. - Sackville, July 18. -[Special]. - The Methodist Sunday School pic-nic was held on Tuesday, the 8th inst., at Wood Point. The parents and teachers supplied teams for the drive, which the children seemed to enjoy in spite of the clouds of dust which were swept along by the high wind that prevailed during the day. The grounds were selected, just below the stone quarries, would have been considered good if the day had been more favorable, yet all enjoyed themselves and the day passed pleasantly away. Many availed themselves of the opportunity and visited the stone quarries which are doing a good business this summer. The upper or Read quarry is supplying stone for the dock of the ship railway and as the stone is not required as fast as the quarry has been supplying it, part of the men at work in the quarry were discharged last week. The lower or Parsons quarry is now employing fifty men and shipping one hundred tons per week to Toronto to fill their contract. Mr. Parsons intends to employ more men and send to market two hundred tons a week, part if which will go to the American market. In conversation Mr. Parsons smilingly said that if the duty was increased one dollar per ton he hoped to get that much more for the stone."

Daily Times - Jul. 22, 1890 A Valuable Stone Quarry. - At Notre Dame, about 20 miles from Moncton, Messrs. John L. Stevens and Edgar S. Stevens are opening up a valuable stone quarry. It is situated on the Mill stream, a few rods from the line of railway, and a branch siding has been constructed in to it. The stone, which juts out the side of the hill all along the stream, is estimated to be 90 feet deep and only about 9 feet of earth is required to be removed in order to get at it. A more favorable site could not be desired and the stone, which is olive colored, is remarkably clear from any foreign substance. It can be got out in blocks almost any size required, several weighing from 3 to 5 tons having been seen at the quarry ready for shipment on Saturday. So far quite a quantity has been shipped to St. John, Montreal and other points and two car loads were brought out to Moncton yesterday to fill orders. About 20 men are employed. The Messrs. Stevens also own a quarrying privilege on the Buctouche River, a short distance above the village, but have not yet commenced operations there. From their Buctouche quarry they would be able to scow stone down the river to vessels to be loaded

Chignecto Post - Jul. 24, 1890 and Moncton Daily Transcript - Jul. 25, 1890 Quarry Improvement.- The Sackville Post says: The Atlantic Freestone Co. have added several important features to their quarry during the past few months. A wharf has been built at the water front at which the scows can load easily and about 500 feet of railway has been constructed to it for the purpose of carrying stone to the scows. The incline will take the loaded cars down, and an engine and wire rope will draw the unloaded ones back. A large quantity of stone is being quarried and shipped."

Moncton Daily Transcript - Jul. 25, 1890 Stone for the United States.- Messrs. D.P. & F.Bourque shipped on Thursday, from their quarry at Notre Dame, on the Buctouche and Moncton Railway, a car of their freestone to R.F. Rutherford at East Cambridge, Mass. This is their first shipment of stone to the United States, but they have appointed an agent in Boston and expect to make further shipments soon. The stone shipped was of fine quality and in blocks weighing from one to three tons, or twenty tons in all. The stone turned out at this quarry is suitable for grindstone, and the first grindstone made from it is now used by Mr. A.E. Killam."

S.J. Evening Gazette - Jul. 26, 1890 Messrs. D.P. & F. Bourque shipped on Thursday, from their quarry at Notre Dame, on the Buctouche and Moncton Railway, a car of their freestone to R.F. Rutherford at East Cambridge, Mass. This is their first shipment of stone to the United States, but they have appointed an agent in Boston and expect to make further shipments soon."

Moncton Daily Times - Jun. 2, 1890 Building Stone. - The subscriber is prepared to furnish free stone delivered at once at Moncton or Buctouche in sizes and quantities wanted for building or monumental work. This stone is of fine quality and free from defects of all kinds and of a very uniform alinic colour. Samples sent and prices quoted on application. Address Edgar Stevens June 21 Moncton, N.B."

Chignecto Post - Jun. 5, 1890 Stone shipments.- The stone shipments from Sackville this summer are expected to be very heavy. About 25,000 tons will be shipped by the New York Freestone Co. (also they dredged the river)"

Moncton Daily Transcript - Jun. 6, 1890 Westmorland Co.- The New York Freestone Co. intend to ship about 25000 tons of stone this summer."

S.J. Evening Gazette - Jun. 6, 1890 The stone shipments from Sackville this summer are expected to be very heavy. About 25,000 tons will be shipped by the New York Freestone Co."

Moncton Daily Times - Jun. 9, 1890 Stone Shipments. - The stone shipments from Sackville this summer are expected to be very heavy. About 2500 tons will be shipped by the New York Freestone Co."

Chignecto Post - Jun. 19, 1890 and S.J. Evening Gazette - Jun. 21, 1890 and Daily Times - Jun. 20, 1890 A quarry has been opened up by S.L. Chapman onhis property on the Petitcodiac River. About ten men are at work and a large quantity of stone is being shipped to Moncton for building purposes. The quarry is of olive freestone and of splendid texture."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
S.J. Daily Sun - Mar. 7, 1890 It is said there is a probability of the Mary's Point stone quarries being opened this summer on a larger scale than usual, to supply an extensive contract in New York. -[Albert Maple Leaf"

Chignecto Post - Mar. 20, 1890 Mr. Chandler, has been at Scotch Settlement, Westmorland Co., with a view of opening a quarry on the river Shediac. The prospects were favorably reported of, and when spring opens, no doubt the stone trade over the B. & M. Railway will be booming as hundreds of tons will be employed to 100 or more men."

Daily Telegraph - May 12, 1890 Mr. A.T. Parsons, manager of the New York Freestone Co., returned to Sackville from New York, on Tuesday. Mr. Parsons says he has contracted for all thestone he can get out this season. He intends working the quarry to its utmost capacity. The schr. Iona sailed from Sackville, on Wednesday, for Boston, with stone from the quarry of J.R. Read & Co."

S.J. Daily Sun - May 14, 1890 A.T. Parsons, manager of the New York Freestone Co., returned from New York to Sackville last week. Mr. Parsons says he has contracted for all the stone he can get out this season. He intends working the quarry to its utmost capacity."

Daily Telegraph - May 17, 1890 Albert Co. - Alex Rogers is again opening his Island quarries. His crew commenced operations this week."

Moncton Daily Transcript - May 26, 1890 Quantities of building stone are being shipped to St. John from the Cocagne quarries, on the B&M Railway."

Chignecto Post - May 29, 1890 Schooner Laura, loaded with stone from Dobson's Quarries, Rockland, was wrecked near the head of the Bay, last week."

Moncton Daily Times - Nov. 14, 1890 Stone. - 110 cars of stone were forwarded to Elliot & Neiland, Toronto, from Sackville during the past season, representing 1500 tons."

Moncton Daily Times - Nov. 21, 1890 Stone for Ontario. - Eight cars of stone were shipped to Toronto during the past week. This finishes the New York Co.'s operations for the season."

Moncton Daily Times - Nov. 27, 1890 ADVERTISEMENT:Stone suitable for cellar wall, underpinning houses or for monumental purposes, supplied at short notice and at very low prices. Apply to Edgar Stevens, No. 31 Botsford Street,

Chignecto Post - Sep. 4, 1890 Stone shipments.- The New York Freestone Quarrying Co. shipped ten cars to Toronto last week."

Moncton Daily Transcript - Sep. 5, 1890 A block of stone, upwards of seven feet in length, five in width and nearly two feet in thickness, was brought by rail today from the Stevens quarry at Cocagne River. It is to be used for the Bank of Montreal vault in the new YMCA building."

Moncton Daily Times - Sep. 6, 1890 and Chignecto Post - Sep. 11, 1890 A Big Stone. - A block of stone, upwards of seven feet in length, five in width and nearly two feet in thickness, was brought by rail yesterday from the Stevens quarry at Cocagne river. It is to be used for the Bank of Montreal vault in the new YMCA building."

Chignecto Post - Sep. 11, 1890 I.T. Stevens is working 20 men at his quarry at Notre Dame on the Moncton and Buctouche Railway. He ships stone to Halifax and Montreal. The stone is of a very superior class and is a favorite in the market."

Chignecto Post - Sep. 11, 1890 Stone.- Three cars of stone were shipped thisweek by the New York Freestone Quarrying Co. to Toronto. During August 25 cars were shipped."

Moncton Daily Times - Sep. 19, 1890 Seven cars of stone were shipped from Sackville to Toronto last week."

Moncton Daily Times - Aug. 7, 1891 Sackville. - Yesterday Martin Bourque, a workman in Clark's quarry, Wood Point, was struck with a stone and badly injured. His leg is broken in several places. Dr. Trueman and Calkin dressed his injuries."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Evening Gazette - Jul. 18, 1891 Hurt in a Quarry. - Wm. Armstrong was quite seriously injured at Glen Cove quarry yesterday by being struck in the back by a rock blasted from a ledge."

Daily Times - Jul. 18, 1891 Some Heavy Blocks of Stone. - A car load of heavy blocks of olive colored freestone of very superior quality is at the siding of the Buctouche and Moncton railway for the American market and is the first shipment this season from the Kent quarries. This quarry was opened and operated last season by Mr. Edgar S. Stevens of Moncton, and the quantity of stone is said to be unlimited, blocks averaging from one to ten tons. With a railway into the quarry, and excellent facilities for shipment at Buctouche and also Moncton, this quarry should become a very important

S.J. Daily Sun - Jul. 20, 1891 Some Heavy Blocks of Stone. - A car load of heavy blocks of olive-colored freestone of very superior quality is at the siding of the Buctouche and Moncton railway for the American market, and is the first shipment this season from the Kent quarries. This quarry was opened and operated last season by Edgar S. Stevens of Moncton, and the quantity of stone is said to be unlimited, blocks averaging from one to ten tons. With a railway into the quarry, and excellent facilities for shipment at Buctouche and also at Moncton, this quarry should become a very important and profitable industry. - [Moncton Times."

Moncton Daily Transcript - May 12, 1891 Stone Quarrying and Brick Making.- DORCHESTER, May 12 - [Special] - A number of Nova Scotia brick-makers who came here to work at the Budro brick yard, struck at some greivance recently and left for home. The brick works will soon be put in operation. Capt. O'Neil is placing the plant as rapidly as possible. The engine and boiler the shot and work will commence about the 1st of June, when it is intended to turn out 40,000 bricks per day. Mr. Miller of Shubenacadie will superintend the operations. A syndicate of Boston capitalists are negotiating for the purchase of the Chatham stone quarry at Budro. Should they do so the work will commence on or about the first of June. Messrs Duesnap and Furlong, of the Dorchester Union Freestone Co. of New York have been visiting their quarries at Budro with a view to extending operations."

Moncton Daily Transcript - May 16, 1891 A consignment of Burpee & Co.'s granite shipped from St. John to Boston, has been seized for alleged undervaluation."

Moncton Daily Times - May 29, 1891 Sackville. - The New York Freestone Quarrying Co., shipped 11 cars of stone to Toronto this week, the first shipment of the season."

Moncton Daily Times - Nov. 6, 1891The Stone Industry. - After a very successful season the New York Freestone Quarrying Co. has closed its heavy shipments. During the season the company shipped 2,500 tons of scabbled stone to Toronto for the new Departmental Buildings, and a large quantity to Buffalo. Sixty five men were employed, and 4 engines and 2 steam drills were used in the works. A great deal of expense has been incurred in getting the stone ready for quarrying and there is now fully 30,000 tons of fine stone in sight, one layer of which is 20 feet thick. - Next year a steam channeler will be used to quarry the larger blocks into suitable sizes. The price realized is in the vicinity of $14.00 per ton. The Atlantic Brown Stone Co. closed their operations on Saturday last after a good season's work. During the summer about 6,000 tons were quarried, 5,500 tons of which was supplied to the ship railway, and the balance to parties in Philadelphia, New Haven and ports in the States. Forty men were employed and 5 scows were used to take the stone

S.J. Daily Sun - Oct. 7, 1891 Harvey. - ... In addition to the agricultural resources of this county, its varied and extensive deposits of mineral and stone have always been regarded of great commercial value if once thoroughly developed. Alexander Rogers, ex-M.P., has had a long and not unsuccessful experience in the exportation of cut stone, in which business he has persevered even when market depressions and McKinleyism have reduced the profits to a minimum. He is at present operating on Grindstone Island, off Mary's Point, and last week shipped a cargo by the H.R. Emmerson to Boston of a large and fine quality of grey stone. The smaller stone is sold in St. John, but as the St. John builder is unwilling to pay more for a large stone than a small one, it is found more profitable to send the former to Boston where it brings about ten dollars per ton, at a tax of one dollar and fifty-four cents duty. Last week several prospectors were looking at the Mary's Point quarry in the interest of American parties. This quarry has a fine grade of stone but owing to the deposit being largely below the tide level is more expensive to work than one of higher elevation. The owners of this property, of which A. Everett of St. John is one, have an exalted opinion of its value, which, to use the comparison of Mr. Rogers, is about equal to that of a good farm. A stone quarry will about pay for the labor it employs, giving very little for capital invested. It is to be hoped that the prospecting parties may see their way to opening up this once flourishing industry."

Moncton Daily Transcript - Sep. 22, 1891 A very large quantity of stone from Wood Point has gone through Moncton on cars this summer to Chicago, Toronto and Montreal."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Sep. 24, 1891 It is rumored that an American company are endeavoring to make arrangements with the claimants against the Mary's Point property in order to get control of the valuable stone quarries thereon. This superior quality of building stone has been in great demand in Boston, New York, Baltimore and other cities in the United States. These quarries being almost inexhaustible, there is every reason to believe they will are long be worked again on an extensive scale.- Maple Leaf"

Moncton Daily Times - Apr. 9, 1892 To Work the Quarry. - Mr. Philip Bourque is arranging to place his new quarry at Cocagne under the management of a joint stock company. A number of gentlemen interested go out over the B. & M. railway today to look over the property. It is said that a large part of the stock has been taken."

S.J. Globe - Apr. 9, 1892 A joint stock company with a capital of ten thousand dollars has been formed to work the Bourque shore quarry at Cocagne, twelve miles from Moncton."

Daily Telegraph - Apr. 11, 1892 To work The Quarry. - Mr. Philip Bourque is arranging to place his new quarry at Cocagne under the management of a joint stock company. A number of gentlemen interested go out over the B. & M. railway today to look over the property. It is said that a large part of the stock has been taken. - [Moncton Times."

Daily Times - Apr. 13, 1892 A Trip to Bourque's Stone Quarries. - A party of twelve or fifteen Monctonians interested in the stone quarries of Mr. Philip Bourque on the B. & M. Railway, left by special train yesterday about noon to inspect the property. The Bourque quarries are located on a stream a short distance this side of Notre Dame station and within thirty or forty rods of the track. They have been worked quite extensively during the past two seasons and though seen at a disadvantage just now owing to the operations of the winter's frost, the outcrop of stone and the favorable opportunity for working were favorably commented upon by the practical men in the party. The stone is pronounced to be of a very superior quality and much of it is said to be excellent for grindstones. Wherever introduced it sells as readily for building purposes and brings as high a price as Wallace stone. Mr. Bourque has, however, been working at a disadvantage for want of capital and is putting the property in the hands of a joint stock company with a capital of $10,000. Messrs. R.A. Borden, M. Lodge and others are interested and the greater part of the stock has already been subscribed. The memorandum of association will it is expected shortly be forwarded to Fredericton, when the work will be vigorously prosecuted. After inspecting the Bourque quarry, some of the party went on to the Stevens quarry, a half mile or so farther on. There the stone is very similar in quality to that at Bourque's and the indications are that in this section of Kent county there is a bed of stone which if properly developed will be of great advantage."

Moncton Daily Transcript - Apr. 13, 1892 Bourque's Stone Quarries. - A Trip Made Yesterday by a Number of Moncton Men. - A special train of the B. & M. Railway yesterday morning took a party of Moncton capitalists to Cocaigne to visit the Bourque quarries, which it is intended to open up and work extensively. With the party were several men who have had a large experience in working stone quarries, and a thorough inspection of the locality, with its advantages and disadvantages, was made. The quarries are on the Cocaigne River, about six miles from the Gulf of St. Lawrence, three quarters of a mile southward from the river and about 1500 feet away from the main track of the B. & M. Railway. There are in all three quarries and the stone lies on each side of the Crawford Brook, which will act as a drain. The stone is apparently present in inexhaustible quantities and there is no limit to the number of men who can be put to work to advantage. In quality the stone is said to be superior. It is of a very fine close texture of a uniform bright olive color entirely free from flaws or iron specks, is easily wrought when newly quarried, but hardens quickly upon exposure. The small courses, it is stated, are exceptionally well adapted for grindstones, being of very fine light colored hard grit. A large number have been manufactured and the demand is increasing. Shipping facilities are excellent and in fact everything is in favor of making the quarries a hive of industry. Considerable quantities of stone have been already quarried and in this city has been used in places, in the construction of the Victoria School house, St. Bernard's church, the Wesley Memorial church and in a number of houses in St. John and Boston. The quarries have been put into the hands of a company of which Messrs. R.A. Borden, Matthew Lodge and several other citizens are connected. The work will be pushed rapidly."

Richibucto Review - Apr. 14, 1892 Mr. Philip Bourque is arranging to place his new quarry at Cocagne under the management of a joint stock company. A number of gentlemen interested go out over the B & M railway to look over the property. It is said that a large part of the stock has been taken.- Times"

S.J. Daily Sun - Apr. 21, 1892 and Moncton Daily Times - Apr. 22, 1892 Hopewell Hill, April 19. - Alexander Rogers is transporting supplies, etc., to Grindstone island, preparatory to re-opening his stone quarry there. He expects to get to work this week."

Moncton Daily Times - Apr. 22, 1892 Albert Co. - Alexander Rogers is transportingsupplies, etc., to Grindstone Island, preparatory to re- opening his stone quarry there. He expects to get to work this week."

Moncton Daily Times - Apr. 29, 1892 and S.J. Daily Sun - Apr. 29, 1892 Moncton Freestone Company. - Application has been made by Messrs. T.B. LeBlanc, Thomas Fitzsimmons, R.A. Borden, Matthew Lodge, P.D. Bourque, all of Moncton, for incorporation as The Moncton Freestone Company, with a capital stock of $10,000 in $100 shares."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Moncton Daily Transcript - Apr. 29, 1892 N.Y. Freestone Co. - Work was commenced in this company's quarry, Wood Point, early in April. About fifty men are at work. A new machine for channelling out the stone has been set up this spring, which will greatly increase the output. Fully 200 tons will be scabbed by the end of April."

Daily Times - Dec. 2, 1892 and Richibucto Review - Dec. 8, 1892 The Kent Stone Quarries. - Mr. John L. Stevens is arranging to form a strong company with a view of working the Kent freestone quarries on an extensive scale next season. A stock list is now being prepared and a large quantity of stock is being guaranteed. This is the most extensive Olive colored stone quarry in the maritime provinces and produces the finest and most perfect building stone, being entirely free from iron or other defects and perfectly uniform in shade. A branch from the B. and M. Railway runs into the quarry which is situated at Notre Dame, Kent Co., 17 miles from Moncton Railway station, where connection are made with the I.C.R. system by which orders, large or small, can be sent to any of the inland towns of the dominion - besides the great advantage of shipping from Moncton and Buctouche wharves to any point by schooners. The very depressed state of the building trade in the U.S. this season, the present depression at home and the want of capital, caused the operations to be stopped early in the season and induced those interested to form a company with sufficient capital to tide over a crisis of this kind when it again occurs. Mr. Stevens aims to pay all liabilities in full and let the company start with a clean sheet. - Times."

Chignecto Post Dec. 22, 1892 To analyze the stone.- Mr. F. Bain, geologist of North River, P.E.I., has been in town for the past two weeks. He is here at the instance of the city of Toronto, to make analyses of the stone of the New York Freestone quarry and to ascertain its properties as building material. He is working in the chemical laboratory of the Mt. Allison college. The new city buildings at Toronto are being built of this stone and the city is anxious to ascertain its

Daily Times - Dec. 28, 1892 N.B. Stone Condemned. - The Brown Stone Used in the Construction of the Toronto Court House not Durable. so It Is Alleged. - (Toronto World) - The brown stone from the New Brunswick quarries which is being used in the construction of the Court House is composed of material which will not stand the weather, being of a most inferior quality and not to be compared to the Credit Valley product. This was the statement made to a World reporter by C.H.C. Wright of the School of Science yesterday, and in support of this utterance he took the reporter to the laboratory, and, showing him the samples of rock which he had brought from the quarries himself, demonstrated the worthlessness of the article. There are three different strata of the stone being excavated, but a comparison failed to make any difference in the quality apparent. A little water poured on the stone can readily be worked up into mud with the finger, showing that there is a preponderance of clay in the composition of the stone, which will wash out easily, thus staining any lighter stone which may be beneath, as well as spoiling the appearance of its own finished surface. Mr. Wright, when in Sackville, N.B., saw and examined stones in buildings composed of this brown stone, which on being rubbed with the bare hand crumbled away in sand in a manner truly astonishing. Mr. Wright further stated that as a result of his analytical examination of the formation of the stone in question he was in a position to state authoritatively that the portion of a building composed of this New Brunswick brown stone would have necessarily to be repaired every year and that at the end of 25 years the poor quality of the article would become so glaringly apparent as to render the whole building an eyesore on account of the crumbling condition and general collapse of the corner stones and sills."

Moncton Daily Transcript - Jan. 16, 1892 DORCHESTER PARISH - List of Municipal Officers for the Year 1892 ..... Grindstone Surveyors - Alexandre Boudreau, Maximilian Gaudet, Felicien S. LeBlanc, Antoine Bourque......"

Moncton Transcript - Jul. 4, 1892 Shipping Stone to Ontario. - The New York Freestone Manufacturing Co. at Wood Point are carrying on an extensive work this summer giving employment to about sixty men. They have one large contract with parties in Ontario for seven thousand tons to be delivered at the rate of one thousand tons a month. It pays the company about as well to ship to Ontario paying the extra cost of transportation over shipping to the States where the lesser freight changes are made about equal by the one dollar and fifty cents duty. The company have made extensive improvements at the quarries this summer for expediting the work while the supply of stone seems to be almost inexhaustible and a

Moncton Daily Times - Jun. 14, 1892 Free Stone Shipments. - Messrs. E.S. Stevens & Co. are erecting a derrick on Harris wharf to be used for shipping free stone by vessel to the Boston market. Harbor master Cook says the derrick will be ready for use by the middle of next week when the shipments of stone will be begun. The price of free stone in the Boston market is said to have risen."

Evening Gazette - Jun. 18, 1892 Shipping. - Charters reported the past two days include, schr. Pefetta, from Stonehaven, N.B. to New Haven, grindstones."

Chignecto Post Jun. 23, 1892 The N.Y. Company's Quarry started work on Tuesday."

S.J. Daily Sun - Mar. 23, 1892 Stonehaven. - During the past week two carloads of grindstones have been shipped away from our little station. It is to be hoped, and we think quite probable, that the quarries will be worked as usual this summer, as there are a number of men almost dependent on this work for a living."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - May 4, 1892 Hopewell Hill. - Ten Frenchmen from Westmorland Co. came last week to work at the freestone quarry on Grindstone Island. Mr. Rogers has now fifteen men at work, including a blacksmith. They are clearing off at present, preparatory to penetrating further into the face of the cliff."

Evening Gazette - Nov. 11, 1892 The Gazette also announces that Messrs. Thomas Fitzsimmons, Phillip D. Bourque, Messrs. Robert A. Borden, Charles H. Thomas, and other persons in Westmorland are incorporated as the Moncton Freestone Company, Limited, with a capital of $8,000 in $100 shares."

S.J. Daily Sun - Nov. 11, 1892 Sackville. - The New York Quarry Company Assigns.- (Special to the Sun). - Sackville, N.B., Nov. 10. - The New York free stone quarry company, who have for the last three years been carrying on extensive quarrying operations in this place, have assigned to W.C. Milner of Sackville."

Evening Gazette - Nov. 11, 1892 Royal Gazette Notices:- .... The Gazette also announces that Messrs. Thomas Fitzsimmons, Philip D. Bourque, Messrs. Robert A. Borden, Charles H. Thomas, and other persons in Westmorland are incorporated as the Moncton Freestone Company Limited, with a capital of $8,000 in $100 shares."

S.J. Daily Sun - Oct. 1, 1892 Hopewell Hill, Sept. 29. - Mr. Foxwell, contractor, of St. John, who has the job on the custom house, visited this place yesterday in the interests of the corporation of one of the larger Ontario cities, who wish to procure a large quantity of brown freestone for building purposes. Mr. Foxwell inspected the different varieties of brown and red stone obtainable in this locality. The old Snow quarry and a site at Mountville, near here, both furnish samples of excellent stone, with evidenced that it can be procured in unlimited quantities. Mr. Foxwell is a practical man, and says he has found exactly the kind of stone that suits him. He has taken specimens to St. John, to be finished up and sent to Ontario for approval, and in all probability a large quarry will be opened in the near future. The corporation which Mr. Foxwell represents will conduct building operations during the next two years, and will want several thousand tons of stone. A quarry to meet the requirements will employ about 150 men. Mr. Rogers' quarry of gray stone has turned out a large quantity of this variety this summer at Grindstone Island."

Moncton Daily Times - Oct. 3, 1892 Freestone Company. - Application has been made by Theophilus D. LeBlanc, contractor, Moncton; Thomas Fitzsimmons, contractor, Moncton; Matthew Lodge, manufacturers agent, Moncton; John B. Cormier, barrister at law, Moncton; John B. Cormier, clerk, Moncton; Denis A. Bourgeois, merchant, Fox Creek; Charles H. Thomas, gentleman, Moncton; and John Kervin, farmer, Moncton, for incorporation as the Moncton Freestone Company, with a capital of $8,000 in $100 shares."

S.J. Daily Sun - Oct. 7, 1892 Hopewell Hill, Oct. 4. - One of the specimens of freestone taken to St. John by Mr. Foxwell, to be finished up and forwarded to Ottawa for inspection, was found on the property of George C. Moore of Mountville."

S.J. Daily Sun - Oct. 13, 1892 Hopewell Hill, Oct. 11. - The stone quarry of Alex. Rogers' at Grindstone Island shuts down this week for the winter. In addition to what has already been reported, there are now about 500 tons finished up ready for shipment."

Chignecto Post Sep. 8, 1892 Stone for New York.- The schr' Hannah H. Carlton,O'Brien, master, will load 300 tons of freestone at the NYE Quarrying Co's works for New York, also Sch. Ada S. Allen, Dudley master, will load 200. Both vessels arrived last Friday."

S.J. Daily Sun - Sep. 9, 1892 Stone for New York. - The schooner Hannah H.Carlton, F. O'Brien, master, will load 300 tons of freestone at the N.Y.F. Quarrying Co.'s works for New York; also schooner Ada S. Allen, Dudley master, will load 200. Both vessels arrived last Friday. -[Sackville Post"

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Moncton Daily Times - Apr. 15, 1893 The Stone Business. - A New Brunswick Industry Capable of Extensive Development. - The January number of the Canadian Architect and Builder contains an article on Canadian building stones, giving description of a number of quarries in different parts of the country. One of the principal quarries in Ontario is that owned by the Owen Sound Co. which has spent $35,000 in building a branch line of railway to its quarry. This item will give some idea of the value of a stone quarry in Ontario and a comparison shows how much more favorably some Maritime Province quarries are situated. Take, for instance, the Kent freestone quarry, situated on the Moncton & Buctouche railroad. This quarry opened only a few years ago consists of about 30 acres, and is situated along the steep bank of the Cocagne river, and instead of an expenditure of $35,000 for railway sidings alone, the entire expenditure for opening the quarry, laying sidings and providing equipment for quarrying on quite an extensive scale has been less than $5000. There is a clay covering only from 8 to 10 feet. The dumping ground could not have been more convenient if specially made for the purpose. The stone crops out of the bank along the whole face of the quarry and in the river. The depth of stone to the level of water in the river where the quarry is now being worked is 60 feet, and further up the stream the quarry shows a solid body of stone 125 feet deep. This stone is fully exposed on the steep bank of the stream, and is seen to be of uniform shade and grain, containing no iron, sandholes or other defects. In fact there are millions of tons of stone in the quarry that can be got out without any of the heavy expense for pumping or draining, which are large items in the operation of the average stone quarry. The product of the quarry may be shipped in different ways, to Moncton over the B. & M. railway and thence by the Intercolonial, Grand Trunk, and C.P.R., to any part of Canada, and by water to the United States; or to Buctouche and thence by water to P.E. Island, Newfoundland or other ports accessible from the Straits of Northumberland and Gulf of St. Lawrence. This stone was used in the construction of the handsome new Y.M.C.A. building at Moncton and also the Winter's block in Moncton, two of the finest structures in the provinces. It is also to be used this year in the front of a handsome dry goods establishment to be erected in Halifax and has also been ordered by Montreal architects. Quite large shipments have already been made this spring, and the quarry will be extensively operated as soon as it can be cleared of the winter's refuse. The only drawback the owners meet is the lack of capital, and there has been some talk of forming a joint stock company to operate this, but in any case they feel that they have a most valuable property, and that when the fine quality of the stone becomes more generally known they will be able to carry on the industry much more extensively than in the past."

Moncton Daily Transcript - Apr. 17, 1893 and S.J. Daily Sun - Apr. 17, 1893 New Brunswick Brown Stone. - The Toronto World says: In the action brought by Capt. Nelson against the city of Toronto and Architect Lennox the master in chambers, on Thursday last, on the application of Lennox, made an order allowing him to issue a commission for the examination of witnesses regarded the quantity and quality of New Brunswick brown stone. It will be remembered that some time ago Capt. Nelson obtained an order for the issue of a commission for the examination of witnesses in the United States and province of New Brunswick. At that time counsel for Mr. Lennox strongly opposed the issue of the commission and appealed from the order granting it, but now that it is gone thinks it best to have evidence taken also on his own behalf. The commission will issue to the same commissioner as the former commission."

Chignecto Post - Apr. 20, 1893 Stone.- Mr. Wm. Clarke has recommenced work at his quarry, Wood Pt., and expects to be shipping stone in two months. There is no word yet of the N.Y. Freestone Quarrying Co. recommencing work. The other day the Master in Chambers at Toronto made an order allowing Architect Lennox to issue a commission to enquire into the quantity and quality of New Brunswick brown stone. This is rendered necessary in order to settle the differences between the city and the contractors for the new Court House, as the city claims that inferior stone from quarries has been put in

Moncton Transcript - Aug. 2, 1893 and Moncton Daily Times - Aug. 2, 1893 Stone Quarry Seized. - New York FreestoneQuarrying Co., Wood Point, in the Hands of the Sheriff. - The above quarry, the property of an American syndicate, known as the New York Freestone Quarrying Company, situated at Wood Point about five miles from Sackville, has been seized by the Sheriff of Westmorland County, at the instance of the creditors of the concern under the Absconding Debtor's Act. The quarry was opened many years ago and was worked by different companies on a small scale until about 1877, when the present company took charge, put expensive machinery on the grounds and proceeded to do business on a large scale. The stone from the quarry is of a dark brown tint and has been used on some very fine buildings across the border and its proximity to the bay made the matter of shipment inconsiderable. It was easily got out and with proper management the property would have proved valuable. A contract was secured for the stone for the new court house for the city of Toronto, and during the past three years much of the stone went there. Through somebody's fault inferior stone was shipped and put into the building and when it was dressed and in position in the walls it was discovered by the architect and a dead-lock ensued. Shipments of stone stopped also, and last summer the company went to the wall. The principal creditors are, Geo. E. Ford, M. Wood & Sons, J.L. Black, A.O.L. Ogden, G.W. Mitton, Rory McLeod and a large force of workers at Sackville, and the Robb Engineering Co, and Dunlap Bros. & Co., of Amherst, besides others outside. Some Americans held first mortgage on the property. City Architect E.J. Lennox, of Toronto, is now at Sackville in the endeavor to make an arrangement between the creditors and the company for resumption of work until at least sufficient stone has been secured to finish the work at Toronto. At present there is every hope that the quarry will be reopened. It is one of the best quarries in the province and is fitted up with machinery capable of handling an enormous quantity of stone. - Amherst Press."

S.J. Daily Sun - Aug. 2, 1893 Albert Co. - McDonald & Co. have nine or ten men boarding at Turtle Creek with Solomon Berry. They are engaged in quarrying stone and building the abutments for the new railway bridge over the chasm made by the burning of the bridge some months ago."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Aug. 17, 1893 N.Y.F. Quarrying Co.- A meeting of the creditors is called by the special assignee, Mr. W.C. Milner to take place at his office Sackville, on Monday next at 2 PM."

Moncton Daily Times - Aug. 25, 1893 Stone Shipments. - The Sackville Post says: The derrick which is used at the New York Freestone Quarrying Co.'s landing for lifting stone from the scow to the cars, fell last week and Monday and Tuesday of this week were spent in repairing it. Shipments now average six cars per week."

Richibucto Review - Aug. 31, 1893 A sad accident occurred at Read's quarry, Stonehaven, Gloucester Co., Tuesday afternoon. While Joseph Pinet and some other men were working with a derrick it suddenly fell, killing Pinet and injuring two other men named Amos Comeau, (foreman), and Fred Doucett, but not seriously. Pinet belongs to St. Joseph's, near Grand Anse. He leaves a widow and four small children. An inquest was held and a verdict of accidental death returned."

Moncton Daily Times - Jul. 21, 1893 Stone Shipments. - The Post says: During this month 12 cars of stone have been shipped by William Clark of Wood Point to E.J. Lennox and Co. for the City of Toronto. The stone is carefully sorted and gives good satisfaction."

Chignecto Post - Jun. 1, 1893 There is Stone in Plenty.- Mr. Biggar reports enough for twenty Court Houses in the N.B. Quarries. The Toronto Telegram of May 23 rd states: The City Solicitor has returned from his trip with the Neelon stone commission around the United States and New Brunswick and is looking much improved in health by the change of air. When asked about the result of the enquiry Mr. Biggar said: I am not the judge of stone or an expert in examining quarries, but I saw enough in Sackville, N.B., to convince me that their is plenty of New Brunswick brown stone to be had quite up to the standard of that which Lennox received and passed last year. I believe it is there in quantity sufficient for twenty court houses like ours. The question is the financial ability of the American company that controls the Wood Point quarry to get out the stone that is there. There is, besides, the Fairfield quarry and others in which precisely similar stone can apparently be had. The only question in my mind is whether this Yankee firm which owns the Wood Point quarry have financial strength to work it themselves, and whether if they have not they would play dog in the manger and prevent anybody else from getting hold of it. In attempting to develope their quarry they evidently undertook more than they had money for; or in the graphic language of the South, they bit off more than they could chew."

S.J. Daily Sun - Jun. 5, 1893 More Stone.- Schooner A.J. has arrived from up the bay with a lot of freestone for the Custom House."

S.J. Daily Sun - Mar. 27, 1893 Early history of Shepody ...Among the earliest handlers of stone were Andres, Rice and Stevens. Quarries were worked at Mary's Point and Grindstone Island. It is related that one of the early settlers purchased a clock, the first one in the country, paying for the same to the extent of œ5 in whetstones. ...."

Moncton Transcript - May 5, 1893 A new stone company known as The New Brunswick Brown Stone Co. has been formed in Sackville to work one of the valuable stone quarries in that district. The valuable stone quarries at Sackville ought to be a permanent source of wealth to the people there; but it requires watchfulness and strict inspection of the stone being sent to new markets. It is not very pleasant for residents visiting Toronto, when pointing out the adaptability of the stone produced here for employment in the large building, operations there, to be brought face to face with a controversy during which the stone already sent from Sackville has been condemned. The writer knowing that the stone had been successfully employed in building elsewhere - that it had given satisfaction, enquired into the trouble at Toronto and the probable cure. The Torontonian who directed his attention to the matter was personally interested in the success of the Sackville stone and therefore his statements were not prejudicial or unduly hostile. It appears that the stone lacked uniformity of colour - there were noticeable spots of a much lighter tone which marred the effect in dressing as exterior stones. It was also claimed that here and there, were soft spots with a crumbling tendency. These defects with the high freight rates were seized by those interested in the Ohio and other stone so generally used in Ontario to prejudice the Sackville stone in the eyes of the architects. As to the suitableness and durability of the Sackville stone there can be no question, but there may be here and there defective spots. Would it not pay the shippers to adopt a rigid system of inspection before shipment and throw out doubtful blocks. This was suggested as one of the means whereby the hostility of interested opponents of its introduction in Toronto and Ontario could be disarmed."

Moncton Daily Times - May 13, 1893 To Work. - The N.Y. Freestone Quarrying Co. will commence at once to pump out the quarry at Wood Point preparatory to beginning work."

Chignecto Post - May 18, 1893 Stone.- The first shipment of stone from Wood Point was made yesterday by the Wood Point Co. It consisted of one car to Toronto, one car to Boston and one to Elmsdale, N.S."

S.J. Daily Sun - May 30, 1893 Hopewell Hill. - Schooner A.J., Capt. Christopher, loaded stone at Boudreau's for St. John."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;
Moncton Daily Times - Sep. 13, 1893 The Stone Contract: Letter from Mr. Job McFarlane. - Moncton, N.B., Sept. 11. - Editor Times: I notice in your issue of the 9th inst. a communication from Alderman Seamans with reference to the stone curbing supplied the city by G.O. Dunham. Mr. Seamans has taken the liberty of bringing my name before the public and has made statements concerning me and my business relations with the city, which are not correct. I take this means of contradicting Mr. Seamans and placing myself in a correct light before the public. My tender this year was 35 cents per lineal foot, delivered on the street (not at the scow), and as I had already supplied the city during the last two years, with about 2500 feet of stone curbing (which had been passed by the city engineer) of the same class, as was called for this year, I thought unnecessary to send any other sample. I also mentioned to two members of the Board of works committee that in case my tender was the lowest I could bring in a sample in the morning if they thought it necessary, as it was late when I got to Moncton the afternoon I put in the tender. I would now suggest to Alderman Seamans that he compare the sample shown with Dunham's tender with the stone that was delivered and see if he got the same class of stone, or have less to say about samples. Don't you think it would have been better if you had asked the whole Board to decide the tenders instead of taking so much upon yourself. I here state that G.O. Dunham supplied stone this year from the same quarry and of the same class of stone as I supplied the city during last year and the same stone I was to deliver this year had I got the contract. The only difference is the hauling, which Mr. Seamans is going to sue the city for (and pay half the

costs himself). Does Alderman Seamans represent the City or does he represent himself and Mr. Dunham. So if the City, as Seaman's states, was imposed upon last year by not having any sample, they are imposed upon this year with the same stone with a sample. I never informed Alderman Magee anything about the hauling of the stone and like many or all of Seamans' other statements this is also untrue. He, Seamans appears to worry about a mare's nest. If I remember right the only mare's nest I have ever found in Moncton was when I became acquainted with Alderman Seamans during the summer, and learned from him in his own peculiar way (you know it was not boisterous) how he was going to keep McCready and everybody else straight this year. I never received one half cent per foot more than my tender, last year or any other year that I am aware of. If any one will take the trouble to make a correct examination they will find my tender and my account to the city correspond. We would not expect Ald. Seamans to get anything correct, as the man appears to be excited. Cool down a little, if possible, and do not make a lot of false statements about persons who have never had any business with you, and have never at any time said or done anything to injure you in the least. The reason is not as your evil mind suggests that I have had work in the city of Moncton, but because I am better prepared, and can do work cheaper, and with quarter dispatch than any other in the same line of business. I am well known to the businessmen of Moncton for the last thirty years and all your cheap talk about myself and my Frenchmen, as you call them, being no good to the trade of the town, will not assist you in your endeavours to get your friends the amount of the hauling of the stone out of the city or of the odium of stealing my tender. It has the appearance of boodle, Ald. Seamans, let yourself down easy with the electors, as your hands are not clean keep them out of sight. Thanking you, Mr. Editor, for taking so much of your valuable space over a matter of so little importance as Ald. Seamans. Yours truly. Job

Chignecto Post - Sep. 28, 1893 N.Y.F. Quarrying Co.- A representative of the creditors, Mr. W.C. Milner, met the company in New York last week and entered into an arrangement for the creditors to operate the quarry till Aug. 1st next year in their own interest. After certain details are completed the creditors will go into possession and work the Quarry."

Moncton Transcript - Apr. 18, 1894 Mr. Thomas Dobson, manager of the Quaco quarries, passed through Moncton last night on his way to Montreal and Toronto to secure contracts of building stone."

Moncton Transcript - Apr. 23, 1894 Cumberland Stone Quarries. - Mr. W.W. Black has purchased a large block of stock of the Amherst Red Stone Quarrying Co. and will assume the active management of that business. The stone from this quarry stands high in popular favor among builders and its quality and durability have proved eminently satisfactory. The company are in correspondence with Mr. L. Melanson, of Memramcook, to work as foreman of the quarry. Mr. Melanson was for some years foreman of the Woodpoint quarries, and has a wide knowledge of the stone business. Mr. C. Dobson, of the Wallace Quarries has begun operations at that point. Mr. Dobson reports the local demand for stone strong and his company has closed some good contracts on the Island; shipment to be made by water. - Post"

Moncton Transcript - Feb. 1, 1894 Dorchester Parish -Grindstone Surveyors - Alexander Boudreau, Maximen J. Gaudet, Felicien S. LeBlanc, Antoine T. Bourque."

S.J. Daily Sun - Feb. 10, 1894 Dorchester. - H.J. McGrath Secures the Lease of Valuable Property Containing Fine Building Stone. - (Special to the Sun). - Dorchester, Feb. 9. - The belief that the United States government may, during this session, take off or reduce the duty on building stone has caused quite a stir among our quarrymen here. H.J. McGrath of this place has secured the lease of a very valuable area of two hundred acres just across the river from this place. The property joins both the old Caledonia Quarry and that of the Dorchester Union Freestone Co. of New York, and it is said by experts and old quarrymen who have worked in both of the above quarries to contain the finest deposits of Dorchester olive building stone to be found in that vicinity. The facilities for shipping both by water and rail are good. It is hoped Mr. McGrath will have good success in his new enterprise."

Moncton Transcript - Jan. 17, 1894 Shediac parish. -Surveyors of stone - Josue Leger, N.D. LeBlanc Inspectors of coal - Chas. Harper, A.S. Poirier"

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Chignecto Post - Mar. 8, 1894 Woodpoint Quarries.- Fifty men are wanted at onceto clear the bank at Woodpoint quarries and make ready for shipments of stone which will begin about the middle of April. The late decision of Judge Rose has removed the difficulties in the case and the work will go on briskly. Neelon & Co. were given an opportunity to show that the stone used by the architect is not better than that which he condemned but failed to do so, and His Honor decided against them. This is all the evidence that was admitted by Justice Rose, the chemist's analyses being thrown out."

Chignecto Post - May 10, 1894 Westcock Quarries.- The numerous and expensive buildings which are being run up in Sackville this summer have caused quite a boom in the quarrying business. Two new quarries have been opened up at Westcock this spring. From both as yet surface stone only has been removed by both give evidence that fine quality stone will be found at a greater depth. In one owned by Roderick McLeod and situated near the aboideau is found stone of a brown color and in the other which is situated on the lands of Messrs. Sandford and William Barnes three quarters of a mile nearer Wood Point, the stone is of a lighter color."

Weekly Transcript - Nov. 5, 1894 The Memel red freestone quarries managed by B.K. Snow, have turned out about 2,000 tons for shipment this season. Work in the quarries has been shut down for the winter, but two gangs of men will probably work till spring, clearing off at both quarries. The intention is to put about 150 men at work next season and build a tramway to a new spile wharf at the Hill landing. This stone has been proved to be the finest in the provinces and is likely to prove highly remunerative to the county and the New Brunswick Freestone Company."

Chignecto Post - Nov. 15, 1894 The last shipments of stone from Wood Point Quarry for the season are now being made."

Moncton Daily Times - Apr. 22, 1895 Wm. A. Hood & Son, of Montreal, contractors, have leased the N.Y. Freestone Q. Co. quarry at Wood Point, in this county for one year with option of longer lease or purchase at the end of that time. They have about finished fixing up the machinery and will start work in a few days. William Clark and ? Read will operate the old Read quarry and expect to have as large an output as last year."

Moncton Daily Times - Apr. 24, 1895 The Kent Freestone Quarries. - Work has commenced this week at the Kent freestone quarries, on the line of the Moncton and Buctouche railway. These quarries have been leased for a term of years from E.S. Stevens by G.P. Sherwood & Co., of New York, who are also the owners of the Wallace and Budro quarries. The Kent quarries, which have an inexhaustible supply of superior stone, and are easily worked, will be managed by Mr. Thos. C. Dobson a gentleman of long experience, and it is the intention to push the business energetically. Some provincial orders have already been received and shipments to New York are contemplated as the season advances. Steam power will be applied to the derricks and other improvements made about the quarries so as to ensure the economical working of a large output. It is likely that the principal shipments by water will be made from Moncton. Mr. Dobson will reside in Moncton."

Moncton Daily Times - Aug. 30, 1895 Sackville Shipments. - Nine carloads of stone have been shipped from the I.C.R. station to Toronto."

Gazette - Dec. 6, 1895 Another Company. - Messrs. James Frier and Foster Pickard, of Shediac, B.B. Teed and W.C. Milner, of Sackville, and Napoleon LeBlanc, of Botsford, are applying for incorporation as the Northumberland Stone Company, with a capital stock of $10,000 in $10 shares, the office to be at Shediac."

Moncton Transcript - Dec. 13, 1895 The Northumberland Stone Co. - The Miramichi Advance relative to the application of several Westmorland Co. gentlemen for incorporation as The Northumberland Stone Co. says: Why Northumberland Stone company? The best building stone (sandstone) in Canada - if not in America - is that of the Fish quarries at French Fort Cove. It is known as Northumberland stone. We hope the Westmorland gentlemen who are applying for incorporation do not intend to pass off any of the sandstones of that county as the Northumberland article."

Gazette - Dec. 18, 1895 A company which is to be called the Northumberland Stone Company, has been organized for the purpose of buying, selling, and working stone quarries. The officer of the company is to be in Shediac. The names of the incorporators are Messrs. James Fryor, Bedford B. Teed, W.C. Milner, Napoleon LeBlanc, and Foster Pickard of Westmorland county."

S.J. Daily Sun - Mar. 12, 1895 The stone quarries situated a few miles from Sackville, N.B. will open in a few days. A large order for stone has been received from Toronto."

Moncton Daily Times - May 8, 1895 Rockport. - Several stone cutters left last week to work in Wood Point quarries."

Chignecto Post - Nov. 7, 1895 Stone Trade.- The season's work in the Clark Quarry closed on Saturday. The shipments were about 2,500 tons all by rail. Mr. Hood, the lessee of the N.Y.F. Quarrying Co. will ship a cargo of stone to New York, which will close his work for the season. The Wood Point stone continues to hold its own in the market as a fancy building

Moncton Transcript - Oct. 31, 1895 Boiler Explosion at Wood Point, N.B. - About noon Saturday after lighting the fire in the small boiler used to hoist stone off the scows at Wood Point at the wharf, the boiler exploded with a loud report, tearing out the end of the small building in which the boiler was located and the crown sheet was completely torn off leaving the upper ends of the tubes exposed. Three men in the buildings at the time, one by the name of Smith of Wood Point was scalded quite badly around the face and hands. Mr. MacKinnon was also badly scalded. A piece of pipe was blown about 100 feet in the air, and the hot water flew in all directions. If the boiler had bursted at the bottom, instead of at the top, no doubt serious and fatal results would have occurred. This will cause quite a loss to the company, as they will be unable to make shipments at present. Westmorland Free Press."

Chignecto Post - Oct. 31, 1895 An explosion occurred at the Hoisting Engine ofthe N.Y.F. Quarrying Co, at the Landing on Saturday 26th inst. A scow of stone had arrived from Clark's Quarry and steam was being raised to hoist it in cars, when the boiler exploded, blowing out the top of the building and starting the top plate of the boiler. In the building were Edward Smith and Watson McKinnon of Wood Point, who were both scalded, the former quite seriously. The cause of the explosion was defective tubes."

Moncton Daily Times - Sep. 14, 1895 Sackville. - Eight carloads of stone were shipped to the States this week."

Gazette - Aug. 8, 1896 Big Stone. - At French Fort Quarry last Saturday there was successfully quarried the largest stone ever taken out in a quarry in this province. The stone is 9 ft. 6 in. in width and 4 ft. in the rise and contains about 1820 cub. feet. The stone got from this quarry is known as the Olive stone and cannot be procured anywhere else in the Dominion. Mr. Charles Fish, the proprietor, is doing a large business this summer. Mr. William Sutherland is foreman at the works. - Northumberland News."

S.J. Daily Sun - Jan. 10, 1896 Some New Companies. - James Frier, Foster Pickard, Wm. A. Russell and Wm. B. Deacon, Shediac; Bedford B. Teed, Wm. C. Milner and Geo. B. Teed, Sackville, and Napoleon S. LeBlanc, Cape Bauld, are seeking incorporation for the purpose of quarrying, buying, selling, exporting and dealing in stone and bridge stone, and conducting a general stone and quarrying business. The name of the company is the Northumberland Stone Co., Ltd., with a total capital stock of $10,000, divided into one thousand shares of $10 each."

Dorchester Spectator Aug. 7, 1897. Taylor Village - stone from Caledonia Quarry by contractor Kitchen ..."

S.J. Globe - Aug. 10, 1898 Dorchester News. - Mr. John Furlong, of New York, managing owner of the Boudreau stone quarry, and Mr. F. De Peyster, of Portland, Conn., were recently in Dorchester. Mr. Furlong stated that his company had onehundred thousand dollars invested in the Boudreau quarry and he hoped the market for building stone will be such that the quarry will be operated again before a great length of time. Mr. De Peyster was in search of men to work in a large quarry in Portland, Conn., but in consequence of the United States labor law he was only in a position to induce men to seek employment at the quarry in Portland, where he inferred that wages of $1.65 per day will be paid. Abour half a dozen men from this locality have gone there for employment."

S.J. Globe - Jul. 16, 1898 and N.B. Reporter - Jul. 20, 1898 Jos. B. Bourque, a young man about 20 years of age, was badly injured at Notre Dame, Kent County, Thursday, as the result of a fall of earth at the Dobson stone quarries. His injuries are very severe and there is some doubt about his recovery. The thighs of both his legs were broken in two places, his left arm badly smashed and he was otherwise injured."

Richibucto Review - Jul. 21, 1898 Crushed by a Cave In. - Joseph B. Bourque, a young man about 20 years of age was badly injured at Notre Dame Friday as the result of a fall of earth at the Dobson stone quarries. Young Bourque was working under an embankment about 10 or 12 feet high, when the ground suddenly gave way, falling on the young man, crushing him to the earth. His injuries are very severe and there is some doubt about his recovery. The thighs of both his legs were broken in two places, his left arm badly smashed and he was otherwise injured. Dr. Myers was summoned from Moncton, and assisted by Dr. A.H. Chandler, of Cocagne, attended the injured man, who was made as easy as possible."

Daily Telegraph - Jul. 25, 1898 Rockport. - On the 18th past outward .... Two Sisters, from Wood Point for New Haven. She was loaded with grindstones, the first cargo shipped this season. Today the Utility, from Lower Cove to Boston, also loaded with stone. There is quite a boom in the grindstone business here this year and stone makers say they have reason to believe that it will in the near future assume its old dimensions. Some Liberals attribute this to a change of government. Rockport N.B. Highland polishing stone quarries. - This stone is found on the property occupied by Captain A.D. Cole. There are five seams in red, brown and slate color, and differing slightly in quality. These stones after being tested by practical marble workers in Canada and the United States have been highly recommended, rivalling pumice stone, and where there are hard spots in marble proving much better. Some of these stones also make good whet and oil stones. There is also in this property a fine quality of brown building stone, but not as yet developed enough to know its value. It is said that a Canadian firm are negotiating for an interest in it. There is no doubt but this will be valuable property when fully

S.J. Daily Sun - Aug. 24, 1899 Hopewell Hill. - Alex. Rogers is shipping freestone to St. John from Grindstone Island."

Moncton Daily Times - Dec. 2, 1899 The Upper Dorchester stone quarry is running full blast, employing over forty men. Some of the stones are worth $70 each. A carload of the expensive round stones for pulp mills was sent to Dorchester Island, to be shipped by water, but as no vessel was on hand and the weather becoming very frosty, they had to be returned to the quarry building."

S.J. Daily Sun - Oct. 13, 1899 Memramcook. - The work of cutting stone for the incasement of the wooden wing of St. Joseph college has started in the Richard quarry at Dorchester. The work of incasing the building will not begin till next

Daily Sun - Apr. 13, 1901 ADVERTISEMENT: Sackville Free Stone Company, Ltd.– Notice is hereby given, that Andrew M. Bell, of the City of Halifax, in the Province of Nova Scotia, merchant; John W. Lowe of Aylesford, in the Province of Nova Scotia, lumber manufacturer; Charles Pickard of Sackville, in the county of Westmorland and Province of New Brunswick, stone merchant; Frederick P. Thompson of the city of Fredericton, in the Province of New Brunswick, manufacturer; and Patrick J. Mooney of the city of Saint John and Province of New Brunswick, contractor; intend making application to the lieutenant Governor in Council of the Province of New Brunswick for incorporation, by letters patent, under 'The New Brunswick Joint Stock Companies' Act, 1893,' and the Acts in amendment thereto. The proposed corporate name of the Company is 'The Sackville Free Stone Company, Limited.' The object for which incorporation is sought is - The doing and carrying on of a stone quarrying business, the manufacture and sale of stone, and generally to trade in stone, and manufacture and deal in all kinds of stone quarry products, to carry on a general mercantile and lumbering business, and for the purpose aforesaid to acquire, hold, alienate and convey lands. The chief place of business of the said company is to be at Sackville, in the county of Westmorland, in the Province of New Brunswick. The proposed capital stock of the Company is twenty four thousand dollars, to be divided into four hundred and eighty shares of fifty dollars each. The names, addresses and calling of each of the above named applicants is as heretofore respectively mentioned and the first three of said applicants are to be the first or Provisional Directors of the company. Dated this twenty fifth day of March, A.D., 1901. Powell, Bennett & Harrison, Solicitors for Applicants"

St. Andrews Beacon - Apr. 18, 1901 A new stone company, called the Sackville Free Stone Company, Ltd., has been organized at Sackville."

S.J. Daily Sun - Jul. 15, 1901 Sackville, July 13. - Alonzo Tower, an employee of the Sackville Freestone Company, had one of his fingers broken yesterday while handling stone."

Daily Sun - Jun. 7, 1901 The Royal Gazette this week contains the notice of application for the incorporation of the Sackville Free Stone Co. Ltd., with 34,000 capital stock in $50 shares. The applicants are: Andrew M. Bell, merchant of Halifax; John W. Lowe, lumber manufacturer of Aylesford, N.S.; Charles Pickard, stone merchant of Sackville; Hon. F.P. Thompson of Fredericton, and Patrick J, Mooney, contractor of St. John."

S.J. Daily Sun - Jun. 12, 1901 Sackville, June 11. - Shipment of Stone Becoming Quite an Industry. - H.C. Read has begun shipping stone to Cape Tormentine to be used in repairing the breakwater there. The stone is quarried at Wood Point, scowed to Sackville wharf, and is thence conveyed by rail to its destination. A fifteen ton derrick is being erected at the Intercolonial station here. This will facilitate the shipment of stone, which is becoming quite an important industry in

St. John Star - Jun. 25, 1901 Two convicts at Dorchester ran away from the stone quarry on Saturday, but several shots fired by the keeper caused them top surrender."

Richibucto Review - Oct. 3, 1901 Grand Anse, Sep. 28. - Lombard & Co., of Boston, Mass. have opened up a grindstone quarry in this settlement this summer. Messrs. Davison & Welsh, foremen, are well pleased with the quarry so far, and if the grit suits the market, they expect to do a rushing grindstone business here next summer, as there appears to be a splendid chance to get any quantity of grindstones all along the shore. They employ about 20 men at present. They shipped 5 cars of grindstones to Boston, Mass., last week."

S.J. Daily Sun - Oct. 23, 1901 Hopewell Hill, Oct. 21. - Schr. Velma A. has gone to Mary's Point for a load of stone for the Riverside culvert."

St. Andrews Beacon - Sep. 19, 1901 Arthur Kirk, a stone mason of St. Stephen, met with a serious accident last week, while working on the new bridge at Andover, caused by a large stone falling while unloading a car, crushing the ankle badly. The doctor thinks amputation may be necessary."

S.J. Daily Sun - Apr. 22, 1902 Alex. Rogers has a number of men erecting a crane at his stone quarry at Grindstone Island. A market has been secured for some stone, which will be shipped at an early date."

Kings County Record - May 23, 1902 The Sackville Freestone Company are supplying the stone for two large fire places which are being put in the palatial residence of Sir William Van Horne, at St. Andrews, N.B."

Richibucto Review - May 28, 1903 Early this week a carload of freestone from Deacon's quarry at Buctouche was transferred from the M. & B. Railway to the I.C.R., consigned to parties at St. John. It was one of the finest qualities of stone which ever passed through Moncton. - Transcript."

Richibucto Review - Oct. 29, 1903 Mr. Lachance has finished at the quarry, the last load of stone was taken to the breakwater yesterday. It will be several days before everything is completed there."

Richibucto Review - Oct. 20, 1904 On Thursday last while working in the Shediac Stone Quarry, Joseph Thompson, of Rexton had one leg so badly crushed that he was taken to Moncton for treatment and it was found necessary to amputate the leg near the knee."

North Shore Leader - Aug. 10, 1906 While working in a stone quarry at Hopewell Cape Friday for Mr. R. Spencer, Mr. Andrew Gotro, had his foot badly crushed by a stone falling upon it. The stone fell from a bank about six feet alighting on Gotro's foot. Dr. Marven, of Hillsboro, attended to the injured man, who was taken to Hillsboro. It may be found necessary to amputate the foot. Gotro is about forty years old and belongs to Pres d'en Haut."

North Shore Leader - Jul. 13, 1906 Bright Prospects For Indiantown. - The Miramichi Quarry Co. is Making It Quite A Lively Place. - On Dominion day, Mr. R. George Hood, the President and Manager of the Company, gave the employees a partial holiday, and entertained them and their friends in the evening on the beautiful picnic grounds, which is part of the company's property. After refreshments had been served, Mr. Hood availed himself of the opportunity to embue the gathering with his patriotic spirit, and filled every one with enthusiasm as he pointed out what a great heritage every son and daughter of our fair Dominion possessed and how proud we should be of our British connection. Appropriate speeches were made by Mr. John Stewart, the quarry superintendent and Mr. James Stewart, foreman, after which songs, recitations and dancing completed a most enjoyable evening. On Saturday evening the Company celebrated the opening af the railway into the quarry by again entertaining the employees in a similar manner. Speeches were made by Mr. R. George Hood, secretary-treasurer of the Co., Mr. John Stewart, Mr. Cummings and Mr. James Stewart. The speakers dwelt upon the importance of railway connection, the prospects of great development of the quarry and the advantages to Indiantown. A feature of the evening's entertainment which was greatly enjoyed was a number of Scotch figure dances by two little girls, the Misses Ella and Agnes, daughters of Mr. James Stewart."

North Shore Leader - Aug. 23, 1907 Terrible Accident at Indiantown quarry. - William Stewart, Harriman O'Brien and Joseph Czorney Killed by Falling Derrick. - Jury Censures Company. - A terrible accident occurred at 10 o'clock Friday morning at the Miramichi Quarry Co.'s quarry, (known as Hood's quarry at Indiantown, eighteen miles from Newcastle. By the collapse of the derrick three men were killed and two injured. Those killed were: Joseph Czorney, a Polander, single; William Stewart, of Indiantown, single, aged 46; Harriman O'Brien, of Indiantown, single, aged twenty-two. The injured are: William Jardine, Indiantown, married, leg broken; and Addington Stewart, Indiantown, aged 15, cut on the face from the roots of the hair down the forehead and through the nose, down to the angle of the jaw. Eight or nine stitches were required. Wm. Stewart's skull was crushed and both his legs were broken, besides other injuries. He was killed instantly. Czorney's neck was broken and his right arm, and he also met instant death. O'Brien's head and back were injured. He died about an hour after the accident, recovering consciousness half an hour before his death. Drs. Pedolin of Newcastle, Coleman of Redbank, and McManus of Blackville, were called immediately by telephone. They responded with all possible speed, but O'Brien was dead before their arrival. They attended to the injured men. Coroner Dr. Desmond held an inquest, with the following jury: Francis Hayes, foreman, Stephen Hogan, William Hetherington, Jeremiah Hallihan, Fleming Shaw, George Hayes and Henry Garrish. The evidence established the fact that the accident occurred through the 'deadman' of No. 1 guy of the derrick giving away from its hold in the earth, allowing the derrick to fall when a stone weighing between eight and ten tons was being lifted in order to be blocked so that chains could be taken from around it. The 'dead man' is a piece of timber about 10 ft. long and 10 inches in diameter, which is sunk in a trench about four feet deep at right angles to the direction of strain on the guy. The guy is fastened around this timber at about its centre, and the 'dead man' is weighted in the trench with stones, thus forming the anchorage for the guy. There are three levels in the quarry. The lower level near the brook, where the railway siding runs, the middle level, where the derrick stood, and the upper level. Above that is the earth covering of the rock. The upper level is about 60 feet above the middle level. No. 1 guy, which pulled out from its anchorage, extended to the earth above the top level, and where its 'deadman' or anchorage was imbedded was slightly on the side of the hill, so that the 'deadman' was imbedded deeper at one end than the other. To off-set this and equalize the strain the guy was fastened to the 'deadman' nearer the deeper end than the centre, and the other end was weighted heavier. The stone that was being lifted was on the middle level, directly in line with No. 1 guy, so that the strain of the lifting came almost wholly on that guy. There were four other guys running in other directions from the mast of the derrick. The stone that was being lifted had already been lifted from its natural bed and swung over to the position it then occupied, and in lowering it the strain had mostly been on the same No. 1 guy. Czorney, the Polander who was killed, was working on the upper level stripping off the earth. He was underneath the guy that pulled out. Wm. Stewart was standing beside Herbert Holt on the middle level, alongside the stone. O'Brien, Jardine and Addington Stewart were loading a car on the track level. Herbert Holt gave the engineer the signal to hoist, and in his evidence said he warned Jardine, Wm. Stewart and Caleb Garrish. When the strain came on No. 1 guy its anchorage pulled out. The guy flew towards the derrick, winding itself around Joseph Czorney, throwing him down to the middle level beside the derrick, killing him. The boom of the derrick fell towards the stone, striking the engine and damaging it and killing Wm. Stewart. The mast fell towards the track, falling across the car. Its top broke off and with the rigging attached to it struck and killed O'Brien and injured Wm. Jardine and Addington Stewart. No. 2 guy also pulled out of its anchorage, from the unequal strain after No. 1 guy came out. John Butler swore that he had seen the derrick lift as much as four tons more than the weight on it at the time of the accident. Robert G. Hood, president and general manager of the company, swore that the derrick was built for 20 tons capacity, and all guys and rigging were calculated to stand that strain. The mast was about 90 feet high. He was not present at the time of the accident, having only returned from Montreal on the afternoon of that day. Had inspected all the gear of the derrick on the previous Saturday, before going to Montreal. Robert Cummings swore he had made an examination of the anchorage that gave way, on the Tuesday previous after the last rainstorm. He detected nothing to show that the anchorage was weakening. Herbert Holt who had charge of the quarry at the time, in his evidence detailed the circumstances of the accident as above set out. He had charge of the gear of the derrick and had frequently inspected it all, including the anchorage of the guys. They were all in good shape. He believed now that the anchorage had given away because the ground had been softened by rains, so that the 'deadman' did not have a solid hold. On Aug. 7, they had lifted a heavier stone, one weighing about 12 tons but that was previous to the big storm. A number of other witnesses also gave evidence. The jury returned the following verdict: 'We, the jurors, find that the deceased men, namely, Harriman O'Brien, William Stewart and Joseph Czorney came to their death while working in the Miramichi Quarry Co.'s quarry at Indiantown, parish of Derby, county of Northumberland, by being struck with the wreckage of a falling derrick then being used in the said quarry, on 16 Aug. 1907. 'We further find the cause of the derrick falling was on account of the anchorage on No. 1 and No. 2 guy wires on the said derrick giving way, owing to the anchorage not being sufficient to hold the strain and put upon the derrick on that occasion. 'We further agree that reasonable precautions were not taken by the Superintendent of the company in putting down the 'deadmen' of the anchorage."

North Shore Leader - Jul. 10, 1908 Miramichi Quarry Co's Annual Picnic. - ... The Miramichi Quarry Co. held its annual picnic on the Company's grounds at Indiantown on Dominion Day. ..."

North Shore Leader - May 5, 1908 The following company has been incorporated:- The Read Stone Company, limited, of Stonehaven, Gloucester county with a capitalization of $150,000."

Moncton Daily Times - Apr. 6, 1910 Sackville Stone Quarries. - Sackville, N.B., April 4. - The Sackville Freestone quarry, of which Mayor Pickard is the manager and chief proprietor, will have this summer the busiest season by far it has had since it was opened. Upwards of forty men will be employed and the stone-mill will be kept running night and day. The most important contract is one for the stone to be used in the construction of a new wing of the Parliament buildings in Toronto and for repairs to the south wing."

Codes Z2 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.;

Daily Telegraph - Sep. 8, 1910 New Brunswick Stone. - In connection with the New Brunswick mineral exhibit in the agricultural hall, the Sackville Freestone Company, of Sackville (N.B.), are making an exhibit of stone samples in small blocks, and also in sawed slabs just as they come from the soda. The operations of this company are located at Sackville (N.B.). This company has now passed through the initial or development period, and find themselves leading the brown or as it is now called the red freestone industry of Canada. The fact that this stone was chosen for the extension of the parliament building, Toronto, in competition with all other Canadian and American stones, should be ample proof that the quality is of the best, and that the facilities for handling large stone quickly are equal to any in Canada. The formation of rock is in horizontal beds from 2 feet to 9 feet thick, and the quantity is uniform in 40 to 50 acres of the company's property. The stone is uniform in color and quality, possessing that depth of coloring, which only the better class of natural stones display, places it at once in the front rank as a building material especially suitable for government buildings, banks, residences and structural work where the best architectural work is desired."

Moncton Daily Times - May 28, 1924 Historical Sketches of Albert County. - … Among the earliest handlers of stone were Andres Rice and Stevens. Quarries were worked at Mary's Point, and (Grind) Stone Island. It is related that one of the early settlers purchased a clock, the first one in the country, paying for the same to the extent of œ5 in Whetstones."

Telegraph Journal - Sep. 3, 1929 Scoudouc Quarry May Supply Stone For Terminals. - Extension to Car Ferry Facilities at Borden, Cape Tormentine Proposed. - Shediac, Sept. 2 - There is a strong possibility that the quarry of Hon. Dr. E.A. Smith will be called upon to supply an immense quantity of stone for the extensions to the C.N.R. car ferry terminals at Borden and Cape Tormentine, several representatives of tendering contracting firms having been here recently to inspect the deposits along the banks of the Scoudouc. When the Borden terminal was built by Roger Smith and Son, of Toronto, thousands of carloads of stone were shipped from Shediac. Regarding the Borden and Cape Tormentine contracts, J.S. Hungerford, C.N.R. official in charge, says: 'Inasmuch as the work is of considerable magnitude and importance it has taken some time to complete our studies and prepare the necessary plans and specifications for improvements at both ports. These plans and specifications, however, have now been completed, and invitations to tender on the work were issued some time ago. The date for the receipt of the tenders will expire Sept. 3, and providing prices are satisfactory we expect to be in a position to close a contract within the next three or four weeks, after which the work may be commenced at once.' 'There has been no unnecessary delay in making a commencement and after the work is started it will be carried on with every possible expedition.'"

History of Sackville - by W.C. Milner, 1934, p. 76 A copy of the Borderer of 4th September, 1868, contains… A.J. Smith, later Sir Albert, advertises his office as the office of the Union Freestone Company, shipping building stone from Budroes.

History of Sackville - by W.C. Milner, 1934, p. 137 Cole Family. - … Squire Rufus Cole … With his brother, Martin Cole, he built a vessel, which Captain Martin sailed and Squire Rufus, confined himself to farming and making and shipping grindstones. In those days there was a good deal of trading with the New England ports. During thirty-six years, he carried on this business, he shipped about twenty thousand dollars' worth of grindstone."

History of Sackville - by W.C. Milner, 1934, p. 138 In 1826, the 'Deliverance', a 60 ton schooner was built at Hopewell on shares. It was kept carrying grindstone from Joggins. ... During these years, Amos Seaman and Joseph Read carried on extensive grindstone shipments from Minudie to United States, which was very profitable until killed by the prohibitory duties put on Colonial products by the American Congress."

Codes Z2 / A2 / J8 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Albert / Kings County Oil Shales; Albert Mines;

S. J. Daily Globe - Jul. 11, 1862 ...Not less interesting, as evidence of the natural wealth of the province, is the very complete collection of the minerals made by Mr. Payne, of Portland, St. John, by the direction of the Colonial

Government. It contains 523 specimens, arranged in five glass cases, the frames of which are made of the woods of the province. Among the specimens of coal are some from which the famous Albertine oil is distilled.- The Albert Mining Company have two shafts; one of these is 750 feet, the second has already been sunk to 350 feet, and it is proposed to be continued to the enormous depth of 1,500, or nearly one-third of a mile. The veins of this extraordinary coal run nearly perpendicular. The coal is used in the production of gas and paraffine, and it is for these purposes superior to the petroleum or American rock oil. One ton of the coal contains from 16,000 to 18,000 cubic feet of gas, or 80 gallons of refined Albert oil. Last year the Albert Company produced from their works not less than 70,000 gallons of refined oil. There are also some specimens of shale found about seven milesdistant from the Albert works, which is not quite so rich in oil, but which, nevertheless, produces nearly 60 gallons of crude oil per ton. Building and limestones, and various descriptions of earths and pigments, and clays, and gypsum are included in the collection. The report presented to the Local Government by Mr. Payne shows that the produce of the colony during the last yearwas 1,500 tons of Albert coal, 21,190 grindstones - and New Brunswick enjoys a high reputation for quality of this description of stone, - 12,430 tons of building stones, 2,300 tons of gypsum, 406 tons of manganese, 20,650 casks of lime, 4,000 tons of coal, and 606 tons of granite. We have felt considerable interest in the examination of the contents of this New Brunswick court, and an hour or two may be most profitably and agreeably passed by the visitor in inspecting the natural products and the many evidences of the arts and industry of the New Brunswickers."

Daily Telegraph - Sep. 16, 1891 Sackville, Sept. 15. - The N.Y. Freestone Quarrying Co., of Wood Point, are shipping largely by rail to Toronto, for the new City Hall and Court House, which will it is said, when completed, be one of the finest structures of the kind in the world. They pay the I.C.R. this season $15,000 for freight. A train load of this stone was examined a few days ago by the Telegraph correspondent, at Sackville Station. The specimens of stone were really splendid, not only for the rich brownish red shade, but for the evenness of color and a texture of unvarying perfection shown. Two stones designed for lintels of immense windows were no less than 16 feet long and two in width. The quarry where these came from is now considered one of the most valuable in these provinces. It is well fitted with the latest appliances for quarrying and hoisting stone, and gives employment and cash pay to a large gang of men.The existence of a coal seam at Shediac has long been known there, but no one has had the enterprise to test it. Although it is said to exist in the lower coal measures, where productive seams are not usually found, Mr. J.W.Y. Smith, who promises to become one of our most active and useful business men, intends to settle the question of its value by actual work."

Daily Morning Telegraph - Apr. 27, 1865 In another column we give an extract which we find in the Quebec Daily News respecting the discovery of petroleum in California. The Engineer, who has examined the locality carefully, and superintended the boring of test wells at much expense, reports the presence, in abundance, not only of petroleum but of ""Albertine coal"". Now ""Albertine coal"", as he calls it, has heretofore been supposed to exist only in Albert County, in this Province, and hence the characteristic name applied to it, Albertite. We had scarcely laid down the Quebec News yesterday when the Christian Visitor, damp from the press, was laid on our table; and the first portion of the contents that caught our eye was a letter from the Editor, the Revd. Mr. Bill, who is travelling in Westmorland and Albert Counties, and whose observations on local topics are always practical and frequently given in detail. In reading his letter from Moncton in yesterday's issue, we were struck with the fact, that, while an engineer was announcing the discovery of Petroleum and Albertite in the same locality on the Pacific Coast, the Press of New Brunswick proclaims a similar discovery on these Atlantic shores! We referred a week or two ago to the fact that Americans were boring for oil at Dover in Westmorland, near the Petitcodiac river; the Visitor gives fuller details of their movements and success than we were able to obtain at the time. It says:- ""Very near the River are valuable stone quarries, of different kinds, which have only to be worked thoroughly to produce immense profits. And not far distant, in all probability, Oil Works will be erected, upon a large and productive scale. Recent investigations are making the impression upon scientific minds that this whole region, extending to Hillsboro, Dover, and Memramcook, is destined to become, at no distant day, a vast oil-bearing country. An American company have already erected six derricks in Westmorland, and two in Albert; they have four steam engines on hand, but only two are yet in use. Two of the wells were bored by hand. A reliable gentleman connected with the company informs us that they intend operating extensively all summer. The oil has been forwarded to Pittsburg, Pennsylvania, where it has been thoroughly tested and pronounced very fine. Oils both light and heavy have been obtained. What is designated The Goodie well is pronounced by competent judges in Pittsburg to be decidedly and distinctly an oil-bearing rock. A friend has handed us a phial of oil from the Goodie well and it seems almost fit for use in its crude state. When we return, it can be seen in the Visitor office. ""As long ago as 1830, oil was discovered here by Dr. Jackson; subsequently Dr. Hay, Prof. Taylor, and several other eminent scientific gentlemen, have examined this district, and all agree as to the existence of oil, and say that it is not confined to any one locality, but exists in different sections. Practical men who have examined these oil formations say that the surface and other indications ""surpass"" anything they have seen in the ""Kanawha"" oil region of Western Virginia, and in West County, Virginia, where oil is being obtained in such abundance. ""If these valuable resources be opened up and rendered productive, it will have to be done largely by foreign capital. Men from the oil regions of the States have already expended here some $12,000 in gold, and are expecting to expend a much larger amount in testing the various points of interest as to their oil-bearing capabilities. We sincerely hope they will go on and prosper. ""With all these natural elements of wealth and progress, surely this ought to be one of the most progressive places in the Maritime Provinces, and it will be as soon as the necessary skill and capital are employed. Education, economy, and industry are essential to the onward march of any country. Let these be applied in sufficient measure to the mines, minerals, and other resources of Westmorland and Albert, and they will soon become the most prosperous sections of British America."" Since the above was in type we have received some additional information on this subject which we shall lay before our readers at as early a date as possible. We need only say at present that the oil prospect at Dover is

Codes Z2 / G3 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Granite;
Daily Telegraph - Apr. 17, 1871 New Granite and Sandstone Quarries. - An enormous mass of red granite, suitable for building purposes, has been discovered on the Magaguadavic village, two and a half miles from St. George. It rises to a considerable height, and extends for some distance. Large masses of it have been detached from its bed by the action of natural agencies, and the expense of quarrying is reduced to the least possible amount. It is owned by parties in this city. In Apple River, Cumberland County, N.S., a sandstone quarry is about to be opened by Messrs. Roberts Bros., of Boston, Mass. The sandstone is red, and of the very finest grade, such as is used for ornamental mouldings, trimmings, etc., and is said to exist in almost unlimited quantities in a very convenient position for shipping. Mr. Robert Dewhurst, who has had several years experience in the business in England is to superintend the operations, and is now in this city getting cranes and other machinery manufactured for working the quarry. He has contracted for framed houses for the accommodations of 100 men. These houses are to be taken to the scene of operations and erected in the form of barracks - in a continuous row. When the works are fairly open machinery and skilled workmen are to be procured from England for preparing the stone for market. The number of men to be employed in these works will be about 150, and a fine market will thus be established for the agricultural products of Salem, Advocate Harbor, and the surrounding country, which will have an influence in opening up and settling large tracts of fine farming lands, which are almost inaccessible at present on account of the absence of passable roads."

S.J. Daily Telegraph - Oct. 2, 1875 M & M Exhibition. - ...Dorchester Union Freestone Co., Westmorland County. A very fine block of freestone cut by this firm attracted much attention by the closeness of its grain. It is rather surprising that a greater display has not been made in this special article. If the quality of stone from this neighborhood is all of the same texture as the above sample, the enterprise should be a profitable one.The samples of red granite have already been

S.J. Daily Sun - Jan. 14, 1887 Mr. Stockton on Stone. - In his last letter to the St. John Globe, Mr. Stockton stated that the export of unwrought stone from New Brunswick was last year less than in 1881 or 1871. He added: The high duty on blasting materials, the duty on iron, and the fact that our coasters under protection cannot get a return cargo from the United States, have brought about the above result. Now, as a matter of fact, the returns for 1871 include dressed stone, grindstone, and unwrought stone, that is to say, stone of all sorts, and according to the trade and navigation tables for the year (sessional papers, vol. v., No.3, page 358), the total value was some $5,000 less than Mr. Stockton's figures. The total value of the same class of goods in 1881, instead of being $30,000 less than in 1871, was in reality $18,000 more than in that year. In 1885 the export of unwrought stone was, as Mr. Stockton says, only $22,551, but as he included all sorts of stone in his statement for 1871, he should do the same for last year and credit this industry with an additional $32,700. As to the price of materials used in quarrying, we have followed our usual custom and have learned the facts from a dealer in the articles in question. We find that blasting powder, which cost at wholesale in this city $2.75 to $3.00 per keg in 1878, is now sold at $2.50 to $2.75. Fuse, of which the price in 1878-79 was 90 cents per hundred feet, is now sold at 85 cents. Cheaper fuse has not changed in price. Good refined iron which was $2.25 per hundred weight is now $1.60. Firth's best cast steel, used for drills was 15 cents per pound and is now 13 1/2 cents. Steel striking hammers such as are used in the quarries were in 1878-9, 22 cents per pound and are now quoted at 15 cents. Shovels of the better class quoted at $10 to $12 per dozen in 1878-9 - are now sold for $7.50 to $9, and the cheaper grades, which cost $6.50 to $7.50 were now sold for $5.50 to $6. Picks costing $7 and $8 in 1878-9, may now be had for $5.50 to $6.50. The class of goods quoted are the same for both dates. Mr. Stockton must really pay a little more attention to the statements he makes, or the public will pay them none at all."

N.B. Courier - Jul. 31, 1852 and St. Andrews Standard - Aug. 11, 1852 Albert County. - We alluded last week to the Albert Coal Company, in which Messrs. Allison, Cairns and others are concerned, and the benefit to be derived by the Province from the exportation of such large quantities of its mineral treasures. The parties in whose possession the mines are at present, are carrying on the work with great energy, having already expended a heavy amount of capital on the undertaking, and the result of this new trade springing up will not be long in producing a great alteration on the appearance of Hillsborough and the surrounding country. We have also to notice another undertaking of great importance to the Province, situatedin the same county, viz., the Albert Building Stone Company, near Harvey. This concern is now carried on under the superintendance of Messrs. Lang and Stirling, two Scotch gentlemen who have an interest in it, with C.D. Archibald, Esq. There are now seventy-five men busily employed raising stone from this quarry, for which a ready market is found in New York and Philadelphia, the quality being very superior. During the present year it is expected 4000 tons will be exported, and next year probably 30,000 tons. Within a few miles from the stone quarry, avaluable slate quarry has been discovered, and there are now eight men employed in clearing away the surface, with a view to commence extensive operations. We have received a specimen of the slate, which we have placed in the reading room for inspection. The Gypsum mines, owned and worked by Mr. Fowler, at Hillsborough, will also prove a valuable source of export when the arrangements are completed for working them on an extensive scale. On the whole, Albert County has at present the appearance of rapidly rising into importance, possessing as it does such varied and extensive mineral resources, besides being one of the finest agricultural districts in the Province of New Brunswick."

Codes Z2 / H6 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Albert County Copper;

Daily Telegraph - Jun. 4, 1881 Albert County. - Great Preparations are being made at Mary's Point and vicinity for operating in freestone. A company has been recently organized in Boston, with a capital of $100,000 - $25,000 paid in - to prosecute the business at Mary's Point. They are putting on a steamer now, intending to run her regularly between Mary's Point and Boston and New York, for the purpose of transporting building stone. They have now 130 men employed at Mary's Point. A. Stevens & Co. are also resuming operations in shipping from the valuable quarry that was opened by them last year, and from which they have already shipped several cargoes. ... Explorations are going on in Alma in connection with deposits of copper ore of a very rich description that have been found there."

Weekly Transcript - Oct. 1, 1884 A find of copper is reported on the premises of Daniel Cleaveland, Lake road, not twenty rods from his house. An assay of a sample sent away gave 70 per cent of copper. The best day's work of the season, in the Memelred freestone quarry, was done last Saturday. Thirty men quarried 60 tons and dressed 35 tons of stone, two of them dressed 14 tons. The schooners Pearl and Magellan will soon load with red freestone at Hillsboro for Boston."

Moncton Daily Times - Sep. 5, 1884 Albert County. - A quantity of copper ore found in the Memel freestone quarry has been sent to Boston to ascertain its worth, so we are informed. ... There are few industries in the county that deserve more notice than the freestone quarry at Memel, owned by the New Brunswick Freestone Quarry Co. and managed by R.K. Snow. A representative of the Maple Leaf visited the scene of operations last Thursday to glean a few facts, which Mr. Fred Snow kindly gave. There are at present 60 men and 4 teams steadily employed quarrying, scabbling, hauling and piling. There are two large derricks, one of which was put up last week, and three cranes kept in constant use. The company has lately built a new engine house and blacksmith shop and now uses the old engine house as a store house. The continued wet weather, during the summer, seriously interfered with work, as the quarries were flooded, the dam that turned the brook being washed out, and the road leading to the highway was rendered so heavy that an outlay of about $300 was necessary before hauling over it was made at all safe. But notwithstanding the fact of the above serious drawbacks, the company is prospering and boasts of an unlimited supply of a quality of building stone that is very highly spoken of and which commands a ready market. The largest stone now piled at the quarry will weigh ten tons or more and is a beauty. The stone is hauled to the Hill Station and loaded on cars for Hillsboro, from which place it is shipped by vessels to the various markets. The quarry at the Creek holds about 1,500 tons of dressed stone for which there is no market at present and work has been suspended there."

Moncton Daily Times - Jul. 16, 1886 Hillsboro. - Shipping of rock plaster has been more active so far this season than last season. Shipment of ground plaster about the same as last year, both by water to United States and per railway to Upper and Maritime Provinces. A large quantity is sent per rail to Quebec and Ontario. Plaster mills are running very steadily. ... Charles Cochrane has his leg badly smashed at Hopewell Hill last Tuesday afternoon. While drawing a load of stone from the Memel quarry the forward wheel came off and Mr. Cochran was thrown and the wagon passed over him, with the above results. Dr. W.J. Lewis attended him. Mr. Cochran was removed to his home at Demoiselle Creek. - Maple Leaf."

Moncton Daily Transcript - Sep. 22, 1891 A large quantity of mill stones, just arrived from the north of the province, are unloading at the public wharf for shipment to Hillsboro to the plaster works there."

S.J. Daily Sun - Apr. 16, 1901 Hopewell Hill, Apr. 14. - The steamer Bratsberg, the first of the plaster fleet, arrived at Hillsboro recently to load cargo for New York Alex Rogers has sold a hundred tons of freestone at Grindstone Island."

Codes Z2 / HILL / A2 / J8 / IDX_Names: Sandstone, Building Stone, Monument Stone, etc.; Grey Brook Gypsum; Albert / Kings County Oil Shales; Albert Mines;

Morning Journal - Jul. 12, 1867 The Resources of Albert County. - ... The soil, being that of, the lower carboniferous rocks, is, of course, of the richest and most productive kind. How could it be otherwise with its marls, gypsum, limestone, and oil-bearing shales? On this point Professor Bailey, a most careful and accurate observer, says:- No other district in the Province, except where alluvial deposits prevail, will compare with that of the subcarboniferous rocks in fertility, and none, therefore offers so many facilities for settlement. ... Mining operations will lead to a large consumption of wood. The manufacture of plaster now, and of oil, sure ere long be undertaken, will consume very large quantities of wood in barrels. .Ship building ... The vessels once built may at once be laden with plaster, albertite, lumber, building or other stones and sent on their voyage. ... Of the mining and manufacturing of Albertite andplaster we have already spoken. As to the latter we needonly add that the supply of gypsum, the white cliffs of which are a marvel to behold, is practically inexhaustible. Part of them may be anhydrous, and therefore of less value than the hydrous gypsum, used for making plaster for building, but it will require ages to exhaust the supplies of the most valuable kind which invite the operations of the manufacturer. The same may be said of the freestone for building purposes. It is now being quarried in several places, and despite an adverse tariff, shipped at a profit to the United States. It is strange if it cannot also be advantageously shipped to the Provinces of Quebec and Ontario as well as the freestone of Ohio. The members of the House of Commons will have to see to these and other kindred matters by and bye, so far, at least, as fiscal arrangements are concerned. Slate, flagging fire-clay, clay and sand forbrick making, may be had in abundance. Manganese and copper have been found, but the search for them and other minerals in quantities sufficient to warrant mining operations which has been carried on at an immense expenditure, has not as yet yielded any proper return. Wemay say the same of the oil bearing shales. The Caledonia works, their grinding apparatus, rotary retorts, distilling, condensing and purifying apparatus and machinery, their steam engine, even their anvils, hammers and other tools and implements, provided at a cost of hundreds of thousands of dollars, are lying idle and wasting away by corrosion. The shales yielding from 25 to 60 gallons of oil per ton, found on the Caledonia property (partly owned by Mr. Archibald,) and at Turtle Creek, in which he has an exclusive interest, are found from a foot to ten or twelve feet thick, increasing in richness and in thickness as they descend. The quantity of shales to be found far above the level of the sea is practically inexhaustible. At Baltimore nine different beds, lying parallel to each other may be most distinctly traced. At Turtle Creek there are five or six smaller ones, the one rising above the other, and even ascending the hillsides during a portion of their course. Quantities of the shale are now being shipped to the United States from Westmorland, where the same deposits are found, and it is probable that the day is not far distant when the price of oil, owing to the failure of the springs of petroleum, and the adoption of fiscal arrangements fitted to stimulate those branches of our industry which have been prejudiced by the refusal of Reciprocity on the part of the United States, may ensure the manufacture of oil from these shales, to such an extent, as will turn Albert into one vast manufacturing hive, and require her shipping in order to meet our export requirements, which will involve corresponding imports, and give the Albert Branch Railroad - we must yet say something more special in regard to this desirable work - and also the Intercolonial railroad a handsome contribution in traffic. When this comes about we suppose Mr. Archibald, who has already several miles of excellent road in Albert, and had several houses erected, preparatory to operations in which he hopes to engage, and about which Mr. McHenry ever thinks and talks by day and dreams by night (if not by day!) the owners of Caledonia stock, and sundry other persons, will have become immensely rich; while the farmers of Albert will have such a demand for their products, and mechanics and labourers such a demand for their work, as has been hither to unknown in New Brunswick. So may it be. We think, indeed, that it is quite likely that such will be the case, and as a means to this end, we hope the press in different parts of our Dominion will not grudge to say a word about the great general resources and the boundless mineral wealth of Albert County. Provincial apathy forced the Albert Mines into the hands of non-resident proprietors, with a single exception. Is this also to be the fate of the rich cannelite of Albert, representing millions upon millions of gallons of oil, or still worse is it to be neglected altogether, merely to nourish the ""forest primeval"" or to promote the luxuriance of the crops grown by the farmers of Albert?"

S. J. Daily Globe - Oct. 6, 1862 Albert County. - The ""Review"" referring to the prospects of Albert County says:- The Albert Coal is to a great extent dependent upon the American market, and also our Plaster and Gypsum; consequently, these branches of industry have not been carried on to the same extent that they would have been had our neighbors been fortunate enough to escape their present trouble. Our Stone quarries have also met a severe check to their progress. Not withstanding all this, these branches of industry have been kept in operation, and although there was some fears a short time since of the Albert Mines suspending operations for a time, yet these doubts and fears have been removed by an increasing demand for coal. Similar fears were entertained in reference to the Plaster Works, but they are still going on with their accustomedactivity. On the whole we are better off than we expected to be under the circumstance, for quite a change has taken place in this country during the past few weeks, and many of those doubts and fears that arise in the human mind at the thought of ""hard times"", have been removed, at least for a time."

Morning Freeman - Nov. 28, 1863 The Eastern Advocate describing the state of affairs in Albert county, says:- ""But the 'lords of creation' may be mining. Letus see. We go to the Albert mines - it is a Yankee company; the Albert County people have no interest there, except to pick up the crumbs that fall from the rich concern's table - the natives supply some of the produce that is consumed there - that is all! We go to the Plaster Quarries - it, too, is Yankee; and we have the same story to tell. The Stone quarries - the new discoveries - everything - is dependent upon Yankee enterprise and capital for development, and ""own fools"" are quite content if they can but sell these 'Yankees' a few goods, and supply them a small amount of produce, and so gather from their expenditure a few shillings! ""As to Mills and Manufactories we have next to none; of those which do exist we will take note, and give due credit at another time. Of Shipbuilding we have spoken in a previous number. ""The sum of the matter is this: that next to the attractive facilities lying idle on all hands which strike the stranger's attention is the easy, independent, want-of-enterprise air, which the people to a great extent exhibit in all the more settled districts of the county. They are comfortable, frugal, moderately industrious, and they are content."""

S.J. Daily Sun - Apr. 21, 1888 and Daily Times - Apr. 26, 1888 The Albert Railway. - And How It Grew Out of The Discovery of Albertite. - Some Interesting Facts in Provincial History. - The inhabitants of more sunny climes often complain of the fog and gloom of England. The water of the Gulf stream though imparting warmth and humidity to its atmosphere does so at the expense of much of the glorious sunshine with which we are blessed. But nowhere has the hearth glowed more brightly and the gas jet more brilliantly than in the homes of Merrie England. Not many years ago the cannel coal, on which the gas companies relied for their supply, was thought to be nearly exhausted, and the gas men substituted for it an inferior article, whereupon the English people called for more and better light. A parliamentary commission instituted to enquire into the matter, unearthed the fact that all the cannel coal then known to exist would at thethen rate of consumption be exhausted in a few years. The electric light was then but a plaything of scientists. Pennsylvania had not yet tapped the oily ocean that lay far down beneath the coal measures. The Scotch cannelite shales attracted the most attention as a possible source of gas supply, but they were limited in extent, poor in illuminating power and altogether inadequate to meet the demand. The world was searching for light. About this time a curious substance was discovered in Albert County, N.B. Professor Dawson in his Acadian Geology speaks of it as follows: A deposit of a curious substance resembling bitumen was found at Weldon Brook, near Hillsboro. It is evidently coal, and is seen in masses presenting a beautiful and singular appearance. It has a splendid resinous lustre and perfect conchoidal fracture. It is perfectly free from mineral charcoal, or impure coal. Associated with it are shales containing numerous fossils and entombed fishes. Israel D. Andrews, American consul at St. John, in his report to the United States government, speaks of it as follows: In the province of New Brunswick recent explorations have brought to light a most beautiful and before unknown variety of coal, containing 60 per cent. gas-making material. This coal is the most remarkable in America, not only from its beautiful, clear, glossy, and highly bituminous character, but also on account of the abundance, beauty and perfection of its fossils. It furnishes a very rich gas, highly charged with carbon, consisting mostly of olefiant gas, etc., etc. Small pieces of it had been found in Weldon Brook, and Peter and John Duffey of Hillsboro determined to search for it. It is reported that as they were walking up the brook they came to a smooth surface, under a few inches of water, covered by a vegetable growth. As the leader stepped on it his feet slipped from under him and he sat down suddenly. On arising he found the vegetable matter clinging to his clothes, leaving a black and glossy coal revealed to his gaze. Messrs. Duffy forthwith secured the mining right. They tried the coal for forging, but it would not work. Used in a grate it would melt and the oil would run out of it. The firm of Allison & Spurr were at that time speculating in mining properties, and some samples of this Albert coal were sent to J. DeWolfe Spurr who was then in England. Mr. Spurr had the novel substance analyzed there, when to the surprise of everybody concerned it was found to yield per ton 120 gallons of oil of a high illuminating power. Messrs. Allison and Spurr immediately purchased the property and the Albert Manufacturing Co. was formed to operate it. As soon as its great value was known, of course other parties wanted a share in it. The land on which the coal was found was owned by H. Steeves. Dr. Gesner, author of A History of New Brunswick, and who was a man of extensive scientific attainments, visited Hillsboro to examine the find, and, of course, recognized the difference between it and any known variety of coal. Having secured the title to the land, he procured an injunction restraining the Albert Mining Co. from raising any more of the substance, on the alleged ground that as it was not coal, but asphaltum, the company had no right whatever in it. Litigation followed, and the most extensive and expensive lawsuit ever witnessed in Albert Co. was the result. Experts were brought in from England, Germany and the United States, but as is the case with experts of all kinds, their sworn testimony was as contradictory as that of ordinary mortals. Some of the scientists contended that it was coal; others equally learned contended it was not. Judge, jury and claimants were alike puzzled. At last an anything but learned blacksmith testified that he had forged an axle with the stuff. That settled it. The court confirmed the title of the Albert Mining Company and gave to the substance the name Albertite. It was extensively mined and much of it shipped to St. John, where Mr. Spurr had large works erected for the distillation of the oil. Another Albert Mystery. - Extensive search was made for other deposits, and some were found but none large enough to warrant working. At a place called Baltimore and Caledonia in Albert Co., a substance was found that nearly resembled albertite; but it was not lustrous, like albertite, nor was it so flammable. Albertite was readily ignited with a match, and would burn till entirely consumed, leaving but little ash. The newly discovered product would also burn with intense heat, but required to be heated to a high temperature before igniting, and by burning its bulk would not be sensibly diminished. It was as great a mystery as the albertite had been. Boulders of it were found all over the section, and had sometimes been used by the maple sugar makers in combination with wood to evaporate their sap, but its forces were too intense for ordinary fires, as it would melt the fire dogs and burn out the pots. The attention of Alexander Wright was called to this stuff, and he recognized it as cannellite, similar to but much riches in illuminating properties than the Scotch shales. A quantity was sent to the oil works in St. John and retorted, when it was found to yield 60 gallons of oil and over 7000 cubic feet of illuminating gas to the ton. Just about this time there appeared on the scene a man whose name is inseparably connected with the inception, construction and progress of the Albert Railway. That man is Thos. McHenry. He had achieved no slight reputation as a writer. He had filled the editorial chairs of the Christian Visitor, Colonial Empire and Eastern Advocate. At the date spoken of he was employed in the oil works at St. John. Mr. McHenry went to Albert County to examine the shales. He found the deposits to be very extensive. The Albert Mining Co. neglected, possibly scorned, to secure them. Albertite yielded 120 gallons to the ton, and had nothing to fear from competition with shales. A new company promoted by J.H. Harding of St. John, was organized for the purpose of working the shales. Extensive and costly works were erected in Baltimore, and over 100,000 gallons of oil were distilled and exported to the United States. But this alarmed the whaling interests there and the whale oil men induced congress to impose a duty of ten cents a gallon on the New Brunswick product. This was severe blow to the new industry, but the works were continued, though with diminished profits. About this time Charles Dickson Archibald came to Albert Co. He had lived a checkerboard life; at one time in the possession of vast wealth, at another in straightened circumstances. He was agent in St. John for an English banking house. Israel D. Andrews, American consul at the port of St. John, who had purchased Mary's Point stone quarries, had secured some accommodation from the bank that Mr. Archibald represented. Unable to meet his obligation, he transferred his property at Mary's Point to Archibald, who went to Albert Co. to look after it. There he met Mr. McHenry, who represented to him the vast mineral wealth of the county awaiting development. Mr. Archibald had already been favorably impressed with its resources and had leased several properties that gave indications of being oil-bearing. His attention was particularly called to the shales by Mr. McHenry, and together they examined the deposits. Imbued with the prevalent English idea that cannel coal would be speedily exhausted, and knowing that the Scotch shales, though only four inches thick, were worked at a profit, while the Albert shales aggregated thirty feet in thickness, Mr. Archibald, after closely scrutinizing the excavation made by Mr. McHenry, rose to his feet and exclaimed: I will sell all I possess and purchase the pearl of exceeding great price. He immediately abandoned all his other business and sailed for England, taking with him samples of the shale. He had them analysed in London, Paris and Edinburgh. The results were uniform. The light produced was pronounced the most brilliant artificial illuminator of the day, excelling that from cannel coal, albertite, or any other source. Armed with the results of these analyses, Mr. Archibald appeared before the British parliamentary committee above referred to. His statements produced a profound sensation. But two drawbacks were discovered: 1st. the shale yielded no coke, while that from cannel coal more than paid the expenses of manufacturing gas; 2nd. the shale was located at a distant, nay in an almost unknown land, remote from shipping or railroad facilities. To compensate for the first drawback, it was argued that though from having a mineral instead of a carboniferous base, this shale yielded no coke, yet it contained in that base the materials, lime, etc., required to purify the gas. Further, the supply was inexhaustible. Instead of having to raise it from the bowels of the earth at great cost, it could be cheaply tumbled down the side of a mountain. Although yielding only half as much oil as albertite, it only cost half as much to retort it. It could be mined for one dollar per ton. These and other points in its favor were urgently

Royal Gazette - May 25, 1853 CAP LIX An Act to Amend the Act to Incorporate the Shediac Grindstone Manufacturing and Mining Company. Passed 3rd May 1853. Be it enacted by the Lieutenant Governor, Legislative Council and Assembly as follows:-1. The second and eighth sections of an Act made and passed in the thirtenenth year of the Reign of Her present Majesty, intituled an Act to incorporate the Shediac Grindstone Manufacturing and Mining Company are hereby repealed. 2. The capital stock of the said Corporation shall be twenty five thousand pounds of current money of the Province of New Brunswick, and shall be divided into two thousand shares of twelve pounds ten shillings each, to be paid in at such times and in such instalments as the business of the said Company shall require, of which 5 stock already taken shall form a part; provided that unless ten per cent of the capital stock herein named,shall be paid in for the purposes of the Corporation, (of which the stock already paid in by the stockholders shall form a part,) and a certificate of such payment, and all future payments, signed and verified on oath by the said Directors, or a majority of them, (which oath any Justice of the Peace is hereby authorised to administer), shall be filed in the Office of the Secretary of the Province before the expiration of six years from the passing of the said Act to incorporate the Shediac Grindstone Manufacturing and Mining Company, the operation of the said Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said six years."

Whereas the undermentioned persons, resident in Great Britain, have associated themselves together by Deed for the purpose of working the Quarries and manufacturing and rendering merchantable the produce of certain lands of which they are the lessees, situate in the County of Albert in this Province, and it is deemed expedient as well to encourage an enterprise of public importance, as for the safety and advantage of the parties so associated, that the rights and immunities of a Corporation should be conferred upon them; 1. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, that Charles Dickson Archibald, Sir Claude Edward Scott, Mark Hunter, William Kilburn, Benjamin Kilburn, and Henry Heald, their associates, successors, and assigns, are hereby declared, erected, and ordained to be a Corporation and body politic by the name of the ""Albert Freestone Association,"" and by that name shall have perpetual succession, and a common seal, and have, hold, enjoy, and exercise all and singular other the general powers made incident to a Corporation by Act of Assembly of this Province, for the purposes of their said Association. 2. That the capital stock of the said Company hereby created shall be twenty thousand pounds sterling, and shall be divided into twenty shares of one thousand pounds each, provided that the money so to be raised shall be laid out in the prosecution and maintenance of the purposes for which the said Company is erected, and purposes properly incident thereto, and in payment of the legal and other expenses incurred in and about the incorporating and establishing the said Company, and to no other use or purpose. 3. That so soon as ten thousand pounds sterling of the said capital stock shall have been subscribed, and five hundred pounds sterling per share shall have been actually paid on such subscribed stock, it shall be lawful for the said Company, and they are hereby authorized and empowered by themselves, their deputies, agents, officers, and workmen, to begin, carry on, and execute all necessary works for the beneficial working of the freestone and other quarries, and the mines, veins, strata, and seams of copper, lead, iron, clay, and all other minerals which shall be found within, on, or under the parcels of lands so demised to the said associates according to the rights and powers conferred upon them by the said demise, provided that nothing in this Act 4 contained shall extend or be construed to extend in any wise to affect or impair the rights of the Crown in or to any such mine or mineral within or under the said lands. 4. That if at any time two thirds or more in number of the stockholders of the said Company for the time being, shall (by themselves or proxies) at a meeting specially convened for that purpose in manner hereinafter mentioned, resolve or declare that the said Company shall be determined and dissolved as from the day of such meeting, or any subsequent day, then and in such case the said Company shall be ipso facto determined and dissolved accordingly, and those of the stockholders of the said Company passing or making such resolution or declaration, or any of them, may declare the same by notice in the London Gazette or other public Journal or Newspaper published in London, and in some one of the public Newspapers published in Saint John New Brunswick, and may sign such notice in the name of and for the said Company; provided also, that if any stockholder of the Company for the time being shall desire to withdraw from the said Company, and shall declare by notice in writing under his hand left at the usual place of business of the said Company in

England, that the said Company shall be determined and dissolved as to him, then and in such case the Company shall be ipso facto determined and dissolved as to the stockholder giving such notice, on and from the day of such notice being so left, or on such day subsequent thereto as shall be expressed in such notice, and the stockholders signing such notice shall advertise the same as last aforesaid; but every such stockholder so dissolving the Company as to himself, and his heirs, executors, and administrators, shall remain liable to contribute according to his share or shares rateably with the other stockholders, to make good any deficiency which may exist at the time of such dissolution in the capital and property of the Company, to answer the then liabilities thereof. 5. That if any stockholder in the said Company for the time being shall become lunatic, or of unsound mind, and shall so continue for the space of six calendar months, or die, the Company shall ipso facto be dissolved so far as relates to him; but he, his committee, heirs, executors, administrators, and estate, shall remain liable to contribute according to his share or shares rateably with the other stockholders, to make good any deficiency which may exist at the time of his lunacy or death in the capital and property of the Company, to answer the then liabilities thereof. 6. That the dissolution of the said Company as to any stockholder giving such notice as is mentioned in the Section last but one preceeding, or as to any stockholder becoming lunatic, or of unsound mind, or dying as in the last preceeding Section mentioned, shall not dissolve the said Company as to the other stockholders. 5 7. That if any stockholder in the said Company who shall or may have subscribed for stock as one of the associated in the said recited Deed, shall make default in payment on the days therein appointed of the several sums to be payable by him on account of his stock or share in the said Association on the days so named, or within twenty days thereafter, it shall be lawful for those of the stockholders in the said Company as shall not have made default, at a meeting or meetings to be called for that purpose, to declare the share or shares in respect of which such default shall have been made to be forfeited, and in every such case it shall be lawful for such nondefaulting stockholders to re-allot such forfeited share or shares, and the money (if any) paid in respect of such share or shares shall be applicable to the general purposes of the Company. 8. That all further sums of money (if any) which in the judgement of three fourths in number, at least, of the stock holders for the time being, shall be required for carrying on the business of the Company, shall be contributed by the stockholders rateably, in proportion to their respective share or shares, at such times and in such sums as the stockholders for the time being shall direct, but so nevertheless that no stockholder shall be required to pay more than one hundred pounds sterling at any one time in respect of each of the shares held by him, nor to make any such payment oftener than once in three calendar months, nor to pay more in the whole in respect of any one of such shares than shall make up the total sum of one thousand pounds sterling in respect of any one such share. 9. That if any stockholder for the time being shall omit to pay any such farther call or sum as in the last preceeding Section mentioned, or any part thereof, on the day appointed for the payment thereof, he shall pay to the Company interest at the rate of five pounds per cent per annum on such unpaid call or sum, or the part thereof for the time being unpaid, until the same shall be paid, and if he shall omit to pay such unpaid principal money and interest or any part thereof respectively for more than six calendar months after the day appointed for the payment of such principal money, it shall be lawful for the other stockholders for the time being to dissolve the said Company so far as relates to the defaulting party, and to declare such dissolution by notice in the London Gazette, and in public Newspapers published in Saint John New Brunswick, but the defaulting stockholder, his heirs, executors, and administrators, shall remain liable after such dissolution to the payment of the principal money and interest in payment whereof he shall have made default, and of further interest in respect of such principal money till the payment thereof, and to contribute rateably according to his share or shares with the other stockholders to make good any 6 deficiency existing at the time of such dissolution in the capital and property of the Company, to answer the liabilities thereof. 10. That all rents and payments reserved or payable by or under the above recited Deed, and the cost and purchase moneys of all works, engines, machinery, tools implements, utensils, and things constructed, done, or purchased in or for the business of the said Company, and all repairs, additions, and alterations of, to, in, or about the same, or the works already constructed, and all rents of offices in England or elsewhere as may be engaged for the purposes of the said Company, and all taxes, rates, assessments, payments for insurance against loss by fire, and other outgoings whatsoever for and in respect of the property of the said Company, as well in New Brunswick as in England or elsewhere, and all salaries, wages, remuneration, and maintenance of all managers, agents, clerks, workmen, servants, and others who shall be employed in or about the business of the Company, and all other moneys which shall become payable for or upon account of the said business, and all losses and damages which shall happen in or about the same, shall be paid, defrayed, and borne out of the said capital and property of the said Company, and the gains and profits from the same. 11. That the stockholders for the time being shall be entitled to the net gains and profits from time to time arising from the business of the Company, in the same shares and proportions in which they shall for the time being be entitled to the capital and property thereof, and such net gains and profits, or so much thereof as the stockholders of the Company for the time being shall think fit to divide, shall from time to time be divided among them when and as often as the said stockholders shall determine, and the residue (if any) of the said net gains and profits shall immediately after the same shall have been ascertained and determined in each year be the general annual account and valuation hereinafter directed to be taken and settled, be either divided among the said stockholders, or be added to the capital of the Company, and become incorporated with and part of the same, as the said Company shall in due course determine; provided nevertheless, that no stockholder shall receive any part of his share or shares of the net gains and profits, as ascertained and determined by any such account and valuation, until he shall have signed the same account and valuation, or a copy thereof, as hereinafter directed, and shall have paid all arrears (if any) due in respect of his share or shares in the said Company, unless the amount due in respect of such calls shall be less than the amount of such stockholder's share of the profits then divisible, in which case the difference shall be paid to him on his signing the before mentioned account or a copy thereof. 712. That it shall be lawful for any stockholder for the time being, with the assent of the other stockholders for the time being, to advance and lend money to the the said Company, and all moneys so lent shall be considered as a debt owing by the Company to the stockholders, leading the same, his executors, administrators, or assigns, bearing interest, at the rate of five possible per centum per annum, payable quarterly, and such principal shall be payable with all interest for the time being owing thereon, after three calendar months notice by the stockholder lending the same to the Company, requiring payment thereof; and such stockholder shall be bound to take back such loan after three months notice to him from the Company requiring him to accept payment of the same. 13. That it shall be lawful for the stockholder for the time being from time to time and at all times to appropriate any unappropriated shares of the stock of the said Company to such person or persons and for such price or prices as they shall at the time of such appropriation think fit, and in the event of any such appropriation or appropriations, the person or persons to whom such appropriation or appropriations shall be made, shall not take or be entitled to or interested in such share or shares, nor have any claim or demand against the said Company in respect of such appropriation or appropriations until he shall have paid the price or prices payable in respect of such share or shares or such portion thereof as the said Company shall determine, and also any proportionate contribution to the capital stock of the said Company, and such price or prices when paid shall be placed to the capital account of the said Company and he applied for the general benefit thereof and that upon payment by such person or persons of the price or prices payable in respect of such share or shares or such portion thereof as the said Company shall determine, he or they shall be entitled to hold such share or shares (but if only part of the price shall have been paid on such share or shares, then conditionally until the payment of the residue thereof) and to attend and vote at all meetings of the said Company; but and to share in the gains or profits of the said Company; but in the case of a party not having paid the full price in respect of his share in the said Company, his share of such gains and profits shall be applied towards the payment of the portion of such price remaining unpaid, and in all other respects the party so taking such appropriated shares shall be entitled to and enjoy by the same rights and privileges in all respects as are enjoyed by the original stockholders; provided always, that if at any time or times it shall be thought desirable by the stockholders to dispose of any one or more of the said unappropriated shares for the sole purpose of increasing the capital of the said Company, and not with a view to 8 appropriate it to any particular person willing or assumed to be willing to interest himself for the benefit of the said Company, such shares shall first be offered to the then existing stockholders, and should there be more applicants for such shares than shares to be appropriated, the same shall be disposed of and distributed by lot in such a manner as the Company may determine. 14. That it shall be lawful for any stockholder for the time being, with the assent of all and singular the other stockholders for the time being, to assign his share or any of his shares in the capital and property of the Company, to any other person or persons (whether previously a stockholder or not) approved of by all and singular the other stockholders for the time being; provided that the number of stockholders for the time being shall not by any such assignment be made to exceed twenty, and that no one of the twenty shares into which the capital and property of the said Company is considered to be divided, shall be subdivided or held by more than one person, reckoning executors or administrators of any stockholder as one person. 15. That on the execution of such assignment by any stockholder or his assigns, such stockholder shall cease to be a stockholder in respect of the share or shares assigned, and such assignee shall become a stockholder in respect of the same share or shares, and upon such terms as to the liability to previous liabilities and losses of the Company, and participation in previous profits and advantages thereof, as may be agreed to, and may be approved as last aforesaid. 16. That the supreme management, direction, and control in all things of the workings of the said quarries, and of the manufacturing, rendering merchantable, and selling the produce thereof, and of the purchase of engines, machinery, tools, implements, utensils, and materials, and of all other business of the said Company, shall be vested in and belong to all the stockholders for the time being, whether resident in England, New Brunswick, or elsewhere, and shall be ordered and conducted at meetings to be held for such purpose in the City of London, or elsewhere in England, once every four weeks, or oftener if desired by the stockholders; and no order or determination shall be made, or business transacted otherwise than at such meeting, or at a meeting specially called as hereinafter is provided; and no order or determination shall be made, or business transacted at any such ordinary or special meeting, unless three at least of the stockholders for the time being shall be personally present; provided always, that if by reason of the absence of stockholders, any meeting, ordinary or special, shall not have been constituted by the presence of three stockholders, and in the opinion of the Manager there shall be any urgent 9 matter of business in connection with the correspondence abroad requiring action before the next ordinary meeting, it shall be lawful for the said Manager, and one or other of the said stockholders, to determine such matter; but in every case, such matter and determination shall be specially reported to the next ordinary meeting of the Company. 17. That all matters in or relating to the business of the Company as to which there shall be any difference of opinion among the stockholders for the time being, shall be decided according to the determination of the majority in number of the stockholders for the time being who shall vote thereon, and each stockholder shall have only one vote, whatever number of shares he may hold. 18. That any three of the stockholders for the time being, or any two of such stockholders, the Manager hereinafter mentioned being one of such two, may by writing under their hands call a special meeting of the stockholders upon any day after the expiration of seven days from notice thereof being sent to the several stockholders resident in Great Britain, and to such stockholder or stockholders generally resident out of Great Britain who shall then happen to be in Great Britain, and shall have given notice thereof, and of his or their addresses in Great Britain, to the Manager for the time being hereinafter mentioned, provided that such notice specify the day of such meeting and the business for which the same is called, and no order or determination shall be made or business transacted at any such special meeting other than the business specified in such notice, and the making of orders or determinations incidental thereto. 19. That every such notice as aforesaid, as well as notices of calls made in respect of shares, and all other communications to be made to the stockholders of the said Company, shall be considered as sufficiently and properly sent, if sent by post, to the address of the stockholder as last given to the said manager, and no stockholder shall be entitled to any such notice unless he shall give such address, and correct and change the same from time to time as circumstances may require. 20. That any stockholder for the time being may empower any other stockholder for the time being, to vote at any and every such meeting as aforesaid by proxy for such first mentioned stockholder, and either by a general authority to vote on any matter or thing which may arise or come to be ordered or determined generally, or at any specified meeting or meetings, or by a special authority to vote on any matter or thing which may arise or come to be ordered or determined, and which shall be specified in the instrument creating such proxy; and any stockholder for the time being, empowered by any other stockholder for the time being, to act as his proxy 10 aforesaid, may also sign, give, or leave any such notice as specified in these presents, and assent or dissent to or from any matter or thing as to which the assent or dissent of a stockholder may be required or expedient, and may sign such general annual account and valuation as is hereinafter mentioned, and generally may act for and on behalf of and in the name of the stockholder so empowering him in respect of the business of the Company, or the management, direct, and control thereof, or the purposes of this incorporation either generally or particularly, as in the instrument creating such proxy shall be expressed. 21. That no one member shall hold the proxy of, or vote or set by proxy for more than one other stockholder, save and except such specially limited proxy as next hereinafter mentioned, that is to say, it shall be lawful for any stockholder or stockholders by any writing under his or their hand or hands, to authorize, empower, and require the Manager for the time being, by a special and limited proxy, to vote on any particular question, matter, or thing, in any particular way; and to be specified in such proxy, and it shall be the the duty of such Manager to record the votes of such stockholder or stockholders upon such particular questions, matters, and things, in the particular way specified in such proxy by such stockholder or stockholders, and that such special and limited proxy shall in respect only of any such question, matter, or thing, suspend any general proxy by such stockholder or stockholders. 22. That the stockholders for the time being shall from time to time appoint one or more of themselves, or some other person or persons, who shall be resident upon the said demised premises, or elsewhere in New Brunswick or Nova Scotia, (but absolutely and entirely subject in all things to the management, control, and direction of the Company, as hereinafter specified) to superintend and conduct the working the said quarries, the manufacturing, rendering merchantable, and selling the produce thereof, the purchase of engines, machinery, tools, implements, utensils, and materials which it shall be thought expedient to purchase in New Brunswick, Nova Scotia, or the United States of America, and generally to transact, superintend, or conduct the business of the said Company in New Brunswick, Nova Scotia, and the said United States; and the stockholders for the time being shall from time to time appoint any one or more of themselves, or some other person or persons resident in England, (but absolutely and entirely subject in all things to the management, control, and direction of the stockholders generally for the time being) to superintend and conduct the purchase of engines, machinery, tools, implements, utensils, stores, and materials which it shall be thought expedient to purchase in England; and the accounts, correspondence, 11 and business of the Company generally in England, and the laying the same in a clear and sufficient way before the meetings of the Company, and the calling of such meetings, and the carrying into effect by order to the Manager and Managers in New Brunswick or Nova Scotia, and otherwise the order and determination of the Company for the time; and every such appointment of Manager as aforesaid, whether resident in New Brunswick, Nova Scotia, or England, shall be revocable at the pleasure of the Company, and subject to any conditions or restrictions they may impose. 23. That in the temporary absence or illness of any such Manager as aforesaid, whether resident in England, New Brunswick, or Nova Scotia, it shall be lawful for the said Company from time to time to appoint any one or two stockholders to transact the business and and perform the duties of such Manager. 24. That every such manager as aforesaid, whether resident in New Brunswick, Nova Scotia, or England, and whether a stockholder or not, shall be paid and allowed such salary or remuneration for his services as the Company shall from time to time determine; and the Company may by any resolution at any meeting duly convened, employ any stocholder or other person upon any special business in the service of the Company at any salary or remuneration which the said Company may think fit; but no stockholder, unless so appointed or employed by such meeting as aforesaid, shall be entitled to any salary or remuneration for any services he may render to the said Company. 25. That the managers so appointed, resident of New Brunswick, Nova Scotia, or England, shall from time to time (subject to the absolute direction and control of the Company generally) engage and employ all such agents, clerks, workmen, servants, and others, for the purposes of the Company, and at such wages, salaries, and remuneration as such managers respectively shall think fit, and may from time to time dismiss all or any of such agents, clerks, workmen, servants, and others, as such managers respectively shall think fit, and shall from time to time (subject as aforesaid) make such purchases and sales, and enter into such contracts and engagements on behalf of the said Company as the Company shall direct. 26. That the bankers of the Company shall be the Commercial Bank of London in the City of London, and the Commercial Bank of New Brunswick at Saint John in New Brunswick, or such other Banks as the Company shall from time to time determine, and all moneys to be paid to the Company as well by stockholders as by other persons, or received by the said company or its managers, clerks, agents, or servants, on account of the said Company, shall be paid into one of the said Banks to the account, and in the name of the said Company, and shall be drawn 12 out of the Bank of the Company in England, and signed by any three of the stockholders for the time being, or by two of the stockholders for the time being, if the manager, being a stockholder, shall be one, and if the manager shall not be a stockholder, then such cheques shall be signed by any two of the stockholders, and shall be countersigned by such manager; and the moneys so deposited in the Bank of the Company in New Brunswick or elsewhere out of England, shall be drawn out by cheques to be signed by such one or more persons as the Company shall from time to time appoint for that purpose. 27. That if any stockholder of the said Company shall in any other manner than is hereinafter directed and authorized, or as shall be from time to time directed and authorized in such behalf by any bye law or resolution of the said Company duly made, draw, accept, indorse, sign, or give any such cheque, bill, note, security, or order as aforesaid, in the name, or on the behalf, or account of the said Company, or which may affect or shall be drawn, accepted, indorsed, signed, or given with intent to affect the property thereof, then every such cheque, bill, note, security, or order, shall be deemed, as between the Company and its stockholders, to have been drawn, accepted, indorsed, signed, or given on the separate account of the stockholder or stockholders drawing, accepting, indorsing, signing, or giving the same and he or they shall accordingly pay, satisfy, and discharge the same out of his or their separate estates, and shall indemnify and save harmless the others of the said stockholders, and their several heirs, executors, administrators, estates, and effects, and the capital and property of the Company from the same, and all actions, suits, costs, damages, and expenses on account thereof; and it shall be lawful for the said other stockholders to dissolve the said Company so far as relates to the said stockholder or stockholders by offending, or any of them, and to declare such dissolution by such notices in England and New Brunswick as are hereinbefore in this Act directed; but such offending stockholder or stockholders, his or their heirs, executors, and administrators, shall remain liable to contribute rateably according to his or their share or shares, with the said other stockholders, to make good any deficiency existing at the time of such dissolutions in the capital and property of the Company, to answer the liabilities thereof. 28. That every stockholder for the time being shall duly and punctually pay and discharge all debts and moneys payable by him to any person or persons whomsoever, and defend and keep harmless and indemnified the others of the said stockholders, and their several heirs, executors, administrators, estates, and effects, and the capital and property of the Company, from his private and separate debts and engagements, and from all 13 actions, suits, costs, damages, and expenses on account thereof; and if any stockholder for the time being shall become bankrupt, or an insolvent debtor, or enter into any composition with his creditors, or shall apply any of the moneys, effects, or property of the said Company to his own use, or to any use other than the proper use of the Company, or shall do, permit, or suffer anything whereby any of the moneys, effects, or property of the Company shall be seized, attached, or taken in execution for or on account of any private or separate debt or engagement of such stockholder, the Company shall ipso facto be dissolved as far as relates to such stockholder; or if any stockholder for the time being shall mortgage or otherwise change his share or shares in the said Company, or do, permit, or suffer any act on behalf or in the name or on account of the Company other than is herein authorized, then and in either of such cases it shall be lawful for the other stockholders for the time being, to declare the Company, so far as relates to such stockholder, dissolved, and give notice thereof in England and New Brunswick as is hereinbefore directed; but such stockholder and his heirs, executors, administrators, assignees, and estate, shall remain liable to contribute rateably according to his or their share or shares with the other stockholders, to make good any deficiency existing at the time of such dissolution in the capital and property of the Company, to answer the liabilities thereof. 29. That proper Books of Account shall be kept both in England and New Brunswick by the Managers to be appointed as aforesaid, or by such other persons as shall from time to time be appointed, and true, plain, and perfect entries made therein of all moneys, works, machinery, implements, tools, utensils, minerals, ores, metals, materials, effects, debts, and other things belonging to or owing to or by the said Company, or which shall be received, paid, sold, or contracted for in the course of the business thereof, and of the names and residences of all persons holding or entitled to hold any share or shares in the said Company, and the number of such shares, and the amount of the interest of each stockholder in the said Company, and all sales and receipts, and of all disbursements or costs, and expenses in respect of the said Company, and of all calls made, and dividends or profits, and interest paid, and of all other transactions, matters, or things in any wise relating to the said business, as are usually written and entered into Books of Account kept by persons engaged in the business of working stone quarries, together with all such circumstances of names, times, and places, as may be necessary or useful for the better manifestation of the state and proceedings of the business of the Company. 30. That as soon as conveniently may be after the end of each and every month a full copy of all matters 14 during the then preceeding month in such of the said Books of Account of the said Company as shall be kept in New Brunswick or Nova Scotia during such month, and of all accounts paid by or on account of the said Company during such month, or owing and unpaid at the end thereof, together with an estimate of the sum likely to be required for the purposes of the Company in New Brunswick or Nova Scotia during the then current month, shall be made and transmitted to the office of the Company in London, and at the same times as nearly as may be, abstracts and copies of such of the said Books of Account and accounts as shall be kept, paid, or owing in England, shall be made and transmitted to the office or place of business of the Company in New Brunswick or Nova Scotia, and all such abstracts, copies of Accounts, and estimates on both sides, and the books from which the same shall have been made or taken, shall before such transmission as aforesaid be audited by persons (who may be a stockholder or not) appointed by the Company, and be duly verified by the signatures of such persons. 31. That it shall be lawful for the said Company during the winter season, when the workmen engaged can no longer be profitably employed at the quarries, to occupy such workmen in cutting timber in the neighbouring forests, and for that purpose and with that view, or for any purpose beneficial to the Company, to purchase or take on lease tracts of timber land, and also to apply for grants of timber land from the Crown; and in the event of any such purchases or grants being agreed on, the same nay be taken and held in the name of the said Company. 32. That on the first day of January in each and every year during the existence of the said Company, a full and general account shall be made and taken of all such works, machinery, implements, tools, utensils, stock of stone, materials, effects, and things, as shall have been constructed, quarried, done, bought, and sold in the business of the Company, in the first of such general accounts, from the day of the commencement of the said Company, and in each of such subsequent general accounts, from the day of the last preceeding general account and of the moneys paid or received therefor, and of all moneys paid during the same period for salaries, wages, and maintenance of managers, agents, clerks, servants, workmen, and others employed by the Company, and of moneys and debts due or owing to and by the said Company, and of all the liabilities of the said Company, and of all such matters and things as are usually comprehended in general accounts of the like nature, taken by persons engaged in the business of working stone quarries, and that a just valuation shall be made of all particularly included in such accounts which require and are capable of valuation, and the amount of the net gains and profits and loss of the Company during such period ascertained 15 and determined; and all the stockholders shall be bound and concluded by such accounts, save and except that if any manifest error to the amount of fifty pounds or upwards shall be found in any such account or valuation, within twelve calendar months after the same shall be so signed, such error shall be rectified. 33. That if and so often as the said Company shall be dissolved as to any stockholder for the time being, by his lunacy, unsoundness of mind, death, or voluntary retirement, or by or in any of the other means or events hereinbefore specified, by or in which the Company is to be dissolved as to any stockholder, then and in such case if the same shall happen before the taking of the first general yearly account and valuation aforesaid, such stockholder, or his estate, shall be entitled to and receive from the Company the amount of all moneys paid or contributed by him towards the capital of the said Company, and to no share of gains or profits, or other payment whatsoever, and such amount shall be paid and borne by the other stockholders, their executors, administrators, or assigns, without interest, at the end of eighteen calendar months after such dissolution, save and except in the case of dissolution by lunacy, unsoundness of mind, or death, in which case such amount shall be paid at the end of nine calendar months after such dissolution; but if such dissolution shall happen after the day appointed for the first general yearly accounts and valuation aforesaid, such stockholder, or his committee, executors, administrators, assignees, or estate, shall be entitled to receive from the said Company such sum of money as his share or shares of the capital and property of the Company shall, upon the then last general yearly account and valuation, amount to, or as such share or shares would have amounted to in case such account or valuation had been taken on the first day of January immediately preceeding such dissolution, and also (in the case of dissolution by lunacy, unsoundness of mind, or death, but not otherwise,) to the share or shares, which if such dissolution had not happened, such stockholder would have been entitled to the next quarter day which shall happen after such dissolution, of the amount of gains and profits (if any) of the said business, and to no other share of gains or profits, or other payments whatsoever; and such sum of money (in case of lunacy, unsoundness of mind, or death,) and share of current gains and profits (if any) shall be paid by the said Company, without interest, at the end of eighteen calendar months after such dissolution, save and except in the case of lunacy, unsoundness of mind, or death, when the same shall be paid at the end of nine calendar months after such dissolution. 34. That every such payment to any stockholder, as to whom the said Company shall be dissolved as 16 aforesaid, his committee, executors, administrators, assignees, or estate, may be made either out of the capital and property of the Company and the then undivided gains and profits thereof, or out of additional moneys to be contributed for that purpose by the stockholders of the said Company for the time being, rateably according to their respective shares, or partly from one and partly from the other of the said sources, as the said other stockholders shall determine; and every share or shares (if any) so discharged shall sink for the benefit of the other stockholders in the capital and property of the said Company, and in augmentation rateably of the shares of such other stockholders. 35. That after any dissolution as aforesaid, it shall be lawful for the said Company to admit into the said Company in respect of the share or shares of any stockholders as to whom the Company shall have been dissolved, any person or persons, whether already a stockholder or not, whom the committee, executors, or administrators of the lunatic or deceased stockholder (if the dissolution shall have happened by lunacy, unsoundness of mind, or death) may name for that purpose, or generally in any case any other person or persons whomsoever, whether already a stockholder or not, provided that not more than one person be admitted in respect of any one share, and that such committee, or executors, or administrators, and nominee or nominees, or other person or persons (as the case may be) do at their or his own cost execute and enter into such assignment, covenants, and other instruments (if any) as may by the said continuing stockholders, or not less than two thirds in number of them, be deemed expedient for constituting such nominee or nominees, person or persons, a stockholder or stockholders in respect of the share or shares in respect of which he shall be so admitted, and binding him and them to perform and observe the provisions of this Charter in respect of such share or shares, and so that the person or persons so admitted a stockholder or stockholders do pay to the stockholder as to whom the Company shall have been dissolved, his committee, executors, administrators, assignees, or estate, all such moneys as he or they shall under the provisions in that behalf hereinbefore contained be entitled to receive from the said Company, or do obtain from him or them a release of the same and of all claims and demands in respect thereof. 36. That after every such partial dissolution as aforesaid, the other remaining stockholders for the time being, or their respective heirs, executors, administrators, or assigns, shall keep the stockholder as to whom the Company shall have been dissolved, his heirs, executors, administrators, committees, assigns, and estate, sufficiently indemnified against all liabilities of the Company, except the liability hereinbefore 17 rovided for of contributing rateably with the other stockholders for the time being, according to the share or shares of the stockholder as to whom the said Company shall have been dissolved, to the deficiency (if any) existing at the time of such dissolution is the capital and property of the Company, to answer the then liabilities thereof. 37. That so soon as conveniently may be, and not later than six months after the expiration of the said Company by the general determination or dissolution thereof, under the provisions in that behalf hereinbefore contained, whichever shall happen, all the quarries, works, engines, machinery, tools, implements, utensils, materials, stone, effects, and property for the time being of the said Company, shall be sold in such manner as the majority in number of the then late stockholders shall think fit, and all debts and moneys owing to the Company shall be got in, and the moneys and the moneys in hand

Royal Gazette - Apr. 18, 1855 Cap XVI. An Act to enable the Dorchester Manufacturing Company of the City of New York to hold Property in this Province. Section. Section. 1. Company may hold 3. Act, when to come in force. property; limit. 2. An Office to be kept in Dorchester. Passed 3rd April 1855. Whereas John Cairns, Edward Allison, James E. Brown, and Frederick A. Peterson, have formed themselves, with their associates, successors, and assigns, into a Joint Stock Company, in the City of New York, in the United States of America, by the name of ""The Dorchester 9 Manufacturing Company of the City of New York,"" to quarry and manufacture Stone in this Province, and are desirous of being enabled to hold real and personal property in this Province as such Company; Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. The Dorchester Manufacturing Company of the City of New York aforesaid, and their successors, shall and may have full power and lawful right and authority to have, hold, own, and enjoy in any way real estate and lands of all kinds in this Province, whether in fee simple or by by lease, or in any other way, and to have and hold personal estate of all kinds in this Province, in any way, and to alienate, encumber, lease, sell, or deal with the same in any manner; provided always, that the real estate so owned by the said Company shall not at any time exceed the value the sum of two thousand five hundred pounds. 2. The said Company shall keep an Office at Dorchester, in the County of Westmorland, and an Agent there for the transaction of business connected with the Company in this Province, service upon whom of all processes, notices, and other documents shall, be deemed sufficient service upon the said Company. 3. This Act shall not come into operation or be in force until the first day of September next."

Royal Gazette - May 23, 1855 Cap. LXIV. An Act in amendment of an act to enable the Dorchester Manufacturing Company of the City of New York to hold property in this Province. Section. Section. 1. Company empowered to hold 2. When Act to come real estate to the value of into operation. œ10,000. Passed 12th April 1855. Whereas by an Act passed in the present Session of the General Assembly, the Dorchester Manufacturing Company of the City of New York are authorized to holdreal estate in this Province to the value of two thousand five hundred pounds, and such personal estate as they may desire, the same not being limited to any amount; and it is necessary that they should be authorized to hold real estate to a larger amount than they are thereby authorized;-Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. The said Company and their successors shall have full power and lawful right and authority, and are hereby authorized and empowered to have, hold, own, and enjoy in any way real estate and lands of all kinds in this Province, whether in fee simple, or by leave, or in any other way, to the value of ten thousand pounds, and to alienate, encumber, lease, sell, or deal with the same in any manner, in addition to the power and authority to hold personal estate thereby granted, any thing therein contained to the contrary notwithstanding. 2 2. This Act shall come into operation on the day when the said recited Act comes into operation."

Royal Gazette - May 30, 1855 CAP LXVIII. An Act to incorporate the Albert Freestone Company. Section. Section. 1. Act 17 V.c. -, 6. Bye laws, enactment of. repealed, and certain 7. Annual general meeting to liabilities transferred. be held in June and certain 2. The Albert Freestone statements to be then made. Company incorporated. 8. Deposit on shares may be 3. Capital to be œ50,000. required. 4. Consideration to be 9. Liability for the Company given to the Albert debts. Freestone Association; 10. Acquisition of property authority to issue in the maritime cities of debentures. the United States. 5. First meeting of the 11. Company to keep an office Company, when and where; at Harvey. election of Directors. Passed 12th April 1855. Whereas the Albert Freestone Association lately incorporated by an Act of this Province have agreed to surrender their Charter, and are desirous of obtaining anAct of incorporation in a new form, and it is expedient to grant the same; Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly,-1. That an Act made and passed in the seventeenth year of Her Majesty's Reign, intituled An Act to incorporate the Albert Freestone Association, be and the same is hereby repealed; provided that all liabilities now existing, or which might by any contract hereafter attach to the Albert Freestone Association, together with all rights and immunities, are hereby transferred and made chargeable on the herein created Company. 2. That Charles Dickson Archibald, Sir Claude Edward Scott, Mark Hunter, William Kilburn, Benjamin Kilburn, and Henry Heald, their associates, successors, and assigns, be and they are hereby declared to be a body politic and corporate, by the name of ""Albert Freestone Company,"" and by that name may have succession and a common seal, and have, exercise, and enjoy all and singular the powers and privileges incident to a Corporation, and may hold, possess, and enjoy lands, quarries, tenements, and hereditaments, vessels, craft, goods, and chattels, and may set up and establish machinery and factories, and construct railways, roads, piers, and breakwaters for the purposes of their operations. 3. That the capital or joint stock of the said Company shall consist of fifty thousand pounds sterling, in two thousand five hundred shares of twenty pounds 3 sterling each, which shall be deemed to be personal property, and transmissible and assignable as such, with liberty to increase the said capital to an amount not exceeding in the whole one hundred thousand pounds. 4. That the above named parties having already paid or rendered themselves liable to the extent of eight thousand pounds, in and about the exploiting and working the Albert Quarries, situate in the County of Albert in this Province, shall be entitled to receive from the Company hereby incorporated three hundred shares, deemed to be fully paid up, and the sum of two thousand pounds sterling, in cash, in consideration of which the said Company shall be and become and stand possessed, without the necessity of any further assurance, assignment, or conveyance, of all and singular the lands, quarries, tenements, and hereditaments, houses, buildings, piers, plant, fixtures, tools, effects, and good will of the said Albert Freestone Association, fully and absolutely to all intents and purposes; yielding and paying, nevertheless, to the tenants of the freehold of the said premises, the annual rent of three hundred pounds sterling, and a royalty of half a dollar per ton of fourteen cubic feet for every ton of merchantable stone raised in any one year over and above three thousand tons, and five per centum per annum upon the profits of the said Company declared and divided, with liberty to the said Company to extinguish the said rent and royalty, or one of moiety thereof, by commuting the same, or purchasing the fee simple of and in the said lands, tenements, and quarries, or on one moiety thereof; and on payment therefor, the Directors for the time being are hereby authorized to issue bonds or debentures of the said Company, the payment of which, and the interest thereon, shall be specially charged on the property, and effects of the said Company, as may be therein expressed; provided always, that such bonds shall not bear a higher rate of interest than six per centum per annum, nor have more than ten years to run; and that the same shall be convertible into stock of the Company at par, at any time during the currency thereof; and it shall not be necessary for the holders of the said bonds to register or record the same. 5. That the first meeting of the shareholders of the said Company shall be held at Delmonico's Hotel, in the City of New York, on Saturday the fifth day of May now next, or at such other time and place in the City of New York, Boston, or Saint John, as any three shareholders, or subscribers for shares, of which one of the above named corporators shall be one, shall determine, and of which public notice shall be given in at least one Newspaper published in the said Cities of New York, Boston, and Saint John, at which, or any adjourned or subsequent meeting, the said corporators, and all parties who shall have subscribed for shares in the said Company, may attend in person or by proxy, and proceed to organize the said Company, and elect a Board of Directors of not less than five nor more than nine, and of whom three shall be a quorum. 6. That the said Directors shall be and they are hereby authorized to frame bye laws, not repugnant to the laws of this Province, for the governance, regulation, and management of all the business operations and affairs of the said Company, which shall have the same force and effect to all intents and purposes as if the same were herein fully declared and set forth; a copy of which said bye laws shall be lodged in the Office of the Secretary of this Province. 7. That the annual general meeting of the shareholders of the said Company shall be held at such time and place in this Province, England, or the United States, as the Directors shall determine on the first Thursday of June in each and every year, at which said meeting the Directors for the past year shall exhibit a full statement and report of the affairs of the said Company and the said meeting shall audit and examine the accounts, elect a new Board of Directors for the ensuing year, amend or annul any bye law, and make new ones, and do and transact all other necessary business; and special meetings of the Company may be called by the Directors on the requisition in writing of any ten shareholders; and at all meetings of the Company each shareholder may vote in person or by proxy, each share being entitled to one vote; and no person shall be eligible to be a Director of the said Company, who shall not be possessed bona fide in his own right of at least ten shares in the joint stock thereof. 8. That the Directors of the said Company are hereby authorized to require payment of a deposit of five pounds per share on allotment, and may call up the remainder from time to time as they may see fit, and may sue for and recover any call or calls in arrear with interest; or at their option may declare the shares of defaulters forfeited, and sell or re-allot the same; and no party shall be at liberty to transfer or assign his or her share or shares whilst any call thereon shall be in arrear and unpaid. 9. That the joint stock, property, and effects of the said Company, shall alone be liable and responsible for the debts and engagements thereof; and no shareholder, in his person or separate estate, beyond the amount of his shares. 10. That the Directors of the said Company shall be and they are hereby authorized to purchase or lease lands and tenements, in or near some one or more of the principal maritime cities of the United States, for depots and yards; and may construct any wharves, piers, cranes, and railways thereon; and set up and work any machinery, and appliances for sawing, shaping, dressing, 5 polishing, and manufacturing the freestone and produce of the said quarries; and may improve the said lands and tenements, and sell, lease, or otherwise dispose of the same, as the said Directors for the time being shall deem meet for the benefit and advantage of the said Company. 11. The said Company shall have an Office at Harvey, in the

Royal Gazette - Apr. 18, 1858 Cap LXX. An Act to amend the Act to incorporate the Albert Freestone Company. Capital stock may be increased; shares reduced in value, &c. Passed 6th April 1858. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, - That not withstanding anything to the contrary contained in an Act made and passed in the eighteenth year of the Reign of Her present Majesty, intituled An Act to incorporate the Albert Freestone Company, the capital of the said Company may be increased to an amount not exceeding one million dollars; and that the shares of the said Company may be reduced in amount from twenty pounds sterling to ten dollars per share, or such other amount as the Directors of the said Company by any resolution or bye law may determine; and it shall be lawful for the said Company to grant and issue paid up shares in full or in part payment for any real estate, quarries, rights, privileges, property and effects that may be purchased or acquired by or for the said Company; (and that notice of the meeting to organize the said Company shall be given by Charles Dickson Archibald, Esquire, the proprietor of the Albert Quarries at Mary's Point, in this Province, or some one on his behalf, such notice to be inserted in some one Newspaper published in the City of New York,) and that citizens of the United States may be shareholders and Directors of the said Company."

Royal Gazette - Apr. 18, 1858 Passed recently: An Act to amend the Act to incorporate the Albert Freestone Company."

Royal Gazette - May 4, 1859 Cap LIX. An Act to enable the Dorchester Olive Freestone Company, of the county of Richmond, State of New York, to hold Property in this Province. Section. Section. 1. company empowered to hold 2. Company to keep an real estate in this Province. Office and Agent in this Province. Passed 13th April 1859. Whereas Lorenzo M. Arnold, Silas M. Stilwell, James M. Arnold, William P. Lee, John L. Taylor, Thomas Munroe, and Albert Horn, have formed themselves, with their associates, successors, and assigns, into a jointstock Company, in the County of Richmond, State of New York, in the United States of America, by the name of ""The Dorchester Olive Freestone Company,"" to quarry and manufacture Stone in this Province, and are desirous of being enabled to hold real and personal property in this Province, as such Company; - Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. The Dorchester Olive Freestone Company, of the County of Richmond, in the State of New York afore said, and their successors, shall and may by that name, have full power and lawful right and authority to have, hold, own, and enjoy in any way, real estate and lands of all kinds in this Province, whether in fee simple or by lease, or in any other way, and to have and to hold personal estate of all kinds in this Province, in any way, and to alienate, encumber, lease, sell, or deal with the same in any manner; provided always, that the real estate so owned by the said Company shall not at any one time exceed in value the sum of ten thousand pounds. 2. The said Company shall keep an office in Dorchester, in the County of Westmorland, in this Province, and an Agent there, for the transaction of business connected with the Company in this Province, service upon whom of all processes, notices, and other documents, shall be deemed sufficient service upon the said Company."

Royal Gazette - May 9, 1860 Cap. LXXVIII. An Act to incorporate the New Brunswick Freestone Company. Section. Section. 1. Company incorporated; name 5. Liability for debts. and privileges. 6. Corporation to 2. First meeting, appointment terminate unless twenty of time and place of. five per cent be 3. Amount of Capital Stock. subscribed within one 4. Liability of Stockholders year. for stock subscribed. Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Nathan M. Bennett, Marten Cole, John S. Howell, William Stewart, W. R. Butterworth, and their 6 associates, successors, and assigns, shall be and they re hereby declared to be a body corporate and politic, by the name of ""The New Brunswick Freestone Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of quarrying Freestone, and vending the same, and such other business as may be incident thereto. 2. The first meeting of the said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons 3. The capital stock of the said Company shall be two hundred thousand dollars, divided into twenty thousand shares of ten dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation for the purposes of or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for by the Corporation and recovered in any Court of Record within the Province. 5. That the joint stock and property alone of the said Corporation shall be liable for the debts and engagements of the same. 6. That unless twenty five per cent of the said capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That John W. Weldon, Thomas Main, John Robertson, James Dorsay, John C. Littlehale, H.B. Crosby, David Main, John Brookfield, John Sullivan, Matthew Stead, Peter Cormack, James Quinton, Jeremiah Dorsay, James D. Turner, George H. Robertson, James E. Ham, James Wilson, and James H. Brown, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Memramcook Freestone Company,"" and shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of manufacturing Freestone. 2. That the capital stock of the said Corporation shall be ten thousand pounds, divided into one thousand shares of ten pounds each, with power to increase the same from time to time if it shall be found necessary, to the sum of twenty thousand pounds. 3. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Company for the purpose of carrying on the operations for which the said Company is incorporated; which call or assessment may be sued for by the said Corporation and recovered in any Court of competent jurisdiction. 4. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 5. That the first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of stockholders. 6. Unless twenty five per cent of the capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall terminate."

Royal Gazette - May 1, 1861 Cap. XLVI. An Act to amend an Act intituled An Act to incorporate the Westmorland Olive Freestone Company. Act 22, V.c. 84, a.6, repealed. Act to be void if a certain subscription be not made. Passed 12th April 1861. Whereas in and by the sixth section of the Act to 9 incorporate the Westmorland Olive Freestone Company, it is enacted that ""unless twenty five per cent of the capital stock of the said Company shall be subscribed within one year after the passing of this Act, the operation of this Act shall cease, and the existence of the said Company shall terminate;"" And whereas it is desirable to extend the said limitation to a further period of two years from the ninth day of April in the year of our Lord one thousand eight hundred and sixty one;-Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, - That the sixth section of an Act made and passed in the twenty third day of the Reign of Her present Majesty, intituled An Act to incorporate the Westmorland Olive Freestone Company, be and the same is hereby repealed; and in lieu thereof be it enacted, that unless twenty five per cent of the capital stock of the said Company shall be subscribed within two years after the ninth day of April in the year of our Lord one thousand eight hundred and sixty one, the operation of this Act shall cease, and the existence of the said Company shall terminate."

Royal Gazette - Jul. 19, 1865 Cap. LVI. An Act to enable the Dorchester Union Freestone Company of New York to hold property in this Province. Section. Section. 1. Company may hold property. 2. Office of Company, where kept. Passed 8th June, 1865. Whereas certain persons in the State of New York, in the United States of America, have formed themselves, with their associates, successors, and assigns into a Joint Stock Company, by the name of ""The Dorchester Union Freestone Company,"" to quarry and manufacture Stone in this Province, and are desirous of being enabled to hold real and personal property in this Province, as such Company:- Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. The Dorchester Union Freestone Company of New York, in the State of New York aforesaid, and their successors, shall and may by that name have full power and lawful right and authority to have, hold, own and real estate and lands of all kinds in this Province, whether in fee simple or by lease, or in any other way, and to have and to hold personal estate of all kinds in this Province in any way, and to alienate, encumber, lease, sell or deal with the same in any manner; provided always, that the real estate so owned by the said Company shall not at any one time exceed in value the sum of sixty thousand dollars. 2. The said Company shall keep an Office in Dorchester, in the County of Westmorland, in this Province, and an Agent there, for the transaction of business connected with the Company in this Province, service upon whom of all processes, notices, and other documents, shall be deemed sufficient service upon the said Company."

Royal Gazette - Jul. 30, 1873 CAP. LXXXIX. An Act to incorporate the Hopewell Freestone and Mining Company. Sec. Sec. 1. Company incorporated. 6. Shares assignable. 2. Capital stock. 7. Joint stock alone 3. First meeting, when held liable. And how called. 8.Time within which ten 4. Annual meetings, how per cent must be paid appointed, proviso. In. 5. Powers of Directors. 9. Where Office of Company shall be kept. Passed 14th April, 1873. Where as the Township of Hopewell, in the County of Albert, offers advantageous situations for the quarrying and working of freestone, marble, limestone and other building materials, and for quarrying and manufacturing plaster, and for mining purposes; and whereas a Company has been formed for the purpose of quarrying, mining and working the same, and other business connected therewith, at Hopewell aforesaid, and have expended a considerable amount of capital, and the expenditure of capital and the employment of labour in such operations would be a benefit to this Province, it is deemed right to afford encouragement and protection to the said Company, and to facilitate their operations by an Act of incorporation:-Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That George K. Snow, Joseph Hayden, Robert K. Snow, and Joseph H. Hayden, and such other parties as shall from time to time become proprietors of shares in the Company hereby incorporated and established, their successors and assigns, shall be and they are hereby erected into a body politic and corporate under the name and style of ""The Hopewell Freestone and Mining Company,"" and by that name shall have a common seal, sue and be sued, plead and be impleaded, answer and be answered unto, defend and be defended in all Courts and places whatsoever, and shall have power, right and authority to purchase, hold and enjoy lands, tenements and hereditaments for them, their successors and assigns, and all other the powers and privileges made incident to a Corporation by Act of Assembly in this Province, for the purpose of erecting cranes, wharves and other machinery for the purpose of quarrying, manufacturing and exporting building stone and other stone and other valuable material, and for opening and working of mines and minerals and all other business connected therewith in this Province, and for carrying on and managing the same, and also the constructing and making of such railroad or other description of road as may be necessary for the transportation and shipment of the said building stone and all other articles, and also that they the said Company or a majority of them shall from time to time have full power and authority to construct, ordain, make and establish such bye laws and ordinance as may be deemed necessary for the good rule and government of the said Corporation; provided that such bye laws and ordinances be not contradictory or repugnant to the laws and statutes in force within this Province. 2. The capital stock of the said Corporation shall be one hundred thousand dollars of current money of the Dominion of Canada, and shall be divided into two thousand shares of fifty dollars each, to be paid in at such times and instalments as the business of the Company shall require, when duly ordered by the Directors, and every person who shall be a holder of one or more shares shall be entitled to vote either in person or by proxy, having one vote for each share as aforesaid, and it shall be lawful for the said Corporation to grant certification of full stock in whole or part payment for the consideration of lands, quarries, buildings, wharves, machinery, mining rights or privileges, in the place of money subscription to said stock, at such valuation as a majority of all the subscribers shall fix. 3. The first meeting of the said Corporation shall be held at Hopewell aforesaid, and shall be called by George K. Snow, or in the case of his death, neglect or refusal, by any two of the said Company, by giving notice in one or more papers printed in the said County of Albert, or any County adjoining the said County, at least thirty days previous to such meeting, in order to organize the said Company and for the purpose of establishing bye laws, choosing Directors and such other officers as may be necessary, which Directors and officers so chosen shall continue in office until the first annual meeting, or until re-election, or others are chosen in their stead; and the members of the said Company, or shareholders present at the meeting or appearing by proxy, shall organize said Company, establish bye laws and choose Directors of the said Company by a majority of votes. 4. The shareholders shall meet annually at such time and place as may be appointed and regulated in and by the bye laws of the said Company, at which meeting the shareholders present or by proxy may either re-elect the Directors before appointed, or any of them, or elect other Directors in the stead of all or any of them; provided always, that the omission to meet shall work no forfeiture, but the shareholders may be afterwards called together for that purpose by one or more of the Directors of the said Company for the time being, or by any three of the shareholders. 5. The Directors and officers of the said Company, or a majority of them, shall have full power and authority to manage the business and concerns of the said Corporation, subject to the bye laws of said Corporation and the provisions herein contained, may appoint and employ any agent or other persons by them deemed necessary, may declare annual or semi-annual dividends or profits as ascertained by them; but no person shall be eligible as a Director unless he be a stockholder and of the full age of twenty one years. 6. All the shares in the said Company shall be numbered in progressive order, and every member of the said Company shall have a certificate under the seal of the said Corporation, and signed by the President and Clerk or Secretary thereof, certifying his property in such shares as expressed in the certificate, and the shares of the said Corporation shall be assignable in the form directed in the said bye laws, and such assignee shall thereupon become a member or stockholder in the said Company; and whenever any stockholder or shareholder shall assign or transfer his stock or shares in the said Company, he shall cease to be a member of the said Corporation. 7. The joint stock and property of the said Company shall alone be responsible for the debts and engagements of the same. 8. Provided always, that unless ten per cent of the capital stock shall be paid in for the purposes of the said Corporation, and a certificate of such payment signed and verified on oath by the said Directors or any one of them, (which oath any Justice of the Peace is hereby authorized to administer) shall be filed in the office of the Secretary of the Province before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years. 9. The said Company shall keep an office in Hopewell, in the County of Albert, in this Province, and an Agent there, for the transaction of business connected in this Province; service upon the said agent of all writs, processes, notices and other

Carleton Sentenil - Mar. 31, 1877Acts passed.... An Act to incorporate the New Brunswick Freestone Company."

Royal Gazette - Apr. 4, 1888 Public Notice. Notice is hereby given, that the undersigned intend applying for the issue of Letters Patent, pursuant to the provisions of Chapter 9, of the Acts of Assembly of the Province of New Brunswick, passed in the year of our Lord one hundred and eighty five, intituled An Act respecting the incorporation of Joint Stock Companies by Letters Patent, for the incorporation of a stone quarrying and working Company. 1. The proposed corporate name of the Company is the Atlantic Brown Stone Company. 2. The object for which incorporation is sought is, the quarrying, working, manufacture, sale, shipping, and exporting of building and other stone at Wood Point, in the Parish of Sackville and county of Westmorland, and at other places in the Province of New Brunswick and elsewhere; the purchasing and working of quarries of building stone, grindstones, &c.; the building and purchasing of railways, tramways, wharves, derricks and machinery, and the doing of all things requisite for or incident to carrying on the business of quarrying and shipping stone in the Province of New Brunswick and elsewhere. 3. The Office or chief place of business of the Company is to be established at Wood Point in the Parish of Sackville, in the Province of New Brunswick. 4. The amount of Capital Stock of the Company actually subscribed is $24,000. 5. The number of shares is two hundred and forty, and the amount of each share is $100. 6. The names, addresses and calling of each of the applicants is as follows:- Joseph B. Read, of Sackville, in the county of Westmorland, and Province of New Brunswick, Merchant. Henry C. Read, of Stonehaven, in the county of Gloucester, and Province of New Brunswick, Merchant. Henry R. Emmerson, of Dorchester, in the county of Westmorland, and Province of New Brunswick, Barrister. Stephen Clark, of Sackville, in the county of Westmorland, and Province of New Brunswick, Merchant. Walter R. Wood, of the City of New York, in the State of New York, Stone Merchant. John Lord, of the City of New York, in State of New York, Stone Merchant. Rufus Seaman, of Minudie, in the County of cumberland, and Province of Nova Scotia, farmer. George Hibbard, of Lower Cove, in the County of Cumberland, and Province of Nova Scotia, Merchant. Amos Seaman, of the City of Boston, in the State of Massachusetts, Merchant. Dated this 2nd day of April, A.D. 1888."

Royal Gazette - Apr. 27, 1892 Notice of Application For Letters Patent. Notice is hereby given, that the undersigned will make application to the Lieutenant Governor in Council, for Letters Patent under the Great Seal, for a Charter constituting the undersigned, and such other persons as may become shareholders in the Company thereby created. a body corporate and politic, under the provisions of The New Brunswick Joint Stock Companies Letters Patent Act of 1885 and Amending Acts. The proposed corporate name of the Company is The Moncton Freestone Company. The object for which its corporation is sought is - to purchase, own, sell and deal in stone quarries and lands, privileges and facilities in connection therewith, to quarry, manufacture, purchase, sell and deal in stone for all purposes, and such other things as are incident thereto. The chief place of business is to be the City of Moncton, in the County of Westmorland. The capital stock of said Company is to be $10,000, divided into 100 shares of $100.00 each. The names in full, address and calling of the applicants are as follows, the first five of whom are tobe the first or Provisional Directors of the Company:- Names. Address. Calling. Theophilus B. LeBlanc Moncton. Contractor. Thomas Fitzsimmons Moncton Contractor. Robert A. Borden Moncton Barrister Matthew Lodge Moncton M'fg. Agent Philip. D. Bourque Moncton Quarryman"

Chignecto Post - May 4, 1893 New Stone Company.- The Royal Gazette containsnotice of the application for incorporation of a local company to carry on a quarrying business at Wood Point or elsewhere. The notice says: 1. The proposed corporate name of the Company is The New Brunswick Brown Stone Company . 2. The objects for which such incorporation is sought, are: The carrying on of a general business for the quarrying, manufacturing and purchase and sale of Building and other Stone; and also for the acquiring andholding of lands, buildings, machinery and other property for the purposes of said business and incidental thereto. 3. The Office or chief place of business of the said Company shall be in Sackville, in the county of Westmorland, in the province of New Brunswick. 4. The amount of the capital stock of the said Company will be ten thousand dollars, divided into two hundred shares of fifty dollars each, upwards of five thousand dollars of which said capital stock will be actually subscribed before the issuing of such Letters Patent. 5. The following are the names and addresses and callings of the several applicants, all of whom are to be the first and Provisional Directors of the Company:- Stephen Clark, of Sackville, in the County of Westmorland, New Brunswick, Merchant; William Clark, of Sackville, in the county of Westmorland, N.B., Merchant; Josiah Wood, of Sackville, in the County of Westmorland, N.B., Merchant; William Milner, of Sackville, in the county of Westmorland, N.B., Master Mariner; Henry A. Powell, of Sackville, in the county of Westmorland, N.B., Attorney-at-Law. There is an unlimited quantity of superior stone at this point and under energetic management an extensive business can be developed."

Daily Telegraph - Oct. 3, 1874 Albert County. -... Lower Cape. - From this place the Freestone of the Hopewell Quarry Company is shipped, although the spot is not a very favorable one, and the stone has to be carted down from the quarries, a distance of three miles. ... Hopewell Quarry Company. - Three miles from Lower Cape, in a northerly direction, are the Freestone quarries which bears this name. The quarries are about a mile from Demoiselle Creek, at the mouth of which, as already stated, the stone is shipped. The company is an American one, and commenced operations June 24th, 1872, in the lower quarry on the south side of the present one, which was worked for half a year. About this time last year they begun in the upper quarry. The property includes about 400 acres, and the quarry has a face of 200 feet, with a depth of 75 feet, the working rock being 30 feet deep. At the end of the season the quarry is expected to be about 200 feet square, and they have now about 1,000 tons on hand, which they are busily engaged in shipping. They supply stone for the culverts of the railway in the section from the Albert Mines to Hopewell, of which 1200 tons have already been forwarded. The Company mainly find a market for their stone in Boston, where freestone of good quality brings $16 per ton. The quarrymen are mostly French, and are accommodated in a large boarding house, which, together with the store, is some distance off on the main road, in the Curryville settlement. This year the operations have been somewhat slack on account of the strike of the stone-cutters in Boston, and also for want of railroad transit. ...... Marble Works. - The visitor is somewhat surprised to find that marble cutting is extensively carried on here, there being two establishments, those of Mr. John C. Tingley and Mr. Josiah Tingley. Here tombstones are manufactured for the inhabitants of Albert County, and in point of workmanship, taste and originality of design, they would compare favorably with those of metropolitan establishments. ..."

Colonial Farmer. - May. 29, 1871 Geological Report. - Continued. From the escarpment of the mountain the ground slopes tothe southeast at a low angle, probably in conformity with the dip of the underlying grey grits, which flank the narrow coping of trap. Near the bridge the river divides into three branches, and on the northeast branch, about one and a quarter miles from the Forks, occur the Falls of Nashwasis. - Here the brook, running in a picturesque gorge formed of nearly perpendicular cliffs of yellowish grey sandstone, 100 feet apart, and about the same height, falls over course silicious conglomerate rocks, forming a cascade of forty feet high and fifty feet in width. Both the cliffs above, and the conglomerate forming the bed of the stream at the fall are copiously charged with vegetable fossils, such as leaves and stems, the latter sometimes of considerable thickness, the bark being converted into coal, and the core replaced by sandstone; nodules of iron pyrites are also very abundant. Although such traces of carbonaceous matter abound, there seems to be nothing to justify the expectation, which has been entertained by some of the neighboring residents, that a workable seam of coal may be found here. Rumours were current also, when I visited the locality, of veins of manganese and even of more valuable ores having been found on McLeod's Mountain, together with great deposits of fine red ochre in the vicinity, but as they were not met with by me, I am unable to give any details. Just below the fall there is a considerable development of a pure white siliceous conglomerate, composed entirely of large quartz pebbles, and without a grace of organic remains. From the mouth of the Keswick, northeastward as far as Tay Settlement, a distance of fifteen miles, the hardness of the outcropping edges of the grey grits and conglomerates, combined with the unequal effects of superficial denudations, produces a very marked topographical feature, forming a succession of nearly 10 parallel ridges running northeast and southwest as far as the valley of the Nashwaak, and all of very considerable elevation up to 900 feet above tide water. Most of the rock exposures observed by me in this district have been recorded on the large map, and need not be here repeated. In this intervale the red rocks are nowhere conspicuously displayed, owing to the relief of the surface, the nearly horizontal attitude of the strata, and the soft nature of these rocks themselves. In the valley of the River Tay, however, they reappear in considerable breadth, as might be expected from the fact of its cutting the formation traversely. At Beone's Mills, about eighteen miles from Fredericton, on the north branch of the Tay, and near the road between Cardigan and Tay settlement, fossiliferous and highly ferruginous grey grits occur in alternating massive and shaly beds, dipping SE 7ø, with specular iron and impressions of large and small obscure fossil vegetable remains. A little further north, at the bridge over the south branch, thin bedded micaceous red sandstones appear, dipping SE apparently 17ø; this is at the junction of the red and grey rocks. Proceeding one and a half miles northward on the road, we find at the bridge over the North Tay, the contorted and nearly perpendicular slate and quartzite of the unconformable metamorphic rocks, seamed with quartz veins, and slightly calcareous, but only so in streaks and bleaches. On descending the stream (but ascending in stratigraphical order) the slates become gradually more calcareous, arenaceous and micaceous, and assume a red colour, till at a little over half a mile below the bridge, they are covered by the unaltered bed of red marl and conglomerate, dipping SE 7ø. The section afforded in the bed and banks of the Tay is tolerable complete distinct, cutting nearly transversely to the direction of the Carboniferous rocks, extending for a distance of about ten miles from their base, and including two small seams of coal. Where coal has been found the seams themselves are concealed, and neither the quality nor conditions of occurrence of these coal seams have been accurately established; but their appears no reason to believe them to be of any economic importance, as no true underclays have been found in this section of the country, and even the continuity of the coal beyond the spot where it has been found has not been ascertained. Between Tay Settlement and Stanley, on the Nashwaak, on the land of Robert Thorburn, an interesting exposure of the red calcareous conglomerate and underlying metamorphic slate rock, in vertical section, is afforded in a small ravine or gorge. The slate rock at and for some distance below the plane of contact is also calcareous, and seamed with strings of quartz and calcspar; in the same neighborhood this rock was manyyears ago successfully burned in a kiln for lime. A similar conjunction to the last is well observed, though in horizontal exposures, in descending the River Nashwaak, where, about a mile below Stanley Bridge, the slates, reddened and rendered highly calcareous towards the contact, are overlapped by the red conglomerate, sandstone and marl, which continue uninterruptedly in descending, for a distance of one and three quarter miles, equivalent to a thickness of about 1000 feet; and terminate near the mouth of

Cross Creek, there giving place to light-grey sandstone and conglomerate in massive beds. At Red Rock settlement and also at the mouth of Cross Creek, eruptive masses of trap protrude through the red conglomerate near the summit. At Nashwaak Bridge, on the Miramichi Road, thin-beddedflaggy grey grits are seen on the bed and bank of the river, dipping SE 5 deg.; and the same rocks are occasionally displayed at intervals along the Portage road to Boiestown. About ten miles from Boiestown the road skirts to a considerable extent, of red conglomerate, terminating towards the east of an eruptive mass of basalt similar to that at Clarke's Mountain, but more vesicular. It forms the height of land on the Portage, and is about three-quarters of a mile wide, terminating at Clearwater Brook, a tributary of the Taxis River; the other dimensions and precise form of the mass have not been fully ascertained. From Boiestown eastward for three or four miles, the right bank of the Southwest Miramichi is flanked by an amphitheatre of the coarse grey sandstone rising to the height of 200 feet above the river, and dipping SE 5ø; the line of this escarpment is considerably to the south of that of the bluffs at Keswick, Cardigan, etc. Near the mouth of the Taxis River, which flows into theMiramichi a little above Boiestown, a small seam of coal about three inches in thickness was reported. Four miles up the Miramichi from the mouth of the Taxis, the horizontal grey fossiliferous sandstones overlie red conglomerates and marls, dipping 67 deg. to the southeast. This high dip, of which some of the beds of the grey grits also seem to partake, may be due to a fault; in corroboration of which hypothesis the underlying metamorphic slate is usually full of veins of quartz and calcspar, as if much fractured; but on the other hand it is to be noted that with the observed horizontal breadth of the red rocks (400 yards) the thickness would closely approximate to that usually obtained for the red rocks, (1000 feet). The grey sandstones near this locality yield very fair though rather fine-grained grindstones; and some of the red marls might be

S.J. Daily Sun - Mar. 1, 1889 Hopewell. - ... (The Rocks) - The cape is best known to sailors as a conspicuous point on the coast during several hour's sail, and ashore for its interesting scenery. Though not as grand as the Giant's Causeway, Fingal's Cave, or the Palisades, yet it is easy of access, well worth seeing, and adds materially to the pleasures of a summer holiday. It is on the west side of the bay mentioned, has a water front near to low water mark of about one quarter of a mile, with a height of 100 or 150 feet. The south end is bold, the north end forming a gentle slope to low ground. This point is reached by a carriage road, and here an array of water worn columns of rock 20 to 30 feet high above a smooth, sloping beach, met the eye while the shore wall is seen to be honeycombed with caverns. Farther down shore past projecting reefs and recurring recesses, as the headland rises, the outstanding masses grow more lofty andimposing, occasionally approaching the height of themainland, with a diameter of 30 to 50 feet. Some areapparently solid and several rods away from the bluff,others parted off by a fissure a few feet wide and rifted from top to bottom, with their bases riddled by long oval shaped passages which here and there almost undermine a towering and ponderous slab. The tunnels, galleries and caves differ in size, shape and form. Here is one roomy as Dan O'Connell's acts of parliament; the next with scarcely standing room, while another has 20 feet of space between its floor of sand and pointed arch overhead. They run parallel to each other at times, or cross at right angles. Some go straight through from daylight to daylight, others by turns and surprises, or now and then end in the cliffs too far and too dark to be explored without a light. The rock at these peculiar places is chiefly a fine grained, tough, dull red, conglomerate, alternating with other layers of red sandstone, and coarser conglomerate, all containing a proportion of lime, which appears to be the cementing ingredient between the layers as well. It pounds up more readily than it splits or breaks and is an unwilling stone to give up specimens. Probably it was formed without flaws, but irregular lines of cleavage now run up and down through it at varying distances apart. These cracks have evidently marked out the isolated portions and located the caverns. Atmospheric agencies, the surf, and the beach pebbles, burrowing in the crevices have done the rest. No caves a mile long and necessarily earlier formed, of which written descriptions and traditions tell, could be found. Fractures similar to these would reasonably account for the remarked absence of living springs over a considerable area of neighboring country. Down shore at the southeast corner two regular wall like ledges of blue limestone reach under the tide and in shore rise in a precipice. Here a pile of large square blocks have ground upon each other showing the marks of the waves' tremendous force. This is the most enduring stone of the group and contains curiously worn arabesque pieces, with veins resembling bunches of grapes. The Cape rocks seem to be older than the fossil marked sandstones at St. Mary's Point and Hopewell Cape, on either hand, on the same shore, but widely separated. ... Close by Cape Demoiselle Creek empties into the bay. This stream gives its name to the country through which it flows. One branch takes its rise near the once famous Albert mine. Large deposits of gypsum, freestone and limestone, with indications of salt are found along its course; freestone and lime stone have been extensively quarried. These facts, with the name as a connecting link, seem to call reference to them. .... Though prospecting to any extent for albertite has ceased, and in view of an estimated expenditure of $100,000 by several American companies in trial pits and borings outside Albert mines limits, yet there is a lingering and quite general hope that the lustrous mineral will crop out at some unexpected place and time."

Freestone Co. - On the border land, between Hillsboroughand Hopewell, are the quarries and kilns of the Albert Brook Lime and Cement Co. The nearest railway station is called McHenry, in honor of the manager of the works, Mr. Thos. McHenry, one of the most widely known of Albert's prominent men, and there is a branch, a half mile long, to the kilns. The company owns 100 acres of limestone and freestone land. This is the fourth year of its operations, and it burns three or four thousand casks yearly. It has been supplying the Penitentiary, and its lime is highly spoken of for building purposes. It is also a valuable fertilizer, as it contains ten per cent. of phosphates, and half of the whole product is sold to agriculturalists. The kilns are lined with firestone, one of the products of the district, which contains so much silica that the action of the heat makes it look like glass. The N.B. Freestone Company, having slackened operations at its old quarries, at Curryville, because the color of the stone there is not of the hue most in demand at present, secured some land adjoining that of Mr. McHenry's company and opened a freestone quarry on it. The quarry is on the side of a hill which rises abruptly from the little valley in which the lime works are situated, a short distance further up the brook which winds through the narrow strip of level land between the hills. The hillside has been opened near the top, and the quarrymen are working downward, leaving a perpendicular wall of stone. This wall is the boundary between the company's land and a lot of which Mr. McHenry has a lease, with the privilege of purchase. The Freestone Company bought up a mortgage on it, but Mr. McHenry has tendered the money for the mortgage and the land and considers it as good as his. He may, therefore, go on and work his own share of the quarry, or join with the N.B. Company. The whole hill, about three acres in extent, is composed of freestone. The greater part of that which has been exposed is lavender brown, the most popular color in the United States; but there is also olive and a handsome light gray, said to be the same as that of which Paris is built, which is so soft that it may readily be carved with a knife, but gets hard after exposure to the atmosphere for a few months. The stone in this quarry is of fine texture, and free from faults and imperfections. It lies in natural benches, with the lines of cleavage distinctly marked, and it is wedged off into as large blocks as are required, some of them weighing eight tons. These are easily hauled by one horse to the foot of the hill, over a steep path along its face, on wooden drags, and an extension of the McHenry Branch Railway, twenty chains or 2,000 feet, will give access to the Albert Railway. Part of the road bed is graded, but the work upon it has been suspended in consequence of the dispute with Mr. McHenry about the mortgage on the land he holds and the company wants. The settlement of this dispute will be followed by the building of the railway extension, and then the shipment of the stone will begin. Mr. McHenry feels, as Dr. Johnson said of the brewery, that the quarry is the potentiality of wealth beyond the dreams of avarice, and he looks forward to becoming a millionaire in the future. Although not clean past his youth, as Falstaff said of the Chief Justice, he hath yet some smack of age in him, some relish of the saltness of time, and has lived an active and laborious life without reaping much reward. All who know him will be glad to see his present hopes realized. Geologically speaking, Mr. McHenry says, this region is of sub-carboniferous formation, and flanks the Huronian, which crops out above the freestone. Metals of various kinds are found at the junction between the two, and people who have been there lately prospecting have washed gold out of the sands of the brook. On one side of the brook there is freestone, and on the other side limestone. The latter is overlaid by a vein of jasper, about a foot thick, from which many beautiful specimens, suitable for jewellery, have been obtained. The stream is called Hayward's Brook, but Mr. McHenry has named it and the district Jasper Brook, and is looking forward hopefully to the time when he will be rich enough to build Jasper Cottage, and dispense therein a generous hospitality to his friends. Mr. McHenry is a man of sentiment, and will have at least the basement walls built of jasper, or faced with it above ground."

County Coal;

Daily Telegraph - Sep. 10, 1885 Over the Caraquet Railway. - ... The chief items of export will be fish, lumber, grindstones, building stones and farm produce of every kind. In a few months the grindstone shipper will be able to send his goods to the United States without the expensive operation of transshipment at either Bathurst or St. John. Already 64 carloads of stones have been shipped over the section of road now constructed. ... At Clifton are the extensive grindstone quarries of the prosperous firms of J.B. Read & Co., Lombard & Co., Francis Scott and others ... Next comes New Bandon with three lobster factories and as many grindstone quarries. It might be mentioned here that at Clifton there are decided indications of coal underlying thegrindstone formation. Mr. Read states that the seam in places has a thickness of eighteen inches, but the greater portion is black carbonaceous slates, and the coaly portion does not exceed from six to eight inches in thickness. Coal of considerable thickness is reported at Caraquet and at Shippegan, and the outcrop yields promising specimens. Should a workable bed be found it is needless to say a market is ready for all that could be produced. The building stone referred to above is used entirely for local purposes. Many of the beds, however, are quite free from pyrites, and equal in quality to the fine stone obtained in the southeastern portion of the Province..."

S.J. Daily Sun - Sep. 15, 1886 From Bathurst to Shippegan. - Caraquet Railway … At Clifton are the extensive freestone quarries of Messrs. Joseph Read & Co., Lombard & Co. and others, capable of producing unitedly, as now operated, between 5,000 and 6,000 tons per annum of the finest grindstone in the world. The deposit appears to be inexhaustible. Within the last two years Messrs. Read & Co. have been finding an outlet for their products in Canada, though as yet the United States supply the chief market. Eventually the entire output will be shipped by rail direct. From 300 to 500 men are employed at the quarries. Read & Co. have some very large quarries in the state of Ohio, and others on the Miramichi and Bay of Fundy. At Pokeshaw the writer was shown a solid cliff of magnificent building stone 200 feet in height. Recently both Lombard and Read have added a great deal of expensive modern machinery to their works. We noticed as we passed a new Methodist church in course of erection at Clifton. Operations, by the way, have been commenced on a handsome new R.C. church at Bathurst to replace the one destroyed by fire a few weeks ago… Strong hopes are entertained that theoutcroppings of coal at Clifton may lead to the discovery of a workable vein. Several small seams of coal have also been exposed by the workmen in the cuttings near Caraquet. The coal is of very good quality and if found in paying quantities, as expected, must be of immense value to the whole county, and of especial importance to the railway, inasmuch as it will have an advantage of 200 miles in distance from the Canadian markets over any beds now worked in these provinces..."

NB. Courier - Sep. 16, 1837 LETTER 1. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May it please your excellency;The important measures which have been adopted for thewelfare and prosperity of New Brunswick, by the Executive and Legislative Branches of the Government, since your Excellency's arrival in the Province, have produced the highest satisfaction among the inhabitants of that flourishing and loyal Colony. And although but a few months have passed away, since the country has enjoyed the benefit of your Excellency's talent and experience,it is already known that the veteran soldier is also the wise statesman under whose care science, industry, and lawful enterprise are protected, and have even now received a new impetus in their numerous departments. With a knowledge of these facts, I beg permission to address the following letters to your Excellency, knowing that whatever they may contain of an useful character, will be received with the patronage their author would endeavour to merit. The importance of examining the structure of the earth, with a view to unfold its valuable resources, must be evident to all who consider that mineral substances are indispensibly necessary in all the arts and sciences, and every work which man is called upon to perform. They form the powerful instruments of war, they supply the blessings of peace, and diminishing animal labor, they afford abundant means of happiness and health. By them agriculture, manufactures, and commerce are sustained, and the prosperity of every country depends upon their discovery and employment. None of the sources of national independence and wealth, have contributed so largely to the civilization of mankind, as those of the mineral kingdom, whose treasures also admirably display the intelligence and power of their All-wise creator. It is true that by viewing them the mind feels its own weakness, although it can hardly fail to behold the beauty and order of their arrangement. If such remarks will in any way apply to countries where vast mineral deposits are giving out their valuable contents to the benefit of their inhabitants, how much more must they be acknowledged to be correct in a Province, into which even granite and limestone were imported a few years ago. But instead of pursuing farther a prefatory part of the subject, I proceed to lay before your Excellency such observations as have been made by personal examination. And without confining them entirely to Geological and Mineralogical detail, will endeavor to give the result of my enquiries in other branches of natural science, with some topographical matter collected on a tour through the country. Having been requested by M.H. Perley, Esquire, the active agent of the Salmon River Coal Company, to examine the Coal formation on the Grand Lake, in New Brunswick, it was deemed necessary to ascertain, if possible, how far the strata of that place were connected with those of Nova Scotia, and how far the Coal districts of the two Provinces were united. On the boundary line between the two Provinces, there is an extensive Coal Field, having a large part of the county of Cumberland on one side, and a part of the county of Westmorland, belonging to New Brunswick, on the other. The coal district has been denuded by the action of the sea, and its rapid tides on the coast of the Bay of Fundy, and by the steady action of the waters flowing along numerous rivers taking their rise from the higher lands of the interior; and long since the coal with its accompanying strata of sandstone, shale and limestone were deposited, vast portions of each have been worn down, and carried away by tidal currents, and torrents ever rushing onward toward the sea -- That the strata of sandstone and other rocks, were once perfect and continuous from one side of Chignecto Bay and Cumberland Basin to the other, there can be no doubt. The strata of Cape Enrage, Cape Maranguin, and Grindstone Island, and those of the opposite coast on Nova Scotia side, are identical in structure, mineral composition, and inclination, and may be seen at low-water, reaching out beneath the sea, pursuing a direct and uniform course. Chignecto, and Shepody Bay, Cumberland Basin, and the numerous rivers and creeks emptying into them, almost intersect this coal field; and have by their unremitting currents, exposed beautiful sections of the rocks now forming their shores. The detritus produced by these causes, frost, rain and atmospheric influence, has been deposited in lakes, estuaries, and on the sides of creeks, forming those extensive marshes, now skirting the rivers of this fertile country. The same causes that reduced the hard rock to an almost impalpable powder, have transported the sedimentary matter to those situations where it is now found, until it rose to the highest level of the sea, and formed a soil only inundated at the highest tides. The coal field extends northward and eastward to Northumberland Straits, where the same freestones are quarried that appear on the shores of Chignecto Bay. - The sandstones of Grindstone Island, Cape Meranguin, North Joggins, and Coast of Shepody, are very valuable, as they apply the most durable and elegant slabs for buildings, and also afford the best materials ever discovered for grindstones. Of the latter great numbers are made yearly, and shipped to the United States, and from thence to other parts of the world. They are equal in quality to those found at the South Joggins, and already afford a profitable and extensive trade. These 3 sandstones are generally of a grey color, and composed of fine grains of quartz, with a little feldspar and mica united by an argillaceous cement. The lines separating the strata, (which differ much in thickness), are perfectly parallel, a circumstance which enables the workmen to select such strata, as have a proper depth for the diameter of the stone to be cut; and it is surprising with what facility the compact rock is converted into circular grindstones, which appear like piles of large cheese at the quarries from whence they are taken. The measure of a single stone is 24 inches in diameter, and 4 inches in thickness, but they are often made of much larger dimensions, the price of each of the above size, is from 2s. 6d. to 3s. 6d. These grindstones already form an important export of New Brunswick, and the time is not far distant when they will not only enrich individuals, but also become a source of public revenue and provincial wealth. From the rocks of the Coal Basin of Chignecto Bay, and the adjacent country, most of the manufactories of the United States receive the best materials for grinding iron and steel; these northern colonies and most of the Western States are supplied with the best grindstones for sharpening all kinds of cutting instruments; therefore it is obvious that as population and manufactories increase, so must the demand for the sandstone of this portion of the country supply a permanent source of commerce. Many years have elapsed since coal was first discovered at the South Joggins, on the east side of the Chignecto Channel, and while making a geological examination of the strata at that place for the General Mining Association, it appeared to me that by the direction of the different layers of rocks, that it could also be found on the opposite coast of New Brunswick. During that examination, I discovered and measured several strata of coal which had not been previously reported, and found the whole number to amount to nineteen, several of which are workable. Having ascertained the true course of these strata, a landmark on the opposite coast was noted down; but the exact point where the coal might be expected is covered with a superficial bed of gravel so far as it could be distinguished by a telescope; and, perhaps that circumstance has prevented its discovery on the N. Brunswick side, which is several miles distant, and I regret that my time has been too much occupied to pursue this enquiry further. The rocks of Cape Meranguin, Grindstone Island, and their neighboring shores, like those of the county of Cumberland, abound in fossil relics of the vegetable kingdom, belonging to that period in the earth's history when the plants from which the coal was formed were in a living state. There is scarcely a stratum along this interesting part of the Province that does not exhibit remains of some lofty arborescent plant, or humbler 4 species of the carboniferous tribes; all of these are now converted into sandstone or shale, according to the circumstances in which they were placed, and they cannot fail to produce reverence in the minds of all who behold them. Their vast dimensions show how frightful the period was when they lived, and their present petrified condition bears record of the changes and convulsions the crust of this earth has suffered. These once living vegetables now stand like sculptured monuments bearing testimony not only to their own former life, and place of abode, but their inscriptions which seem to defy even time itself, declare that this earth has been the theatre of catastrophes unknown in these later days. They now stand like beacons to guide the astonished geologist to the haven of truth, and the indelible characters they display are interpreted without the risk of error or danger of delay. Ferns form a considerable part of the fossil flora of this Coal field. They all seem to belong to arborescent species that previous to their destruction had obtained a growth truly astonishing. Equizetums, plants having some analogy to the common horsetail of our swamps, are common. The species found here are however extinct even in the tropical latitudes, and none of their kind has ever been seen in a living state. There are several species of Lepidodendron, plants resembling the fir tribes. Some of these are of enormous size. I discovered one 48 feet in length, and 3 feet in diameter at the largest end. It lay in a horizontal position, passing through several strata, and a large portion of its top had been carried away by the violence of the waves. There are many other varieties of fossil plants along these shores; but a full description of them cannot be given in these letters, as it would occupy the space intended for other matter. It may, however, be remarked, that all these plants were produced in a climate, at least, as warm as that between the present tropics, and the vegetation to which they bear any resemblance can only be found in warm regions. Many of them have no living successors, and it is far from being improbable, that even the warmest climate in the torrid zone would not supply sufficient heat to produce those families of the vegetable kingdom, that have long since ceased to exist upon this planet. It is certain, therefore, that the climate of this country was at one time extremely warm, that a remarkable reduction of temperature has taken place; and the earth has been clothed with plants adapted to the degrees of heat and light now shed upon it. By taking the most limited view of the great size of the fossil plants to which I have referred, and the luxuriant growth they must have enjoyed, we cannot fail to discover the vast quantity of materials produced by 5 the earth for laying up the stores of coal, which now add so much to the comfort and happiness of mankind. And we must also believe, that when those numerous tribes of the vegetable kingdom flourished, the earth was surrounded by an appropriate atmosphere, an abundant light, and it was as far as we can judge by comparison, every way fitted for sustaining extensive tribes of mammalia, and numerous races of aerial and terrestrial beings. It would be selfish in man, to suppose that this mighty herbage, of a former condition of our planet, was created solely to supply the fuel now found in the earth. It is far more in accordance with the all-wise Creator's works in general, that they were also given to nourish and bestow happiness to other creatures, which were co-evil with the forests now found changed into coal, or converted into solid rock upon our shores. But are the remains of those animals found? It is true there are many tribes of graminovorous animals inhumed in the earth, but some of them are discovered in situations which render it at all probable they fed on the tropical herbage of the coal period. They are, according to the most received geological opinions, separated from that herbage by extensive and deep deposits of other rocks, and by a period of time almost immeasurable. The celebrated Doctor Buckland, in his Bridgewater treatise, Vol. 1, page 62, says, ""no higher condition of vertebrata has yet been discovered in the transition formation, than that of fishes,"" an opinion confirmed by the labors of many other geologists, whose discoveries have been confined to moluscous radiated, and other animals occupying marine and lacustrine situations. But we should be careful how we infer from these facts, that there was not a corresponding exalted state of animal life to that of the vegetable kingdom, at the period referred to. And perhaps the time has not yet arrived, when a perfect theory can be formed which will explain the phenomena exhibited in the earth. It has been said by some that there has been a gradual increase in the number and perfection of plants and animals, since that remote period, when this earth first became habitable. The circumstances, however probable, as far from being proved; and there are many links unsupplied in the chain uniting the animated creation of past ages, with that now in existence. In my next letter, the

St. Andrews Beacon - Nov. 28, 1889 CHARLOTTE COUNTY'S RESOURCES.- We doubt if there is another County in the whole Dominion which offers such tempting opportunities for capitalists as does Charlotte County. Where is there another County so rich in natural resources; in mineral wealth, as Charlotte. Coal depositsat Lepreaux, granite and slate quarries at St. George,silver and gypsum at Frye's Island, copper on anotherisland, salt wells at the Bayside, immense cliffs of red sandstone at St. Andrews. What more could we ask for?What more do we want? And yet we have not mentioned the St. Andrews turnip, or the St. Andrews sardine, or the Grand Manan herring and cod, all of which possess considerable importance. Nor have we dwelt on the scenery, or its beautiful, capacious harbours, the fame of which is world-wide. Surely, if there is a happy people on the face of the earth they should be the people of Charlotte. And so they would be, if the capital was at hand to develop the rich resources of their County."

Codes Z5 / IDX_Names: St. George Slate;

Daily News - Jul. 22, 1881 Slate Quarry. - A fine slate quarry has been found on Mr. Douglas Wetmore's farm, St. George. Some samples of the slate have been sent to this city for examination by those interested in such matters. The slate is of excellent quality, easily worked, and accessible by both land and water. The quarry consists of a high bluff jutting out into the bay, and bounded on one side by the river and on the other by a deep ravine, and the slate lies flat and on edge in all sized sheets."

St. Croix Courier - Jun. 9, 1881 St. George.- ...And now for the news - Col. Wetmore has lately discovered a slate quarry on his farm in the village. The quality of the slate is pronounced first-class, and the quantity is illimitable. The advantage of this find is that it is within a few feet of deep water so that there will be no difficulty in shipping it. The Colonel thinks he

St. Andrews Beacon - Aug. 13, 1889 A Philadelphia gentleman is in St. George examining the slate quarry of the Wetmore property with the view of purchasing it for a wealthy American Syndicate."

S.J. Evening Gazette - Oct. 24, 1889 Slate at St. George. - Councillor R.T. Wetmore of St. George, has been offered quite a consideration by western parties for a slate quarry which is located on his farm close to the southern bank of the river just below the basin. The quarry has been pronounced, by those competent to judge, a valuable one and it may confidently be expected that another important industry will soon be added to those that are already being so successfully carried on

IDX_Names:New Horton Copper; Shepody Mountain Manganese; Dawson Settlement; Teahan Mine; Grey Brook Gypsum; Sandstone, Building Stone, Monument Stone, etc.; Albert Lime, Phosphate and Brick Company; Albert Mines;

S.J. Daily Sun - Apr. 11, 1881 The Mineral Wealth of Albert. - Hillsboro, April 4th, 1881. Mr. Editor:- I have noticed from time to time that reference has been made to the mines and minerals of Albert County. So the Frenchman said of London, it is a province covered and filled with mines and minerals; and - much has been said and written, perhaps the half hasnot yet been told. Beginning at the boundary line between Albert and St. John Counties, we find copper all along the bay shore as far east as Salmon River, where a company is about being formed by Messrs. Cleveland and Steadman, with a capital of $100,000. We wish the enterprise every success. Coming up to Harvey we find a valuable depositof the same mineral at New Horton. At Harvey Point wefind the famous freestone quarries of Messrs. Roberts & Stevens. From these quarries a large number of the stone buildings of Boston and New York have been built. Coming up to Hopewell are the famous stone quarries of Messrs. Hayden, employing a number of men. At or near the Hill Corner has been discovered of late, manganese said to beworth $130 per ton. The company is about commencing operations on a large scale. In Salem manganese has beendiscovered on the farm of Jeremiah Steeves, only awaiting further developments. The lime stone worked by Messrs. McHenry, as well as the plaster quarries of J.T.Tompkins, are considered inexhaustible. That yellow metalso much coveted called gold has been discovered at New Ireland. We learn that searching and exploring willcommence immediately. We are indeed sorry to say that thefamous Albert coal mine is about to close, the deposit of Albertite, worth $25 per ton, having about run out. During the twenty-two years it has been worked, about $4,000,000 worth of that wonderful coal has been raised. Yet it is the opinion of experienced miners that the Albert mine is only a branch of the grand trunk and that the grand trunk is in Baltimore, about four miles west of the Albert mine. Miners tell us that the course of the coal in the Albert Mines is east and west, and as the mountains of shale in Baltimore more correspond exactly with the shale at the Albert mines, and the course is directly west, it looks both reasonable and probable that the Albert coal, so called, exists in mammoth deposits in Baltimore; and, as further proof of coal in that place, small pieces of coal precisely like the Albertite coal can be picked up at any time in the small brooks and rivulets running through those shale regions, which, of course, have been washed out in times of heavy rains. And as those undeveloped coal fields, as we believe them to be, are only four miles from the Albert Railway, and a level grade to and from, the means of transportation would be both cheap and easy; and we believe that if a little capital now lying idle in England and other countries was expended in Baltimore, the remuneration might be counted by millions. Yours, A.B."

IDX_Names: Lake George Antimony; Teahan Mine; Grey Brook Gypsum; Kent County Coal;

S.J. Globe - May 16, 1887 and Daily Times - May 18, 1887 and N.B. Reporter - May 28, 1887 The New Brunswick Mines. - The New Brunswick correspondent of the Halifax Critic writes: Since my last, nothing new has arisen in miningmatters, except the formation of a new development company in the northern part of the province, at or near Weldford Station on the I.C. Railway, to prospect and explore for coal. The presence of coal has been suspected for some time, as small seams and outcrops have been found from time to time in the vicinity. Opinions differ in the matter. Those professing to know considerable about it that there will not be any quantity or depth of seam found. Be that as it may, the intention is to make an exploration, and a company has been formed with a capital of $75,000 to prosecute work. It is said the Albert Manufacturing Co. atHillsboro are gradually increasing their business, and making occasional purchases of plaster properties in the vicinity of their works. The calcined plaster of this company has a good reputation, and they are meeting with large sales in the Upper Provinces.The work at Mineral Vale, Albert Co., is progressing slowly, and some changes have been made in the mining staff. There is also talk of putting in some new machinery, but of what nature I have not as yet ascertained. The location of this mine, eight miles from railway communication, is somewhat against it on the score of transportation facilities, but time will doubtless remedy this drawback soon, as there is some idea of extending the Havelock, Elgin and Petitcodiac railway branch to Bay Shore, in which case the desired facilities will be afforded. There are rumors of some fresh capital beingplaced in the Antimony mines at Prince William, in York county but nothing definite is known. These antimony properties in York county seem to have been dragged through an endless chain of legal difficulties, and companies have succeeded companies, and stock boomed and then sold for non-payment of calls, &c., till one can hardly form any definite conclusion over the matter. The manganese boom seems to be quiet, though work"

Daily Telegraph - Jun. 15, 1881 Economic Minerals of New Brunswick. - Although New Brunswick is inferior to Nova Scotia in minerals, it still is entitled to consideration in that respect, and it is not improbable that at some not distant day we shall see some new developments in connection with the mineral wealth of this Province. A few words now, (in answer to several correspondents) in regard to the useful minerals of New Brunswick which have been so far discovered. The coal areas of the Province are very extensive, and although the seams are thin, not more than 22 inches, and only worked at Grand Lake and one or twoother places, it is quite possible that they may have eventually be worked much more extensively. It is estimated the Newcastle coal basin alone contains upwards of 100,000,000 of tons, most of which could probably beobtained. When St. John becomes a great manufacturing city this coal will no doubt form an important factor in its prosperity. The Albertite has had a great history, but present appearances are unfavorable to that mining interest. There are several seams of anthracite in theDevonian strata at Point Lepreaux and also at Musquash. It has, however, not yet been determined whether these seams can be worked with profit, owing to the large amount of ash left after combustion. Copper ores have been found in many places inCharlotte, in Albert and elsewhere, but, so far, have not been worked with profit. Baryta, used for making, or rather for adulterating white lead, has been found at Frye's Island, Charlotte Co., where also galena and silver have been found. Minute quantities of gold have been found from time to time in several localities, but nothing has beendone in the way of mining. Argentiferous galena has been found in several localities. At Wannemake's, on Hammond River, the galena has been found to yield a fair proportion of silver. In 1878, on the west side ofMusquash harbor, yellow sulphuret of copper and galena were found in veins of white quartz, to the amount of $14 per ton, as was shown by actual assay. The hardness of the rock and the smallness of the vein are, however, against its profitable working. Considerable quantities of silver have been found in the same locality. Bituminous shales are found extensively inAlbert, Kings and Westmorland, capable of yielding from 65 to 90 gallons of crude oil to the ton, but they are of little value so long as petroleum is so abundant. Bog iron ores, believed to be of commercial value, have been found at Burton, in Sunbury, and also at Maryland in York. Large deposits of iron ore of very superiorquality are found at Jacksontown and other parts of Carleton County. Some of these samples have yielded as much as 48 per cent of iron. There seems to be no doubt that these mines will eventually be worked with profit. Black sand containing magnetic iron ore has been found at St. Martins, in the vicinity of St. John, and elsewhere. Antimony is found in great quantities in PrinceWilliam, York. These mines are worked with profit and the quality of antimony is excellent. It is largely used in making Babbit metal. Manganese is another profitable New Brunswick mineral. It is found at Markhamville, Kings County; in the County of St. John, on the South West Miramichi, and elsewhere. In addition to these minerals, there are manyothers more or less widely distributed. Clay fit for bricks and pottery is abundant. Granite in various colours is widely distributed in Charlotte and Queens, and red granite is largely exported to the United States and Upper Provinces. Graphite, or black lead, is foundnear St. John, and also in Queens county. Grindstones and freestones of the best quality abound, especially about the head of the Bay of Fundy. Gypsum is also abundant inAlbert and Westmorland. It also occurs in Kings and St. John Counties and on the Tobique. Kaolin fit for the manufacture of pottery is found in the granite districts of Charlotte. Limestone is abundant and is found of the best quality about St. John.Iron pyrites is found on the St. John and Miramichi. Saltsprings exist at Sussex and in the parish of Upham. There are other minerals of less value which might be named,but these we have mentioned are sufficient to show that the mineral wealth of the Province is by no means inconsiderable. A survey made with a view to practical economic results, rather than a mere scientific survey, might prove advantageous to the Province."

Daily Telegraph - Oct. 7, 1880 Exhibition. - ... Minerals. - Our Ores Viewed in Their Geological and Economic Relations. - The mineralogical exhibits, though not large, are very complete. This is a branch of our industries which ought to rank next in importance to agriculture, but in our Province, at least, it has not been developed to the extent it has in the sister Province of Nova Scotia. The collection of ores and minerals products belonging to the Mechanics' Institute is the largest and is one of the first objects seen on entering the Exhibition Building bythe main entrance. Albert County is well represented inthis collection by several fine specimens of Albertite, brown shale, on which the Albertite occurs, and gypsum or plaster of Paris from Hillsboro. Various samples of this mineral are seen, as well as the calcined plaster in several stages as prepared by the Albert Manufacturing Co. The useful minerals are of great variety, namely ores of iron, lead, antimony, copper, manganese, zinc, etc., the specimens of copper and iron ores being in greatest quantity. On the upper shelves of this collection aresome fine specimens of antimony from the Hibbard mine at Prince William, and of anthracite from Lepreaux. This last, although not found in great quantity and belonging to an earlier geological age than that in which coal usually occurs, is nevertheless a valuable product. The shale in which it is found is also represented, showing that it bears resemblance to that in which albertiteoccurs. Specimens of argentiferous galena from St. Martins, received from Mr. Wanamake, are also exhibited. Behind the last named collection, to the left, stands that of the New Brunswick Natural History Society, exhibited in geological sequence. Commencing with the Laurentian and Huronian formations, which lie at the foot of the series, we find in the Huronian, barytes, or heavy spar from chance Harbour, N.S., chlorite and hornblende from Kings County and Grand Manan. Next in the scale is the Silurian, in which a large number of minerals are found. We have in this series mica from St Stephen, ironand copper pyrites from various places, galena from Campobello, native copper and zinc blende from the sameplace, and argentiferous galena from Le Tete, Charlotte County. In the lower carboniferous formation, which is likewise one of our most productive in useful minerals, we have calcite in various forms from Miramichi and the North Shore, alabaster from Hillsboro, barytes from Markhamville, agate chalcedony, cornelian, etc., from Washedemoak Lake, and pyrolusite (manganese) and manganite (a kindred mineral) from Kings County.The coal measures are represented by bituminous coal from Grand Lake, copper from Bathurst, etc. The Triassic series are shown by only a few zeolites (stilbite), and heulandite from Grand Manan. The recent formations are represented by selenite, or sulphate of lime in turreted crystals, from Sussex, iron sand from Petitcodiac, wad manganese from Woodstock, and bog iron from Richibucto and St. Stephen. In the same case Mr. G.F. Matthew exhibits a collection of useful minerals, namely, granularanthracite from Lepreaux, bituminous coal from Newcastle,Queen County, polished shale (resembling cannel coal) from Caledonia, Albert Co., Albertite, or Albert coal, from Hillsboro, and peat (burnt) from Lawlor's Lake. Mr. W.F. Best, chemist, has likewise exhibited a neat little collection of useful minerals, such as bituminous coal, Albertite, lime, red granite, iron ores, antimony, pottery clay, copper, lead, manganese, graphite and marble. Mr. Alfred Markham exhibits fine specimens of manganese ores, braunite and manganite from his mine at Markhamville.The Revenue Silver Mining company have a case with specimens of zinc blende, which contains small quantities of gold, about 13-100 oz. Troy weight per ton, and also of silver and lead ores. These are from Letete, Charlotte county. Several specimens of silver-lead ore from Yarmouth, N.S. are also exhibited. A block of Iceland spar from Belledune, Gloucester County, a rather remarkable mineral, is also shown. The Spring Hill Mining Company exhibits splendid specimens of coal of

S.J. Daily Sun - Jan. 19, 1888 New Brunswick as a Mining Country. - New Brunswick has never much parade of its mineral wealth, but notwithstanding, the province derives substantial advantage from these possessions. The economic minerals now mined or quarried in the province include coal, gypsum, granite, manganese, lime, grindstones and building stone, antimony, besides some less important substances. None of these minerals is yet worked to any extent compared with the possibilities. The province has no department of mines and no official with authority to collect returns as they have in Nova Scotia. The nearest approach to official statistics are to be found in a report for the year 1886, prepared by Eugene Coste, the mining engineer of the Canadian geological survey. This valuable work is published by Dawson Bros., by authority of parliament. Mr. Coste has been at pains to collect returns from all provinces of their mineral produce and export. The author is not able to tell us much about the coal product of this province owing to the desultory character of mining in New Brunswick. We, or course, know that a considerable quantity is mined at Grand Lake for local consumption in the river districts, and that this coal is used on the New Brunswick railway. It is also sold at St. John. Grand Lake district will next year be put in communication by rail with the outside world, and in a short time will be connected with Montreal, and the coal consuming regions of the west. Then we shall know whether New Brunswick coal fields are rich as has been supposed. The province once exported $100,000 worth of albertite in a year. The census of 1881 credits the Grand Lake district with producing 6,221 tons. We imported in 1886 from Nova Scotia 197,028 tons which at the value given to other Nova Scotia exports would be worth at the place of shipment $375,600. We also imported from other countries 34,845 tons of anthracite, valued at $111,260, and 8,992 tons of bituminous, at a cost of $17,535. It will be seen that New Brunswick has a fine home market. The antimony produced in Canada, comes mostlyfrom Nova Scotia. In 1886, the export of this province was 20 tons valued at $800. It was produced at Lake George, York County. The Rawdon mine in Hants county, Nova Scotia, turned out over $30,000 worth. Of graphite Canada exported $3,586 worth in 1886, all from New Brunswick. The quantity of gypsum produced in Canada has not been ascertained. The exports of crude plaster are givenas 442,833 tons for the Dominion, and 23,498 for this province. The value of the New Brunswick product, nearly all of which goes from Albert county, is $10,559. The quarries on the Tobique river have great possibilities, but are not yet strong competitors with those of Albert county. The total product of the manganese mines in Canada in 1886 is said to have been 4,789 tons, worth$11,499. Of this New Brunswick furnished 4,545 tons, valued at $22,054. The customs statement of export gives a larger value, the foregoing being the estimated worth at the mine. The geological survey people claim to have pretty full returns of granite production in Canada. This gives the total quantity in the rough at 6,062 tons, worth $63,309. New Brunswick is credited with 2,552 tons, valued at $34,509. It is perhaps not very easy to fix the value of the rough stone, but the value of the red granite, as turned out of the polishing works, was in 1886, four times the amount given. Mr. Coste admits his returns of other building stones to be incomplete. He has heard from producers of $??? Of value and it appears that this represents from three to four fifths of total output. Three returns from New Brunswick give 2,728 tons, worth $24,970. His return of the produce of lime quarries as also admittedly incomplete. The total amount heard fromat the statistical office was valued at $283,756. New Brunswick's share being $58,120. New Brunswick is the only province which produces lime for export. Mr. Coste returns includes brick, concerning which he has fourteen reports from New Brunswick disclosing a product worth $30,908. Four quarries in Gloucester County report an output of grindstones to the value of $22, 495. From above returns it would appear that New Brunswick stands well, both in respect to variety and quality of mineral resources. Our coal supply is only beginning to be available. The red granite industry hasbeen doubling its product every three or four years. Lime quarries have been for the past four years doubling their operations every year. The plaster export of 1886 was 50 per cent larger than in the preceding year, and fifteen per cent in excess of any previous year. The construction of the Tobique railway to Plaster Rock will bring a new field into operation. New investments were made last year in manganese properties, and it is probable that the work now in operation will be extended. The exports in 1886 were only exceeded in value by that of 1885 and that of 1880, while that year's sales were probably in excess of any previous year. The total value of mineral export from New Brunswick to foreign countries in 1886 calendar year is given by the customs returns at $101,349. The actual amount of sales outside the province were, as

S.J. Daily Sun - Jul. 20, 1886 Albert. - ... As soon as the loan of $15,000 effected by the Albert Railway Company is received the road will be put in a thorough state of repairs. There is now a heavy traffic in deals, wood and quarry stone over the road... The Snow stone quarry at Hopewell Hill is doing a thriving trade at present. It is expected that the Bay of Fundy Quarrying Company at Mary's Point will be re-opened at an early date. Capitalists from New York, who have invested largely in it, are expected here about the 1st of August. Another leading enterprise is the Freeze gold,silver and copper mine at New Ireland. The company put in a crusher recently and is doing a heavy business with very flattering prospects ahead. ... Among the flourishing industries of Hillsboro is that of the Albert Manufacturing Company, which controls a plaster quarry and factory, saw and planing mill, barrel factory and large provision store. The company employs about 100 men. C.J. Osman is the manager, an enterprising Englishman, who planted his stakes in the county about 15 years ago, and by capital and ability combined has made himself one of its foremost citizens."

St. Croix Courier - Apr. 5, 1956 Buchanan in Legislature: - Reviews Mining, Forest Conditions in Province. - Fredericton. - Lands and Mines Minister Norman Buchanan of St. Stephen reviewed mining ..... making specific mention to Charlotte county ...... Interesting. - The minister said nickel in 'the St. Stephen area' and copper on the 'south coast' of the province were still of interest to mining companies. He did not elaborate. '... Speaking of mining, sir, it is like a story I read the other day of a pink and blue surprise party held in one of the homes and after the lady opened all the parcels she said: 'I will tell you of another surprise, I am not expecting.' That is the way it is in New Brunswick. Nobody was expecting any discoveries would be made here. I didn't mean to be rude, sir. 'We might wonder why these mineral finds were delayed. To put it simply, it was because of the terrific overburden, excepting the Brunswick property which will be mined in the open pit method. 'The great difficulty was that the old methods of prospecting wouldn't apply. Prior to the discoveries in New Brunswick, geophysics was somewhat like water witching. They have proved themselves, they have shown their worth and discovered for us that which is going to be something of great importance. 'In geophysics we simply mean the magnetometer and electromagnetometer air and ground surveys. A magnetometer is a survey which measures the variation in the earth's magnetic forces. By these variations and the measures of the variations, different forces indicate different types of minerals. The electromagnetometer measures the phase difference between the current in the primary field and induced current. The measure of these phase differences then indicates to the prospector that there is a certain mineral there but the amount of it has still to be ascertained. Several Methods. - 'There are other things that contribute - geochemistry, which is the analysis of water and soil which indicate the proximity of minerals. 'There is geobotany which is the analysis of leaves and roots which indicates the proximity of minerals. Discovery depends on all of these things being taken together and studied with the use of maps and the study of geological structure, sir, and a high degree of application and perhaps some luck, because many anomalies are graphitic. 'This must be followed up by drilling to indicate the quantity of the quality. As Mr. Glendenning said, delimited as to attitude and grade of ore all done in logical sequence. This, then is followed by a study of the treatment and disposition of these ores which includes research of processing and separation. 'There has been some suggestion that we should be concerned because so much time has elapsed. When we think of other mining operations of this magnitude we understand that seven to ten years is not long to work out these problems. I do not think we should be disturbed. We should be mindful that the first orebodies were discovered in 1953 and their problems are much more complex. Apart from the known minerals we have also, inthe Moncton area, oil. Mr. Elwell from Boston indicated to me they were having some measure of success. The oil shale has been staked and worked on for some considerable time and we hope the young men working on this will come up with something worthwhile. Nickel Here? - 'Several parties have expressedinterest in our salt deposits.'The gypsum plant in Albert county has added new equipment and it would seem they have stabilized themselves.'The cement plant at Havelock is working full capacity and on last report had a full year's order ahead.'The nickel in the St. Stephen area and the copper in the southern coast still suggest interest tomany of the mining people.'The manganese in the Woodstock area at the moment is being treated in a pilot plant in the Niagara peninsula.'Just recently someone brought me a sample of asbestos and I trust it will prove successful. All this is indeed stimulating to our province. ...."

St. Croix Courier - Nov. 4, 1884 and Daily Telegraph - Nov. 21, 1884 New Brunswick at the New Orleans Exposition.- It was expected that the collection of geological specimens from New Brunswick, in course of preparation by Mr. W.F. Ganong for the New Orleans Exposition, would be ready for shipment the latter part of last week, but a delay of a few days was occasioned by the non arrival of some promised specimens. The collection is now nearly completed and will be shipped in a day or two. As classified, it is a good representation of the economic minerals of New Brunswick. To Mr. Ganong, great credit is due for the labor and time he has expended in preparing the exhibit, as well as to his father, Mr. J.H. Ganong, who will meet the charges of shipment and other expenses incurred. Without their disinterested offering of labor, time and money, the Province would have been entirely unrepresented at what promises to be the greatest display of the kind on this continent during the century. As it is, New Brunswick will make a creditable exhibit in one department, and many, who are entirely ignorant of the Province, will thereby be rendered familiar with its name and one feature of its resources. We append a list of the contents of the cabinet to be forwarded by Mr. Ganong:- New Brunswick at the New Orleans Exposition.- ... Ornamental and Building Stones, &c. Granite:- Dark red, three specimens, polished, dressed and rough; Light red, one specimen, polished; Salmon, one specimen, polished and rough; Gray(Spoon Island), two specimens, polished, dressed and rough - all from the works of Milne, Coutts & Co., St. George. Light reddish grey, one specimen, from the works of H.D. Wallace & Co., St. George. Freestones:- Four specimens, squared and dressed for building; two specimens, dressed for grindstones - all from the quarries of Jos. Read & Co., Clifton, Gloucester County. Whetstone:- Fine-grained, one specimen from Grand Manan, the property of Capt. Pettes. Siliceous Earth:- Two specimens, pure; two specimens with oxide of iron; from Black's Harbor, Charlotte County. Diatomaceous Earth:- Grand Manan. Limestone:- Two specimens, hydraulic and pure, fromFrye's Island; one specimen from South Bay, the property of John Lowry.Slate:- Two specimens, from S. Johnson, St. George. Combustible Materials.-Bituminous coal:- One specimen from Grand Lake. Anthracite coal:- One specimen from Lepreaux. Albertite coal:- Two specimens from Albert County. Mineral Masses.- Serpentine:- One specimen from Frye's Island; one specimen from St. Stephen. Asbestos:- One specimen from Frye's Island. Barytes:- One specimen from Grand Manan; one specimenfrom Frye's Island.Gypsum:- Four specimens. Snowy, anhydrite, selenite, from Hillsborough, Albert County. Ores.- Manganese:- Four specimens. Pyrolusite and manganite.- property of Alfred Markham, Markhamville, Kings County Iron:- Four specimens. Limonite from Grand Manan;hematite, from Woodstock, Carleton County;pyrrhotine, from St. Stephen; pyrite from Frye's Island. Lead:- Galena, three specimens, from Frye's Island, Mascarene and the Elm Tree mine, Gloucester County. Copper:- Bornite, two specimens, Kings County; copper pyrites, four specimens from Kings County: one specimen from St. George; one specimen fromMineral Vale, Kings County; peacock ore, two specimens, Mascarene; copper glance, twospecimens, from the Colonial Copper Mining Company, Dorchester. Antimony:- Three specimens. Sulphuret, 'hard' ore,sulphuret, 'soft' ore; native antimony, from Prince William, York County; one specimen of Sulphuret from Kings County. A few specimens are yet to

Kings County Record - Mar. 18, 1921 Albert County Rich in Minerals. - Much Activity in Mining Work Being Carried On. - Albert Tribe of Sussex Made Valuable Find of Coal at Owls Head, Alma. - There is much activity in mining circles in Albert county, at the present. At Hillsboro, where more men are employed in mining work than anywhere in New Brunswick, except the Grand Lake coal regions, the Albert Manufacturing Company, of which Hon. C.J. Osman is President, is enlarging their plant so that the output of gypsum, andgypsum products will be about doubled. And one or two smaller companies are increasing their output. At Albert Mines, the site of the former Albertiteproduction, men are seeking the veins of this mineral, which are generally believed to be quite as rich as the ones formerly mined. The company promoting this work are said to be satisfied that the development of this property will soon reach the proportions of the first operation at Albert.At Rosevale, another company is erecting a plant of large dimensions for the purpose of extracting oils from the extensive beds of shale that exist in thatdistrict, and in the hills of Lumsden, back of Albert, a veteran prospector is seeking the vein of gold that was found and lost by a man named Steadman, fifty years ago. This man, Mr. B.F. Fales, worked with Steadman at that time, and is confident he can locate the vein. According to tradition it was rich in gold. Down at Owls Head, Alma, a promising vein of coal has been discovered, and sufficient work has been done to prove that it is not a pocket, but a real vein six feet deep. This was located, not buy a prospector, but by a carpenter employed at Alma, Mr. Albert Tribe, a native of Sussex, Kings County, who noticed the coal on the cliff as he was walking on the beach, and after hours, dug out a quantity and tested its burning qualities, and being satisfied, continued digging until the vein was discovered. it has long been recognized that Albert county is very rich in minerals, probably more so than any other county in the province. Beside the above mentioned, there are extensive deposits of manganese and copper. Manganese has been mined in past years, but so far there has been no attempt to develop the copper mines, although there has been sufficient test work done to indicate vast copper deposits."

Daily Telegraph - Jun. 30, 1876 Our Woods and Minerals at the Centennial. - The minerals of New Brunswick, which are treated in the second part of Messrs. Bailey and Jack's pamphlet, consist of iron, copper, manganese, antimony, gypsum, bituminous coal, bituminous shale, albertite, building stones and sandstones. Deposits of bog iron ore are found in several parts of New Brunswick, the best beds being above the rocks of the coal measures in Queen's, Sunbury and York. These measures sometimes cover considerable areas attaining a thickness of 4 or 5 feet, but no attempt has as yet been made to remove or smelt them. An analysis of some ore found in Sunbury yielded 47 per cent of metal. Of the red hematite of this Province, our authors say:-The iron ores of Woodstock were first discovered by the geological survey of the State of Maine, under Charles T. Jackson, as early as the year 1836, having been traced by him from the Aroostook region in the State above named northeastward to the St. John River, and more recently to the eastward of the latter in several bands for a distance of fifteen or twenty miles, or over a large part of the northern and northeastern portions of the County of Carleton. The principal locality from which the ore has been removed is in Jacksontown, about three and a half miles from Woodstock, and about two miles from the west bank of the St. John river. As seen at this point, the ore beds (portions of which are a true hematite, while others are a hydrous peroxide or limonite) are somewhat irregularly interstratified with a of clay slate, usually bright red or brownish red in the immediate proximity to the ore, but elsewhere of a pale grey color, and highly inclined. The width is from six inches to eight feet, the average thickness being about three and a half feet ....?.... their ....?.... variable. About 40,000 tons are said to have been smelted at the Woodstock works while in operation, the resulting metal being remarkable for its great hardness and strength, and admirably adapted for the manufacture of steel. It contains a considerable percentage of manganese. Copper ores exist in considerable quantities, the best being found in the rocks of the southern coast of the Province. The attempts so far made to work these ores have as yet met with but small success, although aspecimen from Salmon River is said to have yielded 62 per cent. of copper. It is to be hoped that the copper beds f this Province will eventually become profitable. With regard to the manganese beds found in this Province, our authors say:- Deposits of black oxide of Manganese consistingchiefly of pyrolusite but associated with more or less ofmanganite, are not of uncommon occurrence in connection with the rocks of the Lower Carboniferous formation, and have been mined to a greater or less extent at several points, such as Markhamville, Quaco and Shepody Mountain. At each of these localities the mineral is met with in connection with limestones lying at or near the base of the series, being distributed through the latter partly in the form of veins but chiefly in irregular masses or Pockets, some of which are of remarkable purity. The most important deposits which are being at present worked are those of Markhamville, under the direction of the Victoria Manganese Company. These were first opened in 1863, since which time the whole amount of ore removed has been about 6000 tons, the annual production varying from 500 to 1500 tons. Owing to the distance of the mines from railway transport, eleven miles, the ore is subject to a cartage of $3 per ton; but notwithstanding this drawback is profitably worked, the price at Sussex varying according to the quality, from $15 to $50 per ton. Manganese is also met with to a limited extent in rocks more ancient than those of a Lower Carboniferous age, near Bathurst, and in those of the Huronian system in King's County, and it is probably from these in part that the ores above described have been derived as secondary products. Another important metal is antimony, which is found at Prince William, and here again we cannot do better than to quote from the pamphlet:The occurrence of Stibnite, or Grey Sulphuret of Antimony, at Prince William, seems to have been known for a number of years, but attracted little attention until about the year 1862, when fresh discoveries indicated a considerable body of ore having been made, several companies were formed with a view to its development. Through the explorations of the latter the mineral was found to be more or less abundantly spread over an area of several square miles occurring chiefly in white quartz veins or veins of quartz and spar, intersecting hard clay slates and sandstones of undetermined age. These veins vary in thickness from a few inches to six feet, the ore being irregularly distributed through the quartz in strings or veinlets, sometimes attaining a thickness of twelve to fifteen inches.

A large portion of the ore hitherto raised has been obtained within a short distance of the surface by means of trenches dug on the course of the lodes, but several shafts have also been sunk, attaining the depth of one hundred feet or more. In connection with these on the property of the Lake George Mining Company, somewhat extensive works have been erected, embracing an 80 horse-power engine, a 30 horsepower air compressor engine, a Burleigh steam drill, Blake's crusher, rollers, jiggers, etc., as well as furnaces for desulphurization and smelting. From these, when in full operation, 15 tons of metal were obtained about every six weeks; the charges (of 500 cwt.) yielding from 45 to 56 per cent. of reguins. The fluxes employed are charcoal, soda or salt cake and rosin. The value of the metal on the ground is 12 to 14 cents per pound. It is partly exported in cakes or ingots to the United States, being valued in Boston at $12.25 to $12.75, gold, per ton, and partly employed on the ground in the manufacture of Babbit metal (containing 15 to 20 per cent. of antimony with lead and tin, or in the better qualities with lead, copper and tin), valued at from 20 to 50 cents per pound.Gypsum or plaster is found in great abundance in this Province, as it is also in Nova Scotia. The largest deposits at present known are at Hillsboro', in Albert County, where the total head of rock is from 90 to 100 feet, about 70 of which is composed of soft plaster or true gypsum, which rests on beds of hard plaster of unknown depth. At Hillsboro', during the season of 1875, 129,000 tons of plaster were quarried, 5,500 tons of which were shipped in rock and 47,200 barrels ground and calcined. The uses of plaster are too well known to require any mention. The value of the deposits of plaster in this Province must increase year by year. Our authors do not give a very encouraging view of the coal mining prospects of this Province, and we quote their remarks in full: More than a third of the Province of NewBrunswick is occupied by rocks of the coal formation, which present the usual variety of conglomerates, sandstones and shales, met with in other coal regions, together with numerous and characteristic fossil remains. Seams of coal are also met with at various points, but so far as at present known, are all of inconsiderable thickness, only one, that of Grand Lake, attaining a thickness (22-26) sufficiently great to be capable of working. Being, however, usually nearly or quite horizontal, such beds as do occur cover considerable areas, and when sufficiently near the surface are readily removed. For the same reason but little information can be obtained from the surface as to the possible occurrence of thicker beds beneath, and it is necessary to resort to borings in order to prove the latter. The results so far obtained in this direction are certainly unfavorable to the existence of any such beds, or even to the probability of any great thickness to the coal formation as a whole in this region, but the latter being unconformable to the older beds upon which it rests, and these being highly disturbed, forming troughs and ridges beneath the carboniferous rocks, it is impossible that the latter may really at some point attain a much more considerable thickness and include workable beds of coal. The only locality in which mining operations for this mineral are at present conducted is in and about the Newcastle River and the shores of the Grand Lake, in Queen's county. The beds here having a thickness of about two feet, are usually met with within ten or fifteen feet of the surface, and have been removed at a great number of points over an area of over one hundred square miles, indicating a total productive capacity of about 154,948,147 tons. The coal is a true bituminous coal of the caking variety, and is employed both for household and blacksmith's use. The total annual production is at present about 3,000 chaldrons, which, delivered in the city of St. John, is sold, according to quality, from $4.50 to $8.00 per chaldron.Bituminous shales are found in considerable quantities in Albert County, and at one time an attempt was made to employ them largely in the manufacture of il, as much as 63 gallons to a ton being obtained, but this oil was unable to compete with the cheaper article from the wells. The same shales yield 7300 feet of gas per ton, and in 1865 some 2000 tons of shale was sent to the United States to be made into gas. With regard to Albertite, which is amongst the most remarkable of mineral products, our authors say:-This remarkable mineral, occurring in connection with the calcareo-bituminous shales or pyroschists above described, was first discovered by accident about the year 1850, and has been by some regarded as a true coal, by others as a variety of jet, and by others again as more nearly related to asphaltum. It resembles the latter closely in appearance, being very black, brittle and lustrous, with a broad conchoidal fracture, and like asphaltum is destitute of structure, but differs in fusibility and in its relation to various solvents. From the true coals it differs in being of one quality throughout, in containing no traces of vegetable tissues, and in its mode of occurrence, which is that of a vein and not that of a true bed. This vein occupies an irregular and nearly vertical fissure, has a varying thickness of from one inch to seventeen feet, and has been mined to a depth of 1,162 feet. The accompanying shales are in some portions abundantly filled with the remains of fossil fishes, (Paleoniscus) and it is not improbable that it was from these, in part at least, that the mineral was derived, existing perhaps at first in a fluid condition (in which state it has in some instances become the cementing material of conglomerate), and subsequently hardened into its present form. Vegetable remains are almost entirely wanting. Between 1863 and 1864, inclusive, 154,800 tons of albertite were shipped. It is capable of yielding 100 gallons of crude oil of 14,500 feet of gas per ton, and when employed with other coals it leaves as a residuum a valuable coke. About 120 men are employed at the Albert Mines.Among building stones our authors make mention of granite and syenite which form extensive beds, particularly in the county of Charlotte. Both yield good building materials, the red granite being capable of receiving a high polish, and it being possible to obtain blocks of it of any size up to 30 or 40 feet in length and 4 or 5 feet in thickness. The Bay of Fundy Red Granite Company vein gives employment to about 110 men.With regard to sandstones our authors say: This stone, commonly known in the United States as Nova Scotia stone, has been long known and highly prized, the Budreau Quarries having been first opened in the year 1856, since which time there has been shipped from that locality an annual amount of from 5,000 to 7,000 tons. The Caledonia Quarries were first opened in 1864, and now ship annually from 4,000 to 6,000 tons, while large quantities are also removed from the other localities mentioned above. The particular qualities for which these stones are prized are their colour, the facility with which they may be cut, dressed or ornamented, and their durability. The prevailing color in the Dorchester quarries is a yellowish or olive gray shading on the one hand ...?... a chocolate brown and on the other into a bluish grey, while at Mary's Point a portion of the rock is pale, purplish red,

S.J. Daily News - Oct. 14, 1864 Our Mineral Resources. - The development of the mineral resources of the Province is daily acquiring increased importance, not only in consequence of the gradual decline in the lumber trade which has so long been one of our most lucrative sources of profit, but because the attention of American and English capitalistsis being turned to our mineral lands to a greater degree than at any former period. This remark applies more particularly to the Americans, who are quietly securing the most valuable mining properties as yet opened out, and are anxious to extend their operations wherever a suitable and promising field for the investment of capital presents itself. The antimony mines of Prince William are in the hands of a Boston Company who will prosecute their development with energy and undoubted advantage. Parties from the same city are making careful enquiries respecting the range and probable extent of theiron bearing rocks of Woodstock with a view to share in the profits which those remarkable ores offer to enterprise and capital. Albert County itself bears witness to the singular advantages which the mining industry, properly directed, is capable of affording - its Albertite, Gypsum and building materials finding a greedy market in the United States, and the fortunate owners of the mining locations, well deserved profits for their investments. But we should like to see the people of the Province share, as they certainly ought to do, in the advantages presented by the mineral treasures of their own soil, and it was with much satisfaction that we noticed at the late exhibition at Fredericton a very marked increase in the representation of our mineral wealth. In describing the general features of the exhibition we glanced at the display exhibited by Professor Bailey, Mr. Matthew and Professor Hind, and we now propose to notice more at length the results of the explorations made during the past summer by the last named gentleman in the Northern part of the Province. Our readers are probably aware that Professor Hind has been engaged in ascertaining the probable area occupied by the already celebrated ""Quebec Group"" of Sir William Logan, the distinguished Canadian Geologist, which he discovered to exist on the Upsalquitch River in the county of Restigouche, in the early part of the summer. The ""Quebec Group"" is now known to be the great metalliferous formation of America, and it has long been recognized as such under different names, but without a suspicion of their relation to one another, by the American and Canadian Geologists. It was in 1860 that Sir William Logan first ascertained the true connection of the different metal bearing rocks of Canada and the United States, and because he satisfied himself that they constituted but one great metalliferous group and that this group was enormously developed in Lower Canada, and particularly near Quebec, he named it the ""Quebec Group,"" and as such it will very probably be recognized by the geologists of all the different States of the Union in which it is known to occur. As already stated, Professor Hind discovered in the early part of this summer that the ""Quebec Group"" comes to the surface on the Upsalquitch and the Nepisiguit Rivers, having there a breadth of about forty miles. He has subsequently ascertained that this important group stretches through the Province, and enters the State of Maine south of Woodstock, and extends a few miles north of that town - forming a belt across the Province not less than 30 miles broad. His collection of rock specimens with their associated minerals, at the late Exhibition, was chiefly from this group as it occurs in New Brunswick; and they were obtained from four lines of exploration which he has made across it. Among the minerals exhibited with the mother rock were copper bearing diorites, black magnesian slates which are supposed to be one seat of the gold not only of New Brunswick but of Nova Scotia and Canada. There were exhibited also what are called the ""Glauconite Slates"", an important member of the ""Quebec Group"", together with red slates and their associated iron ores, purple manganese slates, porphyries red and green, and gold obtained from the drift gravels and sands of the Nipisiguit, Upsalquitch, Tobique, Campbell river, Serpentine, &c. It results from a study of the mineral collection exhibited by Professor Hind that some idea can be obtained not only of the mineral resources of the localities which have been the scene of his operations, but also of the direction in which practical miners should expend their energies. It will be apparent to every one that the ores of metals exhibited by themselves, without relation to their geological range or distribution, cannot convey to a stranger, or to scientific men who may be consulted by capitalists, an adequate idea of the mineral wealth of a parish, county, or Province, because such ores may represent the richest portion of a mineral vein which would soon become exhausted if vigorously worked, as, unhappily, the dear bought experience of many in this Province is able to prove; but when metalliferous rocks extending over a hundred miles or more in one continuous belt are discovered and properly described, we feel satisfied that it requires time only to reveal the mineral treasures which experience and science assures us they contain. The map which illustrated the geology of the carboniferous area in the valley of the Tobique points out to any and every enquirer the place where to find his sandstones, his grits for millstones, his limestones, his gypsums, his firestones, housestones, argillites, &c., and a map of the ""Quebec Group"" of New Brunswick would point out the copper bearing rocks, the manganese and iron series, the lead and antimony series, and we hope in due time the rock in which the eager prospector may find his gold. We shall look for Professor Hind's report with much interest, and are glad to learn from himself that he intends to spend the remaining portion of the season in examining the geology of Albert, King's, Queen's, Charlotte and St. John Counties. We must not omit to notice the beautiful sea green and red argillites, the dolomitic limestone and the fine blue slates of the Upper Silurian rocks which lie to the North of the ""Quebec Group"" in this Province. Although they have not exhibited much metalliferous wealth, yet they are rich in valuable materials for construction and decorative purposes."

S.J. Daily News - Oct. 14, 1867 At Exhibition: ... There are some fine specimens of the minerals of New Brunswick exhibited by Mr. Matthews. Mr. Fellows shows a collection taken from mines opened out by the late Mr. Simmons. Mr. C. Connell shows another collection that looks very well. There is iron ore from Woodstock, copper ore from Le Tete, manganese from Albert, petroleum from Westmorland, goldfrom Tobique and Beckaguimic, coal from Grand Lake, plaster stone from Hillsboro', building stone from St.Mary's quarries, Albert."

N.B. Courier - Sep. 27, 1851 We have been favored by the Directors of the Mechanics' Institute with the following Report, which we have much pleasure in publishing: Report on the Industrial Exhibition, Held at Saint John, On September 9th, (and following days,) 1851. To the New Brunswick Society for the Encouragement od Agriculture, Home Manufactures and Commerce throughout the Province. On the 11th of June last, W.J. Ritchie, M.P.P., the President of the St. John Mechanics Institute made application to the New Brunswick ... Class 1. Raw Materials: Sec. A. Minerals. The Exhibition was by no means complete in this department, although the Museum of the Institute, which was thrown open to the public, contains a great variety of the useful Minerals of the Province. We could wish to have seen at a glance, a series of the Provincial Rocks and Minerals of economic importance, and shall expect it at some future Exhibition. The Minerals exhibited on the present occasion were, many of them, of considerable interest. We may mention - A mass of native Black Lead, of which a large and valuable vein exists near Indian Town, and is now profitably mined by a Joint Stock Company. Samples of prepared Black Lead, exhibited by the St. John Black Lead Mining Company: this article seems well adapted to supply all the wants of our Provincial housekeepers. Asphatum or Asphaltic Coal, (for there is adoubt as to its true nature,) is a valuable Mineral, mined by a private Company in the Parish of Hillsborough, Albert County, and is already largely in demand for the manufacture of Gas. Soft bitumen, or Naptha, from the Petitcodiac, where it issues from the earth in a liquid form, and afterwards hardens by exposure to air. Asphaltic Shale, from Albert and Westmorland Counties; this is an article, the use of which in making gas, waterproof cements, pavements, &c., is increasing every day. Mineral Paint (an earthy oxide of iron, orferruginous earth,) from Shediac; this substance occurs in various parts of the Province, and is yet destined to replace all the forms of ordinary paint as a covering for wood work, &c. exposed to risks by fire. This present sample was exhibited by the Messrs. Gilbert. Mineral Paint, (an earthy oxide of Manganese,) from Albert County; an article which may yet be brought into use. Black lead, we may observe, is considered to be a good kind of mineral, or fire-proof paint; and we would suggest to the St. John Black Lead Company, that they should make some experiments upon the subject. Alabaster, or White translucent Gypsum; this is another of the varied Mineral products of Albert County; we observe specimens of it now for the first time on public exhibition, with great satisfaction; there is a square block of it, a vase turned from it, by Mr. McCoach, and a head carved in alto-relievo, on the same material, by Mr. Foulis. Its admirable purity and general qualities are well seen in these specimens, but none of them exhibit the beautiful polish of which it is susceptible. There is also a magnificent group of Chrystals of Gypsum, from Kings County, but their economic value is small as compared with the massive form from Hillsborough. Lime. - There is a cask of beautiful white Limeexhibited. This is one of our staple productions, and the St. John Lime is unsurpassed for its purity and general fitness for the purposes of the builder. The Limestone contains less than two per cent. Of impurities.Salt, by Joe Brand, of Sussex Vale; this salt is of first rate quality for farmers' purposes, and we are much pleased to learn that its manufacture has been resumed at the springs, and that Mr. Brand is enabled to sell it as low as the imported salt.Honestones, from the Kennebeckasis; these seem to be of good quality, and work either with water or oil. They bite well, and will compete with the Honestones of Woodstock or Miramichi, which are now coming into repute. Lead Ore. - Of this there are samples from King'sand Charlotte Counties, and Iron Ore from one or two places; but no information is given as to the probable supply from the various localities. The samples of Iron and Steel, from Woodstock,seem to be of the very first quality; the Iron has been bent and twisted, when cold, in every direction, but without showing the least injury to the fibre. It would be hard to devise a more complete proof of the quality of the article. We understand that the manufacture of Woodstock Iron will now be carried on vigorously by a Sheffield firm, who have become aware of its admirable qualities and adaptation for the making of Steel. Pipe Clay. - This article is from Albert County, and is exhibited by Mr. Foulis. It has a very good color, and seems to be well adapted for the manufacture of Stoneware, &c. ..."

Daily Evening Globe - Dec. 26, 1862 Mineral Localities of New Brunswick. - A Paper Read Before the Natural History Society of New Brunswick, At Its Last Meeting, By Mr. G.F. Matthew. - As no systematic list of the various mineral localities in the Province has heretofore been published, and the greater number still remain unknown to those who have not access to the few existing sources of information on the subject, I have endeavored to supply a want by collecting the numerous notes scattered through Gesner's report on the Geology of New Brunswick, adding thereto notices of localities discovered since his survey was brought to a close. In this work the writer has received valuable aid from his brother, as also from the late Dr.Robb and Mr. Wm. Payne of Portland. As the two branches of Natural Science, Geology and Mineralogy, are so intimately connected, it will be necessary, in order to obtain a comprehensive view of the character of the mineral deposits mentioned in the accompanying list, to give sketch of their geological distribution. The Province of New Brunswick is mostly occupied by unaltered rocks of aqueous origin. It is traversed, however, by three metamorphic bands which originate in a district of the same character, occupying the greater part of the County of Charlotte, and extending thence westwardly into the State of Maine. The northern land, pursuing a N.N.E. course through the Counties of York, Northumberland and Gloucester, terminates on the Bay of Chaleur. The 4 southern, of which the intermediate band passing through King's County is a subordinate spar, skirts the Bay of Fundy on its northern side as far as Chignecto Bay. A metamorphic district, of which little, however, is known, also exists about the head waters of the Tobique, Upsalquitch and Nepisiguit Rivers. The triangular area intervening between the two bands of altered and igneous rocks is occupied by an extensive coal formation, having deposits of Limestone and Gypsum, principally in the lower beds of the basin. On the triangular side of the first mentioned metamorphic band is another large and comparatively level district in which calcareous and argillaceous shales, of Silurian age, prevail. No great variety of minerals has been found in either of these flat districts, nor is it to be anticipated that there will be. Those, however, which do occur, are mostly of economic value (ores of iron, coal, gypsum, &c.) To the metamorphic bands and the district in which they unite therefore, we may look for the principal and more varied accessions to our mineral wealth. The following remarks regarding the southern metamorphic district are based upon the writer's own observations.The limestones of St. John Co. to which the localities in Portland pertain may have been produced by chemical deposition; for, although, they are only partially altered in many places, no fossils, except obscure vegetable remains have been detected in them. From the abundance of magnesian silicates we might suppose that these calcareous beds are, in part, ""dolomite."" The granite and gneiss of the limestone district contain tourmaline, epidote and laumontite, and small quantities of the sulphurets of iron, copper and lead, besides their ordinary constituents. Epidote is eminently characteristic of the trappean beds of Upper Devonian age, which extend in a double curve from Musquash to Bloomsbury Mt., and probably beyond. It is usually accompanied by quartz, specular iron and chlorite. Sheldon's Point is in this belt, and the minerals of Kingston and Clifton occur in stratified greenstone, probably of the same age; while those of Cape Spencer, West Beach and Black River are in overlying beds of sedimentary origin, largely charged with volcanic products. It will be seen that none of the zeolites found in the Triassic traps of Nova Scotia have yet been detected in the Devonian beds of volcanic origin on the North Shore of the Bay of Fundy; these latter seeming to hold (with the exception of chlorite and prehnite) anhydrous silicates only. The N.S. zeolites have been met with at only one locality in the Province - the Island of Grand Manan. It is not improbable, 5 therefore, that the trap of this island, like that of Isle au Haut and the North Shore of the Basin of Minas, is an outlier of the great masses which skirt the southern shore of the Bay of Fundy. Mineral Localities. - (This list was prepared three years ago for a supplement to Dana's Mineralogy which was not issued owing to the illness of the author of that work. I therefore feel that I am now at liberty to place it at your disposal. Alterations in the arrangement of some localities have been made, a few unimportant ones struck out, and others added. The marks used to distinguish the character of the specimens are similar to those in Dana's Mineralogy, viz: those which may be had in good specimens are underlined, (!) is added where they are remarkably good, (!!) where the specimens are unique. (NOTE - underlined articles are bracketed with square brackets, i.e. [coal] Albert County Grindstone Point and Island - Lignite, Iron Pyrites, Barytes. Hopewell - Gypsum, Selenite, [Alabaster].Albert Mines - Albertite !! Pollet River, 15 miles up - Coal. Shepody Mt. - Pyrolusite, [Calc spar], (rhombs with Manganese), Iron Pyrites, Native Alum, a clay. Turtle Creek - Coal. Carleton CountyWoodstock - Copper Pyrites, (mined) Wad, Bog Iron Ore. At Iron Mines - Hematite, Limonite. Charlotte County Beaver Harbour - Red jasper, Chlorite. Campobello island; at Welshpool - Iron Pyrites, Galena, Blende, Erubescite, Copper Pyrites. At head of Harbor de Lute - Galena, 4 in. vein. At Head Harbor - Iron Pyrites, Copperas. Deer Island, on N.W. side - Magnetic Iron, Calc Spar, (in Amygdaloidal) Hornstone, Quartz, (in trap). Digdeguash R., at Hog Island - Red jasper. On W. side of entrance - Calc Spar, (rhombs, in conglomerate,) Chalcedony, (in Greenstone,) At Rolling Dam - Graphite. Grand Manan Island, between Northern Head and Dark Harbour - Amethyst, Agate, Jasper, Hornstone, [Thompsonite, Stilbite, Heulandite, Calc Spar, Zeolite (Mesotype?), Apophyllite], Specular Iron, Magnetic Iron. At Whale Cove - Calc spar ! Heulandite ! Laumontite ! Stilbite ! Semiopal ! At Fish Head (2 miles S. of Eel Brook) - Chlorite, (abundant in qtz). At Ross's Island - Quartz Crystals. White Head - Chlorite, Quartz Crystals. At Kent's Island - Veined Marble. L'Etang Island and Harbour - Marble, Serpentine, Chlorite, Iron Pyrites. Le Tete - Galena, Erubescite, Copper Pyrites, Barytes. 6 Magaguadavic R., at entrance - Veins of copper pyrites, Malachite, Azurite. One eighth of a mile E. - Galena. Red Head, (on Mace's Bay) - Red jasper. Seeley's Cove, Hill 1/2 mile N. of - Quartz crystals, Calc spar, Magnetic Iron, Iron Pyrites. St. Stephen, 4 1/2 miles N. of - Graphite (in greywacke). Molybdenite, (in gneiss.) Milltown - Pyrites. Simpson's Island, on the Shore - Copper glance, Malachite. [See note]. Waweig R., 3 miles up, at Cormick's Mills, - Pyrites, Feldspar, Schorl and Garnet, (in boulder). At Bartlett's Pond - Quartz crystals. At Oak Bay - Hepatic Pyrites, in greywacke.) Gloucester County Bathurst - Malachite, (in coal). Eight miles from, on Tete-a-gouche R. - Manganite, (in crystals and crystalline,) [Copper Pyrites]. Kent County Buctouche R. - Coal. Cocaigne R., on branch, 3 miles from bridge - Coal. Richibucto R., 3 miles above Ford's Mills and at Big Brook - Coal. At Bass R. - Iron pyrites. Half mile W. of Liverpool - Bog Iron Ore. Kouchibouguaasis R. - Coal. Kings County Belleisle Bay, on N. Shore - Galena, (in limestone), veins of chalcedony, Jasper and Hornstone, (in trap). One and a half miles W. of Bull Moose Hill, on farms of Northrup and Benson - Large bed of Magnetic Iron. Clifton - [Orthoclase], (xls) Epidote, [(Pistacite)]. (common xls.) [Chlorite], (abundant granular,) Prehnite, all in bedded greenstone, Quartz crystals, Specular Iron. Hammond R., at Sherwood's - Graphite, (in limestone). Hampton, and at Darling's Lake, in loose pieces - Agate, Carnelian, Red jasper. Kingston, on ridge S. of village - Magnetic Iron, Magnetic Pyrites; also, Chlorite and Red jasper. Nerepis, near Hatfield's Mill - Iron Pyrites, (in greywacke). Near Mather's Inn - Amethyst, Quartz Crystals, Feldspar. Norton - Near Choat's Mill, on road to Belleisle - Argentif. Galena. One mile N. of Baxter's Inn - Specular Iron (xls) and Red Hematite. Quispamsis - Pyrites, Copper pyrites, Galena, Laumontite. Sussex, 1/4 mile from church, on McReady's farm - 7 [Selenite !] (hexagonal xls. forming in the mud of a spring.) [There are two fine groups of crystals from this locality in the Museum of the Mechanics' Institute.] Eight miles from Station, on Dutch Valley road - [Manganite], Pyrolusite, [Barytes.] Upham - Brine springs.Four miles E. of Titus Mill - Gypsum Northumberland County Boiestown - Coal. Barnaby's R., opposite mouth - Coal. Chatham - Coal, Iron Pyrites. Newcastle - Coal. Queens County Grand Lake, at Grand Point - Fossil Trees, containing Barytes, Pyrites, Copperas. Salmon River, (on Crawford's farm) - Coal, Caly, Iron Stone, Pyrites, Copperas. Newcastle - Coal mines. Coal Creek - Coal, (formerly mined.) Long Reach, opposite VanWart's - Chlorite. Washademoak River - Coal, (2 1/2 miles from Long's Creek.) Few miles above mouth on S.E. of a small cove - Hornstone, Jasper, Chalcedony, Carnelian, Quartz Crystals. Restigouche County Belledune Point - Verd Antique, Serpentine, Iceland Spar! Dalhousie, near to - [Agate], Carnelian. Point le Nim - Coal. St. John County Carleton, near Falls - Red Calcite. Chance Harbour - [Calc spar] (deep red xls) in quartz veins, Chlorite (in argill and talcose state). Brandy Brook - Quartz crystals. -

Epidote (Pistacite) and Hornblende in boulders. Black R. settlement. - [Quartz crystals], Chlorite, Calc spar, Copper Pyrites, Specular Iron !(tabl. xls) Little Dipper Harbour, on W. side - Barytes, quartz crystals, Amethyst (in compact greenstone). Moosepath - Schorl (crystals), Hornblende (crystals), Felspar (red), Muscovite, Albite (?) Musquash, on E. side, Harb. at entrance - Graphite, Pyrites, Copperas. At Shannon's - Serpentine, Verd-Antique, [Chrysotile.] E. side of Musquash - [Quartz crystals] (veins in conglomerate). Portland, [Crow's Nest - Serpentine,] Chrysotile, Steatite, Magnesite, Asbestos. [Drury's Cove] - Indurated Talc, Pyrallolite (?), Graphite, Pyrites.[At the Falls] - Graphite (impure bed 4 ft.) [Fort Howe Hill] - Graphite, Calcite (several forms, viz: dogs-tooth spar, nail-head spar, &c.) [Howe's Road], 1 1/2 miles from St. John - Epidote (in syenite). ! 1/2 mile from road [Tremolite], Steatite, Mica (?). [Lily Lake] - Serpentine, Chrysotile, Talc, (radiated), Steatite, Graphite. [White Augite] (?). Quaco, Light House Pt. - Manganese, ([Pyrolusite]), (bed 4 ft). W. of Point - Lignite. E. of Quaco, Fuller's Creek - Graphite, Iron Pyrites. Farther Eastward - Schorl, Asbestos, Chrysotile, Serpentine. Sheldon's Pt. - [Epidote] (Pistacite and Zoisite), Actinolite, Asbestos, Calcite, Specular Iron, Malachite. Cape Spencer - Specular Iron (crystals), Calcite (crystals), Talc, Chlorite, Asbestos. Ten Mile Creek - Coal in slate and sandstone. West Beach - At Evan's - Quartz Crystals, Talc, Chlorite. Half Mile W. of Evan's - Vein of Magnesite with Talc, Chlorite and Magnetic Iron, Copper and Iron Pyrites, [Hematite], [Specular Iron]. [See note.] Point Wolf and Salmon R. - Iron and [Copper] [Pyrites], Asbestos, Chlorite, [Erubescite], Chrysocolla, [Cuprite.] Sunbury County Oromocto River, N. Branch, 10 miles up - Coal. Lincoln - Wad, Bog Iron Ore. Victoria County Tobique River - Red Jasper, Carnelian, Agate. At mouth, S. side - Galena. At mouth of Wapskehegan R. - Gypsum, Salt Springs. Three miles farther up - Stalactites (abundant). Quisibis River - [Blue Phosphate of Iron] (in clay). Westmorland County Bellevue - Iron Pyrites. Dorchester, Taylor's Farm - Cannel Coal, Clay Iron Stone. On Ayre's Farm - Petroleum, Asphaltum. Grand Anse - Gypsum, [Selenite] (large crystals), Apatite, (vide Gesner). Memramcook - Coal, [(Albertite).] Shediac - 4 miles up Scadouc R. - Coal. York County Harvey Settlement - Wad. Nashwaak River - Coal. Tay Creek - Coal. Pokiok River - Tin pyrites (in granite vein). Three miles from St. John River, in direction of Lake George - Stibnite ! [See note]. 9 In order to obtain a clearer view of the value of the mineralogical resources of the Province as thus far developed, let us take a glance at the more important facts to be deduced from the foregoing list. Many of the minerals noted in its columns are not of economic importance, and therefore will not receive any further notice. Serpentine and marble, both of which are largely used in ornamental work, are known to occur at many localities; but few of those which have been examined yield blocks sufficiently perfect to be useful to the manufacturer. Of such well known and widely distributed minerals as limestone and gypsum it is scarcely necessary to speak. Both, the former especially, are abundant in many parts of the Province. Heavy beds of limestone are common in the southern metamorphic belt, also on the Bay Chaleur. Unaltered deposits may be seen skirting the margin of the great coal field. Gypsum is confined mostly to the Lower Carboniferous series of King's, Albert, and Westmorland; but occurs also in the red sandstone district of the Tobique River. Chlorite or ""pipestone"" and Steatite or ""soapstone"" have been found at a number of places; but no deposit of the latter mineral, sufficiently large to be available for manufacturing purposes, has yet been discovered. Barytes, or ""heavy spar,"" has been met with only at a few localities, and not in any considerable quantity, unless we may except that in Sussex and a large deposit said to occur at Le Tete. This mineral is largely used in the manufacture of white paint, and also for other purposes. It resembles calcareous spar, but differs in cleavage and is much heavier. The only gem which this province has thus far yielded is that very common one called, according to its color, white stone or rock crystal, false topaz, and amethyst. Other varieties of this mineral, such as carnelian, agate and jasper, which are frequently used in jewellery, occur at several places. Garnet is reported from Waweig river, but it has not been found ""in situ"". All the tourmalines mentioned are of the ordinary black variety. It will be seen on examination of the catalogue, that all the metals in ordinary use as well as some others which are more infrequent, occur in this province. But of the commoner ones several have not been found in sufficient quantity to be worth extracting. Indications of tin were observed in the granite of the Pokiok river, by Dr. Gesner. Lead ore has been met with at Tobique River, Norton, Campo Bello, and other places, but not in sufficient quantities as to assure a profitable return to 10 the miner. Zinc blende is found at Campo Bello and a few other localities, but not even so abundantly as lead. This mineral is usually of a dark brown color, and is frequently associated, as at Campo Bello, with galena and copper pyrites. Several ores of copper, chiefly sulphurets and carbonates occur in various parts of the Province, but few of the mines opened in these deposits have been permanently worked. Those of Bathurst and Woodstock have been abandoned. But mining on a small scale is still continued at Salmon River and Le Tete, and experimental operations on the deposit at Simpson's Island have been commenced. Two ores of this metal have been newly added to the list of those already known to occur in the Province. These are the Suplhuret called copper glance, from Simpson's Island and cuprite, or the red oxide of copper found at Salmon River. Iron and manganese are the metals which above all others are most abundant. Heavy ore beds of the former are exposed at Woodstock, Nerepis Road, Bull Moose Hill, West Beach, and other localities referred to in the list. At the first mentioned place the ore has been worked for a number of years. Manganese occurs in greatest quantities and purity near the eastern terminations of the two metamorphic bands to which allusion has already been made. The earthy variety called Wad is also common. The mine near Bathurst which affords beautiful crystals of the grey oxide has been abandoned on account of the irregularity and unreliable character of the deposit. Operations, however, are still carried on at Sussex and Shepody. Of the precious metals, silver has been detected in some of the lead ores, in the ore of antimony near Pokiok, and in the copper ore of Simpson's Island, but only in minute quantities. Gold, so far as we are aware, is yet undiscovered; at least, there is no tangible evidence to show us that it has been found in the Province. If reliance may be placed on the results of the geological survey, the northern metamorphic band, the County of Charlotte, the region about the headquarters of the Tobique, and that part of the southern band which has not been shown to be of Devonian age, are the most promising districts for the gold seeker. The discovery of a rich gold field would undoubtedly give a great spur to the development of our Provincial resources, but, at the same time, would probably have a tendency to attract a lawless and reckless population. Seams of coal have been found at numerous localities within the great central area, covered by deposits of Carboniferous age. Few of these, however, promise to be productive. The unique variety found at Hillsborough has proved to be a mine of wealth to its owners. Operations have also been successfully carried on at the mines on Grand Lake for many years. But in no other part of the Province have beds of this mineral sufficiently large to attract the attention of capitalists, been opened. Those best qualified to judge (Drs. Robb and Dawson) of the productiveness of New Brunswick coal measures, gives us little reason to hope that they will yield stores of fossil fuel as large as, considering the extensive area which they cover, we might anticipate. Still the discovery of extensive beds is not altogether hopeless, for we should bear in mind that a great part of the area underlaid by these rocks remains unsettled and uncleared; and we may traverse parts of it for scores of miles through an unbroken wilderness. Although New Brunswick is not favored with the possession of mineral attractions so brilliant as some of her Colonial sisters, she is not altogether devoid of some solid advantages as the preceding summary will show. The many openings for the advantageous investment of capital, which are to be found in a young and flourishing colony is no doubt the reason why the abundant mineral wealth, with which bountiful Providence has endowed us, still remains undeveloped. As population increases, however, and our wants become more diversified, this source of a prosperous and remunerative commerce will receive the attention which it deserves. Already we see signs of the approach of such a period in the careful investigation which several newly discovered metallic deposits are receiving. [In these remarks I have endeavored as far as possible to occupy ground different from that taken up by Prof. L.W. Bailey in this valuable little publication on the mineral resources of the Province, as exemplified by the metallurgical collection of the University of New Brunswick; considering that a repetition of what has recently been made public would be superfluous.] Addenda. -Iron Ore of West Beach. - The bed of ore at this place inwhich the mine has been opened is included in the upper part of a large mass of coarse reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry from which the ore has been extracted has been opened in a bed of dark, reddish, brown hematite. One or more schooner loads have been taken away, and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz containing scattered masses and veins of micaceous and specular iron in tabular crystals. Two or three miles eastward of the mine the iron ore again appears on the hill side. Here, however, three or four beds of ore (one of them 20 feet thick) are visible; and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate, and talcomicaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken. From its association it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea and within the influence of active volcanoes. I hope to be able to show at some future time that the accompanying rocks do not possess the antiquity ascribed to them in the geological reports of Dr. Gesner, but are of a later date than the sandstones and shales of St. John, which have yielded such an abundant harvest of Devonian plants. [For the information regarding the two following localities, I am indebted to Edward Allison, Esq.] Copper Ore, Simpson's Island. -The vein of green carbonate (malachite) recently discovered, occurs in a small island, (not exceeding 100 acres in extent) about one mile south of Deer Island, andseven miles from Eastport. The island is composed of trap-rock, through which protrudes a band of slate, with nearly vertical layers, which extends across the island in an East and West direction; it being about four feet wide on the West side, and from ten to twelve feet wide where it terminates in a small cove on the East side of the Island. The copper lode occurs in this slate, and was discovered on the West side of the Island in a beach which extends (from high to low water) abut 400 feet. This beach is composed of rock covered with seaweed, except near high water mark, where it is shingle. The copper lode, where discovered, is about four feet wide, and about 150 feet from low water mark; it has been traced about 150 feet toward the shore and to low water mark. Several tons of this ore have been taken out and sent to Liverpool to be tested. A small sample sent some time since yielded 27 per cent of copper, and nearly four ounces of silver to the ton. The value of the ore as taken out is reported to be £27 stg. per ton. [Pieces of Copper glance (sulphuret of copper) were scattered through the Carbonate which forms the mass of the ore at the surface, and were found to increase when the evacuation was deepened. At a greater depth the ore probably consists of the former compound, as the carbonate seems to result entirely from decomposing agencies at work at and near the surface] - G.F.M. Antimony of York Co. -The vein of antimony recently discovered occurs in York Co., Parish of Prince William, about 20 miles above Fredericton, and is on the S.W. side of the river Saint John. The rise of the land from the river at this place is gradual, till the summit of the slope (about 300 feet high) is reached, when the ground falls away toward Lake George, and the Pokiok Stream. Near the top of the slope a band of primary rock, having a course about N.W. and S.E., protrudes through the soil, and is shown particularly where it crosses the highway. This band of rock contains the vein of antimony referred to. It was discovered in boulders evidently detached from this ridge, and upon uncovering the rock the antimony was discovered imbedded in it. The vein was traced about one quarter of a mile by trial pits, and probably extends further. It appears to be about two feet wide, with a dip to the North of about 45ø. The vein has not been penetrated to a depth of more than six feet. Samples of the ore have been analyzed by Drs. Hayes and Jackson of Boston - also by a person in Liverpool. The result differs
